MR. LOVE'S NEW ENTERTAINMENT. "THE LONDON SEASON"—Mr. Love, the polyphonist, has, at length, given his new entertainment an airing in the metropolis; and, on Thursday week, appeared at the Marylebone Institution; and has also announced it for other places. It is entitled, as we have said, "The London Season;" and, in a light and elegant manner, and, at the same time, very humorously, describes the different characteristics alluded to. The lecture, which is written by Edward Jopping, Esq., is exceedingly clever, and the wit with which it abounds is not only rich, but of that polished sort which befits a drawing-room audience. The new entertainment includes the assumption, in proper costume, of seven novel and most salient characters. The first is a modern Tuneo, *Mr. Marvlene Perfywhe*, who is most unaccountably surprised with difficulties, having, in his own opinion, managed his matters with such laudable economy. These lead him to a moneylender, and introduce us to *Mr. Moses Mordecai*, whose disinterested regard for his clients is most tenderly displayed. Then *Mr. Benjamin Billows* gives, in nautical phrase, a description of a debate he had heard in the House of Commons—highly whimsical and laugh-provoking. Next *Mrs. Oldstyle* counsels young people about to marry where to purchase their furniture; and *V. B.* 0001, a London cabman, with an extraordinary memory, gives to Mr. Love an opportunity for presenting one of the richest of his portraits. *Mr. Tranquilus Calm* next comes before us, and murmurs against a too-noisy world, the most ordinary business of which is too strong for his weak nerves. *Miss Ickleank* concludes the series, and gives a strange rambling, confused, and inaccurate account of the celebrated spots and sights in London, including a critique on Mr. Love's own performances, conceived and executed in a delicate vein of good-natured raillery—highly refreshing. Some extraordinary ventriloquial feats concluded each portion of the entertainment, which is divided into two parts, and met with the most decided approbation.

THE WAGES MOVEMENT.—The Preston masters, at a special meeting held on Wednesday, resolved to re-open their mills on the following day. In a placard published by them, they state that they have been induced to do so "in consequence of the greatly-increased disposition shown by the operatives to resume work since the meeting of the masters on the 26th of January." They promise that all persons desirous of obtaining employment may depend upon constant work, and remind the men that "the masters are pledged, and are fully determined to protect them against any improper interference or molestation." The operatives held an open air meeting on Wednesday, and pledged themselves not to resume work till the ten per cent advance be granted.

FINE ARTS.

THE BRITISH INSTITUTION.—WORKS OF BRITISH ARTISTS.

THE Fine Art season, according to long-established usage, opens with the Exhibition of the Works of British Artists at the British Institution; and although the leading artists of the day do not condescend to enter the lists there, others—many of considerable merit—appear before us with some of their best efforts, which are seen to good advantage in rooms of moderate dimensions, judiciously proportioned, and admirably lighted. Thus constituted, the Pall-mall Exhibition forms an agreeable lounge to the artist and amateur, who, besides the pleasure of indulging in their critical propensities, after long abstinence, have an opportunity of interchanging much gossip about the doings in the studio, and the prospects of the coming season. To the artist, a further point of no small consideration and interest is this: the purse-strings of the patrons of art now begin to open; and the canvas upon which so much anxious study and patient labour have been bestowed, through a long winter, is now, perhaps, destined to receive that one finishing touch, before which all its other merits fade; that surest proof of exchangeable value—the little word "sold."

As the result of a general survey of the rooms, we should be inclined to say that the display this year presented is not so striking as many previous ones. We say this because, although there is enough of variety, and a fair average degree of merit, in most of the examples, there are no works of such decided interest, as regards the subjects, or such striking merit in the treatment, as to command universal recognition and remembrance as "the pictures (or pictures) "of the room." Of works in the historic school there are none—or none which we would wish to speak of. Landscapes, cattle pieces, still life, domestic and fanciful sketches, form the staple of the display—works all calculated to amuse the general public, and serve the purpose to which art, of late years, has so profitably directed its energies—that of house decoration.

Most prominent amongst the exhibitors are—Inskipp, who has three pictures, one—"The Colmers," in the place of honour; E. W. Cooke, six pieces: Sant, two studies; Sir G. Hayter, "The Arrest of Cardinal Wolsey," and two others: Ansdell, animal subjects; Goodall, "Feeding the Swans;" Smythe, a clever picture—"An Eastern Story Teller," Glass, "A Raid on the Scottish Border." Gilbert, "Sancho Panza Informing his Wife of his Coming Dignity;" W. Wyld, "A View of the Port of Oran, in Algeria;" and, in landscape department, Creswick, Linnell, S. Percy, the Williamses, &c.

[We propose giving a detailed notice of this Exhibition, accompanied by Engravings of some of the pictures.]

DINNER OF THE IRISH INDUSTRIAL SCHOOL, AT BONMAHON, WATERFORD.

IRISH INDUSTRIAL SCHOOLS.

Of schools of industry, that for which we were least prepared, was a printing-school! but such has been established, and that with the greatest success, even in the wilds of Ireland: the Rev. D. A. Doudney, a Protestant Curate, seven years resident in Ireland, has proved of what the Irish character is capable, when well directed. We have engraved above a sketch of a dinner scene given in the little obscure sea-washed village of Bonmahon, county of Waterford, upon the completion of six large and closely printed royal octavo volumes,* the composition of which has been effected by "raw Irish lads," who, rather more than two years ago, had not as much as seen a printing-type! These youths have composed upwards of six thousand pages, have been liberally paid from the fifth week of their entrance, and, by the self-supporting establishment, their manners and appearance have undergone the most desirable change. Of this formidable undertaking, a contemporary says:—

"The year 1851, which saw [illegible] the World's Exhibition the gorgeous [illegible] the earth, held, for the resting. [illegible] bearing the *imprimatur* of a remote village school, and a village curate in the wilds of Ireland."

To the above has been added an Infant and a Girls' Working School, from the latter of which [illegible] broidery, wrought by girls, who, four months since, could not handle a needle. On Monday last a purse of 150 sovereigns, and a silver tea and coffee service, were presented to the Rev. Mr. Doudney, in commemoration of the completion of the printing of Dr Gill's Commentary at the Bonmahon school.

* Gill's Commentary, six vols., royal 8vo. Published by W. H. Collingridge, City Press Long-lane, London.

EXTENSIVE ROBBERY OF BILLS OF EXCHANGE.—Louis Montagnard, son of a French merchant in London, went into the Queen's Hotel, Manchester, last Saturday evening, and remained there for about an hour, speaking broken English, but not having any apparently very well-defined object in view. After he was supposed to be gone, a Mr. Garneau, a Canad an merchant, who was staying at the hotel, went up to his bed-room, and found a man about the size of Montagnard, and wearing a moustache as he did, just coming out of the apartment. He asked him what he was doing there, and the man said he was seeking his room, the number of which he had forgotten. Mr. Garneau then went down-stairs, and informed the housekeeper, who went with him at once and searched the room; and they found that a portmanteau had been cut open, and a bill of exchange for £1,000, a set of shirt studs, a purse containing American money, and other property was abstracted. The man had then left the house. Information was immediately given to the police, and Mr. Kerry and Mr. Mark, two of the most active of the detective force, were set upon the search, and on Sunday night they [illegible] in the warehouse of Montagnard, the moustache), as he was [illegible] from for Preston. When they came to search him they found upon him the bill of exchange lost by Mr. Garneau, and bills of exchange amounting in the whole to £7800, which had been stolen from the portmanteau of Mr. Chamberlain, another gentleman who was staying at the Queen's, who discovered on Sunday morning that his portmanteau had been cut open. Other portmanteaus had been cut open in other bed-rooms, and property stolen from them. It was proved that on Saturday night Montagnard purchased a suit of clothes from Mr. Levi, outfitter of Market-street, and paid for them with a twenty-dollar note—no doubt, part of the property taken from Mr. Garneau's purse. Nearly all the property has been recovered. He has been committed for trial at the sessions.

NYPHON,

Formerly Bishop of Bonzeo, and the present Metropolitan of Wallachia, like every Bishop destined to occupy the highest functions of the Wallachian ecclesiastical hierarchy, belongs to the order of monks. He is one of those Prelates for whose spiritual and temporal emancipation the Emperor Nicholas has engaged in what he wishes the world to consider a holy crusade against Turkey; and whom he is, all the while, robbing of their wealth, and despoiling of their prerogatives. As priest, the Wallachian Metropolitan owes allegiance only to the supreme authority of the Patriarch of Constantinople; but the Autocrat of St. Petersburg would compel him to pay fealty to him. As monk, Nyphon claims the right of participating in the administration of the immense wealth of the Wallachian convents; but the Consul-General of the Emperor has handed this power over to the Greek Igoumenes. Lastly, as Metropolitan, the Prelate (whose Portrait we here present to our readers) is entitled, in pursuance of the most venerable traditions of the Roumaine country, to preside over the Council of the Boyards; but the Czar, in remembrance of the rôle played by the Wallachian clergy during the events of 1848, has even excluded him from the Council instituted for the government of the country, during the absence of the Hospodar (now a refugee in Vienna), and the occupation of the Russians. And it is for the religious Protectorate of this same Greek Church that the Czar of all the Russias has disturbed the peace of the world. It would be difficult to define the word *religion* as it is understood by the Russians, and in the name of which so much blood has already been shed.

The revenue of the Metropolitan of Wallachia is 5000 ducats. He lives in Bucharest, in the palace of the metropolis. The Illustration represents him in the magnificent robes of his order. His mitre is after the model of the ancient crown of the Emperors of the East. In his public capacity, he bears the title of Metropolitan of Hongro-Wallachia.

Nyphon is one of the principal characters connected with the great Eastern Question which has aroused Europe from East to West. If any of our readers should desire more detailed information with respect to this interesting subject, we refer them to an excellent treatise published in Paris in 1848, by M. Billecocq (formerly Political Agent and Consul-General of France in the Principalities of the Danube), and called the "Moldo-Wallachian Album."

As an appropriate pendent to this Sketch of Nyphon, we print the following document, which contains historical proof that the monstrous pretensions of Russia date from the remotest times. Russian diplomacy already, in the year 1684, 8th of February, succeeded, at a Council held at Rome, in concluding a secret alliance between the Pope Paul III., the German Emperor Charles V., and his brother, the Archduke Ferdinand, King of Hungary and Bohemia, *in order to effect the expulsion of the Turks from all the European states and isles.*

This document was presented by the Czar Johann to the Roman King Ferdinand, and to the Estates of Germany, assembled at the Diet of Regensburg in the year 1567 (28th February). The original is to be found in the collection of the posthumous works of the famous traveller, politician, and warrior, Sigmund of Herberstein, in his family archives, at Gratz:—

To the Most Serene and Victorious Prince Charles, the Roman Emperor, at all times Possessor of Germany, Spain, both Sicilies, Jerusalem, Hungary, Dalmatia, King and Duke of Austria, the eternal friend of Russia Count of Hapsburg, &c., our dearest Friend and most beloved Brother:

We, Johann, by the Grace of God Emperor and Autocrat of all the Russians, Possessor and Ruler of all Europe and Asia, present to our aforenamed brother our best wishes for his life, health, dominion, &c. Having taken the government, eight years ago, after the death of our most revered father, Basilius, considering the strong friendship and affection which has always united us with our brother, Charles, Roman Emperor, and Ruler of the brave German nation; and considering our innate hatred against the Turk, the hereditary foe of Christendom; and considering our most violent desire for the protection of the Christian Church, we think it our most holy duty to resist the bloodthirsty Turk with money and power. We, therefore, believe that a General Council of the Germans nation, for the aforesaid purpose, ought to be held; for which purpose, we have sent the bearer of this, our theologist and scholar of the Holy Writ. May he inform you as to our religion, our language, and our customs.

We beg, you, further, to send us some men who may make us acquainted with the rites of the Latin Church; and some others who understand the law, and are experienced in police matters, in order to undertake the task of establishing order and police-courts in the provinces we have taken from the barbarians, and among the ignorant peasantry; and especially, also, some masons, in order to erect, on the boundaries of our dominion, strong castles and fortresses, against the invasions of the Tartars, Scythians, and other barbarians. We beg you to comply with our wishes, for the purpose of conserving our old alliance and friendship.

We beg you to answer, in a letter written by your own hand, to the aforesaid requests, whereof you send us an authenticated copy. We do not act for sake of the Christian religion, but only in order to disguise our purposes, and in order to win the support of the German nation; we aim at fortifying ourselves to facilitate the work of suppression. At the same time, we must act so to as gain us the favour of Christianity. We, therefore, unite our religions in such a way that we order in both our Churches the "Symbolum Nicaenum" ("Credo in unam Deum," &c.) to be sung.

Our forefathers already have worked successfully in favour of the Christian name. They have subjugated many barbarian tribes, as Scythians, Benimen, Baskirs, Ceramisses, Thuia, Korelis, and Berussa, worshippers of the sun and the moon, and they have forced them into the Christian faith. We have also subjugated the Tartars, the accursed Mahomedan sects; and we not only have taken from them their lands, but vanquished, too, their army of 80,000 men. We have driven them into Asia, across the water which scholars call Tanais, and have won their territories, not only for ourselves, but for Christ the Saviour, &c.

In consequence of our efforts in the propagation of the Gospel, we have in our Imperial Castle at Moscow sixteen churches, and in our Imperial Neugarden more than days are in the year. This is confirmed by the learned writer Sebastian Munsterus in his "Kosmography." We ought to endeavour to make improvements, in order to rule more securely our extensive dominions, comprising more than 600,000 German miles; and in order to increase in this way our power, whereto we here, with, by our Ambassadors, most earnestly request the aid of the German nation. If we had not hitherto undertaken this work, the only reason was that there were so many obstacles, chiefly consisting in our countries being so very far from each other. We, therefore, have now despatched our Ambassadors, after the fashion of other Potentates, in order to negotiate in our name, in holy as well as in profane matters. Because the city of Augsburg, in Sonabia (Schwaben), is considered the principal city in all Germany, where so often diets are held, money is made, and soldiers are armed, and therefore it is most convenient for successfully arranging different matters: in consequence thereof our Ambassador shall establish posts from there through Livonia, to the frontier of our Empire. Messrs. Fugger, at Augsburg, the richest private persons at Augsburg, have been advised by us to pay you 870,000 crowns (Thaler) for the sake of carrying on the holy war against the Turk, which sum we will advance to the German Empire, on the following conditions, viz:—

That the money be deposited in the hands of Messrs. Fugger for twenty years, and five per cent be annually paid into the hands of our Ambassador, until a common expedition of the German nation against the Turk be undertaken, and until a great and steadfast war against the Turk be carried on. Should no war ensue, during the aforesaid time, the money shall be repaid to us. In the case of war, when the money shall be spent for war purposes—by which, no doubt, with the help of God, many lands and people will be won—it must be repaid, with interest. If a great and powerful expedition be undertaken against the Turk by the German nation and by the Crowns of Hungary and Bohemia, and if your Great Mightiness or your well-beloved son will take the command personally, we beg you to inform us of your so doing, in order that we may send 30,000 Moscovite cavalry or "Ringepferd" to your aid into Hungary, or any other country, where the scene of the war will be; which force we will maintain five years at our own expense. These armed men ("Reisigen"), however, shall be commanded by our own officers; and whatever be conquered of countries, castles, towns, boroughs, by the aforesaid 30,000 horses ("Pferd"), from that we do not require a spot of earth ("Kein Fussbreit"), but only the repayment of our war expenses. If the war should be lost, we are ready to resign all claims.

That we bear so much grace, love, favour, and affection towards the German nation and its chieftains, for the following reasons:—Because we are of the same origin and extraction with the Germans, because we possess so many lands in Scythia and Sovisien, and have conquered them, where, in former ages, the first of the German chieftains had their seat and habitations, and where still the mountains, woods, wells, and castles bear German names. Such are the reasons inducing us to conclude with the Germans eternal peace and friendship. Besides all this, I send you twenty-five sons of princes and lords, as hostages, in order to prove you that I will use the above-named force against no Christian power, but only for the destruction of the hereditary foe of Christianity.*

Past things cannot be undone; and "it is better to improve things late, than that they be not done at all." Therefore, when our empire and the Germans, with right earnestness and good faith, hold together (in which matters there shall be no want in us and our subjects, over whom we are perfectly master, and exercise an absolute power), we have full confidence that, in a short time, the common hereditary foe and tyrannical bloodhound, the Turk, will be humiliated, debilitated, and utterly subdued ("niedrigestossen"). If we have, then, set as strong a foot in Europe as the Turk in the beginning in Europe, then we shall visit the Turk at Constantinople ("Wir werden ihn in Constantinopel heim suchen"), and shall embody again into Christianity the empire taken from it, with all countries formerly belonging to it (restitution of the Byzantine Empire!)

Here the essential part of the document concludes. There follow still some formalities, purporting that the Czar will faithfully adhere to what he has promised; after which there is enumerated a series of presents sent to the German Emperor, consisting of Imperial birds ("Kaiserlichen Voegeln"), foreign white eagles, some Circassian horses, and some tame sables ("Zimmer-Zoebeln"), &c. It is remarkable that still the request is expressed that the Emperor's answer might not be styled in those quaint and elegant terms usually employed in the diplomatical language of Germany, because, it is said in the Czar's letter, German scholars were still rare in Russia. The document coincides with the usual formulas of greeting.

* Here something seems to be wanting in the documents.

NYPHON, METROPOLITAN OF WALLACHIA.

Exploration of Australia.—A deputation, composed of Mr. Moffatt, M.P., Mr. Gregson, M.P., Mr. T. A. Mitchell, M.P., Mr. T. A. Travers, and others, waited upon the Duke of Newcastle, at the Colonial-office, on Saturday last, to urge upon Government the necessity of carrying out the proposed exploration of the interior of Australia, so as to make of Northern Australia, so as to make it connected by way of India. The Duke of Newcastle observed that the deputation was, no doubt, aware that it was his (the noble Duke's) intention to offer the conduct of the expedition to Captain Stokes. The Royal Geographical Society had applied for a further sum of £1000, and if the matter had been left in their hands, he believed the Treasury would not have been unwilling to comply with their request. But it had occurred to him, regard being had to the importance of the service, and to difficulties to be encountered, that the more satisfactory course would be that the Government should themselves take up the matter, so that they might be responsible for the outlay, and carry out the expedition on a scale of which the nation might be proud, and which at the same time would develop the great resources of the country in a manner more efficient and complete than if it had been undertaken by individual association. Under these circumstances, he had communicated with the Royal Geographical Society, who had approved of the alteration in the scheme. He had also told them that, before taking any further steps, he would call upon Captain Stokes to lay before him a detailed plan, showing the course that he intended to take, the point he proposed to start from, the assistance which he would require, the probable time it would take, and an estimate of the expense. He was of opinion that in many instances it was more advisable to leave matters of this sort in the hands of private individuals; but in this instance he believed it would be better to allow the Government to take it up; and, if in any way the Government could take counsel with these gentlemen, they would be glad of their assistance and advice. The great object of the deputation was the internal exploration of the country. The survey of the coast must be made subservient to that. How far it might be desirable to ask the merchants to assist with money or advice and co-operation was a matter for future consideration, and also how far it might be desirable to call upon the Colonial Governments to contribute a portion of the expense, or only to give their co-operation. Mr. Lindsay, in thanking the noble Duke for the attention he had paid to the subject, assured him, that if the Government should require funds to carry on the exploration, in a more extended and effective manner, they might rely upon receiving pecuniary assistance from the merchants of London. The deputation then thanked the noble Duke, and withdrew.

Diplomatic Arrangement with Rome.—Declarations have been exchanged between the Governments of Great Britain and of the Roman States for securing national treatment to the vessels and commerce of each country in the ports of the other. The arrangement is to be in force for seven years; and, further, until after twelve months' notice on one or other side.

IMPERIAL PARLIAMENT.

(*Continued from page* 127.)

HOUSE OF LORDS.—THURSDAY.

Their Lordships met at five o'clock.

In reply to Lord Torrington, Lord CANNING stated that a great improvement had been effected, both in a sanitary and economic point of view, since the introduction of Mr. Leslie's patent in connection with the lighting by gas of the Post-office establishment. There were now 800 burners fewer than had been used a few years ago; and the saving of cost was no less than £50 a week.

The Marquis of CLANRICARDE complained both of the lighting and ventilation of the Houses of Parliament, and expressed a hope that before Easter the recommendations of the Committee, that had sat upon the subject upwards of two years ago, would be adopted.

In reply to Lord Lyndhurst, the LORD CHANCELLOR entered into a long statement respecting a revision of the statutes. There were now one of the greatest importance. A commission had been appointed to inquire into the question, but it had not as yet concluded its labours. When the inquiry had terminated, he would be fully prepared to deal with the subject.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The House met at four o'clock.

In reply to Mr. Hume, Lord J. RUSSELL said that a remonstrance had been addressed to the Spanish Government on the conduct of the Governor of Cuba in connection with the admission of slaves into that island. The result was, that the Governor had been superseded, and promises were given that a change of conduct would take place.

In reply to Mr. M. Milnes, Lord J. RUSSELL said that he had no objection to produce the correspondence that had taken place between the British Government and that of the Queen of Spain on the subject of a Protestant burial-ground, the complaint upon the subject having been ameliorated.

In reply to Lord C. Hamilton, Mr. GLADSTONE said that no new duties had been imposed upon the police in Ireland in connection with the collection of the Excise revenue there.

Mr. T. CHAMBERS moved that a select committee be appointed to investigate the claims of Yuille, Shortridge, and Co., against the Portuguese Government, for compensation for losses incurred through breach of treaty. The hon. member stated that the firm alluded to had suffered grievous losses, amounting in the whole to about £100,000, in their commercial transactions from the year 1838, through the faithless conduct of the Portuguese Government; and that, as British subjects, they had a claim to protection at the hands of the House.

Mr. HORSFALL seconded the motion.

Mr. D SEYMOUR supported the proposition.

Lord J RUSSELL opposed the motion, and warned the House against acting upon an exparte statement. He was willing to produce all the papers connected with the case, in order that a correct judgment might be formed in respect to it.

Mr. G. BUTT thought the case was one which would best be met by a Select Committee.

After some further discussion, the House divided, when the numbers were—For the motion, 126; against it, 74: majority against the Government, 52.

Mr. CAYLEY moved for a Select Committee to consider the duties of the member leading the Government in this House, and the expediency of attaching office and salary thereto. The hon. member contended that the duties of the office of Leader of the House, now discharged so ably by Lord J. Russell, were exceedingly onerous, and deserved remuneration.

Mr STIRLING seconded the motion.

Sir C. WOOD said he could not accede to the motion, which, if carried, would attach a salary of a Secretary of State to an undefined and indefinable office—an office which really did not exist. The position of Leader of the House was at present an exceptional case, and one which should not be taken as a guide for the future. Besides, he thought that salary ought only to be attached to offices in which there were public duties to fulfil, and to which there was responsibility attached.

Mr. W. WILLIAMS opposed the motion. He thought that the time was very ill chosen for increasing the public expenditure by proposing to attach a salary to an office that was not defined by the Constitution.

Mr. WALPOLE, however indisposed to make any reflections upon the arrangements made by the present Government in respect to the appointment of Lord J. Russell as their Leader in that House, thought that it would be improper to attach salary to an office of the Government who could not be held responsible by the country. There were two great inconveniences attending the creation of an office like that held by the noble Lord. In the first place, the Queen might select a person to fill the position of the noble Lord without such person being compelled to go back to his constituents. In the second place, the person holding such a position might be the chief adviser of the Sovereign, and yet the country would be deprived of knowing, in the ordinary and constitutional manner, who, in fact, this responsible officer of the Crown was. The position of the noble Lord was a most anomalous one—that of being Leader of the Government without holding any particular office. For these reasons he thought it would be a most dangerous precedent for the House to agree to such a motion as was now under consideration.

Lord J. RUSSELL concurred in the reasons advanced against the motion. He, however, saw no constitutional danger in the position which he then occupied; for he held himself to be responsible for any advice which he might give to the Sovereign or the Cabinet, as much as if he held any other public office. At the same time, he thought, generally speaking, the organ of the Government should hold a particular office.

The motion was then withdrawn.

The Assessed TAXES Act Amendment Bill was read a third time, and passed.

Sir J. GRAHAM laid the Navy Estimates on the table of the House; which Estimates, Lord J. RUSSELL intimated, would be taken on Friday week.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

COUNT ORLOFF'S MISSION.

Earl FITZWILLIAM inquired whether the Government could furnish any information with regard to the mission of Count Orloff to Vienna?

The Earl of CLARENDON believed that Count Orloff was the bearer of any counter project, or counter terms to those previously suggested by Austria. He believed that his mission was to state, in the first instance, that it was indispensable that a Turkish Plenipotentiary should proceed either to St. Petersburg, or to the head-quarters of the Russian army, to negotiate for peace; secondly, that, if he came to St. Petersburg, the representatives of the Four Powers might be authorised to advise and to consult with such Plenipotentiary, but that there should be no formal conference; thirdly, that a protocol should be drawn up, defining clearly the recent firman of the Sultan, confirming or bestowing the privileges of the Greek Church in the East, and that the Principalities would be evacuated as soon as possible; and, fourthly, that arrangements should be provided in respect to the system of affording an asylum to agitators or demagogues. The Conference was immediately summoned by Count Buol, to which this counter project was submitted. The Conference compared the terms contained in such counter project with those which had previously been approved of by them, and which had been transmitted by them to St. Petersburg. Finding them to be totally at variance with the propositions agreed to by the Four Powers, the Conference determined to disregard them, as being impracticable; and refused to transmit them to Constantinople. With respect to the other propositions of Count Orloff, he (Earl of Clarendon) was not sufficiently informed upon them to make any statement in respect to them to the House. He believed that the mission of Count Orloff only referred to the relations, or proposed relations, between Russia and Austria; and he believed that the answer given to the proposal of Count Orloff was such as was perfectly consistent with the independence of Austria.

The Earl of ELLENBOROUGH asked whether the Government had received from Denmark and Sweden any communication respecting the neutrality, or modified neutrality, in respect to hostilities likely to take place in the Baltic?

The Earl of CLARENDON said that her Majesty's Government had received communications from both Denmark and Sweden, announcing their intention of preserving strict and perfect neutrality in the event of such hostilities; and they had sent her Majesty's Government a list of those ports and fortified places into which they have declared they will not permit any ships of war to enter. Her Majesty's Government had stated their approval of that system of policy, and the manner in which it was intended to carry it out. Her Majesty's Government were prepared to respect that neutrality (Hear, hear).

In reply to the Earl of Ellenborough, the Earl of CLARENDON said that exception had been taken by the Russian Government to the determination come to by Sweden and Denmark.

The Earl of DESART expressed his dissatisfaction at the proceedings that were going on in respect to this war, and his misgiving at the result.

Earl GREY asked whether it was really the determination of the Government to proceed with the Reform Bill before Parliament had considered the Army and Navy Estimates. He thought it would be attended with the greatest mischief and inconvenience to proceed as was announced with a measure of Reform, which might involve a resignation of Ministers, or a dissolution of Parliament at a time so perilous as the present to the interests of the country.

The Earl of ABERDEEN said it was the intention of the Government to persevere in the measure of Reform on Monday; but after the House of Commons had read that bill the first time, it would be postponed for a second reading until the Army and Navy Estimates were considered. Although he had heard it asserted by various noble Lords in that House that war was inevitable, he was prepared to deny the assertion. Preparations were, no doubt, going on as if war were inevitable; at the same time, he did not yet abandon the hope that peace would still be maintained.

The Earl of DERBY expressed his regret at the determination of the Government to proceed with the Reform Bill, which was calculated to engender party spirit at a time when it was important that unanimity should prevail. He believed that the noble Earl at the head of the Government was the only person in the country who could express the opinion that war was not inevitable.

The Marquis of CLANRICARDE asked whether negotiations for peace were still going on?

The Earl of ABERDEEN disputed the position that this country was as yet actually at war. The negotiations at Vienna were brought to a close, and he was not aware of any others going on at present.

Lord BEAUMONT denounced the continuance of such a state of incertitude.

Earl GRANVILLE complained of those questions being put without notice being given, and the manner in which they were discussed.

After a few words from the Marquis of CLANRICARDE and Earl GREY in justification of their respective inquiries, their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY.

Mr. R. Clive and Colonel Herbert took the oaths and their seats—the former for South Shropshire, and the latter for Ludlow.

In reply to Mr. Wise, the CHANCELLOR of the EXCHEQUER said he hoped to be able to introduce a bill relative to Savings Banks during the present session.

THE COMBINED FLEETS.

In reply to Mr. French, Lord J. RUSSELL stated that the return of the combined fleets to Beicos Bay had occurred in consequence of the Admiral in command being of opinion that to remain in the harbour of Sinope might disable the fleet. The conduct of the Admiral would, he believed, meet with the approbation of the Government. Ships of war would be sent out occasionally, to preserve the command of the Black Sea.

UNIFORM COLONIAL POSTAGE.

Mr. WILSON stated that arrangements were in preparation for the establishment of an Uniform Sixpenny Colonial Postage. It would be proposed to allow one penny for the inland postage, one penny for the colonial postage, and threepence for the occasional conveyance. The remaining penny to be the profit of the Post-office.

THE REFORM BILL.

In reply to Lord Jocelyn, Lord J. RUSSELL said that he would move for leave to bring in a bill for the Reform of Parliament on Monday, but he would not move the second reading until the 13th March.

After a few words from Mr. HUME, in favour of immediate legislation, Mr. DISRAELI observed, on the part of the Opposition, that if the proposed measure should have a tendency further to diminish the influence of the landed interest, already too much diminished by recent legislation, they would meet it with the most determined opposition. They would not, however, oppose the introduction of the bill.

BRIBERY, &C., AT ELECTIONS.

Lord J. RUSSELL then moved to bring in a Bill for the Better Prevention of Bribery, Treating, and Undue Influence at Elections for Members of Parliament; and for the Trial of Controverted Elections: explaining that the earlier clauses of the first bill would define the offences it was intended to prevent; and, provide that any person threatening violence or restraint, or in any way practising intimidation, in order to induce persons to vote, or to abstain from voting, should be deemed to have committed the offence of intimidation, and be liable to a penalty of £50. It was proposed, also, that persons found guilty of bribery should be for ever disqualified from voting in Parliament. Another provision was, that copies of all convictions for bribery and treating should be entered in a book of Parliamentary disqualification. Voters found guilty of bribery were to have their names struck out of the register, and to be published in a yearly list as disqualified. The second bill provided that when a petition, complaining of bribery, treating, or intimidation at an election, was presented, there should be a preliminary committee, in the nature of a grand jury, consisting of fifteen members, who should take evidence on the part of the petitioners. And if, in their opinion, there was a prima facie case made out, then there should be a select committee appointed to try the petition. In the event of the sitting member being unseated, and it appearing that the unsuccessful candidate had obtained two-thirds of the votes at the election, he proposed that the committee should have the power of declaring him duly elected. Should the committee report that bribery had extensively prevailed, then the Speaker was to report the fact to the Home Secretary, and the Crown should be empowered to issue a Commission, and to name the Commissioners, who, he suggested, should be chosen from the Revising Barristers. To obtain uniformity of decision, he proposed that assessors should be appointed, who should be barristers of seven years' standing, one of whom should act on each committee. The Chairman's panel he proposed to abolish, leaving the General Committee to choose the whole of the members of the committee to try the petition.

Mr. M. GIBSON expressed his doubts whether a constitutional principle was not infringed by the proposal that the unsuccessful candidate at an election, if obtaining two-thirds of the number polled by the successful candidate, should be declared elected, at the discretion of the committee, in the event of the latter so reporting.

Sir FITZROY KELLY also expressed his doubts as to some parts of the proposed measure being constitutional.

A discussion then took place as to the merits of the various features of the measure. The result was that leave was given to bring in the bill.

LAW OF SETTLEMENT.

Mr. BAINES moved for leave to bring in a Bill relating to the Settlement, Removal, and Chargeability of the Poor in England and Wales. He said that the abuses and evils under the present system became so great that Government felt itself called upon to grapple with them; and whether this bill he had to submit for consideration was sufficient as a remedy, it must be, at all events, admitted that nothing whatever could be worse than the law as it now stood. After stating the nature of the law of settlement and removal as it now existed, and many of the mischiefs arising from its operation, he said that the Government had come to the conclusion that the only remedy was to be found in taking away altogether the power of compulsory removal on the ground of settlement. With respect to the area of chargeability, the Committee of 1847 thought it would be right to extend it from parishes to unions. Some persons went further, and suggested a national rate, or a charge upon the Consolidated Fund; but to any such propositions he had decided objections, for they would lead to extravagance, waste, and jobbing, by withdrawing the expenditure from the searching supervision of the ratepayer. He was of opinion that the most advisable course to pursue was that recommended by the committee; and that the area of chargeability should be extended to unions instead of parishes; but that the uniformity of rating the parishes within each union should be gradually accomplished—if possible, within the period of ten years' The right hon. gentleman concluded by moving for leave to bring in a Bill to Abolish the Law of Settlement in England and Wales.

After a short discussion, leave was given.

Sir JOHN YOUNG obtained leave to bring in a Bill for the better Paving, Lighting, and Improving Towns in Ireland.

Adjourned.

CHESS.

TO CORRESPONDENTS.

J. S.—Have the goodness to write the question legibly. Your note is quite undecipherable.

MEDICUS.—In a part of our impression last week the Chess column was printed before it had been revised. The two following questions are necessary in the games. 1. White's 4th move: in the first, instead of 6. Q P to Q Kt 2nd, read 6. Q Kt to Q Kt 2nd. In the second game, for Black's 8th move, instead of Q to K B 7th read Q to K B 2nd.

ISK DRAGON.—We shall endeavour to find room for the new regulations of the St. George's Chess-club next week.

VIATOR.—The *Chess Player's Chronicle*, we see, gives every month on its wrapper a list of above fifty British Chess-clubs, all alphabetically arranged, with the time and place of meeting of each. Every chess player about to make a journey should have this list in his pocket, and he will be enabled to enjoy his games, and make some agreeable acquaintances in almost every chief town in the kingdom.

V. G.—Black ought to win easily.

A CHESS PLAYER OF MODERATE SKILL has forgotten to give his address.

R. F., of Hungerford.—There is no mistake whatever; for if Black takes the Rt, White takes Pawn, discovering check with his Queen. Black must then capture the Queen, and White is stalemated. The game is therefore drawn, either by stalemate, or perpetual check.

A SUBSCRIBER FROM THE FIRST.—Your Problem is somewhat neat, but much too easy.

NORA CREINA, of Penzance, although not sufficiently difficult for our columns

A SUBSCRIBER, of Putney, Bath.—It is lawful to Castle under the circumstances mentioned.

J. B. of Pendpool.—We shall be glad to have the games adverted to when you have leisure to write them out. Three such shall not be forgotten.

RICARDO.—Mate in eight moves.

J. B. of Pendpool.—We are obliged by the trouble so kindly volunteered.

HISTORIA.—The error in "Black's 4" problem shall be rectified, if possible.

AN OLD MEMBER.—I feared as the St. George's Chess-club now is, and affording such convenience and advantages as it now does, there can be no reasonable doubt of its prosperity.

J. B. Salem, Box 3.—Three volumes were sent to Town, and One Guinea for Country Members. Candidates for admission should apply either to the secretary, or the Managing Committee, at 53, St. James's street.

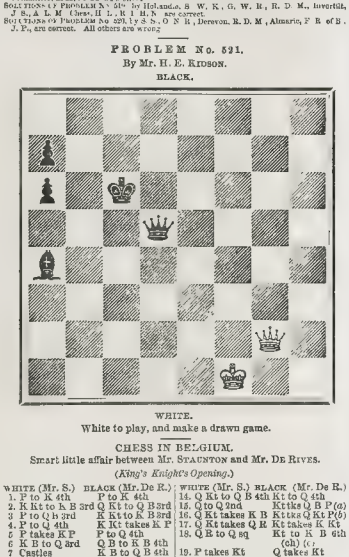
SOLUTIONS OF PROBLEM No. 530 by Helianda, S. W. K., G. W. H., R. D. M., Inverlin, J. S., A. L. M. Chess, H. L., R. I. H., and Caro, are correct.

SOLUTIONS OF PROBLEM No. 529, by S., O. N. H., Derevon, R. D. M., Alnarric, F. R. of B., J. P., are correct. All others are wrong.

PROBLEM No. 531.

By Mr. H. E. KIDSON.

BLACK.



WHITE.

White to play, and make a drawn game.

CHESS IN BELGIUM.

Smart little affair between Mr. STAUNTON and Mr. DE RIVES.

(*King's Knight's Opening.*)

WHITE (Mr. S.)	BLACK (Mr. De R.)	WHITE (Mr. S.)	BLACK (Mr. De R.)
1. P to K 4th	P to K 4th	14. Q Kt to Q B 4th	Kt to Q 4th
2. K Kt to K B 3rd	Q Kt to Q B 3rd	15. Q to Q 2nd	Kt takes B P (a)
3. P to Q B 3rd	K Kt to K B 3rd	16. Q Kt takes K B	Kt takes Q Kt P (b)
4. P to Q 4th	K Kt takes K P	17. Q Kt takes Q R	Kt takes K Kt
5. P takes K P	P to Q 4th	18. Q R to Q sq	Kt to K B 6th (ch) (c)
6. K B to Q 3rd	Q B to K B 4th	19. P takes Kt	Q takes Kt
7. Castles	K B to Q B 4th	20. P takes P	B takes P
8. P to Q Kt 4th	K B to Q Kt 3rd	21. P to K B 4th	Q to Q B sq
9. P to Q Kt 5th	Q to K to 2nd	22. Q to Q 7th	Q to Q Kt sq
10. K Kt to Q 4th	Q B to K Kt 3rd	23. P to K 6th	P takes P
11. K B takes Kt	Q takes B	24. B to Q Kt 2nd	And wins.
12. Q B to Q R 3rd	Castles		
13. Q Kt to Q 2nd	K R to K sq		

(a) Hazardous, though well-conceived.
(b) Taking the Kt with his Q would have cost him the exchange, we believe.
(c) He could do no better, bad as this is.

Another Lively Skirmish between the same Antagonists.

(*Giuoco Piano.*)

BLACK (Mr. de R.)	WHITE (Mr. S.)	BLACK (Mr. de R.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	19 Kt takes B	P takes Kt
2. Kt to K B 3rd	Kt to Q B 3rd	20. Kt to K 6th	P to Q B 3rd
3. B to Q B 4 h	B to Q B 4th	21. K R to K sq	K to Q 2nd (c)
4. P to Q B 3rd	Kt to K B 3rd	22. Q R to K sq	Kt to Q 4th
5. P to Q 4th	P takes P	23. R to K 6th	R takes R
6. P takes P	B to Q Kt 3rd (a)	24. Kt takes R	R takes Q R P
7. P to K 5th	P to Q 4th	25. B to K Kt 7th	P to Q Kt 4th
8. P takes Kt	P takes B	26. Kt to K B 5th (ch)	K to Q B 2nd
9. P takes K Kt P	R to K Kt sq	27. Kt takes K R P	Kt to K B 5th
10. P to Q 5th	Kt to h 2nd	28. P to K B 3rd	Kt to Q 4th
11. Kt to Q B 3rd	Kt takes P	29. R to Q Kt sq	P to Q Kt 5th
12. Castles	Q B to K Kt 5th (b)	30. P to K R 4th	Kt to K B 5th
13. Q to Q R 4th (ch)	Q to Q 2nd	31. Kt to K B 6th	P to Q B 6th
14. Q takes Q (ch)	B takes Q	32. P to K R 5th	P to Q B 7th
15. K R to K sq (c)	P to K B 4th	33. R to Q B sq	Kt to K 7th (ch)
16. P to K 6th (d)	P takes P	34. K to K R 2nd	Kt takes R
17. Q Kt to Q 5th	Q B to his 3rd	35. P to K R 6th	Kt to K 7th
18. B to K R 6th	R to K B 2nd	36. P to K R 7th	P Queens
		37. P Queens	Q to K B 5th (ch)
		And Black surrenders.	

(a) Better to play Bishop to Q Kt 5th (ch). By retreating to Q Kt 3rd, White subjected himself to some needless trouble.
(b) Bishop to K R 6th would have led to many interesting variations.
(c) An embarrassing move for White.
(d) Well played.
(e) Safer, perhaps, than taking the Bishop. In the latter case the game would probably have proceeded thus

21.	R takes B
22 Q R to K sq	Castles +
23 R takes Kt (if Kt to h B 7th, White may	K R to K Kt 3rd
answer with Kt to K Kt 6th, &c.)	
24. P to K R 4th	P to K R 3rd
	(He might also take the K Kt P with his Bishop.)
25. Q R to Q 6th	Q R to K Kt sq

CHESS ENIGMAS.

No. 861.—By FOUZDAR, of Madras.

White: K at his 3rd, B at K 8th, Kt at K 4th; Ps at K Kt 5th, Q 4th, Q B 3rd and 4th.

Black: K at his 3rd; Ps at K 2nd, Q 3rd, and Q B 3rd.

White to play, and mate in five moves.

No. 862.—By F. F. H.

White: K at K Kt 4th, Q at K R 7th, B at Q Kt 4th, Kts at K Kt 5th and Q 6th; Ps at K 3rd and Q B 5th.

Black: K at K 4th, Q at Q 3rd, Rs at Q R 3rd and 8th, B at Q R 6th, Kts at K 7th and Q 7th; Ps at K Kt 3rd, K 2nd, Q 4th, and Q R 6th.

White to play, and mate in five moves.

THE NEW WEST-END CHESS SALONS.—This noble suite of rooms, which have been splendidly decorated by the celebrated Sang, and which form a portion of the establishment now known as "The Wellington," in St. James's-street, were re-opened to the public on Monday last; and, certainly, in the magnificence of their appointments, and the general excellence of all the arrangements, these salons completely eclipse everything of the kind hitherto seen in this country.

ORNITHOLOGY.—The *Boston Guardian*, of Feb. 1, states that an adult male specimen of the Solan Goose (*Pelecanus Cassanus*) was captured a short time since, near Boston. A splendid specimen of the common Bittern (*Ardea Stellaris*) was shot a few days since, by Mr. Charles Brookes, in his crew-yard, at Lenke, and a remarkably fine Bittern was captured about a month since, at Benington, in a field not. Before the inclosure of the fens, the Bittern used to be seen in the neighbourhood of Boston; but now they are very seldom seen.

CALENDAR FOR THE WEEK.

SUNDAY, February 12.—Septuagesima Sunday.
MONDAY, 13.—Massacre of Glencoe, 1691. Duc de Berri assassinated, 1821.
TUESDAY, 14.—Valentine's Day. Captain Cook killed, 1779.
WEDNESDAY, 15.—National Debt commenced, 1690.
THURSDAY, 16.—
FRIDAY, 17.—Battle of St. Albans, 1461. Michael Angelo died, 1564.
SATURDAY, 18.—Martin Luther died, 1546.

HIGH WATER AT LONDON-BRIDGE,

TO CORRESPONDENTS.

J. W.—The golden bee was the emblem of the French Kings of the Merovingian race, and was found depicted in great numbers at the opening of the tomb of those monarchs at St. Denis. It is supposed to have been assumed by Napoleon from its antiquity as the symbol of a French dynasty in contradistinction to the fleur de-lis, the comparatively modern one of the Capet an race.

BAM.—Apply for the names to the Secretary, H. M. Vane, Esq., Eaton-place.

SCES.—The appointment of Gentlemen-at-Arms is obtained, generally, by purchase, on the recommendation of the Captain. The price is, we believe, about £1000.

LOUIS DE MONTFORT.—There is no existing Peer of the name of Thompson, or Thomson. The late Lord Wenlock adopted the surname of Thompson; but his son and successor, the present Lord, adheres to the family name of Lawley. In the extinct Peerage occur—Thompson, Lord Haversham; and Thomson, Lord Sydenham.

DOLLYFUL.—Unus Deus et unus rex.

RICHARD AND THE RAVEN is desirous of ascertaining if there was any peculiar badge or heraldic augmentation to the arms of the Lords Mowbray. The only Lord Mareel now remaining, our Correspondent informs us, is the Lord of the barony of Kames, in the county of Pembroke.

A. B. C.—A Captain in the East India Company's Service can scarcely be said to hold her Majesty's commission, or to hold from him his appointment as of right the title of Esquire.

A. Z.—The full pedigree, arms, &c., of Sir Charles Price, Bart., the banker, may be found, elaborately drawn out, in the last edition of Mr. Burke's "Peerage and Baronetage."

*** In our sketch of the life of Admiral Adolphus Slade (Muchaver Pacha), which appeared in our paper of last week, we find, in giving the names of his brothers, that we omitted that of his brother "Ernest Augustus Slade, Esq." This gentleman, a godson of the late King of Hanover, late of the 40th and 54th Foot, served with the latter regiment during the first Burmah campaign, and has received the "Ava medal."

Now ready, with upwards of 600 Engravings, price 21s.,
VOLUME XXIII.

THE ILLUSTRATED LONDON NEWS, elegantly bound in cloth, gilt edges, rich in illustrations of the events of the last Six Months; together with a mass of useful and highly-interesting articles on Art, Literature, and Science.

The COVERS for VOLUME XXIII., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also the previous Volumes.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 11, 1854.

THE country, and we doubt not the Ministry and the Parliament, are fully alive to the necessity of conducting the impending war with all possible energy and decision. This great nation avoided rushing into hostilities as long as there was a chance of preserving the peace of Europe by fair and honourable negotiation; but, as soon as it was found that the Emperor of Russia would listen to no reason except that which was thundered in his ears from the cannon's mouth, the mind of the people was made up. Active preparations of every kind have been made within the last few weeks: the Baltic Fleet will speedily be fully manned and ready for sea; and a third fleet—almost, if not entirely, equal to those in the Euxine and the Baltic—will, ere many weeks, be stationed at the Nore. As in all previous struggles, the right arm of British prowess will be her navy. The services of the army, according to all present appearances, are not likely to be called into such immediate or extensive requisition; for while Great Britain will bear upon the sea the brunt of the pending collision, France, which is a military rather than a naval power, will do her part by land towards re-establishing the peace which the Russian Emperor has so unjustifiably broken. Should the last feeble hope transmitted from Vienna—that he will yet yield to reason, or, what is more probable, to fear—not be destined to confirmation, our gallant seamen will know what they have to do; and they will do it. It will be their duty to sweep every Russian vessel off the ocean; and, if need be, to destroy or take possession of Cronstadt, Odessa, and Sebastopol. They will enter upon the task with all the characteristic vigour of their profession and race. All who may have previously doubted the fact, will speedily discover that forty years of peace have not weakened the national stamina, or rendered us unable to justify our proud boast of being rulers of the Ocean. It is currently stated—and, we believe, on good authority—that Admiral Sir Charles Napier is to have the command of the Baltic Fleet. We sincerely hope that the report is well founded. Such an appointment would, in the popular estimation, presage victory; and would be hailed with satisfaction in every part of the country.

THE House of Commons has never shown itself regardless of the individual honour of its members, or of its high privileges as a Legislative Assembly. There is, no doubt, a conviction in some places that the House is venal and corrupt, and it is difficult to persuade the wretched voters of many notorious rotten boroughs, that the gentlemen who offer them bribes, and expend large sums of money in contested elections, make these large pecuniary sacrifices without expectations of an adequate return. They know themselves to be knaves for being bought, and they naturally think that their buyers are as bad as themselves. But this is an unjust estimate of the House of Commons If Lord John Russell's new Reform Bill—which is to be brought forward, notwithstanding the Russian War—shall provide the means for the prevention of bribery, or for its effectual punishment when committed, we are confident that the result will be hailed with unfeigned satisfaction by the members of that Assembly. The House of Commons is, at the present time, more than ever it was, the hope and example of Europe; and the higher its character for personal purity, as well as for deliberative wisdom, the greater will be its influence in the affairs of the world, and the stronger the barrier that it will everywhere offer against the encroachments of Barbarism and Despotism. But the corrupt practices at elections for small boroughs are far more disgraceful to the character of the people than to that of the House of Commons; for, while Venality and Corruption strut openly about in the glare of noon, and are so little ashamed as to think themselves part and parcel of the British Constitution, in scores of places returning each a couple of members to Parliament, they dare not show their faces in the House itself. The new Reform Bill, if it achieve nothing else than the purification of such places, will confer a great public advantage; and Lord John Russell acts wisely in not allowing himself to be deterred from its introduction by the prospects, if not the certainties, of a war.

But the individual purity of members is a matter of a different kind, which it is the bounden duty of the House to maintain—at all times and at all hazards. There are ultra-purists who seem to imagine that Members of Parliament should be cold abstractions, uninfluenced by personal motives, and having no private interests. The ties of family, friendship, and political companionship, cannot be altogether ignored. They are as strong as human nature, and will exert and vindicate themselves, however much purists may think it necessary to condemn them.

But imputations such as those which have been cast upon the Irish members, collectively and individually, and which were brought under the especial notice of the House by Mr. Butt, on Tuesday evening, are of the most serious importance if true;—and, if false, require immediate disproof. When one of the leading journals of the country accuses a member of having openly sold his patronage; and imputes to the Irish members in general that they are traffickers in places and appointments, and will sell their votes to any Ministry for a consideration in money or money's worth, the House of Commons would be guilty of treason to its own majesty if it did not make the charges the subject of the most searching investigation. The charges made in the first place by a Dublin, and reiterated by a London, journal, rest at present upon the personal testimony of two Irish gentlemen, named Gray and Kelly. At a public dinner at Tuam, about a fortnight ago, Dr. Gray, formerly a candidate for an Irish county, stated, in the presence of several members of Parliament, "that at the time when paid guardians were appointed to administer the affairs of the Poor-law Unions in Ireland, a friend of his consulted him as to a proposal made to him by a member of the House of Commons, that that member would obtain for his friend the appointment of paid guardian to the poor, upon consideration of receiving one year's salary for himself." Such was the first charge, aggravated by the insinuation that the inculpated member knew at the time that the office was actually obtained. Mr. Kelly added, "that, on a particular occasion, when the Minister was hard-pressed on the eve of a division, the appointment was conferred; but that the purchaser of the office turned round upon the member who had got him the place, and refused to pay him the second five hundred pounds." This charge, supposing it to be true, is quite as disgraceful to all parties concerned as the first.

Into the general allegations against Irish members it is needless to enter. We believe them to be false, ungenerous, and utterly unwarranted. But the charges of Dr. Gray and Mr. Kelly are specific and tangible; and the House, having had cognizance of them, could not do otherwise than order an immediate and full inquiry. A Committee of Investigation was unanimously appointed; and ere long the country will be in a position to form an opinion upon their truth or falsehood For ourselves, we expect they will turn out to be mere moonshine—post-prandial gossip—attenuated and re-attenuated, by passing through the large and dirty current of *gobemoucherie*, until their original shape and identity have been altogether dissipated. It is no imputation upon the Irish character to say that the after-dinner speeches of Irish patriots are somewhat less discreet than after-dinner speeches in other countries. But we will not do Irish or any other gentlemen the injustice of believing in such sweeping charges without the most rigid and unexceptionable proof. It is fortunate that the charges are so distinct. If not proven, the result to the individuals who have preferred them will teach them how perilous it is to trifle with the character of honourable men, and the privileges of the British Legislature.

THE "ILLUSTRATED LONDON NEWS" IN JAPAN.—It has lately come to our knowledge that the ILLUSTRATED LONDON NEWS is regularly received at Jeddo through Nagasaki, for the library of the Emperor of Japan. This is an interesting fact, and one that deserves particular mention as an event, though perhaps it may be considered a small one, in the history of civilisation. Here is the despot of a country which has always disdained to have any intercourse whatever with other nations openly, his sleepy eyes to gaze out upon the wide world, and awakening to a sense of his relationship to the rest of mankind. Perhaps, neither the Emperor himself, nor any man in his dominions, understands the English language; therefore an ordinary newspaper would be a dead letter to him. But the langua e of pictures—those beautiful hieroglyphics of modern times—that universal tongue which is intelligible even to savages and babes; this he can understand. And thus, through the medium of our pages, is the panorama of the different countries of the earth made to pass before the eyes of this hermit-King, and helps to make him a wiser man, and, consequently, a better Sovereign.

IPSWICH MAGISTERIAL REFORM.—A petition to the House of Commons, praying the Legislature to appoint a stipendiary magistrate for the town of Ipswich, is in course of signature.

THE HULL CORRUPTION.—The Commissioners appointed to inquire into the existence of corrupt practices at the late elections, report that systematic corruption has always prevailed at Hull. Before the Reform Act there was a general practice of paying the freemen, then the only voters, head-money, at the rate of £4 4s. for a plumper, and two guineas for a split vote. Since that act, the mode and amount of payment have changed, but the system of corrupt on has not been discontinued. It has prevailed at every election. At the election of 1841 each party paid between 600 and 700 voters; and in 1847 about 1200 were bribed; in 1852, of the 2983 who voted, nearly 1400 were bribed. The constituency consists of 1360 freemen, and 3000 occupiers; and the Commissioners state that three of the freemen were bribed once at least and the greater number of them oftener, in the course of these three elections.

A DECREASE OF PAUPERS IN IRELAND.—A return to the House of Commons shows that, on the 1st Jan., 1853, the number of paupers in receipt of relief in Ireland was 161,672; and, the 1st January last, 10 746. The decrease was 41,76in the year. The Poor-law valuation on the both dependent lists, was £11,396,412.

THE COURT.

The distinguished company enjoying the Royal hospitality last week left Windsor Castle on Saturday, with the single exception of the Duchess of Sutherland, who remained on a visit to her Majesty until Monday.

On Sunday the Queen and the Prince Consort, with the Prince of Wales, the Princess Royal, and the Princess Alice, and the Duchess of Kent, attended divine service in the private chapel of the Castle; the Duchess of Kent received the sacrament of the Holy Communion. The Duchess of Sutherland was also present at the service.

On Monday Mr. J. G. Middleton had the honour of submitting for her Majesty's inspection the portrait he has recently finished of his Imperial Majesty the Emperor of the French. In the afternoon the Queen and Prince drove out in an open carriage attended by the Equerries in Waiting. The Earl of Aberdeen, who had arrived on the previous night from London, left the Castle to-day.

On Tuesday the Queen and Prince walked in the Home-park. Her Majesty and his Royal Highness Prince Albert afterwards drove out in an open pony phaeton. The Equerries in Waiting attended on horseback.

On Wednesday her Majesty, attended by the Marchioness of Ely, drove to the Cumberland Lodge School. Major-General Buckley was in attendance on horseback. The Prince Consort rode out on horseback, attended by Colonel the Hon. A. Gordon. The Earl and Countess of Ellesmere and Lady Alice Egerton arrived to-day on a visit.

On Thursday the Queen and the Prince Consort walked in the Home Park. His Excellency the Prussian Minister and Madame Bunsen, Viscount and Viscountess Mandeville, the Hon. C. A. Murray, and the Rev. Professor Sedgwick (of Cambridge) arrived at the Castle to-day on a visit to her Majesty.

The Court will arrive at Buckingham Palace, on Tuesday next, for the season.

Mr. John E. Jones has had several sittings lately for his bust of his Royal Highness Prince Albert.

POLITICAL ENTERTAINMENTS.

The Earl of Aberdeen had a dinner-party on Saturday, at Argyll House. The Marquis of Lansdowne, the Earl of Chichester, the Earl of Zetland, the Earl Bruce, the Earl of Clare, the Earl of Essex, the Earl of Wicklow, the Earl of Ringsll, the Earl of Bessborough, and the Earl of Carlisle were among the guests.

The Earl of Derby gave a Parliamentary dinner, on Saturday evening, at his mansion in St. James's-square, to a large party of noblemen and gentlemen, members of the House of Commons.

The Earl and Countess Granville gave a grand dinner, on Saturday evening, at their mansion in Carlton-terrace, to a distinguished circle, including, among others, the Duke and Duchess of Bedford, the Duke of Newcastle, the Duke and Duchess of Argyll, the Marquis of Lansdowne, the Earl and Countess Grey, Viscount and Viscountess Canning, Lord and Lady Ashburton, &c.

Viscount and Viscountess Palmerston gave a grand dinner, on Saturday evening last, at their mansion in Carlton Gardens, to a distinguished company, comprising the French Ambassador and several other members of the *corps diplomatique*. The Viscountess subsequently had an evening party, which was attended by his Excellency Namik Pacha, and most of the nobility at present in town. Her Ladyship's first grand assembly for the season will take place this (Saturday) evening.

Lord John Russell had a Parliamentary dinner-party, on Saturday, at his residence in Chesham place.

His Excellency Baron Rehausen, the respected representative of the King of Sweden at this Court, has, we are sorry to learn, been suffering severely from an attack of illness, which for some days assumed a serious character. His Excellency is now happily approaching convalescence.

The gallant Marquis of Anglesea is progressing satisfactorily towards recovery from his recent indisposition.

We are sorry to learn that the Marquis of Thomond has had a severe fall, and dislocated his shoulder, at Bath. The dislocation has been reduced, and his Lordship is now doing well.

THE TAXES ON KNOWLEDGE.—SOIREE AT THE WHITTINGTON CLUB.

The soirée given by the Association for Promoting the Repeal of the Taxes on Knowledge, to celebrate the abolition of the Advertisement-duty, and do honour to Mr. Milner Gibson, took place at the Whittington Club on Wednesday evening.

Sir John Shelley, who occupied the chair, spoke strongly in favour of the abolition of the penny stamp on newspapers, in order that the working men might have newspapers as well as the middle and higher classes.

Mr. Samuel Lucas proposed as a sentiment, "The right of free speech, a proper right, and the means of obtaining all others." In doing so he expressed a wish to see education brought home to every man's door. "He would have it laid on like water." He congratulated them on having obtained the repeal of the Advertisement-duty, and exhorted them to persevere till the last rag of those restrictive laws, which prevented education being brought fairly home to every man's door, was abolished.

Mr. Hickson, in proposing "Mr. T. M. Gibson, and his supporters in the House of Commons," said that no member of Parliament had acted more honestly, more energetically, or more successfully in the matter than Mr Gibson; and, therefore, he was entitled to their special and grateful thanks.

Mr. Gibson, after expressing his sense of the compliment paid to him, defended the course which he and his friends had pursued with reference to the repeal of the Advertisement-duty. They had conducted that question in a fair, reasonable, and, he might say, moderate manner. They had not scrupled to accept the aid of Mr. Disraeli and other intelligent Conservatives, whose sympathies with literature inclined them to the Liberal side on that question. For having done so, they had been charged with joining in an unprincipled coalition; but he could not see why such a complaint should be made, so long as neither party abandoned principle. A further complaint was, that they endangered Government by bringing forward such measures; but, if the measure were good, no good Government would be embarrassed by its introduction. He then went on, at great length, to advocate the abolition of the newspaper-stamp, which acted as a heavy tax on the circulation of news among the poorer classes. The pretence on which this most oppressive tax on knowledge was maintained was, that it prevented scandalous publications. There never was a greater delusion. At present, a man may publish sedition, blasphemy, or personal attacks in a penny periodical, without the Stamp office recognising such a paper. But the moment it contains news in any weekly or fortnightly publication, he is immediately pulled up by Mr. Timms for having infringed the law.

Mr. Cobden did not think there would be any use in moving for the repeal of the Paper-duty this year, owing to the war expenditure; and therefore they should unite for the abolition of the Newspaper-stamp. He did not see the justice of the stamp with the idea that he was going to promote a system which would supersede any of our able and well established newspapers. If the peasant took the *Times* and supplement home to his cottage, he could not find what he wanted. Besides, he did not care for advertisements of estates to be sold, nor for information as to the price of Funds, for he had no prospect of having any money to invest; the letters of "our own correspondent" from Vienna or St. Petersburg had no interest for him, because he had never heard of such places. What such a man wanted to see was the news of the place and neighbourhood in which he had been born, lived, and was destined to die; and, if a system of freedom were allowed to prevail in the newspaper press, there would, within five years, be a weekly paper containing such news published in every market town, and sold at the price of about a penny. It was the knowledge that a paper contained the news of his immediate neighbourhood the conviction of any of his neighbours for poaching and so on—which would first stimulate a man to read it, or to get it read by his child when it came from school (Applause). It was because they could not give such news as this—that the Society for the Diffusion of Useful Knowledge were unable to obtain for their *Penny Magazine* a circulation in the rural districts. What we all read daily was, not extracts from geographical works, travels, or histories, but the broadsheet of news, and our reason for reading it daily was that the events of one day were connected with another—we got upon a sort of electric chain of sympathy, and read on to see whether the plot would end so. But for this stimulus, how many of us would read at all? (Applause.) The opponents of the stamp wanted to supply a want which never would be supplied so long as this restriction was maintained. They did not keep the class of papers at a rate which pressed heavily upon the great mass of the population in the agricultural districts. And let it be remembered that you could never permanently keep the intelligence of towns above that of the agricultural districts, because it was from the latter that the populat on of the former was constantly recruited. If they were to bring the working class in the country up to a state deserving the name of civilisation, they must let them have cheap newspapers, in order that they might be stimulated to read

The vacated chair having been taken by Mr Cobden, Mr. John Watts of Manchester proposed a vote of thanks to Sir John V Shelley, which was seconded, and carried by acclamation. After it had been briefly acknowledged by Sir John V. Shelley, the proceedings terminated.

THE DEPARTURE OF THE RUSSIAN AMBASSADOR FROM CHESHAM HOUSE.—(SEE PAGE 119.)

LATEST INTELLIGENCE.

CHANGE IN THE TURKISH CABINET.

VIENNA, Thursday Morning.

We learn by telegraphic advices from Constantinople, that the Turkish Cabinet has been dismissed, and that one in favour of compromise with Russia has been formed. The Seraskier and Rapudan Pacha have left the Cabinet. Riza and Achmed Pacha have succeeded them.

THE FLEETS IN THE BLACK SEA.

The latest despatches from Constantinople are to the 30th of January. The *Chronicle* correspondent writes:—"One English and one French steamer have started on a cruise in the Black Sea. The Turkish Admiral is preparing an expedition of troops and ammunition for the army in Asia. English and French ships accompany the same to-day. The *Banshee* has arrived with despatches for the English Ambassador."

The *Gazette de Trieste* publishes letters from Trebisond, which state that Russian men-of-war have again appeared off Batoum and Kisch, 20 leagues from Trebisond, since the departure of the combined fleets.

Military operations in Asia are suspended.

General Baraguay d'Hilliers was to have set out on the 26th, on his tour of military inspection.

AUSTRIA AND PRUSSIA NEUTRAL.

VIENNA, Wednesday, Four p.m.

Count Orloff left at nine o'clock this morning, taking with him the positive assurance that Austria and Prussia would remain neutral. Although the Russian Envoy offered to give up the pretension to treat with Turkey alone, his new propositions were rejected. The English Ambassador was very positive, in consequence of express instructions from home on the subject.

AUSTRIAN INTERVENTION.

A letter from Vienna states that public attention has been much excited there by an order which has been given to send an Austrian corps *d'armée* of from 30,000 to 40,000 men to the southern frontier. This corps is, it is said, destined to maintain the independence of Servia, which is threatened on one side by the Turkish Government, and on the other by the Panslavist leaders, who wish to take the upper hand in the country.

THE WAR ON THE DANUBE.

VIENNA, Feb. 7.—There is a report that on the 5th a small affair took place at Giurgevo, between the Turks and Russians, with considerable loss on either side. It appears that 3000 Turks crossed the Danube, routed the Russian outposts, and attacked the town, after which they retired.

A corps of 800 Dorobanzes (Wallachians) has just passed nearly entire over to the Turks. All that remain are thirteen privates and two sergeants. On hearing this fact, General Fischbach had Major Calinesco arrested, and has decided on sending him to Siberia.

Omer Pacha is entirely restored to health. A Wallachian General, two or three American officers and several French and Swedish officers, have arrived at head-quarters, to take service in the Ottoman army.

Considerable reinforcements are on march from Sophia for Kalafat, where there is already assembled an army of 25,000 men, provided with a numerous and excellent train of artillery.

According to General Schilders's report to the Russian Embassy, the Russian army of occupation is in a patiable condition, the original corps being 85,000 men weaker than when it crossed the Pruth in July last.

The Turkish *corps d'armée* on the line of the Danube, from Pregova to Nicopolis, in Lesser Wallachia, over an extent of four English miles, amounts to 80,000 men, without reckoning 80,000 men of the reserve, who are at Sophia. The Russian corps reckon 41,000 infantry, 12,000 cavalry, 120 pieces of cannon, 3000 Sappers and Miners, and 15,000 men of the reserve.

BUCHAREST, Jan 31.—Prince Stourza has gone to Constantinople. He has offered 200,000 ducats, and has been made a Pacha by the Porte.

General Liprandi has superseded General Anrep in Lesser Wallachia.

Prince Gortschakoff has declined the services volunteered by Prince Milosh.

The last intelligence from Lesser Wallachia, viâ Belgrade, represents that country as in a most disturbed state. The peasants are so harrassed with exactions, that they prefer any fate to their present one. The greater number of the inhabitants of two villages are mentioned as having absolutely refused any longer to comply with the requisitions of the Russians and to have withdrawn en masse to the mountains. Prince Gortschakoff, on hearing of this unexpected act, sent troops to surround the villages, and announced that if on the instant the remaining inhabitants did not themselves surrend, and answer for the return of their companions, fire and sword should be set to work. The peasants refusing to answer for the absent, the villages were burned to the ground, and a great number of persons massacred. This dreadful piece of unnecessary cruelty had excited indignation in the whole country. The mountains were being filled with guerilla corps, composed of the young peasants. Two of these bodies consisted of not less than 1200 men. The fermentation which prevails is such as to excite great alarm amongst the Russians; as, should the country rise at the moment that they are pressed by Omer Pacha, their position would become exceedingly critical. It is also rumoured that the formation of a Roumelian legion by the side of the Polish legion already in arms is not unlikely; and it is remarked that such a step would be a fair answer given to the formation of the Greco-Sclavonian corps imagined by Prince Gortschakoff; but which idea, as yet, he has not been able to carry into execution.

BELGRADE, Feb. 4.—The Turkish firmans confirming the rights of Servia have been published. The diplomatic corps was not present.

THE RUSSIANS IN BRUSSELS.

The Russian Princess Lieven, so many years one of the leaders of the *haut ton* in the French capital, and relict of the former Minister of that title at our Court, has arrived at Brussels (Hôtel de Bellevue), where other Russian families have arrived, or are expected, to wait the course of events. Baron Brunnow and M. Kisseleff, with the *personnel* of their Legations, have also arrived in the Belgian capital, to await the arrival of instructions from Count Nesselrode.

TROOPS FOR THE EAST.

The first portion of the military force to be despatched to the East will consist of four battalions of the Foot Guards and six regiments of Infantry from Ireland. These troops will embark with the least possible delay for their destination, which will probably be Malta in the first instance. It is said that the *Ripon* and the *Manilla*, belonging to the Peninsular and Oriental Company have been engaged for the conveyance of a portion of the troops.

THE FLEET IN THE TAGUS.

We learn by the *Lusitania* steamer, which arrived yesterday (Friday), that up to the 3rd instant the following vessels of war were in the Tagus—*Arrogant, Valorous, Prince Regent, Duke of Wellington, Amphion, Tribune, Imperieuse, Desperate,* and *Odin*—all English; and the French steamer *Newton*.

SWEDEN.

STOCKHOLM, Jan 27.—A Russian courier has arrived with despatches relative to the neutrality of the Baltic Powers. The Russian Minister has been received by the King.

SPAIN.

MADRID, Feb. 6.—A democratic conspiracy has been discovered, and fourteen persons have been arrested, *flagrante delicto*, being portion of a revolutionary club.

General Joseph Concha has been proclaimed a rebel. He has escaped from Barcelona, and is said to have embarked for France.

THE BRAZILS.

The *Lusitania*, from Buenos Ayres, arrived at Liverpool yesterday (Friday)—having left on the 21st December, at which time the differences with the provinces remained in *statu quo*. General Urquiza had been elected Constitutional President of the Thirteen Provinces. In the Oriental Republic, General Flores continued his exertions to suppress dissafection; and several skirmishes of trifling importance had occurred during the month; in one of which Colonel Borez was killed.

THE OVERLAND MAIL.

TRIESTE, Feb. 9.—The steamer *Calcutta* arrived at one o'clock p.m. in 320 hours from Alexandria. By electric telegraph we learn the following:—

BURMAH.—The steamer *Medusa* has been lost between Prome and Meaday. A Dacoit chief had assembled 5000 men near Fonghro: the garrisons at Moolmien and Malabar have been apprehensive of attacks. The Governor-General arrived at Rangoon on the 14th December, and left for Prome.

INDIA.—Madras is threatened with famine. The north-west frontier is tranquil. Exchange at Calcutta, 2s. 1d.

CHINA.—A large portion of Shanghai has been burned down by the Imperialists. A portion of the rebel forces had proceeded Northward, and had taken Teen-thin, about eighty miles from Pekin.

AUSTRALIA.—The Government at Sydney has been officially informed that on the 24th September Admiral des Pointes French Commander in the Pacific, landed at Balade in New Caledonia, and took possession of that island in the name of the French Emperor.

A Cabinet Council will be held at the Foreign Office this (Saturday) afternoon, at two o'clock.

SOUTH STAFFORDSHIRE ELECTION.—The nomination of candidates for the southern division of Staffordshire took place on Wednesday. The two candidates were Lord Ingestre and Lord Paget. Lord Ingestre declared himself a Free trader from conviction. He found that the country was prosperous, and therefore he should not by his vote disturb the present existing arrangements. He was an advocate of free toleration, a stanch admirer of the Protestant Church, and in favour of the universal education of the people. The show of hands was taken by the Sheriff, and declared to be in favour of Lord Paget. A poll was demanded on behalf of Lord Ingestre, which will take place to-day.

THE REPRESENTATION OF WINDSOR.—Lord Charles Wellesley has intimated to his leading supporters that he is about to resign his seat for Windsor, on the ground of ill-health. It is said that his Lordship's eyesight is seriously affected, and that he is about to undergo an operation for cataract.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Hon. Canonry*: The Rev. W. Procter has been appointed to an Honorary Canonry in Durham Cathedral. *Rectories*: The Rev. H. J. Cummins to the united parishes of St. Alban, Wood-street, and St. Olave, Silver-street; the Rev. H. M. Fletcher to North Stoke, Somerset; the Rev. W. Halton to Branstone, Leicestershire; the Rev. W. Holland to Brasted; the Rev. G. H. S. Johnson to Weyhill, Hants; the Rev. J. B. Smith to Dorsington, Gloucester; the Rev. W. Vallance to Southchurch, Essex. *Vicarages*: The Rev. E. Walker to Bumstead Helion, Essex. *Incumbencies*: The Rev. J. B. Harrison to Walmer; the Rev. H. Owen to Llanbeulan; the Rev. T. Reynolds to Trinity Church, Woolwich. *Perpetual Curacies*: The Rev. H. D. Blanchard to Ribbleton-by-Watton, Yorkshire; the Rev. G. Garbett to Accrington, Lancashire; the Rev. C. Marshall to Harpurhey, near Manchester; the Rev. D. Slyman to Withnell, near Chorley, Lancashire; the Rev. D. D. Stewart to Maidstone, Kent.

ON Sunday last the Archbishop of Canterbury preached a most impressive sermon to a crowded congregation, at the parish church of St. Mary, Newington, in aid of the Cancer Hospital, Cannon-row, Parliament-street, and West Brompton. His Grace referred to the great sufferings from that awful disease for which the institution had been specially established to alleviate, and the good effect which was likely to result from the greater extension of its sphere of usefulness; concluding by a powerful and pathetic appeal for an increase of funds.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. J. Butler, by the congregation of the Sailors' Home, Liverpool; the Rev. H. P. T. Woodington, by the inhabitants of Whitstable and Seasalter, on his removal; the Rev. W. Crowther, who is leaving the curacy of St. James's, Accrington, and about to enter upon that of Rawtenstall, by the members of the congregation; and the Rev. J. Davidson, by the parishioners of Whitby, on his removal. The inhabitants and parishioners of Husthwaite have just presented to the Rev. John Winter a splendid tea and coffee service (manufactured by Messrs. Benson, of Cornhill, London), on the completion of the forty-seventh anniversary of his curacy of that parish, in commemoration of their respect and esteem for his labours in the parish during that long period.

NEW CHURCH IN MARYLEBONE.—A new church is about being commenced between Orchard street and Duke-street, Manchester-square. An ecclesiastical district, formed out of the rectory division of the parish of St. Marylebone, will be assigned to the new church, of which the Rev. C. Molyneux, M.A., formerly minister of Trinity Church, Woolwich, will be the first incumbent.

ELVERTON CHURCH, DERBY.—The Earl of Harrington has just had executed a very handsomely painted window, for erection in Elverton Church, in memory of his mother, the late Countess of Harrington. The window represents the Saviour blessing little children, and has been painted in a very masterly style.

WHITTINGTON CLUB.—On Monday evening, the half-yearly meeting of the members was held at the Club-house, Arundel-street, Strand, when the report was of an unusually favourable character, and Mr. Mechi was elected President for the ensuing year.

IMPORTANT DESPATCHES FOR CONSTANTINOPLE.—The *Curaçoa* left Marseilles on the morning of the 6th. She carries out, it is said, despatches which point out in the clearest manner the line of conduct to be pursued by Lord Stratford de Redcliffe and General Baraguay d'Hilliers.

ANOTHER FIRE, AND LOSS OF LIFE.—Considerable excitement was caused in Clement's Inn, on Thursday morning, about three o'clock, in consequence of violent screams proceeding from the premises of Mr. Harrison. It seems that the younger branches of the family had gone to a party, and that Mrs. Harrison went to fetch them home, leaving her daughter, Sophia Harrison, asleep, and the candle burning on the table. On her return home the room was on fire, and the girl in the midst of the flames. She was instantly taken to King's College Hospital, but she died shortly after her admission.

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied during the week from 30.37 inches on the morning of the 3rd, to 29.92 inches on the afternoon of the 5th. The mean for the week, at the height of 82 feet above the level of the sea, was 30.058 inches.

The mean daily temperatures have varied during the week from 2·2° below, to 11·6° above, their average values. The mean daily temperature of the 7th was 49·8°, and is the highest mean daily temperature recorded on that day—the register extending as far back as 1816.

The mean temperature of the week was 41·6°, being 3½° above the average of the corresponding week during 38 years.

The range of temperature during the week was 28·3°, being the difference between the lowest reading on the 3rd, and the highest on the 6th.

The mean daily range of temperature during the week was 14°. The greatest was 22·7° on the 5th, and the least 7·2° on the 7th.

Rain fell during the week to the depth of three-tenths of an inch nearly.

The weather on the 3rd and 4th was fine. The sky was mostly overcast from the 5th to the afternoon of the 9th. The wind was blowing strongly on the 6th and 7th. On the 9th a great darkness prevailed at different times, equally, with heavy pressures of wind. Rain, with snow flakes, fell at two. The afternoon was fine.

JAMES GLAISHER.
Lewisham, Feb. 10, 1854.

HEALTH OF LONDON.—The number of births registered within the metropolitan districts within the week ending February 4, was 1653: of these, 807 were boys and 846 were girls, exceeding the average of the same week in the nine preceding years by 102 boys and 82 girls. The deaths registered within the week numbered 1204: of these, 619 were males, and 585 females. In the ten corresponding weeks of the ten preceding years, the average number was 1091, which, corrected for increase of population, becomes 1200. The actual result of last week agrees very closely with the calculated amount.

CABINET COUNCIL.—A Cabinet Council was held on Wednesday afternoon, at the Foreign-office, Downing street. It was attended by the Earl of Aberdeen, Lord John Russell, the Marquis of Lansdowne, the Lord Chancellor, Earl Granville, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir William Molesworth. The Council sat three hours.

THE SUBMARINE AND EUROPEAN TELEGRAPH COMPANY.—The usual half-yearly general meeting of the proprietors in this undertaking was held at the London Tavern, on Wednesday. Lord de Mauley, the chairman, read the report, which stated that the telegraph between Dover and Ostend has now been in uninterrupted communication since the 20th of June last, and since that period the agreement between the Company and the Submarine Telegraph Company has taken effect. The Queen's Speech at the opening of Parliament was conveyed to Paris and Berlin before her Majesty left the Palace of Westminster, and experiments have been made which prove that no town in Europe where a line of telegraph exists is beyond the reach of immediate communication by the submarine wires from London. The number of messages transmitted during the month of January, 1853, after the opening of the French line, was 1068; in January, 1854, 2018, and in January, 1854, the number had increased to 3120. This increase has been maintained in spite of active opposition, and the conservative organization of all commercial affairs from the unsettled aspect of the political horizon. The present position of the company's finances enables the directors to recommend a dividend at the rate of eight per cent per annum for the last six months on the capital of £75,000; and a resolution to that effect was carried. A resolution, that £800 be presented to the directors for their past services, and that a similar sum be the annual remuneration for them in future, having been proposed, an amendment was moved, that the sum of £200 from the reserve fund be voted to the directors for their past services, which was carried unanimously.

"LUMLEY *v.* GYE."—This cause is specially fixed to be tried in the Court of Queen's Bench, on Monday, the 20th instant, and is expected to occupy more than one day. The action, it will be remembered, is brought by Mr. Lumley, Lessee of Her Majesty's Theatre, against Mr. Gye, of the Italian Opera, Covent-garden, to recover compensation for the non-appearance of Mdlle. Wagner. The damages are laid at £30 000. For the plaintiff, Sir T. Wilde, Sir Frederick Kelly, Sir Fitzroy, Mr. Cowling, and Mr. Haddeston have been retained; and for the defendant, the Attorney-General, Mr. Willes, and Mr. Creasy will appear. A special jury has already been nominated by Messrs. Lewis and Lewis, for the plaintiff, and will be reduced in a few days.

THE DERBY BERESFORD CASE.

The important case of the Queen *v.* Beresford, which has excited so much attention, was disposed of in the Queen's Bench, on Thursday, before Lord Campbell, in a more summary manner than was anticipated. After Mr. Turner had opened the case, Mr. E. James, Q.C., said that the parties who preferred the indictment, believing that the exposure which had taken place would be sufficient to prevent a repetition of the offence, did not intend to offer any evidence, and a verdict of "Not guilty" was, in consequence, given.

NATIONAL SPORTS.

REPRESENTATION OF CAMBRIDGE.—A meeting was held at the Bull Inn, Cambridge, on Saturday last, at which the Hon. W. F. Campbell attended, and explained his political opinions to the electors at great length. He commenced by adverting to the question of the admission of Jews to Parliament, and to the measures with which the subject was environed. He then referred to the Turkish question, and gave his opinion that if England did not interfere with energy the Ottoman Empire would be destroyed. With regard to Parliamentary Reform, he felt hesitation in surrendering a blind and implicit confidence to the present Government in reference to the forthcoming bill. Mr. Cockerell put some questions to Mr. Campbell, and opposed his election. A motion was then made that Mr. Campbell should be recommended to prosecute his canvass, but to this proposition an amendment of a contrary character was proposed and carried; upon which the meeting was adjourned.

OXFORD UNIVERSITY ELECTION.—A convocation was held on Tuesday at twelve o'clock for the purpose of electing a burgess to represent the University in Parliament, in the place of Sir Robert Harry Inglis, Bart. The Vice-Chancellor stated the existing scrutiny and corruption, and the pains and penalties which a violation of them would subject the parties to. The Warden of New College addressed the house in Latin, and concluded by nominating Sir William Heathcote, Bart., of All Souls College, D.C.L., as a fit and proper person to represent this University in Parliament. No other candidate being proposed, the Vice-Chancellor declared Sir W. Heathcote to be duly elected. The writ was then signed and sealed, after which the Vice-Chancellor dissolved the Convocation. The proceedings—the whole of which, with the exception of reading the writ and bribery clauses, were conducted in Latin—occupied about half an hour. Sir W. Heathcote was not present, as it is contrary to etiquette for a candidate to be on the spot or to take part in the proceedings.

NAVAL AND MILITARY INTELLIGENCE.

PREPARATIONS FOR WAR.

From all sides we hear of the most active preparations going forward to render the navy as efficient as possible. At Portsmouth, which has always been the head-quarters of the navy, the preparations become every day of a more warlike character.

On Monday an order was received for drafting one-half of the Coast Guard on board the various line-of-battle ships fitting at Portsmouth and other ports. This step will add to the naval service about 3000 of the most efficient and steadiest men it could possibly receive—all of them well trained in gunnery, and admirably adapted to form the nuc eus of crews for screw line-of-battle ships. With them the newly-raised men can be brought into a state of comp ete efficiency; and a powerful Baltic fleet may be organised without the necessity of resorting to impressment.

THE BALTIC FLEET.

A letter from Portsmouth says:—"Rumour is busy with her hundred tongues as to who shall be the Commander-in-Chief of the Baltic fleet. The name most generally received is that of Vice-Admiral Sir Charles Napier, and that he will hoist his flag in the *Duke of Wellington*, supported by Rear-Admirals Corry and Chads. Certain it is that fifteen sail of the line, with a corresponding number of frigates and corvettes, will be in the Baltic by the 6th of March, or, at all events, ready to enter. We also hear that ten sail of the line (French) will co-operate with the British fleet. Rear-Admiral Chads has hoisted his flag (blue) at the mizen of the *Princess Royal*, 91, screw, Captain Lord Clarence Paget."

Of the fleet thus mentioned, we believe that the advanced fleet will be the *Duke of Wellington*, 131, *Nile*, 91, *Hannibal*, 91, *Edinburgh*, 90, *Leander*, 50, *Immortalité*, 51, *Imperieuse*, 51, *Arrogant*, 46, &c. This division, with the exception of the *Leander*, is about fully manned. The heavier ships will not be ready for sea much before the end of April. The Channel fleet will then be composed of the following ships, which are nearly ready to commission immediately or is to be fitted with engines of 400-horse power.

RECRUITING.—Parties were sent out from the second battalion of the Rifle Brigade, the 34th Regiment, and the 79th Highlanders, stationed at Portsmouth, for recruiting, on Saturday, orders having reached them to fill up to 1000 strong forthwith.

BIVOUAC CAMP.—It is intended, early in the ensuing month, that a camp, consisting of 30,000 English militia, shall be formed either at Chobham, or such other place as the General in Command of the Army shall deem fit.

THE ENROLLED NAVAL PENSIONERS.—PORTSMOUTH, WEDNESDAY EVENING.—The following order has been promulgated:—"All Greenwich pensioners under sixty years of age, *no matter how employed or engaged*, are directed to attend at the Pension-office between this and Saturday next, for the purpose of receiving a printed form to attend on Tuesday, the 14th inst., for inspection by officers from the Admiralty, to ascertain their fitness for service. If this notice is not attended to, they will be subject to loss of pension.—Feb. 8, 1854."

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The near approach of open hostilities between this country and Russia has been productive of great uneasiness in the City during the whole of the week. The value of National Stocks has fluctuated considerably; nevertheless, no material decline has taken place in prices, owing to the comparative scarcity of stock and the great abundance of money. Rather large operations have been entered into both for a rise and fall; but the leading sale has been one of £100,000 Three per Cents Reduced by the broker employed to effect the purchase. This has led to the conclusion by us to imagine that several of the bondholders have accepted the proposition made to them some time since to the effect that the Directors would take South Sea Stock at par.

Money has been in steady demand. In the rates of discount scarcely any change has taken place, first-class bills of short dates having been done at 4½ per cent. Gold has been in fair supply, and the arrivals continue rather large; but the imports have fallen off considerably. The late arrivals of dollars from Mexico have sold at 4s. per ounce, or 1d. per ounce above the prices previously paid.

The Market, on Monday, fluctuated to some extent. Bank Stock marked 217. The Three per Cents Reduced were 92¾ to 93⅛; the Three per Cent Consols, 93 to 93⅛; the New Three per Cents, Quarter per Cents, 94 to 94⅜. Long Annuities sold at 5 15-16. India Stock was 231. Exchequer Bills marked 18s. to 16s. premium. On Tuesday the Three per Cents Reduced were 93⅛ to the Three per Cent Consols, 93⅛ 94; and the New Three-and-a-Quarter per Cents, 93⅝ to 93⅞. India Stock, 232. South Sea Old Annuities, 101. Exchequer Bills advanced to 14s. and 20s. premium. On Wednesday the Three per Cents Reduced were 93⅛ to 93⅜; the Three per Cent Consols were done at 93⅛ to 93⅜, both for Money and Time. Reduced Threes were 93½ to 93⅝; and the New Three-and-a-Quarter per Cents, 93⅞ to 94⅛. Exchequer Bills were firm, at 17s. to 20s.; and India Bonds, 16s. premium. Altogether, about an average business was done.

Miscellaneous Securities have been in moderate request. London Dock have been dealt in at 105 to 105½; Australasian Pacific Mail Steam, 11; Electric Telegraph, 7¼ to 7⅜; Royal Mail Steam, 57¼ to 57½. Insurance Shares have ruled dull. Albion, 95; Argus Life, 23; European Life, 23; General, 5⅝; Guardian, 3½; Globe, 141 to 140 ex div.; Law Fire, 4½; Palladium, 3 ex div.; Pelican, 45; Phœnix, 156; Rock Life, 7½; Royal Exchange, 204; Sun Life, 65; Union, 220; East London Waterworks, 121 ex div.; Southwark and Vauxhall, 85½; West Middlesex, 110½ ex div.; Grand Junction, 74½ to 75 ex div.; Ditto, New, 75; Hungerford Bridge, 12; Waterloo, 5¼; Vauxhall, 22.

With very few exceptions Foreign Bonds have been dull and drooping. The leading quotations have been as follow:—Danish Five per Cents, 101; Mexican Three per Cents, 22½; Russian Five per Cents, 105; Ditto Four-and-a-Half per Cents, 99; Ditto Small 90; Sardinian Five per Cents, 95½; Spanish Three per Cent Ditto, New Deferred, 19½; Venezuela Three-and-a-Half per Cents, 28½; Belgian Four-and-a-Half per Cents, 88; Dutch Two-and-a-Half per Cents, 61; Dutch Four per Cents, 93½.

Railway Shares have commanded very little attention, nevertheless, prices have been fairly supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 8½; Caledonian, 53; Eastern Counties, 13½; East Lancashire, 65; Great Northern, 103½; Great Western, 54½; Hull and Selby, 92½; Lancashire and Yorkshire, 65½; Leeds Northern, 18½; London and Brighton, 85¼ ex div.; London and North-Western, 109; London and South-Western, 91; London, Brighton, and South Coast, 97¾; Manchester, Sheffield, and Lincolnshire, 22¾; Midland, 63; North British, 32½; South-Eastern, 61½; Vale of Neath, 18½; York, Newcastle, and Berwick, 68; Ditto, Extension, 11½; York and North Midland, 49.

LINES LEASED AT FIXED RENTALS.—Northern and Eastern, 99½.

PREFERENCE SHARES.—Eastern Counties New Six per Cent Stock, 12½; London and South-Western, 6 per Cent, 120; York, Newcastle, and Berwick, 96; Ditto, 4½.

FOREIGN.—Luxembourg, 7½; Northern of France, 39½; Paris and Lyons, 23; Paris and Strasbourg, 29½; Western of France, 13.

In Mining Shares so little has been doing, that the quotations have ruled almost nominal.

Friday Evening

The Consol Market has fluctuated to some extent to-day. The Three per Cents have been done at 93½, 93, 93⅛ and 92. The Three per Cents Reduced have ruled steady at 93½ and 93⅜. The New Three-and-a-Quarter per Cents, 93⅝ 8. Exchequer Bills, 17s. to 20s. premium. Long Annuities, 5 to 4½. Foreign Bonds and Railway Shares have been tolerably firm.

THE MARKETS.

CORN EXCHANGE (Friday).—A portion of the supply of Kngl sh wheat in to day's market was the refuse of Monday and is very middling condition. The fresh arrivals were very moderate. There was a slight increase in the attendance of buyers; nevertheless, the amount of business doing in both grown wheats was tuisunderate In prices scarcely any change took place from Monday. The imports of foreign wheat were under 6000 quarters. Most kinds were in moderate request, but we have no decline to notice in the quotations. Foreign barleys were dull. English barley, the show of which was large, was nearly a nominal currency. Malting was in very limited demand, and sold at Monday's quotations. Beans and peas were in fair request, at late rates. Flour was in moderate demand, at Monday's currency.

Arrivals this week:—English wheat, 5,720 quarters; barley, 1,310; malt, 10,820; oats, 4180. Irish oats, 1500. Foreign: wheat, 5720; barley, 940; oats, 1720; flour, 8400 sacks.

Average prices of the week:—Wheat, Essex and Kent, red, 68s. to 84s; ditto, white, 75s. to 92s; Norfolk and Suffolk red, 72s. to 84s; ditto, white, 84s. to 92s. per qr.; rye, 50s. to 52s.; grinding barley, 36s. to 38s.; distilling ditto, 39s. to 41s.; malting ditto, 42s. to 46s.; Lincoln and Norfolk malt, 65s. to 70s.; brown ditto, 56s. to 64s. Kingston and Ware, 6s. to 70s. Chevalier, 74s. to 78s. Yorkshire and Lincolnshire feed oats, 28s. to 31s.; potato ditto, 31s. to 33s.; Youghal and Cork, black, 25s. to 28s.; ditto white, 29s. to 32s.; Sligo, brown, 25s. to 27s.; Galway and Limerick, 25s. to 27s.; potato ditto, 29s. to 32s.; Dublin and Belfast, 29s. to 31s.; Scotch feed, 29s. to 31s.; potato ditto, 31s. to 33s.; beans, 40s. to 46s.; Harlings, 42s. to 46s.; pigeon, 42s. to 46s.; tick beans, new, 34s. to 38s. Arrivals this week in Mark Lane:—Wheat, 5720 qrs.; barley, 940; oats, 1720; flour, 8400 sacks. Duty on foreign wheat, 10s. per qr.; barley, 5s.; oats, 2s.; beans, 4s.; peas, 5s.; flour, 3s. per cwt.

The Mark Lane Express says:—Wheat, 79s. 4d.; barley, 41s. 4d.; oats, 24s. 3d.; rye, 49s. 3d.; beans, 42s. 8d.; peas, 43s. 9d.

The Baltic Mercury says:—Wheat, 79s. 4d.; barley, 41s. 4d.; oats, 24s. 3d.; rye, 49s. 3d.; beans, 42s. 8d.; peas, 43s. 9d.

The Irish Farmers' Gazette says:—Wheat, 79s. 4d.; barley, 41s. 4d.; oats, 24s. 3d.; rye, 49s. 3d.; beans, 42s. 8d.; peas, 43s. 9d.

Liverpool Corn Trade.—The arrivals of grain and flour this week are moderate. The demand for wheat is limited, and prices are barely supported. Barley and oats are in fair request, at full prices. Beans and peas are held for more money. Flour is in steady request, at full rates.

Provisions.—For all kinds of Irish butter, the demand is to a sluggish state, at previous prices. The Belgian and Dutch markets are very quiet, and prices are barely supported. Hams are in good request, at full rates. Bacon is in steady demand, at full prices. Lard is in fair request, at full quotations.

Smithfield (Monday).—The supply of beasts on sale was moderate, and the weather favourable for the disposal of the beef trade ruled steady, at fully Monday's prices. Amongst the stock were 240 oxen from Spain and Portugal. Sheep—the numbers of which were limited—sold readily, at extreme rates. We had an improved inquiry for calves, at an advance of 2d. per 8 lbs. The supply was very limited. Pigs sold on former terms. Milch cows met a steady sale, at £14 to £19 each, according to their small calf.

Per 8lbs. to sink the offals:—Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime Scots, 4s. 4d.; and prime cows, 4s. 2d. to 4s. 4d. Coarse and inferior sheep, 4s. 2d. to 4s. 4d.; second quality ditto, 4s. 6d. to 4s. 8d.; prime coarse woolled ditto, 4s. 10d. to 5s.; and prime Southdown ditto, 5s. 2d. to 5s. 4d. Coarse and inferior calves, 4s. 4d. to 4s. 6d.; second quality ditto, 4s. 8d. to 5s.; prime small ditto, 5s. 2d. to 5s. 4d.; large ditto, 4s. 8d. to 5s. Coarse and inferior pigs, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s.; prime ditto, 4s. 2d. to 4s. 4d.; and large ditto, 4s. 2d. to 4s. 4d.

Per stone of 14lbs.:—Inferior beef, 2s. 8d. to 3s.; middling ditto, 3s. 4d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 4d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 4d. to 4s. 4d.; prime ditto, 4s. 6d. to 4s. 8d.; small ditto, 4s. 8d. to 5s.; middling ditto, 5s. 2d. to 5s. 4d.; prime ditto, 5s. 6d. to 5s. 8d.; veal, 4s. 0d. to 5s. 4d.; small pork, 4s. 4d. to 5s. 0d.

ROBERT HERBERT.

THE LONDON GAZETTE.

TUESDAY, FEBRUARY 7.

WAR-OFFICE, FEB. 7.

17th Light Dragoons—Major-General Sir M. Thomas to be Colonel, vice Major-General T. W. Taylor, C.B.

Royal Foot—Major-General T. E. Napier, C.B., to be Colonel, vice General W. Carr, Viscount Beresford, G.C.B., deceased. 60th Lieut.-General Viscount Gough, G.C.B., to be Colonel in Chief, vice Viscount Beresford, G.C.B., deceased.

OFFICE OF ORDNANCE, FEB. 6.

Royal Artillery—Brevet-Col. W. Reynolds to be Colonel, vice G. Browne; Capt. J. M'Coy to be Major, vice Reynolds; Lieut. and Sub-Lieut. Forster to be Captain, vice M'Coy; First Lieut. G. S. Robertson to be Second Captain, vice Clerk; Second Lieut. R. Keate to be First Lieut. and Sub-Lieut.

ADMIRALTY, FEB. 3.

The following additional promotions have been taken on the Reserved List, consequent on the removal of Admiral James Carthew to that list, with a pension:—Vice-Admiral F Temple, as the Reserved List Half-pay List, to be Admiral on the same list; Vice-Admiral H. Gordon, on the Reserved Half-pay List, to be Admiral on the same list.

BANKRUPTS.

T. J. BURTON, B. I. GABB, and G. F. CHANTLEY, Wigmore-street, Cavendish-square, church furnishers, commission agents, and dealers in works of art. J. CROFTS, Threadneedle-street, stock and share broker. H. HARRIS, Wolverhampton, builder. E. BALDING, Bishopsgate-street Within, and Hackney, tailor. H. HARRIS, Mark-lane, City, and Royston, Essex, corn merchant. J. HARRIS, Bishopsgate-street Without, and Hexham, woollen draper. A. SCHWABE, Leeds, merchant. T. TURNER, Manchester, silk manufacturer and flour-dealer.

SCOTCH SEQUESTRATION.

C. CAMPBELL, Campbeltown, draper, grocer, and baker. C. H. FAWCETT, Dingwall, merchant and innkeeper.

FRIDAY, FEBRUARY 10.

WAR-OFFICE, FEB. 10.

BENTLEY, Bouverie-street, Fleet-street, bookseller and publisher. J. R. GIBSON, Bishopsgate-street Within, and Hackney, wine merchant. W. F. ANSELL (Ansell and Co.), Birmingham, manufacturing jewellers. J. WRIGHT, Ashton-under-Lyne, Lancashire, and Manchester, manufacturer. J. WRIGHT, Manchester, joiner and builder. J. CARTER, Gloucester, ironmonger and tin-broker. J. COX, formerly of Bristol, but late of Cheltenham, Gloucestershire, and Wimbledon, Surrey, builder

THE ILLUSTRATED LONDON NEWS

No. 669.—VOL. XXIV.] SATURDAY, FEBRUARY 18, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE NEW REFORM BILL.

If the Emperor of Russia be capable of calm and serious reflection, he cannot but be struck at the present moment with the spectacle presented by Great Britain. Though about to enter into a war, such as has not for nearly forty years taxed her energies and resources; though within the last few months she has equipped and made ready for sea fleets of a magnitude and splendour unprecedented in her own history or in that of the world, this great country enters upon the consideration of the question of Parliamentary Reform, as if no such mighty events were in progress, and as if she had no other objects to engage her attention but the consolidation and improvement of her laws, and the elevation of the moral and social condition of her people. Such a spectacle might well make the most haughty and ambitious of despots pause ere he incurred the risk of a conflict with a power of resources so magnificent, and of dignity so majestic. Lord John Russell, speaking in behalf of the Ministry, so far from thinking the time inopportune for the introduction of the new Reform Bill, takes a true measure of the greatness of his own country, and the weakness of her opponent, when he refuses, even on the threshold of a war with Russia, to postpone his long-promised scheme of Parliamentary improvement. Were we about to measure our strength with France, or with the United States of America, a calamity so deplorable would compel us to devote all our energies to the struggle, and to adjourn until happier times the consideration of every question that did not involve the national safety and honour. But a war with Russia is not of the same importance, the more especially when we have an actual ally such as France, proximate allies such as Prussia and Austria, and probable allies in every other State of Europe. Both the people and the Government have gaged and probed the Russian war and all its consequences, and show their estimate of it by proceeding with their new Reform Bill as unconcernedly as if no such event were about to disturb them.

Those who consider a further Reform in Parliament to be unnecessary will, of course, object to its introduction at a time of war. But such an objection from such a quarter is of no real weight. It would have been raised with equal earnestness in a time of peace. If Reform be unnecessary, it is inopportune either in peace or war, but if it be necessary, no time—unless

A TURKISH SCHOOL FOR TEACHING THE KORAN.—(SEE NEXT PAGE.)

A TURKISH INN.—(SEE NEXT PAGE.)

it be one of actual peril to life, property, and independence—can be improper to consider it. The opposition, therefore, should the bill be proceeded with, will probably assume the shape of hostility to the measure itself, and not to the period of its introduction. There is no great and overwhelming demand for Reform at the present time, as there was in 1830 and 31. Large sections of the people have not gone mad about it; and do not, as in former days, consider the amendment of the representation as a panacea for all possible evils that can afflict the state. The first Reform Bill, and the repeal of the Corn-laws, swept away whole armies of discontents and grievances. The people know that the Constitution is not perfect, and that the working of our representative system is not, in all respects, what it ought to be, either to satisfy the theory or the practice of free government. Nevertheless, we enjoy a greater amount of solid and useful liberty than is to be found in any other state or country of the earth; and constitutions infinitely more perfect, *upon paper*, have failed to procure for the nations which adopted them one tithe of the advantages which the venerable fabric of British liberty has secured to every class of the people. For this happy state of things we are partly indebted to the fact that, for the last twenty years, Reform has been continuous, and also to the happy accident that the people are prosperous. Wise statesmen look to the future as well as to the present and the past. Lord John Russell foresees that the day may come when unfavourable seasons, deficient harvests, and the derangement of trade and industry, may change our prosperity into adversity, and prepares himself accordingly. It is when food is dear, and employment not to be had, that a large portion of the English people devote themselves to politics. Addicting themselves to the study by the glare of burning towns, or of consuming corn-ricks, they imagine that a reform in the constitution of Parliament is to provide them with a fair day's wages for a fair day's work, and to eradicate all the diseases of the body politic. It is at such times that the anomalies and defects of the parliamentary system are painfully apparent to the merest tyros in social science, and that the voices of Hunger and Despair join in the angry demand for Parliamentary Reform. Lord John Russell desires to anticipate such demands as these, by effecting the reform of proved abuses, at a time of social calm and general prosperity.

The measure is by no means a small one. Many of its details were foreseen, because in any scheme of Reform they were inevitable. The disfranchisement of small boroughs containing less than 300 voters and 5000 inhabitants, should have been effected by the first Reform Bill Lord John Russell only completes his own work by depriving them of their privilege; yet, as the voters in these small places were, as individuals, quite as much entitled to the suffrage as the same class of persons in larger and more thriving towns, the author of the new Reform Bill has acted with justice in giving them a county vote as a compensation for the borough vote of which public policy has seen it necessary to deprive them. As long as numbers are considered a title to representation, it was an anomaly that places containing from three to five hundred voters, and less than ten thousand inhabitants should elect as many members to the British Legislature as such great towns and cities as Liverpool, Manchester, Edinburgh, and Glasgow. It, therefore, will excite no surprise in such boroughs as are included in Lord John Russell's Schedule B, that they are henceforward to return but one instead of two members to Parliament. If such a change excite dissatisfaction in the localities more immediately affected, public opinion in other parts of the country will, on the contrary, consider it not only a wise, but an essential alteration. The distribution of the sixty-six seats which will thus have to be disposed of seems to be equitable. To enfranchise such important places as Kensington, Birkenhead, Staleybridge, and Burnley, is to recognise the growth of new towns as an element in the British Constitution. The additional members that are to be given to several of the most important counties, and division s of counties, and to such places as Southwark, Manchester, Birmingham, Bristol, Bradford, Leeds, Liverpool, Sheffield, Wolverhampton, and Salford, can surely excite no party objections, or be disapproved of by any sound politician. There may be a difference of opinion as to the appropriateness of the selection in some cases. We are surprised, for instance, that the Gorbals of Glasgow, containing—with Tradeston, Kingston, and other adjoining districts—nearly 80,000 inhabitants, has not been considered as deserving of the franchise as Birkenhead or Burnley; or why the thriving and splendid city of Glasgow itself, with a population of nearly 400,000 has not been considered as worthy of an additional member as Birmingham or Leeds. But it is possible that Lord John Russell is not bigotted in favour of all the details of his scheme, and that if the bill proceeds this Session, it will be amended in these and similar particulars. The House laughed at the idea of enfranchising the Inns of Court, but for our parts we can see nothing laughable in the matter. The educational franchises are far too few, and we can anticipate no results but good ones from giving to the legal profession the right of representation in Parliament. There are, no doubt, abundance of lawyers in that assembly; but lawyers do not sit there as the representatives of lawyers, but of the ordinary voters in counties and boroughs. For the same reason that we approve of the enfranchisement of the Inns of Court, we rejoice that Lord John Russell proposes to enfranchise the University of London.

Like every project of Parliamentary Reform, the new bill deals with two branches of the subject. It is not only a question of places, but of men, and takes cognisance, not only of the franchise, but of the suffrage. In the latter respect the views of Lord John Russell are just and comprehensive; and, if the bill should become law, no honest and industrious man need clamour in vain for admission within the pale of the Constitution. Every kind of facility will be afforded him for acquiring the rights of citizenship. If he be not qualified by the rental of his house, by his assessment to the Income-tax, or by the amount of annual salary or wages—either of which is sufficient to admit large classes of voters—a new door will be opened to him, if he choose to enter by it. Any man, though devoid of other qualification, may possess the privilege of a vote if he be a graduate of a British University, or if he possess, and have possessed during three years, the sum of fifty pounds in a savings bank. Those who may be excluded from the suffrage under these circumstances will have to blame themselves, and not the Constitution. It will say but little for their social status, for their industry, or their prudence, if no exertion they can make shall provide them the enjoyment of a right so widely and so variously admitted.

The most distinguishing, if not the greatest, feature of the bill remains to be mentioned. An attempt is to be made to secure, in certain cases, the representation of the minority. In counties, divisions of counties, and great towns or cities returning three members, the simple expedient of only allowing each voter to record votes for two candidates will have the effect of enabling the minority to carry the third member. We confess ourselves unable to discover or to invent a valid objection to this proposal. We have left ourselves but little space to dilate upon one important auxiliary to the measure—the repeal of the Statute of Anne, which renders it necessary for any member accepting office or emolument, under the Crown, to vacate his seat. There is much to be said in favour of, and in opposition, to the working of that enactment. We shall, doubtless, have future occasion to advert to it. In the mean time, the reasons adduced by Lord John Russell for proposing a change seem likely to recommend themselves to the favourable consideration of the House and the country. Upon the whole, the new Reform Bill, whether destined to be carried this year, or to be postponed to a future period, will remain a durable memorial to the fame of Lord John Russell. It is the crown and completion of his first great work. It will neither disappoint by its littleness nor startle by its audacity, but will commend itself to the gratitude of friends and the respect even of party opponents. It is a broad, an equitable, and a safe measure, which will strengthen the foundations of British liberty; and, could it be carried during the present Session—of which, however, we have but small expectation—will afford materials to some future Macaulay for one of the most gratifying pages in British history.

SKETCHES IN TURKEY.

A TURKISH SCHOOL FOR TEACHING THE KORAN.

A TURKISH School of the above description is infinitely more noisy than a similar establishment in Europe; for all are occupied in reading aloud the Koran, which is supposed to comprise all that is necessary for guidance in this world and salvation in the next. The students do not occupy their time with a diversity of letters, but are principally confined to a knowledge of the Koran, and its commentaries, and the pronunciation appropriated for all the words of this book, which is accounted holy by all Mahommedans.

The Koran is usually divided into thirty sections, each subdivided into four parts: these divisions are for the use of the readers in the royal temples, or in the adjoining chapels, where the Emperors and great men are interred. There are thirty of these readers belonging to every chapel, and each reads his section every day; so that the whole Koran is read over once a day in every mosque or mausoleum.

From the limited range of study in the schools and *medressees*, or colleges, it follows that literature, science, and the arts are still in their infancy among the Turks. The principal branches of education are grammar, rhetoric, Persian and Arabian poetry, with the logic and philosophy of the Dark Ages. History, geography, and mathematics, are completely neglected. Baron de Tott, being desired to confer with the chief of the Turkish geometricians, asked them how many right angles there were in the angles of a triangle. The boldest of the State mathematicians, after due deliberation, learnedly replied, that it *depended upon the size of the iron that bound it!*

To make up for this utter ignorance of the exact sciences in the Turkish system of education, judicial astrology is held in high estimation by all ranks; and their physicians are merely pretenders to supernatural skill. In Constantinople there is an officer called *Munedjim Bachi* (or Chief of the Astrologers), who is consulted on all occasions which relate to the health and safety of the Sultan; and also as to the particular day or instant when any important public business is to be undertaken.

These unsophisticated seminaries are generally held in the open air; where, sheltered from the sun by a simple awning, or in the deep shadow of lofty trees, the scholars sit upon the ground cross-legged, like so many young tailors, getting their portion of the Koran with incredible volubility, and casting furtive glances at the master, who, seated on a rug, enjoys his *chibouk* in dreamy gravity; while his assistant, with cane in hand, stands ready to bastinade the soles of delinquents' feet: for thus, in Turkey, they apply that species of punishment which in England is administered to another part of the body.

Such is the system of education pursued at Turkish schools, where the master endeavours to instil into the wayward minds of his pupils knowledge of which he is, perhaps, himself ignorant. It is not, therefore, to be wondered at that even Turkish Ministers of State, who are frequently taken from the dregs of society, should be unacquainted with the statistics of their own country, and that their knowledge of the governments, the diplomacy, and the relations of European states should be very superficial.

A TURKISH INN.

A Turkish road-side inn is generally a very primitive place. In its performance it never exceeds the promise of its name; the visitors or customers establish themselves equatingly on the floor, as the group are seated round the table in the Illustration upon the preceding page. The refreshments are chiefly coffee and tobacco; and the pipe is to be seen in every party. The customers in the picture are of the better class of travellers; and the group of three appear to be discussing with such earnestness as to warrant us in supposing the subject to be the knotty points of "the Eastern Question." The Engraving is from the Sketch-book of a British officer.

FRENCH PURCHASES OF FOREIGN CORN.—The *Moniteur* publishes a report to the Emperor from Marshal St. Arnaud, Minister of War, on the purchases of wheat which he was authorised by decree to make abroad for the army, in order not to increase the demand of corn in the French markets. From this report it appears that 500,000 quintals of wheat, or nearly 700,000 hectolitres (the hectolitre is rather more than 2½ English bushels) have been purchased abroad, 300,000 quintals of them in London; that notwithstanding the high price of corn, the price of the kilogramme of bread obtained from the foreign wheat will not exceed 32c for 1853, and 32c. for 1854; and that, compared to what the expense would have been if the wheat had been purchased in France, the total saving will be 6,060,000 fr. at least. The Minister concludes his report by praising in high terms the ability and discreteness with which the purchases were effected by the house entrusted with the operation.

MAIL SERVICE BETWEEN DOVER AND CALAIS AND OSTEND.—A tender has been accepted for the performance of the mail service between Dover and Calais and Dover and Ostend, by a private company. The contract is concluded for a space of four years, commencing from the 1st of October next, at the rate of £15,0.0 per annum, of er which it may be determined by either of the contracting parties giving twelve months' notice.

EXTRAMURAL CEMETERIES.—The report of the St. Pancras Rural Board states that the sum of £18,289 has been laid out in the purchase of land at Finchley. Contracts for building two chapels and making the main roads have been entered into, to cost £10 464. The laying out the ground, draining, fencing, &c., is computed at £17,144 more. The board have already borrowed £25,000 upon the land, and now require a further sum of £12 900. The parish will receive in return, by the twenty years' payments from the parishioners their proportion towards the chapels, &c., and from the sale of the residue of land for building purposes, £7000, so that the total sum chargeable to the rates will be £30,960. This is proposed to be paid by forty half-yearly or twenty yearly instalments; and for which a halfpenny on each rate will be sufficient.

GENERAL POST-OFFICE.—The Lords of the Treasury have consented to appropriate the fund arising from unclaimed money orders, and from unclaimed property in dead letters, to the payment or part of the premium on the policies of such of the officers of the Post-office, in any part of the United kingdom, as may insure their lives. The fund now amounts to £1800 a year, and there is an accumulation from past years of about £16,000, which is also to be applied to this purpose.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Several Russian families have left Paris, and are at Brussels *en route* for Russia. The Princess Lieven is among the number; her salon has been closed since the departure of M. Kisseleff.

The Court and official fêtes, notwithstanding the threatening aspect of affairs, have become more numerous than ever, and are almost the only ones of any importance that take place. MM. Fould, Pescatore, Lebœuf, &c., have given brilliant balls; the Princesse Mathilde has followed the example; and the ex-Roi Jerome gave a grand dinner, which is the commencement of a series of banquets. The Emperor so constantly takes occasion to express his desire that the high functionaries of the State should entertain frequently and magnificently, and his dissatisfaction when they fail to do so, that there is no doubt many more will follow in the wake. The *bals costumés* at the Tuileries will take place on the 18th and 27th; as it was desired that those who did not choose to appear in fancy dresses should return their invitations, a certain number have been sent back.

Great preparations are being made for the *bal costume* of the Tuileries, to take place on the 18th. The dresses are being prepared, the quadrilles rehearsed, and, in short, the topic, for the moment, occupies the place of the war and everything else. It appears not yet decided whether the Emperor is to appear in costume or not. The Empress is, it is reported, to wear a Circassian dress; but we do not guarantee the fact. The Ministers will be in the costume of Sully and the other *seigneurs* of the time of Henri IV., and the Generals will wear the uniform of that grade in the time of Henri II. Such, at least, is the statement given out. Four quadrilles are arranged, and in rehearsal—the Mythological, the *Mousquetaires*, the *Gardes Françaises*, and the Hungarian.

The second grand ball is to be given at the Hôtel de Ville on the 21st inst.

The new five-franc pieces of gold have just been brought out; they are the same size as the silver four-sous pieces, but thicker, and are very well struck.

The most tragical events, caused by the fluctuations of the Bourse, are occurring here with a frequency the most awful. The week before last as many as four or five suicides were known to have taken place entirely resulting from those operations. Among the most melancholy was that of a young man of high family and large fortune, married with in a few years to a lady with whom he lived on the most happy terms, and by whom he had a son. Driven to distraction by his losses, he blew out his brains, and was brought home a corpse to his wife.

Valenciennes and Lille have formed an institution which cannot, we trust, fail to produce desirable results in a moral point of view. This is the establishment of a free association for the observance of rest on Sundays and fête days. A similar measure is in preparation at Orleans.

An *émeute* of some gravity took place at Perigueux on the subject of another rise in the price of bread. It was in vain that the *maire* endeavoured to induce the crowd to disperse, that he arrested some of the most prominent among the groups; and that the *préfet*, in his official costume, appeared and attempted to conciliate the complainants by assuring them that the *chantiers* of the railroads would shortly be opened, thus providing well-paid labour in abundance to the workmen. His discourse failing to produce the slightest effect, an armed force was called in to clear the place; but a second assemblage was formed the following evening, which was with some difficulty dispersed. Several arrests took place on both occasions.

One of the most celebrated notorieties of the period, the Abbé de Lamennais, has been dangerously ill, so much so, as to cause great alarm for his life. Perfectly aware of the gravity of his position, he sent for two friends, his executors, and dictated to them his instructions that he should be buried among the poor, and with the same ceremonies, or rather want of ceremonies, as the poor; that no memorial, not even a simple stone, should mark his grave, and that his body should be carried directly from his residence to the cemetery, without being taken to the church. Every attempt was made by those about him to induce him to alter this decision, and we are credibly informed that certain persons used every means short of violence to persuade him to disavow some of his works, but without result. A considerable change for the better has, however, taken place in the health of the invalid, and his ultimate recovery is now looked for.

Two steam-vessels have, on the same day, achieved the enterprise deemed a few years since impossible; but effected, for the first time, last year by the *Sole* proceeding up the Seine as far as Paris. One of these vessels, the *Laromagnère*, ar exceeds the size of either the *Omnibus*—which accompanied it, and which is intended to carry passengers between Asnieres and Chouy-le-Roi—or the *Sole*. The vessel is of 150 horse power, and the cargo consists of upwards of 400 tons of merchandise. The *Lamorignère* was built at Bordeaux, and is to carry on the service of merchandise between Rouen and Paris during the periods of high water, and of steam-tug when the water is low. Much curious interest is excited by the arrival of this vessel, and crowds are daily collected at the port St. Nicholas to examine it.

A new society has been formed in Paris, entitled "La Société Zoologique d'Acclimatation," for the purpose of importing into France, and acclimating, for this and for other northern countries, such foreign animals as may be rendered useful or agreeable for the purposes of agriculture or amusement. The plan is one which merits, and will no doubt receive encouragement.

The Theatre de la Palais Royal has met with a serious loss in the person of one of its most popular actors, Sainville, whose comic powers must be remembered by the frequenters of the St. James's Theatre. Sainville, placed as clerk in a mercantile house, felt the vocation for the boards so much stronger than that for pounds, shillings, and pence, that he began by spending his evenings in acting at a certain little theatre then existing in the Place Beadoyer. His employer, deeming such pastime inconsistent with his diurnal duties, took the first opportunity of requesting him to discontinue his attendance at the office. He then engaged himself in a strolling company; where, being seen by M. Dormeuil, his talents were immediately recognised, and he was engaged at the Palais Royal, where he created, during his career, as many as 286 *rôles*. For many years Sainville suffered acutely from disease of the heart (the immediate cause of his death), and gout, but such was his courage and perseverance, that, constantly, in the midst of the most intense pain, he performed the comic scenes which called down peals of laughter from the audience, without betraying a particle of his sufferings. These at last became so severe, that he was obliged to go to the Pyrenees, where it was hoped his health would be sufficiently re-established to enable him return to the theatre; but in vain; he expired at Pau, at the age of forty-eight. A new opera, the music by Meyerbeer, the *livret* by Scribe, lately received at the Opéra Comique, has been stopped for the present by the Censeur, as containing a portrait of Peter the Great, the court, and country, too flattering to be considered by any means *à propos* in the present crisis. It is said, however, that the *Censeur*, not feeling itself wholly competent to give a final decision in so delicate a matter, has referred to the Minister; who, in his turn, has submitted the question to the *Chef de l'Etat*. The appearance of Bressant, late of the Gymnase, at the Français, has been greeted with almost unqualified applause in the "Femmes Savantes," and "Mon Etoile," a little vaudeville of Scribe. The Emperor and Empress attended the representation. The Théâtre Lyrique is giving an opera-ballet, entitled "Les Etoiles," in which a new dancer M. Chapuis, has great success.

Alphonse Karr, the *spiritual* journalist, who has replaced his *Guêpes* by a weekly *feuilleton* in the *Siècle*, is unfortunately so ill, as to be obliged to spend the remainder of the season at Nice.

THE WAR.

THE FLEETS IN BEICOS BAY.

The *Triton*, despatch steamer, which left Beicos Bay at three p.m. on the 2nd of February, and the Golden Horn at nine on the same night, reached Valetta harbour on the 6th instant, bringing despatches for England from Lord Stratford de Redcliffe and from Vice-Admiral Dundas, which were forwarded next day to Marseilles by the *Vectis*. When the *Triton* left Constantinople, the combined fleets were still at anchor at Beicos, except the *Firebrand* and *Samson* (English), which left on the 27th January to await, at the entrance of the Euxine, the *Retribution* and *Sone*, which left on the 28th. These four powerful steam-frigates have orders to proceed to the offing of Sebastopol, there cruise for twenty-four hours (very much like defying or rousing the bear in his den), and then return to Beicos and report proceedings. Rear-Admiral Sir Edmund Lyons was under orders to proceed on the 3rd and 4th February, with the steam force of both squadrons, for the purpose of conveying a number of Turkish steamers and transports conveying 10,000 troops, gunpowder, and other warlike stores, to Batoum.

The *Cornelia* arrived at Malta from Marseilles with despatches for Constantinople from London and Paris on the 4th inst., and having on board General Sir John Burgoyne, Inspector-General of fortifications and military defences, with an aid-de-camp, Captain Cootie, of the 11th Hussars, Captain Fuller, of the 12th Lancers, and Colonel Arderon, of the French Engineers; besides several other distinguished officers of the French army, who all went on in the same vessel the same day.

THE ENGLISH FLEET WANTED IN THE BLACK SEA.

The English merchants at Trebizond have addressed a note to the English Ambassador at Constantinople, praying for the energetic protection of the English navy in the event of an attack from the Russian fleet. They state that the English colony of Trebizond is numerous and flourishing; that its commercial transactions surpass the yearly amount of thirty millions, and that in consequence of the return of the squadrons to the Bosphorus the city may be attacked by the Russian ships, thereby exposing them and the inhabitants to a disaster like that of Sinope.

THE RUSSIAN FLEET AT SEBASTOPOL.

The St. Petersburg journals contain a communication, the object of which is to declare, that in causing the Russian fleet to return to Sebastopol on the day after the visit of the *Retribution*, Prince Menschikoff had only followed the rules and usages observed in that sea from time immemorial, and wholly irrelative to the actual situation (i. e. to the letter conveyed by the *Retribution*. This note explains that the bad state of the sea at this time of the year, and the fear of finding the harbour blocked up with ice, has made it a principle in the service never to leave the harbour in January or February, and not even till the 15th of March.

CAPTURE OF AN ENGLISH STEAMER.

Private letters from Sebastopol state that the English steam-boat *Haydn* (query, a steam-boat carrying English colours), which had run aground, had been seized by the Russians, in conformity with the orders issued at the commencement of hostilities, the *Haydn* having Turkish troops on board.

THE WAR IN ASIA.

The news from the Caucasus comes down to January 18. Prince Woronzoff was still ill. Schamyl had received in safety the arms, ammunition, and supplies sent him by Turkey, as well as a certain number of officers to instruct his men. It was said that a Polish legion was to join Schamyl from Smyrna.

A letter from Trebizond, of the 26th ult., mentions that "3000 Russian troops of the Uruzuhet corps went out on the night of the 19th and posted themselves behind a bridge near Cheffketil, intending to surprise that fortress. The Seraskier, Selim Pacha, having been informed of the movement, ordered them to be attacked at five in the morning by a portion of his troops. The combat lasted five hours. The Russians lost more than 2000 slain and dangerously wounded.

ANOTHER ATTACK BY THE RUSSIAN SQUADRON.

The *Journal de Constantinople* of the 29th ult., gives the following account of the attack made by the Russian ships on the fort of St. Nicolas (Chef-ketil):—

According to letters from Batoum, which reached Constantinople on Thursday last, the Russians, on the 6th, made a fresh attack on the fort of Chef-ketil, with five sail-frigates, and were vigorously repulsed by the Turkish troops. The Russians fired from 4000 to 5000 balls, without ever touching the fort, which is well protected, from its admirable position. The Turkish artillerymen lodged a hundred cannon shot in the hulls of the Russian vessels, which were at length obliged to retire, after taking their most crippled vessel in tow. On the same day, several Russian corvettes and other vessels showed themselves in sight of Batoum, but soon after retired, without making any hostile manifestation.

The date assigned by the letters in question to this attempt is worthy of remark. It is said to have taken place on the 6th. The combined fleets only entered the Black Sea on the 3rd; and it is known that several frigates were detached to Sinope, in order to accompany the Turkish convoy to Batoum. This port is situated very near Chef-ketil. How, then, did they not hear of the attack of the fort by the Russian squadron? If this attack took place at the time mentioned, it was impossible that the Russian squadron could have known of the allied fleets having actually entered the Black Sea.

THE RUSSIAN FLEET IN THE BALTIC.

Letters from Copenhagen of the 6th inst., call attention to the fact that the equipment of the large fleets of men-of-war, lying in the harbours of Helsingfors and Cronstadt, is daily being proceeded with, and that seamen are repairing to them from all quarters. The winter is mild, and these fleets, it is said, can be sawn out of the ice and put to sea at a very early date. No time should be lost in sending our fleet over to seal them up, before it be too late.

THE RUSSIAN SQUADRON IN THE CHINA SEAS.

The Russian squadron, it appears, is still in the China Seas. Under the circumstances it is reported that the Admiralty have ordered the *Fox*, 49, frigate, to remain on the station, and Rear-Admiral Sir George Lambert, K.C.B., will return overland to England. In the absence of the *Fox*, the Russian squadron would be more than a match in size of ship and force, for the largest man-of-war we have there is the *Winchester*, 50, the next-to-last ship; and the only other frigate is the *Sybille*, 50. With the exception of the *Winchester*, 24, the rest of the squadron are small vessels. Rear-Admiral Sir James Stirling goes overland by next mail steamer to succeed Sir F. Pellew, in the *Winchester*. It is not at all unlikely that he may have the honour of capturing the Russians.

THE RUSSIANS AT RIO.

The Admiralty have not lost sight of the fact that there is a heavy Russian frigate at the present moment on the Brazils station, superior in force to anything that we have there, and their Lordships have determined to send out a ship of sufficient strength to prevent any possible mischief. It appears that this Russian frigate is now at Rio, where the few British vessels of war that we have there would become an easy prey in the event of hostilities. The *Trident's* machinery is in such a state that not more than three knots can be got out of her—in short, she is almost useless. The *Centaur's* boilers are leaky, and will not hold water. The *Vixen* is under repairs; and the *Star*, 8, quite rotten. The *Pique*, 40, fitting at Devonport, will, it is said, be sent to look after this Russian.

THE CZAR'S PATERNAL GOVERNMENT IN WALLACHIA.

The atrocious measures recently adopted by the Russian Generals in the Principalities are said to have produced general exasperation. The peasants in the district of Mehedienz had risen against an order commanding men, women, and even young girls, to be employed in the compulsory labour. The villagers at Isvoela having refused to obey the order publish d in the *Wallachian Moniteur*, the General sent a detachment of 200 Cossacks to chastise them. The unfortunate people defended themselves courageously, but, having no arms, they were overpowered, and nearly all murdered. A few who escaped gave the alarm in the neighbourhood. All the inhabitants of the adjacent villages, to the number of 3000, fell upon the Cossacks during the night, and exterminated them. The Russian General was preparing to avenge his loss in the most brutal manner, and to march against the villagers with his brigade. The Russians, moreover, having consumed all their own provisions, had seized upon every description of food belonging to the inhabitants, so that the majority of the latter are reduced to a state of starvation.

THE WAR ON THE DANUBE.

The latest accounts from Orsova are to the 8th, and from Bucharest to the 4th inst., up to which dates no movement of much consequence had taken place. According to all accounts the Russians do not seem well to know what they are about. On the 28th and 29th ult. there was a general movement *en avant*, and several villages were occupied by the troops; then orders were given to abandon these, and the headquarters were to be removed to Slatina; next, General Soimlders gave an opinion, and other orders were to be issued; and, finally, on the 1st inst., General Anrep was recalled to Bucharest, and General Lüders was installed as his successor. Some letters speak as though the attack might begin any day, weather permitting; while others affirm that it is postponed to the beginning of March. The prevailing impression seems to be that the Russians cannot venture to attempt anything against Kalafat until further reinforcements arrive, and as to their crossing the Danube, it begins to be rumoured that Austria, in spite of her neutrality, would strongly object to it.

Advices of the 3rd, from Odessa, state that the van of the 6th army corps, which left Moscow some months ago, passed the northern frontier of Bessarabia on the 31st ult., under the command of General Skobelityne. The reserve corps under General Tcchodaieff will not be able to follow for some weeks, but still the troops in Bessarabia have received orders to enter the Principalities. The same accounts say that no decisive events will occur until the end of next month, when the Emperor will probably arrive at the seat of war. In the month of March there is to be a general conscription, and the 80,000 recruits, with the invalids, will maintain tranquillity in the interior of Russia, while the garrisons are fighting the battles of the Czar in the Principalities "against the Turks and the Anglo-French auxiliary troops."

Since the 29th the garrison of Kalafat, previously about 20,000 strong, has been reinforced by ten battalions of foot, one regiment of horse, and twelve pieces of ordnance. The number is now estimated at 50,000 men. A considerable Turkish force also stands at Widdin. The present swollen state of the Danube makes it very difficult to maintain the communication between Widdin and Kalafat; and, should an attack take place before the subsidence of the river, the Turks would fight with the consciousness that they must conquer on the spot, as there could be no retreat.

Information of the 2nd from Galatz, states that on the 1st two Turkish steamers and eight gun-boats, commanded by Abdal Halil Pacha, had made a reconnoissance from Matchitze towards Ibrailn. They tried to get from the branch into the main stream, the Russian batteries saluted them at the fork, to which they replied, but retreated after the firing had lasted nearly an hour. Another Turkish reconnoissance was made at the same time from Isakcha against Reni.

The rumour of Prince Gortschakoff's removal from the command of the Russian army is contradicted by the Berlin papers. Letters from Bucharest state that on the 29th ult., Prince Gortschakoff made a grand reconnoissance of the position of Kalafat. The party approached so close to the place as distinctly to observe all the preparations making for its defence. Several cannon shots from the Turkish entrenchments also fell close about them. On the following day the Prince was still at the Russian head-quarters at Boleschti; he had, however, made all his preparations, it was said, for returning to Bucharest on the 31st. The reason why the Russians have not yet ventured to undertake anything important again Kalafat, is said to be the very sufficient one that "an attack on it would be attended with many serious difficulties." Something has been said of an attempt to turn the position of the Turks by taking the route of Nissa, but this could not be done without a violation of the Servian territory. This point is stated to have been touched on by Count Orloff at Vienna, but without success. The Russians now begin to see that the Turkish army is something better than the wild undisciplined mob of fanatics they took them for; that they have something like the valour of a European army; and that Omer Pacha is, at all events, not very much inferior to the Duke Sortschakoff. This conviction may explain the precaution which the various corps of the Russian army observe in their movements, and the impatience with which reinforcements indispensable to resuming hostilities are waited for. The difficulty is all the greater because the Ottoman General keeps the Russians in a state of incessant alarm in the direction of Oltenitza and Giurgevo; and it is not at all improbable that he may attempt something against Bucharest if the enemy should weaken that point by moving towards Kalafat. The Ottomans do not seem to repose on the laurels they have already gathered on the Danube.

THE RUSSO GREEK CONSPIRACY.

The latest accounts from Constantinople contain further particulars of the conspiracy in favour of Russia. It seems to have extended its ramifications through Bulgaria, Bosnia, Montenegro, Albania, Thessaly, and Epirus, and even to Athens, Corfu, the Ionian Islands, and the Morea. Constantinople; also to Smyrna, Samos, and other islands of the Archipelago; but the head-quarters were at Bucharest and Athens. At Constantinople, seven persons, mostly ex-employés of the Russian Government, carried on the principal direction of the plot. Amongst them was a person of the name of Kalmucki, formerly director of the Austrian Post-office at Pera, who left with Prince Menschikoff, but shortly afterwards returned incognito, and who, it appears, found refuge on board the Austrian war-steamer in the Bosphorus, together with some other Russian conspirators. Baron Celasec, one aide-de-camp of General Lüders; an officer of the name of Kanskoff; and two Greek papas (priests), who had travelled through all the above named Turkish provinces, carrying the correspondence and directions of the chiefs of the conspiracy. Letters were found on these persons which throw much light upon the ramifications of the plot, and which compromise some of the Legations at Constantinople, especially that of Austria. Three other men have since been arrested—natives of Bosnia, who stood under Austrian protection. After the first interrogatory, the Turkish police went to their homes in order to seize their papers. They, however, found the Austrian guards already there, who had collected them, and were carrying them away, on the pretence of suspecting these men of having been engaged in manufacturing false bank-notes. The Turkish police in vain declaimed at such unnecessary good offices, and could not get back any of the papers that had been taken away from the houses of these men, who stood under the protection of Austria. The commission appointed to investigate the affair very properly insists on examining these papers. These Bosnians are well known to have been in frequent and secret communication with the *employés* of the Austrian Embassy, of whom they used to receive money. It were of great importance that the trial of the four-and-twenty accused in this conspiracy should be published, as it would throw much light upon the neutrality of Austria in the Turco-Russian differences.

The French Minister at Athens has been instructed to communicate a note to the Greek Government relative to the encouragement given at Constantinople to the parties implicated in the conspiracy in favour of Russia, and that the Greek Government has been informed that if measures are not at once taken to prevent such encouragement from being given to the disaffected subjects of the Porte, that Athens and other towns of the kingdom of Greece will be occupied by French garrisons.

THE CHANGE IN THE TURKISH MINISTRY.

Letters from Constantinople confirm the telegraphic despatch of last week as to changes in the Turkish Cabinet, but qualify the former report by adding that no political importance is attached to it. The Seraskier, Mehemet Ali, the Sultan's brother-in-law, has been removed, and his place supplied by Riza Pacha, who was a short time ago named Capudan Pacha; whilst Kaiserli Achmet Pacha, the chief officer of the arsenal, had been raised to the vacant capudanship. According to one account, there had been serious differences among the Turkish Ministers as to the mode of conducting the war in Asia, where things seem to have been managed badly. As the ex-Seraskier was very popular, some fears of a disturbance were felt at first, and it was deemed advisable to occupy the streets of Constantinople with a military force. This almost looks as if there had been some truth in the first rumour of Russian influence.

MILITARY PREPARATIONS AT CONSTANTINOPLE.

General Baraguay d'Hilliers returned to Constantinople on the 28th, from his excursion to Buyuk Tchekmedje and Kara-Bournou. This little expedition is with reason considered to be connected with the transport of French troops to Turkey; and the object of the French General's visit was undoubtedly to have a look at the country, in case of their arrival. General Baraguay d'Hilliers has visited the country from thirty to forty miles to the east of Constantinople, near the ruins of the celebrated wall of Athanasius. It is now thought that a French force will be placed from sixteen to eighteen miles distant to the east of the capital, behind the formidable natural position which is there, and which was well known and appreciated by the ancients, in order to be enabled to arrest the progress of a Russian army which should be advancing victoriously on the capital, after having forced the Balkans.

This position has been considered impregnable by all who have visited it. To the left it leans on the bridge called Buyuk-Tchekmedje (great bridge), 400 yards in length, and constructed across a canal, which proceeds from an inland lake, formed out of the waters of the river Karasou, and which runs into the Sea of Marmora; whilst to the right it is supposed by Kara Bournou, on the Black Sea.

The *Festo Napio* states, upon the authority of a Belgrade letter of the 27th ult, that French engineers were marking out a camp for 40,000 Frenchmen at Bujuk Ceskmedze. This place is about six hours distance from Constantinople.

THE RUSSIAN CRUSADE.

The idea prevails among the Russian soldiers that they are on their way to the Holy Land, to rescue it from the hands of infidels, in which flattering term are comprised not only the Mussulmans, but the English and French. On the march of one of the early corps into the Principalities, a party of soldiers halted at a house, to beg for a draught of water. After their thirst was satisfied, they asked with great simplicity, but with all apparent sincerity, whether they were far from Jerusalem, for which they were on their march; and that they were told they would reach it in one or two days more.

COUNT ORLOFF'S RETURN TO ST. PETERSBURG.

The Russian diplomatist had an audience of the Emperor of Austria on the 7th inst., to take leave; and, next morning, he left Vienna for St. Petersburg. The *Austrian Correspondence* of the same day contains the following diplomatic article on Count Orloff's mission:—

Count Orloff has again left our capital, after a sojourn of ten days. The distinguished reception which this statesman, honoured with the special confidence of his Emperor, has met with from the Imperial Court, is the best proof how highly the Majesty the Emperor values the maintenance of that friendly understanding which has so happily subsist between both these Sovereigns. If even, therefore, the Vienna Conference did not find the communication, which Count Orloff was charged to make to the Imperial Court, in reply to the conciliatory propositions made to the Russian Government, so far to correspond with the same as to enable them to forward it for acceptance to the Porte, but was rather of opinion that the final decision of the Russian propositions should be left to the respective Governments; yet, on the other hand, the consultations held with the Russian de egate do not exclude the hope that means will yet be found to bring about a satisfactory solution of the Oriental question. We recognise, therefore, in the mission of Count Orloff not only a proof of the friendly disposition which his Majesty the Emperor of Russia entertains for the Imperial Court, but we also trace in the same a new manifestation of the value which the Emperor Nicholas attaches to the maintenance of the peace of the world.

Like Lord Aberdeen, the Austrian journal still clings to the hope that "means will yet be found to bring about a satisfactory solution of the Oriental question."

THE INTENTIONS OF PRUSSIA.

The views of the Berlin Cabinet on the question of neutrality are thus expressed by the *Wochenblatt*. –

Prussia had to give her vote on this European question, like the other great Powers. By so doing she relinquished her position of a total neutrality. As Russia has rejected the propositions of the Four Powers, there can be no doubt that Prussia stands on principle in opposition to Russia. If Prussia acted in concert with the other Powers to obtain a pacific solution, she was bound at the same time—considering the diversity that existed between the interests of the Powers—to consult, above all things, the interests of Prussia. Now, what do the interests of Prussia demand? Prussia has the right to co-operate actively when a great European question is cancelled by war. When the question is to defend European interests, to combat the preponderance of one sole Power, Prussia cannot remain a passive, inactive spectator; it is rather fitting that she should throw the whole weight of her power into the balance on the side of right and of the general interests of nations. To do so, she must have free action; and if she reserves that action, it does not follow that she wishes to remain inactive, but it results that she will act when her interests demand it. And to be enabled to act it is necessary that she should not be bound by engagements with any party.

THE RUSSIANS AT BRUSSELS.

General Jomini, who has had to leave Paris in consequence of the rupture of diplomatic relations with Russia, has arrived at Brussels, and intends to reside there for some time.

It was reported last week that the Princess Lieven had arrived at Brussels from Paris on account of the war premature. Although about to take her departure for the Belgian capital, she was still in Paris at the beginning of this week. The *Ami de la Religion* says:—

The Princess Lieven gave a grand *soirée* a few evenings since. She announced to her friends that, although she had not received the slightest intimation either from the Russian Embassy or from the Czar, that party would, doubtless, be her last. The Russian Princess manifested an intention, future to Russia. M. de Rodachcvi, who was present, replied to her "Madame, if that is the case, no change will take place in our habits, we will come and see you at Brussels as we do in Paris. We will procure leisure-trains on the Northern Railway. It will be, besides, a good affair for the Company." This is what may be called French gallantry.

SPAIN.

Our accounts from Madrid, to the 9th inst., state that Ministers held frequent councils, at which important resolutions were adopted. The political prisoners were still kept in close confinement, and not allowed to communicate with their families or friends. A letter from Cadiz states that the Minister of Marine had ordered Captain Juan de Dios Ramon Izquierdo to proceed to Mobile, U.S., to purchase an assortment of masts of all sizes for the royal navy.

PORTUGAL.

The *National Gazette* of Berlin, of the 10th, says:—"We understand that the young King of Portugal will visit, in the spring, several of the Courts of Europe, commencing by London, and then proceeding to Brussels, here, Dresden, and Vienna. His Majesty will return home by Munich, Brussels, and Paris.

AMERICA.

The steam-ship *Niagara* arrived at Liverpool on Monday night, having sailed from Boston on the 1st inst., and from Halifax on the 3rd.

The United States mail steam-ship *Ohio* had arrived at New York from Aspinwall, with one million of dollars' worth of gold dust. The health of the Isthmus is good. By the news from California we learn that Governor Johnson had reached San Francisco that Walker and his Filli busteros had been relieved by the reinforcements that had sailed from California to aid him and his band.

Another destructive fire had occurred at New York, on the 30th ult. The scene of the catastrophe was No. 81 Pearl-street, and property to the amount of 200,000 dollars destroyed.

The Quebec Parliament House, with the buildings attached, were entirely destroyed on the morning of the 1st February. The fire was not discovered in the north wing until some time after it had broken out, notwithstanding that a sentinel was on duty at the spot. When it was observed it had obtained too great a power to be subdued. Part of the valuable library was saved, but the Historical Society's library and apparatus were almost entirely destroyed.

AUSTRALIA.

The steam-ship *Great Britain*, from Australia, arrived in the Mersey on Tuesday, having made the passage in seventy-two days. She sailed from Melbourne on the 4th of December, and has brought 199 passengers and 165,000 ounces of gold. She is also the bearer of the first shipment of cotton from Sydney. The political news received by her is not of much importance.

A TURKISH ENTHUSIAST.—Letters from Constantinople mention the arrival in that city of a youth of from fourteen to sixteen years of age, accompanied by several hundred warriors. This youth, who is a native of a remote country in the interior of Asia Minor, is the offspring of a woman five years of age, and on that account his mother looked upon him as destined for great things—a feeling which seems to have been shared by her neighbours and all the province. The child was taken to the mosque. On the night arm an Arabic verse has been inscribed, signifying "Thou will die a martyr;" whilst, on the left, the happy prophecy, "Thou will be a great man," is carved in Eastern characters. This youth was from his birth destined for a military career, and generally regarded with feelings of respectful veneration by his fellow-countrymen. He has now grasped a standard, and, surrounded by his followers, is burning to go to the war. His youthful appearance, whilst riding through the streets of Stamboul at the head of his followers, has given rise to the report that a heroine *à la Jeanne d'Arc* had started up for the cause of the Crescent. A warrior-woman has, however, appeared in Anatol a, surnamed Karak-haa (or the Black Girl), and she is the leader of some thousand horsemen.

THE PEACE DEPUTATION TO THE CZAR.—Letters from St. Petersburg mention that the three gentlemen composing the deputation from the Quakers of London, and who reached that city about the middle of January, were received, and were to leave the capital on the 31st of that month, on their return to England.

Printed and Published at the Office, No. 198, Strand, in the Parish of St. Mary-le-Strand, in the County of Middlesex, by JOHN CROCKFORD, of No. 5, Clarence-terrace, Regent's-park, in the County of Middlesex, Publisher, this 18th day of February, 1854.

DEPARTURE OF THE RUSSIAN AMBASSADOR, M. KISSELEFF, FROM PARIS.

DEPARTURE OF BARON BRUNNOW FROM LONDON.

We last week illustrated the departure of his Excellency from Chesham House, on Wednesday, the 8th instant. We now engrave the Farewell Scene in the hall of the mansion, where Baron Brunnow and the Baroness, and their daughter, took leave of their household, left for the South-Eastern Railway; and in the evening arrived at the Ship Hotel, Dover. On Thursday Baron Brunnow, with the other members of the London Embassy, arrived at Brussels, where it was understood that he would await the arrival of instructions from Count Nesselrode. Later accounts, however, state that he has gone to Darmstadt, and that he is likely to remain there for some time.

DEPARTURE OF M. DE KISSELEFF FROM PARIS.

In our Journal of last week we detailed the circumstances of the departure of the Russian Minister from Paris. Our Artist has represented the scene at his Excellency's Hotel, in the Faubourg St Honoré, which he left on Monday week, for the Northern Railway, *en route* for Brussels.

The *Moniteur* announced the departure in the following brief terms:—"The Minister of Russia left Paris on Monday. M. de Kisseleff was accompanied by all the *personnel* of the Legation. There now only remains at Paris the Consul-General Ebeling, charged with civil and commercial affairs.

The following, which has appeared in the *Débats*, will be read with interest:—

It is stated that, before leaving Paris, M. de Kisseleff drew up a circular to inform all his countrymen residing in France of the resolution which it was his duty to come to in execution of the orders of the Emperor, and to say that, in view of certain eventualities, it was the intention of the Emperor that they should have to quit France. The departure of M de Kisseleff has caused great regret, not only among the political personages who had relations with him, but also in the whole of the society in Paris. He was universally loved and esteemed, and his company was sought after on account of the amusing and safe character of his society. He was an essentially obliging man, most anxious to render service, and avoiding with the greatest care all that could annoy any person. In society he paid no attention to political parties, being intimate with every one, and he was everywhere liked. M. de Kisseleff, though still young, is certainly one of the oldest members of the diplomatic corps of Russia, and one of those who can boast of the greatest number of years of uninterrupted service. He first came to Paris in August, 1829—a few days before the formation of the Polignac Ministry

THE RUSSIAN AMBASSADOR, BARON BRUNNOW, LEAVING CHESHAM HOUSE.

He had been sent here as Secretary of the Russian Embassy, of whic Count Pozzo di Borgo was then the head. But that was not his com mencement, for he had already served in Persia and elsewhere. Nearly twenty-five years have since elapsed, during which time have taken place the revolutions of 1830 and 1848. M. de Kisseleff witnessed these, and beheld the consequences of them successively de velop themselves before him. In 1837 Count Pozzo di Borgo, who had ceased to be Ambassador at Paris, having been sent in a similar capacity to London, asked for M. de Kisseleff as his first secretary, which was accorded him. This latter returned to Paris in 1840, with the title of Counsellor of Embassy; and soon after, Count Pahlen, the Ambassador, being re-called to St. Petersburg, M. de Kisseleff was placed at the head of the mission as Chargé d'Affaires, which post he still held when the revolution of February broke out. In 1849 or 1850 he was raised to the rank of Minister Plenipotentiary, and in 1857 received the title of Envoy Extraordinary. M. de Kisseleff had, consequently, passed among us half of his life, and it may be affirmed that it is in France that he has gone through the various degrees of his career. We shall be contradicted by no one when we affirm that he loves France and the French by taste and by gratitude, and that he saw with real sorrow the difference which arose between the two Governments relative to the Eastern question. He did not at first foresee all its consequences, and he long hoped that European diplomacy would succeed in overcoming all difficulties. We believe that his personal efforts have not been wanting for that object. If the storms which obscure the political horizon clear away, the numerous friends of M. de Kisseleff at Paris, after having accompanied him with their regrets, will be all happy to see him again.

Since his arrival at Brussels, it is said, that he has held long conferences every day with Count Creptowitsch, the Russian Ambassador at that Court, and the latter personage has had frequent interviews with the King of the Belgians. Other accounts state that M. de Kisseleff has been confined to his hotel by indisposition ever since he arrived at Brussels, but that is said to have been published merely to allay suspicion as to his movements.

Another *on dit* regarding M. de Kisseleff is given in the *Cologne Gazette*, which states that the Prussian Government has granted him permission to send certain large trunks by the Berlin Railway, without their being opened—a favour granted to few persons. These trunks, it is alleged, contain many important diplomatic secrets, and are not deemed sufficiently safe in Belgium.

ALEXANDRIA.—THE "HIMALAYA" STEAM-SHIP.

(From a Correspondent.)

After the bustle and excitement attendant upon the outfit and despatch of the Egyptian troops and naval force, who have lately shown that renown is a characteristic of the modern Egyptians as well as those of ancient days, we have here settled down again into our wonted routine of business life. Public works are again progressing rapidly; foremost among these we may mention the railway—forty miles of which are expected to be open for the conveyance of the mails and passengers by the Indian route in March. Mr. Stephenson has recently arrived here in his yacht *Titania*, and is at present at Cairo.

It is not the intention of the Egyptian Viceroy to send more troops to Constantinople at present, above 30,000 soldiers have already joined the Sultan's army from this country. For the last eight or nine days we have had a succession of gales, with heavy squalls of rain and very cutting wind. The Prussian frigate *Gefion*, 42 guns, Commander Schroeder; a corvette, and the 12-gun steamer *Dantzic*, are at present in port here. The monster ship *Himalaya* came in here on the 2nd, after the quickest passage on record from Malta. The Governor of Alexandria, Ibrahim Eiff Bey, and Heireddien Pacha, Minister of Commerce, several of the European Consuls, and principal merchants and bankers of Alexandria, visited the *Himalaya*; she left in the evening for Malta, with 190 passengers and the Indian and Australian mails, which arrived at Suez on the 31st ult.

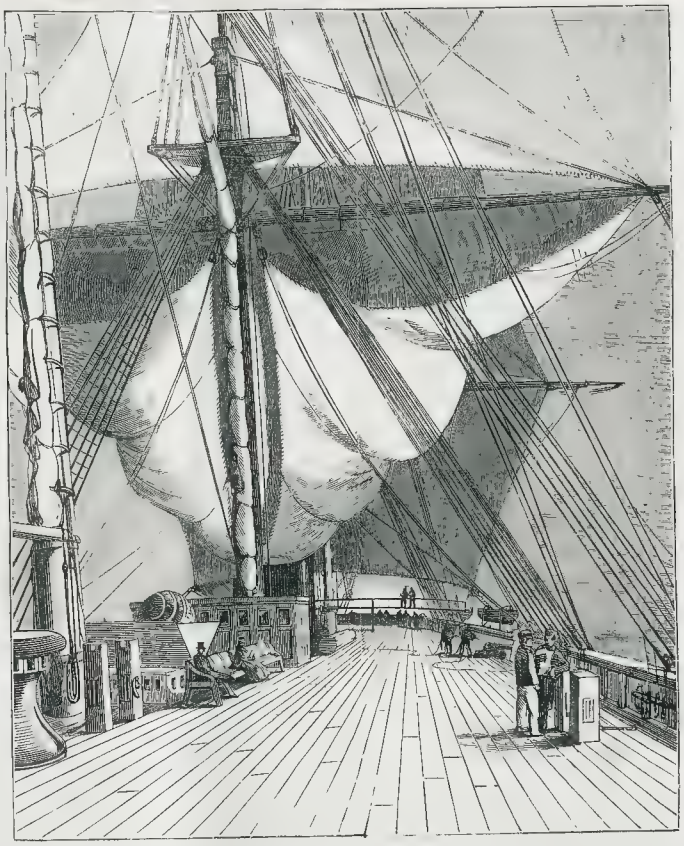
The *Himalaya*, Off Malta, Feb. 7, 1854.

The success of this gigantic vessel is now established. Combining great and unrivalled speed, with splendid accommodation for passengers, and ample stowage for the largest freight, she resembles more a floating city than a ship. On her outward passage, she performed the run from Gibraltar to Malta, a distance of over 1000 miles, in 7¼ hours—the quickest run on record; while from Malta to Alexandria, a distance of 830 miles, she accomplished in 6½ hours, beating the quickest run before made by 7½ hours. During the outward voyage she made 9 knots against a strong gale of wind and heavy head sea. Her best run in 24 hours was 350 miles, with plain sail set, her speed being for some hours 16 knots, or over 18½ English miles.

Returning from Alexandria, she reached Malta in 68 hours, with a continuance of head winds and sea; making 10 knots against a very heavy head sea and strong breeze, and 13½ knots with light head winds and sea.

Her measurements within and without, her palatial saloon and sleeping-cabins, her promenade deck, in short, her multitudinous appliances, the power and speed of her engines, all have been told; and I shall only add that there seems now to be no question as to the superiority of the screw, in vessels of large tonnage, over the paddles, as regards speed, economy of space, and fuel.

(This fine vessel is stated to be engaged for the embarkation of troops *en route* for the seat of war in the East.)



VIEW OF "THE HIMALAYA" STEAM-SHIP, FROM THE QUARTER-DECK.

IRON HOUSE BUILDING.

In our Journal for April 30, 1853, we engraved one of the most remarkable constructions which had, to that date, issued from Hemming's Manufactory of Iron Houses, Clift-house Works, Bristol. In the accompanying Sketch, we obtain a general view of this large establishment, taken at the time the subject of our previous illustration—an iron-built Church or Melbourne—occupied a prominent position in the grounds.

With the growth of the establishment great improvements have been made in the structures themselves. There is greater boldness of style in the buildings, which gives room for some admirable arrangements for ventilation. Foremost in the picture is a villa with rooms twelve feet high, Venetian blinds between the tops of the windows and the ceiling, and hanging window over the door in entrance-hall.

Next is a lofty, two-storied hotel, to make up thirty beds. We understand that a repetition of this structure was ordered for a Welsh town.

A store, 37 by 25 feet, and 12 feet high, fitted up with shelves and mahogany counter, might deceive a practised eye upon entering: the ceiling, with its moulding running round it, looks so like veritable plaster and white lime. The whole is without a nail, and might be packed up in a few hours.

Another of the structures now in progress is a Female Emigrants' Home, intended by the benevolent proprietor as a gift to the colony. It comprises a large common room; four bed-rooms, with twelve comfortable berths in each; detached lavatories and water-closets on one side; on the other, cooking and store-houses, with a separate dwelling for the superintendent—the whole with the best arragements for ventilation.

A church, ready for shipment, and of much greater capacity than its predecessor, towers above the surrounding erections.

It is difficult to describe the impression produced by the busy scene at Clift-house: a town rising and falling in a week; but the *debris*, instead of unsightly heaps of rubbish, are trim packages lying about in all directions, waiting only to be shipped.

We admired much an imposing range of stores, built for a London merchant, two stories in height, with balconies and verandahs, 100 feet in length by 37 in depth. Such a construction removes everything of a "makeshift" character from these buildings, and justly entitles them to take place with those others whose foundations are laid upon parchments and stamps.

CLIFT-HOUSE IRON BUILDING WORKS, NEAR BRISTOL

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE EASTERN QUESTION

The Marquis of CLANRICARDE sub-mitted the following the notice he had a ready g on for the d scuss on on the following evening

That an humble ad be presented to her Most Gracious Maje ty, praying her Majesty will be graciously pleased to direct that further information respecting our relations with the Court of St. Petersburg and also respecting the war between Turkey and Russia, may be laid before the House.

THE BALTIC POWERS.

The Earl of CLARENDON, in reply to the Earl of Ellenborough, said there would be no objection to produce the papers relative to the neutrality of the Baltic Powers.

HOUSE OF COMMONS—MONDAY.

THE BLACK SEA FLEET.—COUNT ORLOFF'S MISSION.

Mr. LAYARD regretted to find from the Blue Book on the Eastern question, and from more recent intelligence, that some disagreement had taken place between our Ambassador at Constantinople and Admiral Dundas. It was stated the other evening, by the member for Roscommon, that her Majesty's Ambassador had ordered the fleet into the Black Sea—that Admiral Dundas had returned to Constantinople and that on his way he met a steamer bearing despatches to him from the Ambassador, requesting him to remain there; but he declined complying with the instructions, and proceeded into the Bosphorus. In explanation, Lord J. Russell stated that the conduct of the Admiral, although the Ambassador had asked for an explanation of it, would be found to deserve the approbation of the Government and the country. He (Mr. Layard) conceived that this answer conveyed a very severe censure on her Majesty's Minister at Constantinople. He therefore begged to ask the noble Lord whether the fleet had been placed under the orders of her Majesty's Ambassador, or whether the Admiral had instructions of a different nature, opposed to those given to the Ambassador? Touching Count Orloff's mission, also, he wished to know whether the Government had any official information of its purpose; and, if not, who was in fault for the omission?

Lord J. RUSSELL replied to the first query, that both the Ambassadors and the Admirals had done their duty; the former politically, in sending the fleets into the Black Sea; the latter professionally, by returning when they found the harbour of Sinope unsafe, and the weather tempestuous. No reflection was meant to be cast on Redcliffe when meant by Government Respecting the mission of Count Orloff, that envoy had only terminated his negotiations (which had entirely failed) on the 6th and England had no direct concern in the business. Some despatches relating to the matter had arrived that afternoon; and, when properly selected and prepared, would be laid, at the discretion of the Government, before the House.

RATIONS OF THE TROOPS.

Mr. SIDNEY HERBERT, in reply to a question from Lord W. Graham, explained the regulations now in force regarding the stoppages and provisioning of the troops. The sum formerly paid by each soldier for his rations was to vary with the market provisions, being at the maximum: said, during the war, that amount was always reached. Of late years the cost had diminished; and, although prices were again enhanced, it had been determined to make the stoppage a fixed sum of 4½d., accompanied with much improved bread of quality, especially as the bread supplied, and subject to periodical revisions; so that in no case could the Government profit at the expense of the soldier. During the present year it was estimated that the extra expense to the country caused by this boon to the army would be from £1[illegible] to £130,000.

THE LIVERPOOL FREEMEN.

Mr BRIGHT presented a petition from 3000 householders of Liverpool, praying for an investigation into recent election proceedings in that borough, where votes were sold at from £2 to £60 a piece, and contests had cost £40 000 a side; and urging the disfranchisement of the whole body of freemen electors, as being generally open to the charge of corruption.

THE NEW REFORM BILL.

Lord J. RUSSELL, in introducing the proposed measure for the Reform of Parliament, said he should not follow the custom of some honourable members in seeking to magnify the character of the measure he was about to submit. Its nature had, perhaps, been unduly exaggerated; for the name of a Reform Bill took men back to the days when the House deliberated amid the fires of Nottingham and Bristol. It was in a very different temperament that they might now proceed to improve and complete the former measure. Briefly alluding to the inquiries that impending the measure inopportune, he cited precedents set by Pitt, Fox, and Grey, in which proposals for parliamentary reform were introduced at far more critical periods; and added, that the prospect of war with Russia did not, under present circumstances, so alarm his apprehensions as to induce him to believe that projects of internal reform and improvement should be therefore abandoned, or could not be considered with calmness and security.

Much, Sir, as I abhor war (said the noble Lord), much as I deplore the evils of war, I confess I do not look on a war with Russia with anything like that apprehension which some gentlemen do (Cheers). I cannot conceive that we should not be able to proceed with the means necessary for carrying on that war with vigour—and, if carried on at all, it ought to be carried on with vigour (Loud cheers)—and at the same time have full opportunity for deliberation in our domestic matters which appear to us most to require attention (Hear, hear). Sir, I cannot but think that this apprehension of our being unable to attend to the consideration of questions of this character from the approach of war, if war should be unhappily declared to be inevitable, and, at the same time, to increase our exertions and our efforts to oppose the forces of Russia, appears to be one of those thoughts which are declared to consist of only one part wisdom and three parts cowardice (Laughter). I am not one of those who share in that apprehension.

He then recapitulated the chief changes in the system of representation affected by the act of 1832, and after pronouncing a short eulogy on the practical measures which had been passed by the Reformed Parliament, addressed himself to the immediate object of his present motion. This he characterised as an attempt to secure the more full representation of the people at large. For this purpose he intended to deal with three primary points on which the first Reform Act appeared to be deficient or erroneous.

DISFRANCHISEMENT OF SMALL BOROUGHS.

First came the principle of the disfranchisement of small boroughs, which he now proposed to extend. Not, however, on the ground which some Reformers take, that there ought to be an equal number of electors in every place returning members to Parliament.

My belief (said the noble Lord) is that, although you might get a full you would hardly get a fair representation of the people without some variety of the conditions of our system of representation. If anybody will look at the history of the last few years, he will see that, during the contentions which existed on the subject of Free-trade, if he take up an account of a meeting in some agricultural county, he will find that great applause was given to those who pointed out the selfishness and cupidity of manufacturers, and attributed their efforts to those feelings. On the other hand, at meetings held in great manufacturing towns, the landed aristocracy were held up to odium, and their monopoly of power was denounced as the great cause of evils. But there remained a great number of people who neither listened to nor believed in either of these representations. A great portion of the people—consisting of many of the most moderate and sober part of the country—justly thought that the landed aristocracy were useful to the country—that they constituted an important element to the free and settled institutions of the state; and they thought, on the other hand, that the country derived the greatest benefits from the industry and spirit of the manufacturing class. If nothing but large cities and counties were represented, you would want that mediating principle of the Constitution which is derived from those who are not sent by either of those classes. I think, likewise, it would be impossible to do not say whether it would be desirable to do—for even that would be impossible, in the present social state of this country, with our laws of primogeniture in the great properties that exist, to prevent the influence of great proprietors in counties and boroughs. At the time of the Reform Bill I said there was a certain small number of boroughs which would still have a sufficient number of electors to enable them to make an independent election of members to serve them in Parliament. I find the number of electors which I then stated I thought all boroughs should have at the least, to enable them to send members to this House, was 300. I find, however, there are several boroughs whose constituencies fall below that number. I find, likewise, that there are boroughs which, although they have more than the number of 300 electors, are yet of a population which is not considerable—in fact, falling below 5000. I should propose, therefore, to deal with the boroughs which are in that position (Hear). Going on to some of the boroughs which are not so small, I find there is a certain number of other boroughs which have less than 500 electors, and others which have a population of less than 10,000, though more than 5000 (Hear, hear). Such are the cases I propose to deal with those boroughs by taking away one of their members (Cheers). The number of boroughs—taking the double return of electors and population, which is one under 500 electors, and the others which have 500 electors and a population of 5000—are 19, an I they send 29 members to the House (Hear, hear). The number of boroughs which will come into the next table, which have either less than 500 electors or less than 10,000 population, are no fewer in number than 33. Now, therefore, if the former boroughs were entirely disfranchised, there would be no less than 69 seats by which the number of the House of Commons would be diminished.

REPRESENTATION OF MINORITIES.

The next defect in the Reform Bill, which I have to mention is, that I think it has tended too much to divide the constituencies into opposite camps, so far as they are connected with land or with trade (Hear, hear) I think we have seen what was the case in 1841, when we have seen county members generally exclusively of one party, and members of great manufacturing cities exclusively, likewise, of another party Perhaps I afore I proceed to state the manner in which I propose that the sixty-two seats should be filled up, I should state that I think very great advantage would be derived from a change which has been proposed in bygone days and in part in the present day—I mean the representation of minorities. Of the numbers who have voted at some of the elections for counties, and for some of the great cities, I find that there are two, three, and four thousand who have voted for the unsuccessful candidates; while, perhaps, not more than one hundred, or one hundred and fifty more are to be found on the side of the successful candidates. It appears to us that many advantages would attend the enabling of the minority to have a part in these returns. In the first place, there is apt to be a feeling of great irritation and soreness when a very considerable number of the electors, such as those I have stated, are completely unrepresented in a constituency; and when that is the case, it is obvious that, supposing there be a decided majority of 100 or 500, that majority would, at all events, have two members out of the three, and in the other they would be so close to one in any division which took place. I think, besides, that the adoption of a plan or this sort would have a great tendency in preventing angry conflicts in those places where elections for members of Parliament might take place (Hear).

REDISTRIBUTION OF REPRESENTATION.

I have stated more than once, in answer to honourable gentlemen who complained that there were places of 6.00 or 7000 inhabitants which returned as many members as places having 60,000 or 70,000 inhabitants, that if we were to reform our representation according to the numbers of the people, the towns of 10,000 or 15,000 inhabitants must yield their claim to great consideration to those that had 50,000, or even a million inhabitants. I remember the right honourable Member for Bucks maintaining that argument with great ability, in answer to the proposition which was made in this House during the time he was Chancellor of the Exchequer. It appears to me that that argument is founded in fairness and in justice (Hear, hear). We should propose, therefore, to take population generally as the rule, but to be guided in the instances which I have stated as I have. We take, in the first place, the West Riding of the county of York, which has nearly 800,000 inhabitants, besides the inhabitants of the towns which are represented; and we find in the county of Lancashire, even in the former division of that county, 500,000 inhabitants. We propose to divide these two divisions of the counties, but to each of the divisions we propose to give three members. Proceeding with the counties and towns, we propose to give an additional member to each county or each town which has more than 100,000 inhabitants (Hear, hear). But then we propose that in giving to those places these additional members are to be returned, the electors should vote as they do at present, only for two candidates out of the three, and that when the minority exceeds two fifths of the whole number of electors persons having a right to vote should be enabled to have one of the three representatives which were given. The consequence of this alteration would be to give to the West Riding of the County of York four additional members, and four to the southern division of Lancashire. There would then be, I think, thirty-eight members for the other counties, making forty-six altogether.

ADDITIONAL MEMBERS FOR TOWNS.

With respect to towns having more than 100,000 inhabitants, there are one which come within the category, without including those which the metropolitan boroughs, for we have considered the metropolitan boroughs as forming parts of one great city, and not as separate cities and towns (Hear, hear). There would be, at the present time, eight towns having 100,000 inhabitants to which one additional member would be given; and to Salford, containing upwards of 50,000 inhabitants, one member would also be given, being the only town of 50,000 to which we now require members. We propose also that one member be given to three towns which have more than 20,000 inhabitants, and which are not at present represented; they are Hull, Oldham, Wolverhampton, and Greenock. ("Oh, oh!" from the Opposition benches). Each of these towns contains about 20 000 inhabitants. We then propose to give effect to that proposition which has often been urged in this House—that Kensington and Chelsea should be made into a distinct borough, to which two members should be allotted (Hear, hear).

MEMBERS TO THE INNS OF COURT AND UNIVERSITIES.

There is another kind of representation which has been often spoken of, and to which we propose at least to give some parts of the seats which will be at our disposal. The first which I shall mention of the kind are the Inns of Court (Laughter, and expressions of dissent from both sides of the House). I know that some honourable gentlemen think that already there are a sufficient number of lawyers in the House (renewed laughter); but my persuasion is, that there would be a great benefit, were we put the question to the test in this House—that Kensington and Chelsea should be made into a distinct borough, to which two members should be allotted (Hear, hear).

MEMBERS TO THE INNS OF COURT AND UNIVERSITIES.

There is another kind of representation which has been often spoken of, and to which we propose at least to give some parts of the seats which will be at our disposal. The first which I shall mention of the kind are the Inns of Court (Laughter, and expressions of dissent from both sides of the House). I know that some honourable gentlemen think that already there are a sufficient number of lawyers in the House (renewed laughter); but my persuasion is, that there would be a great benefit, were we put the question to the test in this House—that Kensington and Chelsea should be made into a distinct borough, to which two members should be allotted (Hear, hear).

EXTENSION OF THE FRANCHISE.

I will now advert to what I believe to be a defect in the Reform Act, and one which still more requires to be remedied. Since the Reform Act has been given, a great deal of alteration was made, and a large amount of information was obtained, even after the bill was brought into the House, be one the Government of the day was ready to bring up the bill and on the subject. It was first proposed that there should be a £10 rating. It was thought at one time that a far higher rating ought to be adopted, but ultimately it was reduced to £10 value. Now, I think that, taking that plan of the franchise, and modifying, as we did, all those intricate franchises which then existed, we too much confined ourselves to one species of franchise, and did not make it as comprehensive as it might and ought to be, consistently comprehensive. We propose, on the present occasion, that there should be several branch es, which should be common to counties and towns—that a person who has lived in the same house for a year should be place in which he resides, and should exercise his vote there, whether he be resident in a county or borough returning a member to Parliament. The first of these franchises is that of occupation, which is now the most common franchise in counties and towns. Now, I think that, taking that plan of the franchise, and modifying, as we did, all those intricate franchises which then existed, we too much confined ourselves to one species of franchise, and did not make it as comprehensive as it might and ought to be, consistently comprehensive. We propose, on the present occasion, that there should be several branch es, which should be common to counties and towns—that a person who has lived in the same house for a year should be place in which he resides, and should exercise his vote there, whether he be resident in a county or borough returning a member to Parliament. The first of these franchises is that of occupation, which is now the most common franchise in counties and towns. Now, I think that, taking a year of salary derived from any employment, whether public or private (Hear, hear). The amount of salary stated must, however, be received half-yearly or quarterly, and in no case should persons be included those persons who are paid by weekly wages. I consider that this franchise will bring in a very large body of able and deserving men who are not householders, and who are at present excluded under the description of householders under the existing system. The next franchise which we propose is one of £10 a year derived from dividends from property either in the Funds or in joint stock companies, or in any company's stock (Hear). The third is somewhat similar, though rather higher than that which we proposed two years since—viz., a 40s. payment either of income-tax or assessed taxes within the year. Those who now pay the income tax will be entitled to the vote, and when they lose the vote in consequence of this part of the qualification ceasing, they will receive as a compensation for their loss the benefit of having got rid of the tax (Laughter). We also propose that all graduates of any university in the United Kingdom—saitable means being, of course, devised for compelling persons claiming this franchise to prove their right—shall have the right of voting, because they may be fairly considered as being persons of education and intelligence. We also propose that any person having a deposit of £50 in the savings-bank (Cheers), and having had that deposit for not less than three years, shall be entitled to vote (Renewed cheers).

THE COUNTY FRANCHISE

With respect to county fra nchise, it may be recollected that, at the time of the introduction of the Reform Bill, the Government did not propose to depart in principle from the general provision of our constitution—that a life occupation gave the right of voting in cities and boroughs, tenants should give the right of voting in counties. The "forty-shilling freeholders" were added to by copyholders and others who had, in fact, smaller properties; but, with the exception of leaseholders holding for twenty-one years, it was not at first proposed to vary the nature of the right of voting for counties. But in the course of the progress of the Reform Bill through Parliament, amendments were proposed and carried, by which a fifty-pound copyhold estate obtained the right of voting in counties. I am far from making any objection to the case of fifty pound copyholders; but it will be seen that it entirely changed the character and nature of the county franchise as it had previously existed, and it certainly tended to diminish the power of that class which I have always considered as the best and most independent in this country the forty-shilling freeholders. Were that principle wholly departed from, great opposition was manifested, and many reasons were assigned why the "occupant franchise" should not be extended further. I believe that which is extensively urged to state the number of electors in towns sending members to Parliament. At the same time, I think it would be a very great advantage if those who live in towns who have not the right of sending members to Parliament should yet have in the counties in which they reside some voice in the county elections. We propose, therefore, to adopt the principle embodied in that motion which has more than once been made in this House, that the £10 occupier should have the right of voting at county elections (Cheers from the Ministerial side). But this county right of voting, with the exception of houses being of no value, shall consist in the voter living or residing in it; in all other cases, the building must be at least of the value of £5 (laughter); of course, I mean £5 a year. Suppose the house and land to be occupied by a tenant of the value of £1 or £2, provided the voter resides in that house, he will be entitled to the franchise. But, if the right to vote should be claimed in respect to any other building or that and—select the building in which the voter resides it may be a cattle-shed, or other erection of that kind—then this check shall apply, viz., that the building must be of the value of £5 a year. This, therefore, is the franchise which we propose to give counties for voters, and the House will see that it has a very considerable bearing upon that question of the increase of members which I have stated we intend to propose for counties. Considering the increase of county members which I have stated, we propose that forty-six should be added to the counties; but as these counties will hereafter include all £10 householders, it is proper that the representation of the counties should be so drawn as to [illegible] interest, or to run down the manufacturing interest, are perfectly foolish and absurd, and that there could be no better representation than that which takes into consideration the whole of the great interests of this country (Cheers), and which considers them all as contributing to the glory and prosperity of a great country (Cheers).

THE BOROUGH FRANCHISE.

Now I come to the question of the franchise for the boroughs. It certainly appears to me that since making a £10 franchise so absolutely as we did in 1831, we did not make a sufficient provision for the admission of the working classes into the right of voting (Hear, hear). It was not intended, as has been supposed, that the middle classes should be exclusively the electors in cities and boroughs; but still it was supposed—as has actually taken place—that the middle classes would have a greater portion of the power in their hands than in effect did exist, and have a great influence upon the future conduct of the Parliaments of the country. I do not shrink from saying that I think the extension of the franchise, as I proposed it two years since, was not too large, but too large in its extent. But at the same time I must own that that proposition has been productive of great objections, and that it was generally admitted that it was not to carry into effect, and that it would not obtain that intelligence and independence which it was desirable to secure. We propose to take all householders above £6, on the condition that they possess that qualification for the space of three years, that is, a term of about two years and a half before they are entitled to be placed on the register, and about two years and ten months before they can exercise the right of voting. By this proposition you would not include the mass of the franchise as would include a large number of working men, and which would not procure those who are most remarkable for the steadiness of their conduct, or for the sobriety and regularity of their habits in their trade, and who are, in consequence, enabled to live in houses of a better character than those which are occupied by the great mass of their fellow-workmen (Expressions of dissent).

ABOLITION OF THE RATE-PAYING CLAUSES.

There is one change, however, which we propose to make, both with respect to this new franchise and the existing £10 franchise in towns. According to the old doctrine of representation, persons paying "scot and lot" were entitled to the right of voting. That payment of "scot and lot" extending even to the lowest class of householders, was accompanied with the proviso on, that the payment of "scot and lot," amounting to a certain sum, which came to be the payment of a poor-rate in modern time, was always insisted upon before the voter could go to the poll. This provision was retained in the before the voter could go to the poll. This provision was retained in the Reform Bill for the purpose of ascertaining the solvency and sufficiency of the new class of voters which were then created. But considering that in the case of the occupation franchise in counties, the person who exercises that right must be rated to the poor's rate on a house of £10 a year in rated value, and that in towns he must occupy a house of the rate and value of not less than £6 a year, and must have resided in such house a considerable time before the time of voting, it appears to us that you have in the way a sufficient test of solvency, and that it is no longer necessary to keep in force those checks of the payments of rates and taxes which have been hitherto considered necessary to impose before the party was permitted to exercise the franchise (Loud cheers).

REGISTRATION OF ELECTORS.

Another change we propose is, with regard to the register of electors. We propose that, in future, the register of electors, as revised by the barrister, shall be final as to the voter's right; and that no question shall be allowed to be raised upon it (Cheers). I should, perhaps, explain somewhat more clearly than I have done, that the ten-pound franchise that now exists—which is a franchise of the House is aware, of £10 rated value—we preserve exactly as it is, but with three exceptions. First, with regard to buildings, which are not dwelling-houses, they must be of the rated value of £5 a year. Another change that the payment of rates and taxes shall be no longer considered necessary. It will, therefore, be one franchise, which, in effect, will be the present franchise with the relaxation I have mentioned. Then we propose to add to this the other franchise I have mentioned as to the £10 occupation. Thus, a person having resided in a £10 house for a year would come in as he does at present, and he would be placed upon the register by the overseer; and, in the other case, the franchise will depend upon the occupation of a house of £5 a year rated value, and residence for two years and a half (Hear, hear).

DISFRANCHISEMENT OF FREEMEN.

There is likewise another change, of very considerable importance, which we have to propose, and that is, previous complaints of bribery and corruption which have come up from certain boroughs in the kingdom, it has, over and over again, been represented that one class of the voters was, in fact, those who were corrupt (Loud cries of "Hear, hear"). We inserted in the last Reform Bill a clause in reference to that class of voters and I shall now propose to insert a similar one in the present bill, viz., that freemen, in right of existing interests, freemen shall cease to have the right of voting; and that, in future, no person shall take up his freedom, by birth, service, or otherwise, shall thereby acquire that right (Loud cheers).

VACATION OF SEATS BY MEMBERS ACCEPTING OFFICE.

There is also another change, not necessarily connected with this bill but connected with our scheme of representation, and bearing upon the alterations we propose to make in it. I mean the provision of the Act of Anne, whereby it was enacted that every member of the House who accepts any office under the Crown, to vacate his seat and go to a fresh election. So long as the House of Commons was unreformed, and so long as the House was not elected by the people, this provision might take up no freedom, by birth, service, or otherwise, shall thereby acquire that right (Loud cheers).

VACATION OF SEATS BY MEMBERS ACCEPTING OFFICE.

There is also another change, not necessarily connected with this bill but connected with our scheme of representation, and bearing upon the alterations we propose to make in it. I mean the provision of the Act of Anne, whereby it was enacted that every member of the House who accepts any office under the Crown, to vacate his seat and go to a fresh election. So long as the House of Commons was unreformed, and so long as the House was not elected by the people, this provision might take up no time; but when we proceed to make the House of Commons a real representation of the people, it appears to us that you have in the way a sufficient test of solvency, and that it is no longer necessary to keep in force those checks of the payments of rates and taxes which have been hitherto considered necessary to impose before the party was permitted to exercise the franchise (Loud cheers).

REGISTRATION OF ELECTORS.

Another change we propose is, with regard to the register of electors. We propose that, in future, the register of electors, as revised by the barrister, shall be final as to the voter's right; and that no question shall be allowed to be raised upon it (Cheers). I should, perhaps, explain somewhat more clearly than I have done, that the ten-pound franchise that now exists—which is a franchise of the House is aware, of £10 rated value—we preserve exactly as it is, but with three exceptions. First, with regard to buildings, which are not dwelling-houses, they must be of the rated value of £5 a year. Another change that the payment of rates and taxes shall be no longer considered necessary. It will, therefore, be one franchise, which, in effect, will be the present franchise with the relaxation I have mentioned. Then we propose to add to this the other franchise I have mentioned as to the £10 occupation. Thus, a person having resided in a £10 house for a year would come in as he does at present, and he would be placed upon the register by the overseer; and, in the other case, the franchise will depend upon the occupation of a house of £5 a year rated value, and residence for two years and a half (Hear, hear).

DISFRANCHISEMENT OF FREEMEN.

There is likewise another change, of very considerable importance, which we have to propose, and that is, previous complaints of bribery and corruption which have come up from certain boroughs in the kingdom, it has, over and over again, been represented that one class of the voters was, in fact, those who were corrupt (Loud cries of "Hear, hear"). We inserted in the last Reform Bill a clause in reference to that class of voters and I shall now propose to insert a similar one in the present bill, viz., that freemen, in right of existing interests, freemen shall cease to have the right of voting; and that, in future, no person who shall take up his freedom, by birth, service, or otherwise, shall thereby acquire that right (Loud cheers).

VACATION OF SEATS BY MEMBERS ACCEPTING OFFICE.

There is also another change, not necessarily connected with this bill but connected with our scheme of representation, and bearing upon the alterations we propose to make in it. I mean the provision of the Act of Anne, whereby it was enacted that every member of the House who accepts any office under the Crown, to vacate his seat and go to a fresh election. So long as the House of Commons was unreformed, and so long as the House was not elected by the people, this provision might take up no time; but when we proceed to make the House of Commons a real representation of the people, it appears to us that you have in the way a sufficient test of solvency, and that it is no longer necessary to keep in force those checks of the payments of rates and taxes which have been hitherto considered necessary to impose before the party was permitted to exercise the franchise (Loud cheers).

REGISTRATION OF ELECTORS.

Another change we propose is, with regard to the register of electors. We propose that, in future, the register of electors, as revised by the barrister, shall be final as to the voter's right; and that no question shall be allowed to be raised upon it (Cheers). I should, perhaps, explain somewhat more clearly than I have done, that the ten-pound franchise that now exists—which is a franchise of the House is aware, of £10 rated value—we preserve exactly as it is, but with three exceptions. First, with regard to buildings, which are not dwelling-houses, they must be of the rated value of £5 a year. Another change that the payment of rates and taxes shall be no longer considered necessary. It will, therefore, be one franchise, which, in effect, will be the present franchise with the relaxation I have mentioned. Then we propose to add to this the other franchise I have mentioned as to the £10 occupation. Thus, a person having resided in a £10 house for a year would come in as he does at present, and he would be placed upon the register by the overseer; and, in the other case, the franchise will depend upon the occupation of a house of £5 a year rated value, and residence for two years and a half (Hear, hear).

DISFRANCHISEMENT OF FREEMEN.

There is likewise another change, of very considerable importance, which we have to propose, and that is, previous complaints of bribery and corruption which have come up from certain boroughs in the kingdom, it has, over and over again, been represented that one class of the voters was, in fact, those who were corrupt (Loud cries of "Hear, hear"). We inserted in the last Reform Bill a clause in reference to that class of voters and I shall now propose to insert a similar one in the present bill, viz., that freemen, in right of existing interests, freemen shall cease to have the right of voting; and that, in future, no person who shall take up his

person who is known to be in a position to secure his re-election though he may not be so well suited to the vacant office, instead of one who may be better qualified, but whose re-election is not so certain. That is an inconvenience for which there is, at present, no equivalent benefit (Hear, hear). If the responsible Ministers of the Crown are to appear in the House, and be answerable for the conduct, they ought to be enabled to use the Crown to give any office that may be vacant to such member who in their judgment is most fitted to perform its duties (Hear). It is obvious that many questions may arise in reference to the conduct of a member quite as important as that of taking office, but upon which he is not required to ask the consent of his constituents. For instance, he may totally change his course of politics (loud cheers, and laughter); and though he may, if he thinks it advisable to do so, go before his constituents, whether he does so or not is entirely a matter for his own breast; therefore, I say that this check is not wisely proposed, nor is it productive of any public advantage. We propose, therefore, to repeal that provision altogether, and, as in the reign of William III., to allow of the acceptance of office under the Crown without vacating the seat in Parliament (Hear).

The noble Lord then read the list of boroughs which the bill would wholly or in part disfranchise, and the counties or divisions of counties which would have additional representation.

My belief (said his Lordship, in conclusion) is that it tends to correct inequalities which sooner or later you must correct, and that, in addition to a number of persons of property who send members to this House, you give a greater basis to the representation, you thereby contribute to the strength and security of your institutions, and give the people greater confidence in them (Hear, hear). With these words sir, I will not do more at present than move for leave to bring in the bills.

Mr. H. T. LIDDELL had heard nothing from the noble Lord to justify the bringing forward at such a moment a measure certain to disturb the peace of society, and, if successful, to lead to a dissolution of Parliament at a most critical period, probably in the summer or autumn of the year.

Mr. E. ELLICE and Mr. GRACE severally defended the freemen of Coventry from the charges of bribery or corruption

Colonel SIBTHORP hoped the freemen of Lincoln would look at this bill with the same contempt as he did. He only wished the occupants of the Treasury bench were half as honest as the freemen of Lincoln.

Sir B. HALL thought that the metropolis was not fairly treated in the new apportionment of members.

Mr. J. G. PHILLIMORE objected to the proposal for giving representation to the minority, and suggested its being tried in the House, by letting the minority carry one measure for every three of the majority. He also objected to the repeal of the statute of Anne

Mr. HUME was pleased with much of the bill, but feared it would do nothing towards enfranchising the higher class of artisans.

Mr. DRUMMOND said that the old Reform Act had been a revolutionary measure, and was received by friends and foes as such. He did not blame Lord J. Russell for carrying out his former policy, but he was at a loss to reconcile this measure with language used by Lord Aberdeen The course taken by Lord J. Russell was to separate property from power. The bill was incense to the party Lord John had idolized for twenty-one years—the party who had honestly declared their intention to establish democracy.

Mr J. BALL thought that, considering the numbers and intelligence of the working classes, they were entitled to the franchise, and might, if refused it, take it by dangerous means

Various questions having been asked by members, Lord J. RUSSELL briefly replied:—The number of members for Ireland would be the same as at present, the number for Scotland increased by three only. He thought enough had been done for the metropolitan members, who had the advantage of being near their constituents. He vindicated the mode in which it was proposed to deal with freemen by the opinion in which they were held. He hoped that when the House had the bill before them, it would be dealt with impartially. It had been framed in no party spirit. He totally denied the truth of Mr Drummond's imputations, and asserted that the effect of the Reform Act had been to attach the people more firmly to our institutions. He considered that the proposed bill was at once Liberal and Conservative

Mr. T. DUNCOMBE said that the measure must be judged as a whole, and he believed it would be an excellent bill, but the House must convince the country that they were in earnest, and not listen to evil counsels for postponement.

Leave was then given to bring in the Reform Bill, and that for repealing the statute of Anne.

HOUSE OF LORDS.—TUESDAY.

THE EASTERN QUESTION.

The Marquis of CLANRICARDE, in moving for further information respecting "the cessation of diplomatic relations with the Court of St. Petersburg, and the war which seems imminent," said, his object was to ask her Majesty's Government was not that they had not earlier engaged in war, but that they had adopted measures which necessarily involved hostilities; and that, being now engaged in hostilities, and upon the brink of a great war, he did not see signs of the vigour necessary to bring it to a speedy close The great error which he attributed to them, in the first instance, was, that when they had a full report of the preparations of the Russian Government, and of the indications of the nature of Prince Menschikoff's mission, they did not come to a common understanding with the French Government. He attributed the audacity of Prince Menschikoff's demands at Constantinople to the hesitating attitude assumed by England at that period; and thus Lord Stratford de Redcliffe was placed in a most embarrassing position; for he had to keep up the courage of the Turks on one hand, whilst unable to promise them any assistance upon the other. The moment Prince Menschikoff retired from Constantinople, the time had arrived for coming to a common understanding with France respecting the occupation of the Principalities. With regard to the entry of the fleet into the Black Sea, it was not a correct definition of our position to say, as our Ambassador at St. Petersburg had stated, that it entered with no hostile intentions. It was a sophism to say that, because we would not allow Russia to attack the ships or territory of Russia, we had no hostile intentions towards Russia; especially as we had previously declared that the evacuation of the Principalities was a *sine qua non* of peace. The truth was, we were waging war to resist Russian aggression. Acknowledging the honour and good faith with which the French Government had acted towards us, he was unwilling to embark in such a war without knowing to what limits we were going, and for what objects. These were matters upon which he thought he ought to be given, as the papers left their Lordships totally in the dark with respect to them. England could not engage in a little war with Russia. Our fleet had now returned to the Bosphorus, on the ground that it was unsafe for the ships to remain in the Black Sea. But the Russian fleet was able to keep the sea, and even to undertake hostile acts. This was scarcely honourable to British seamanship; and he must lament a report at Constantinople that the return of Admiral Dundas was owing to the fact, that he had received final instructions to avoid collision with the Russian fleet. He strongly condemned any such proceeding; and he must tell the noble Earl at the head of the Government, the Parliament would never consent to treat Russia now as we might have done seven months ago. Far rashness would never consent to a pitiful and contemptible adjournment of the war, but would insist upon its being prosecuted with vigour.

The Earl of CLARENDON said the object of the noble Marquis appeared to be to disparage the Government, and to create dissension at a moment when unanimity was absolutely necessary. A question had been asked, whether we were at peace or war? This was a most important inquiry, to which it might be difficult to give a distinct answer. We were not at war, because war was not declared, nor were we strictly at peace with Russia. We were in that intermediate state when the desire of peace was just as sincere as ever, but when the hopes of the Government were gradually dwindling away and they were drifting towards war. As his noble friend (the Earl of Aberdeen) had said the other night, so long as war was not declared the maintenance of peace was not impossible. Negotiations might be considered to be at an end, and as a state of war might ensue, he was sure he should not be expected to describe exactly the steps which her Majesty's Government might think it necessary to take in such a state of things. It would be sufficient to say that preparations were being made with vigour and rapidity. He then went over all the facts of the case, from the first appearance of Prince Menschikoff at Constantinople to the entry of the fleets into the Black Sea, and justified the proceedings of the Government at each step, against the allegations of the noble Marquis. He was gratified at being able to state that we had every reason to be satisfied with the conduct of Austria and Prussia, both of which Powers had met the proposals of Russia in a manner becoming their honour and independence. In conclusion, he expressed his conviction that the people of this country would appreciate, now that they had the means of arriving at all the facts, the efforts which the Government had made to preserve peace, and, doing so, he was satisfied they would cheerfully bear whatever sacrifices might be necessary to bring the contest to a speedy and honourable issue

The Earl of ELLESMERE expressed a hope that, as we were about to make a great naval effort, the Admirals in command might not find themselves fettered too much by diplomatic authority.

The Earl of MALMESBURY repeated the opinions he had formerly expressed, that Russia had in the first instance been deceived as to the real intentions of this country, and that there had been a want of identity of action between France and this country, which had lasted till within a very few weeks. The *sine qua non* of the evacuation of the Principalities had always been advised by her Majesty's Government, and it was not even mentioned in the famous Vienna note.

Lord GLENELG expressed his cordial approval of the whole policy of the Government, and deprecated all expressions of doubt as to the firmness and sincerity of the union with France.

Earl GREY said the fault of the Government was in having permitted themselves to be drawn into the original quarrel between Turkey and Russia; and arguments were not wanting to show that they ought to have pursued a more pacific course. Because Russia had done wrong, it did not follow that we should interfere on behalf of Turkey, as we had no treaty to entitle us to do so. But if we said that our interference was required upon grounds of national policy, because it was of European importance to maintain the independence of Turkey. It was bitter mockery to talk of the independence of the Ottoman empire; and he called upon the Government to define what they meant by it. But it was said that Turkey must be maintained as a security against the aggressions of Russia. Now he was unable to concur in the popular apprehensions of Russian aggression—first, because a nation of slaves could never become really formidable; and next, because corruption and population were destroying the efficiency of the public service of Russia. Having dwelt upon the inexpediency of interfering with the affairs of other countries, the noble Earl concluded by declaring that in his opinion the course which her Majesty's Government had entered upon was pregnant with danger.

The Duke of ARGYLL rejoiced that the speech of the noble Lord had been delivered, because, from the facts on which he relied, it was possible to educe the strongest arguments in favour of the policy adopted by the Government. The real issue before the House, however, was, whether peace would have been better secured by what was called more energetic action. Glancing at the circumstances, he argued that the safest measures had been taken to secure this object, both diplomatically and with regard to the movements of the fleet. Nothing had occurred to lead the Government to regret the course they had pursued.

The Earl of DERBY ironically asked what must be the state of that country which was neither at peace nor war, nor yet neutral? Taking the Blue-books, the noble Earl contended that, so early as the 7th January, 1853, the Government had ample information that Russia was preparing military forces to carry out her objects, whatever those objects might be. They had similar information in March, and again in April. It was true that Count Nesselrode's answers to representations on this subject were evasive; but there were the like accounts from our own Consuls and agents in or near the countries where the forces were being collected. The noble Earl the Foreign Secretary had in his possession the fact that Russia was endeavouring to negotiate a secret treaty with Turkey against the Western Powers, when he stated to their Lordships, on the 25th April last, that he had perfect reliance upon the friendly assurances of Russia. And subsequent to this period, had they any reason to believe that Russia would abandon her claims? Again, quoting the Blue-books, he contenced they must have had every reason to expect the contrary, particularly from the despatches of Sir G. Seymour. The Government had characterised the occupation of the Principalities as an act derogatory to the dignity and fatal to the independence of Turkey: but when it occurred did they remonstrate against it, or did they throw upon the Czar the responsibility of war? No, but they mildly expressed their opinion to the Czar's pacific intentions, and that the door would not be closed to an arrangement. Yet at this moment they were also encouraging resistance on the part of Turkey. After the Czar had taken this step, it was not likely that he would withdraw upon such language; but if, before he had ventured upon it, energetic language had been held, the peace which the noble Earl at the head of the Government valued so much might have been preserved. With regard to the prospects of the future, he could not see any hope of avoiding war. On what did Lord Aberdeen rest his expectations of peace? Did he anticipate that the Emperor of Russia would suddenly recede from his position? If he did, it would be the strongest condemnation of the noble Earl's policy, for in such a case, on what ground could he say that his attitude for war ought not to have been taken earlier. He did not blame the Government for having endeavoured to preserve peace, though he did not approve the means they had adopted; but if they were in earnest, and if they were embarking in this war in a manner worthy of the country, and of the justice of its cause, he should, waiving all other considerations, render them all the support in his power.

The Earl of ABERDEEN regretted to say that war was looked upon by some as a kind of pleasurable excitement, and he verily believed that if, by the blessing of Providence, peace was maintained, very great disappointment would be felt by those persons. It was the province of Government, however, to resist such feelings, and to turn them into a better course, though it required some moral courage on their part to attempt to do so. The practical question, however, was, what would the noble Earl have had the Government to do? The only proceeding on the part of the Emperor of Russia upon which they could have threatened war. Suppose the threat to have failed in inducing the Emperor to withdraw, could the Government have hoped to have induced Parliament to provide the means? Would they not have received from the noble Earl himself an unchangeable fund of censure and attack? He was quite sure they would have deserved it. Looking over the whole transaction, he could not put his finger upon any part of which he lamented. He had certainly done his best to preserve peace, and he should never regret the time which had been occupied with this view. The most perfect concert had been maintained throughout with France, and this union would always give the highest satisfaction to him, whilst no endeavours should be wanting to secure its permanence. He could not look without apprehension to the consequences of war, however it might end, to the Turkish empire itself, for it must be attended with great danger to its future condition Slender as the hope was, he would not even now abandon the hope of peace; but if her Majesty's Government were making every preparation to carry on war, if war were inevitable, in a manner befitting the honour of the country.

After a few words from the Earl of ALBEMARLE, the Marquis of CLANRICARDE said a few words in reply; and the motion was withdrawn.

HOUSE OF COMMONS.—TUESDAY.

THE EASTERN QUESTION.

Mr. LAYARD gave notice that on Friday (last evening) he would call attention to the present state of the relations between Russia and Turkey.

LAW OF SUCCESSION TO REAL PROPERTY.

Mr. L KING moved for leave to bring in a bill to amend the law of succession to real property in cases of intestacy. He considered the present state of our legislation on this subject a disgrace to a free and civilized country.

Leave was granted to bring in the bill.

PUBLIC PROSECUTORS.

On the motion of Mr. J. G. PHILLIMORE, leave was given to bring in a bill for the appointment of public pro-ecutors.

THE WINE-DUTIES.

Mr. OLIVEIRA proposed a resolution declaring the present rate of duty charged upon foreign and colonial wines excessive and impolitic, and that the same be reduced to a uniform rate of one shilling a gallon. After arguing at great length that we ought to consider wine almost as much a necessary article of consumption as tea, coffee, or cocoa, that any diminution to the revenue caused by reducing the duty would be more than made up by increased consumption, and that great social benefit would be attained by the substitution of the use of wine for that of ardent spirits and strong adulterated drinks, he concluded by stating that, in the present condition of public affairs, he should not press the motion.

GUANO.

Colonel BLAIR called the attention of the House to the present state of the guano-market in this country, and dwelt on the necessity of opening negotiations with the Peruvian Government for the abolition of the monopoly.

Mr. CARDWELL assured the House that the Government were fully alive to the importance of the subject.

Sir J. GRAHAM stated that directions had been given to the Admiral commanding in the Pacific to use every exertion for the discovery of a fresh source of supply.

SMITHFIELD MARKET.

Sir J. SHELLEY called the attention of the Government to the evidence given before the City Corporation Commission by the chairman of the Markets Improvement Committee, in reference to the intention of the Corporation of the City to establish a dead-meat market on the site of the present Smithfield-market, instead of at the new market at Islington.

Mr. FITZROY pointed out that the evidence in question was not a document to which the attention of the Legislature could be directed in the present stage of the question, and that no meat market could be established without the sanction of the Secretary of State.

HOUSE OF COMMONS.—WEDNESDAY.

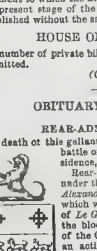
A number of private bills were read a second time, and ordered to be committed.

(Continued on page 153.)

OBITUARY OF EMINENT PERSONS.

REAR-ADMIRAL CHARLES SOTHEBY.

THE death of this gallant seaman, one of the few survivors of the great battle of the Nile, occurred on the 26th ult., at his residence, Lowndes square.



Rear-Admiral Sotheby commenced his naval career under the auspices of Nelson in the *Vanguard*. In the *Alexander*, he was present at the glorious conflict to which we have above alluded; assisted at the capture of *Le Genereux* and the *Ville de Marseilles*; was at the blockade and surrender of Malta, and at the siege of the Castle of St. Elmo. In the *Foudroyant* he took an active part in the operation of 1801, in Egypt: in 1807, was employed against the Turks; and in 1809, formed one of the advanced squadron in the expedition to the Scheldt. In 1824 he was very active in the suppression of piracy in the Mediterranean; and on one occasion, in May, 1825, by his spirited conduct, forced the Bey of Rhodes to acknowledge and redress an insult offered to the British Consul.

Admiral Sotheby married, first, in 1819, Jane, daughter of the late Lord Belhaven, which lady died the following year, leaving one son; and, secondly, his cousin, Mary Anne, daughter of the late Admiral and Lady Mary Anne Sotheby, by whom he leaves issue five children.

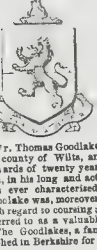
GENERAL GEORGE PARIS BRADSHAWE, K.H.

GENERAL BRADSHAWE died at his residence, Chester-villa, Notting-hill, on the 11th inst. This gallant officer spent almost his entire life in active and distinguished service in the East and West Indies, as well as in the Peninsula. He commanded, as Colonel, the 77th Regiment for many years.

General Bradshawe was the eldest son of Lieutenant-Colonel Paris Bradshawe, of the East India Company's service, and was a member of Bradshawe, of the East India Company's service, and was a member of Bradshaw, of Bradshaw, of Haigh Hall, near Wigan, in Lancashire, and of that of Bradshaw, of Bradshaw, near Bolton, in the same county, being cousin to the late Rev. Paris Bradshaigh, male representative of the former house in the year 1848.

THOMAS GOODLAKE, ESQ., OF LETCOMB-REGIS, BERKS.

THIS gentleman, the senior magistrate of the county of Berks, died at



Letcomb, on the 7th inst., of bronchitis, aged 78. He was the son and heir of the late Thomas Goodlake, Esq., of Letcomb-Regis, by Catherine, his wife, sister of Sir Charles Price, Bart., and represented an old and respectable Berkshire family. He was born on the 9th of April, 1776, and married—on the 26th of July, 1806—Jane, only child and heiress of William Yarnton Mills, Esq., of Wadley, and has an only surviving son and successor, the present Thomas Mills Goodlake, Esq., of Wadley House and Shellingford, who served as High Sheriff of the county in 1832, and who married Emilia Maria, second daughter of the Sir Edward Baker Baker, Bart., of Ranston, Dorset, by Elizabeth, his wife, daughter of the late, and sister of the present, Duke of Leinster.

Mr. Thomas Goodlake, the subject of this notice, was a magistrate for the county of Wilts, and Deputy-Lieutenant for Berks. He was, for upwards of twenty years, chairman of the Berkshire Quarter Sessions, and, in his long and active career as a county magistrate, his conduct was ever characterised by honour, sense, and sound judgment. Mr. Goodlake was, moreover, well known in the sporting world—especially with regard to coursing; and his interesting work on that subject is often referred to as a valuable authority.

The Goodlakes, a family of time-honoured standing, have been established in Berkshire for upwards of three hundred years.

WILLS AND BEQUESTS.

THE Will of the Right Hon. Theresa, Countess of Eglinton, has been proved in London, her Ladyship having died possessed of personalty in England, and within the province of Canterbury, of the value of £200. This, together with all other property over which the Countess had a power of disposition, her Ladyship has bequeathed amongst her daughters.

THE Rev. N. D. H. Newton, many years Vicar of Bredwardine—his own patronage—left personalty amounting to £35,000, bequeathing to the Society for Promoting Christian Knowledge, £500; National Society for Educating the Poor, £500; Society for Supplying Additional Curates in Populous Parishes, £500; and to the Society for Propogating the Gospel in Foreign Parts £100.

THE estates and wills of the under-mentioned have also been administered to:—Sir Richard Jenkins, K.C.B., £16,000; James Lloyd, Esq., Banker, Birmingham, £35,000; John G. Behrends, Esq., merchant, St. Mary Axe, £16,000; James Spicer, Esq., citizen, Dunmow, £16,000; George Gutheneau, Esq., Notary Public, formerly of Pope's Head alley Cornhill, and of Lower Edmonstone, whose death occurred in December last, died intestate—his sister has administered to his estate, under £120,000.

THE estate of the late Richard Hanbury Gurney, Esq., of Norfolk, has been valued for Stamp duty at £600,000

MISS LOUISA BAKER, of Berrow, Somerset, whose personalty was sworn under £500, has left to the Church Missionary Society for Africa and the East, £100; Church Pastoral Aid Society, £100; London Society for Promoting Christianity among the Jews, £100; the Operative Jewish Converts Institution, £50; and to the Irish Church Missions to Roman Catholics, £100.

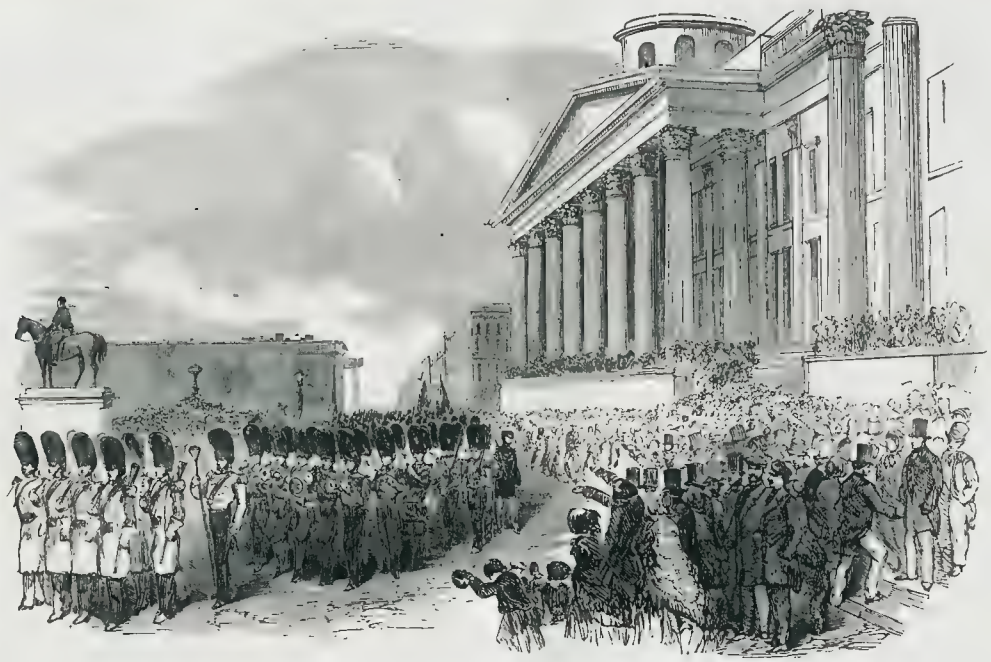
GEORGE MARSHAL, Esq., of Godalming, Surrey, an extensive builder, by his will, contained in very few words, has bequeathed the whole of his property to his wife—the personalty valued at £180,000.

THE BATTLE OF CITATE.

UPON the next page we have illustrated the terrific conflict in the main street of Citate, as described by our Special Correspondent in our Journal of January 28. We quote the leading details of the action of the scene:

"The Turks appeared before Citate at seven in the morning; attacked the battery which defended the lower end of the street with five battalions; whilst the cavalry made a circuit to the right, to cut off the retreat of the enemy. Achmet Pacha remained a little to the right with a reserve of three battalions and some cavalry, holding a good position on a hill that slopes down to a road leading from Respitsch to Citate. Ismail Pacha, who commanded the infantry against the village, and Tefik Bey, at the head of his regiment of Chasseurs, entered the main street after the Russians had been dislodged from the battery. The latter, however, had recovered by this time from their surprise, and disputed every inch of ground. Concealed in houses, in holes and corners, and behind the bayricks, they kept up a galling fire, whilst their artillery played down the street. The Turks, holding a good position, and a dreadful *mêlée* soon commenced, the order of the Turkish battalions was broken; every man seemed to fight for himself, and on they went pell-mell, driving back the Russians, who gradually retired and concentrated their shattered force behind the church. At that moment the cavalry, which had moved to the right, commenced firing from a cross street that led direct to the church, with a battery of field-pieces The Russians finding the place too hot for them, retired further along the main street; and the troops, under Ismail Pacha, continuing their onward course, the same system of defence amidst house and bayrick, was pursued by the enemy."

THE BATTLE OF CITATE.—(SEE PRECEDING PAGE.)



THE COLDSTREAM GUARDS LEAVING ST. GEORGE'S BARRACKS, ON TUESDAY.

GOING TO THE WAR.

People who are given to pore over the pages of Alison, Maxwell, or of the British Polybius, Napier, will look with no ordinary regard upon our illustration of the heart-stirring spectacle which the Strand presented on Tuesday last. One does not, perhaps, whilst absorbed in the story of how we got into Badajos, think much of any fact collateral or consecutive. Stunned with the rattle and roar of 10,000 guns, and dazzled with the raging fire with which that devoted city was "girdled round," there is but scant leisure to think on anything but the fearful scene before us. It is when the book is laid down, and the spirit begins to run in its ordinary current, that we are apt to revert to the antecedents of such great deeds; to think of the leave-takings—hopeful, though heart-breaking—which preceded them; and the utter desolation which they brought upon uncounted homes.

These associations it has hitherto been the practice of the historian to have little concern with, or, at most, to treat them in a manner so general and vague, as to afford but a very faint idea of them. Here and there, in Livy, and other old-world legends, we may read how men went out to fight. A fervid imagination may realise, and put on canvas, the colossal war-pictures of the greatest of all histories; and the poet, true to his office, may create anew the serried ranks of battle: but it has been reserved for us to picture for the first time—the earliest passages in a great war that may devastate half the world, whilst the earth still shakes with the heavy tread of dense battalions. The introductory scene—the Chorus as it were—of the great drama that is about to be enacted, was presented on Tuesday last, at mid-day, by the march of the Coldstream Guards from St. George's Barracks, along the Strand, and over Waterloo-bridge to the railway terminus. The people took possession of every spot that was tangible on the "finest site in Europe." They literally swarmed over the National Gallery and every "coin of vantage" offered by St. Martin's Church had an occupant. Every species of vehicle, whatever its hurry may have been, was arrested as if by a sudden spell, when the band of the Coldstreams proclaimed in their own martial way, that the "British Grenadiers" were coming. As our gallant fellows emerged into the square, the crowd, with one voice, cheered, and hats and handkerchiefs were waving in every direction. A thousand hands were stretched out to grasp those of the soldiers as they marched along. The officers, for the most part, young-looking men, had full occupation in this sort of friendly greeting along the whole line of march; and many a swart hand put out from the crowd was grasped in the most cordial manner by men with the best blood of England in their veins.

The cheering was kept up along the line—men stood up on omnibuses, and thrust their heads out of cabs, to contribute to the general

THE GRENADIER GUARDS LEAVING THE TOWER, ON TUESDAY LAST.

acclamation. Some touching little incidents diversified the scene—of wives, and children, and sweethearts, escorting husbands, fathers, and lovers. Many such we have seen in our day, of which we might say, with truth, *quorum pars magna fui*. But these it is not our province to describe just now.

At the Kirkstead several singular scenes occurred, amid the numerous tearful "farewells" and "God speeds" expressed. Before the troops reached New Bridge, there was a general rush up and our lane to the stalls of all vends of oranges by the pub lic for the soldiers, nearly all of whom were supplied with some of the fruit, while others contrived to imbe copious draughts of more potent fluid than orange juice.

At two o'clock on Tuesday the 3rd battalion of the Grenadier Guards marched out of the Tower for St. George's Barracks, where they will remain until to day (Saturday). A crowd of from three to four thousand persons accompanied them; and as the corps passed along the streets, the fine band of the regiment played "The Girl I left behind me." The cheers of the populace were frequent and enthusiastic.

DEPARTURE OF THE GUARDS FROM WINDSOR.

The portion of the 2nd battalion of the Scots Fusilier Guards (360 rank and file) entered for the seat of war, left Windsor on Tue day morning, at half-past nine o'clock, for Wellington Barracks, proceeding by the South-Western Railway, under the command of Lieut.-Colonel Dixon. As they marched through the town, with their find band playing "Over, boys, cheer," and "We are going far away," they were loudly cheered by the inhabitants, hundreds of whom accompanied them to the station. As the troops wheeled down Thame-street into Datchet-lane, the band struck up "The British Grenadiers," which they continued to play until they reached the station of the London and South-Western Railway, where a train was in waiting to convey the battalion to London. Here the scene which presented itself was most exciting. The whole population of "the two towns" seemed to be concentrated in and about the station. The whole of the Eton boys were there, with most of their mas-ters. The boys occupied a small elevation at the end of the arrival platform; and, when almost all the Guards had taken their places in the train, and the band had ceased to play, the Etonians gave three times three hearty cheers, in excellent time, and with thrilling effect. When the monster train finally started, skirting the home-park, and beneath the shadow, so to speak, of Windsor Castle, the Fusiliers sent forth a long loud cheer from the carriages, which was cordially re-echoed by the dense assemblage in the station and the park. The only officers belonging to the second battalion likely to go out with the expedition are Lieut.-Colonel Dixon, Lieut.-Colonel Moncrieff, and Quartermaster Allen, the two former of whom exchange into the first battalion of Fusilier Guards, which will supply the whole of the officers. The battalion will be made up to 800 strong, with 40 sergeants; and permission has been given for 48 women to go out.

VOLUNTEERS FOR SERVICE.

It is said that General Brown and Colonel Airey have both volunteered to accompany Lord Raglan in any situation whatever. The officials at the Horse Guards have all expressed their desire to be employed in any manner whatever under their late most gallant chief, Lord Raglan.

Orders were sent down on Saturday for 600 volunteers from the provisional battalion at Chatham for regiments going to the East. If treble the number had been required, there would have been no lack of candidates for this service. Upwards of 400 volunteered on the first parade, and upwards of 100 on Sunday after the relieving of the guards, and on Monday the whole of the men required; the number was completed to the full complement, with the exception of 32nd Highlanders. Not one soldier out of the 500 men who have volunteered from the battalion—it is a proud feature in their character—has ever been tried by a court-martial, or has a scratch against his name in the regimental defaulters' book. On Saturday, the duty men of the 34th volunteered to a man, with the exception of two old soldiers, who are just returned from India; they were left by themselves on parade—a circumstance which created considerable laughter; and on the Sunday, after the 71st had come off duty, the whole of that depôt volunteered, and they left the pay sergeant standing on the parade by himself.

EMBARKATION OF TROOPS.

So far as can be ascertained, the Guards will embark first, then the regiments of the line in England and Scotland; and lastly, those in Ire and. There will be five squadrons of picked men, in all 500 sabres, included in the division, probably for staff and escort service. It is understood that the whole of the first division— except, perhaps, the regiments from Ireland—will have set sail by the 1st of March, and that the latter will have embarked before the 10th. The steamers thus far definitively engaged for this service, are the *Himalaya*, the *Ripon*, the *Cressy*, the *Manilla*, and the *Golden Fleece*. The ports of embarkation and the exact days of sailing will be determined according to circumstances. The Guards embark this day (Saturday). Government has determined that the effective strength of each regiment or battalion sent out shall be made up to 850 bayonets, and soldiers from other corps have been permitted to volunteer. Thus the 4th Foot have received an accession of 142 volunteers; 28th, 109; and the 77th, 39. What ever the strength of the 93rd Highlanders is so nearly up to the required mark that it requires no greater number, or whether the kilt acts as a damper to military enthusiasm at this season of the year, we know not, but the accession of volunteers to that regiment is at present only 13. The second battalion of the Rifle Brigade wanted 199 men, and they were at once obtained, but what deserves special notice is, that of this number 102 are volunteers from the 1st battalion, which only returned home a few weeks ago from the Cape. There is no doubt that the 33rd and 57th, which are in Ireland, will make up their effective strength with equal facility. Taking the force now under orders for the Mediterranean, a brigade already formed there, and the regiments next for service, the British contingent for the defence of Turkey will amount to 20,000 men, with 40 guns, admirably horsed, and provided with a full proportion of ammunition waggons. Of this auxiliary army, Lord Raglan takes the chief command; but it is not expected that he will leave England for that purpose till the beginning of next month. We cannot compete with the great military nations of the Continent in the numerical strength of our troops, but we shall endeavour to compensate for this by perfection in discipline, effective equipment, carefully selected officers and, above all, the unflinching courage of our soldiers. To render these as telling as possible in the force which we are now despatching to the East, several measures of great importance have been adopted. First, 250 picked men in each battalion are to be armed with Minié rifles. Brigade commands, instead of being given to antiquated general officers, will be conferred on young Colonels, who will have the temporary rank of Brigadiers; thus, the brigade of Guards will be under the command of Colonel Bentinck. Colonel Eyre, who so greatly distinguished himself at the Cape, will, it is said, act as Adjutant-General. The batteries of the Royal Artillery under orders for the Mediterranean are to be made up to a number of 140, being more than double their strength on the peace establishment.

WAR PREPARATIONS AT PORTSMOUTH.

Were the Russians coming to Portsmouth, instead of the fleet going from Portsmouth towards Russia, greater stir and excitement could scarcely prevail at that port, afloat and ashore. An enormously heavy battery has been lately thrown up on the site of the well-known platform promenade, which used to parade 21 little 6 pounders, the duty of which was comprised in saluting Royalty and other distinguished personages. This new battery will mount about a dozen 68-pounders, on traversing platforms, pointing over a brick and earth work parapet about nine feet high, commanding the entrance to the harbour. Recruiting parties, with fife and drum, are daily parading the garrison towns and suburbs; and the volunteering for the naval service goes on quite as briskly. Vans, omnibuses, and other vehicles roll along the main thoroughfares from the railway terminus as each train arrives, containing seamen and volunteers in fifties, all greeted with the warmest reception by the population, and seemingly as jolly among themselves as sailors bent on favourite service can be.

THE STEAM TRANSPORT FORCE.

The only transports now at home available for conveying the troops to Malta are the *Simoom*, *Vulcan*, *Bulldog*, and *Dragon*. These, it is said, are capable of carrying 1200 men each—a considerable number, and fully far above the average for vessels of that class for emergency. The Government have, more over, chartered the following steamers:—From the General Screw Steam-ship Company—The *Golden Fleece*, 2810 tons, 300 horse power; the *Jason*, 2690 tons, 300-horse power; the *Cape of Good Hope*, 700 tons, 100-horse power; the *Propontis* 600 tons, 80-horse power. From the Peninsular and Oriental Company:—The *Himalaya*, 3500 tons; the *Manilla*, 650 tons; the *Argus*, 800 tons. From the Cunard Company—The *Cambria*, and the *Niagara*. From the Australian Company—The *Victoria*. From the [illegible] is stated that three or four steamers can be obtained for transport service. The General Screw Company have also received notice to hold at the disposal of the Government the following ships of their fleet, now on their way home:—The *Queen of the South*, 1850 tons; the *Hydaspes*, 1850 tons; the *Harbinger*, 921 tons. From the ports of London, Liverpool, Southampton, and Glasgow, a further supply of tonnage can be procured to any extent that may be required; but at present there is no reason to interrupt the regular transit of our ocean mails, and the above enume ration merely comprises those ships that at the moment can be spared. It will be observed that the other steam companies, with the exception of the General Screw, have their fleets almost sub dized by the assistance which thus far they are called on to supply. The Government, with that consideration for the welfare of the expedition which befits the extraordinary resources at their disposal, are de ermined to give a fair allowance of elbow room on the passage out to the Mediterranean. From 200 to 250 tons register will be allowed to every 100 men; so that the whole force will ren h the point of rendezvous not only with all the speed of steam, but in the best possible condition. For the heavier munitions of war, and, probably, the artillery horses, sailing-vessels will be employed; and it is understood that some of Mr. Green's and Mr Duncan Dunbar's finest ships have already been engaged for that service. These details will enable the reader to form a tolerably correct conception of the military preparations of the Government, so far as they have yet been developed. The facility with which its plans are being carried into execution furnishes evidence of the resources of this country for war, which our enemies would do well to consider. Not only are we able to transport an expedition to the Mediterranean without serious embarrassment to our regular commerce, but it is also not improbable that steamers, hither o the property of English Companies, will be employed in conveying the French auxiliary army to the East. It is stated that the Transatlantic Steam Navigation Company, of which the Duke de Montebello is chairman, and the formation of which was announced some months ago, has recently purchased in this country a fleet of ten screw steamers, all of which are ready for sea, with the exception of two ships, which are of large size, at the disposal of the Emperor for the present emergency.

It is satisfactory to know that no interruption of the mail service will be occasioned by these ships having been withdrawn from their regular duties. The *Sultan* and *Euxine*, two paddle-wheel steamers, of 1200 tons and 400-horse power, are temporarily to replace the *Ripon* and *Himalaya* on the Southampton, Malta, and Alexandria line, while those ships are carrying out the orders of the Government.

OUR BALTIC FLEET.

The naval preparations are now chiefly directed to the formation and complete equipment of the fleet which is to start early next month to the North Sea and the Baltic, and which is to consist of the following ships—*Duke of Wellington* (screw), 131; *Neptune*, 120; *St. George*, 120; *Royal George* (screw), 120; *St. Jean d'Acre* (screw), 101; *Princess Royal* (screw), 91; *Cæsar* (screw), 91; *Rhin* (screw), 91; *James Watt* (screw), 91; *Prince Regent*, 90; *Monarch*, 84; *Cressy* (screw), 81; *Majestic* (screw), 80; *Boscawen*, 70; *Cumberland*, 70; *Blenheim* (screw) 60, *Hogue* (screw), 60; *Edinburgh* (screw), 58; *Ajax* (screw), 58, *Impervious* (screw), 61; *Euryalus* (screw), 51; *Arrogant* (screw), 46; *Pique*, 40; *Amphion* (screw), 34; *Dauntless* (screw), 33; *Tribune* (screw), 30; *Leopard* (paddle), 18; *Magicienne* (paddle), 16; *Valorous* (paddle), 16; *Desperate* (screw), 8 guns. This list speaks for itself, and requires no comment.

THE FLEET IN THE TAGUS.

The *Iberia* steamer, which left Lisbon on the 9th, brings word that Adm ral Corry's squadron was then in the Tagus. Admiral Corry had officially notified to the Portuguese authorities the objects of the squadron that we are on the eve of a war with Russia, and that he would expect to find that the ships are perfect in gunnery. Every attention is said to have been paid to the important point of the service throughout the fleet.

GUNPOWDER AND STORES.

The most strenuous exertions are being made at the mill at Hounslow to complete as very large supply under the expedition about to sail, and for the fleet destined for the Baltic. To accomplish this a double set of workmen are employed, who relieve each other, consequently the manufacture is continuous. The powder is removed by night, in hermetically-sealed copper barrels, in order to obviate the possibility of accidents.

The victualling and store departments are not less busy. The mills and the bakery at Deptford are kept going from daylight until ten o'clock at night. The ships for the Baltic fleet they are killing and salting from twenty to thirty oxen every day; and large quantities of wine, &c, are being prepared for the depôts at Sheerness and Deal. This establishment is also completing supplies for the *Cressy*, *Monarch*, *Majestic*, *Boscawen*, and loading vessels for Malta, Constantinople, and elsewhere. There are upwards of 160 contractors delivering stores at Deptford at the present time. At Portsmouth, besides the usual routine duty of baking biscuit, of which they complete between 30 and 40 tons per week), slaughtering bullocks and salting them down, pemmican making, &c., they make 120 beds and bedding a day for ship service. The public departments fairly groan with the work of preparation, and the active officials are up to their eyes in correspondence and contracts.

FRENCH MILITARY PREPARATIONS.

Admiral Brust's squadron has arrived at Algiers, where, according to the French papers, it will take on board General Pelissier, with a division of the African army amounting to 12,000 men; then make sail for Toulon, where an English squadron and transports will meet it, taking on board 30,000 French troops; and both squadrons, with the arm- of 42,000, proceed to the Levant, enter the Dardanelles, and disembark the troops at Silivri, near Rodosto, on the Sea of Marmora. What appears somewhat strange, in this alliged arrangement, is the return of the squadron to Toulon, as it is rather going out of the way. So, however, it is stated. The object of the fleet is variously spoken of from the position it seems intended to occupy, would no doubt be to cover Constantinople; though with the Black Sea swept by the British and French cruisers, and the impossibility of a Russian army supplying itself from the coast, a march on the capital in that direction, now the support of the Balkans to be forced, would be highly improbable. If the reported expedition by the Adriatic enter into the general plan of protection, it would have for its object to menace the Russian army in case it attempted (which is not impro-bable, and to watch the vast preparations which Austria is reported to force the Danube in the direction of Wi din. It will be observed that the Emperor of Russia has not ceased to concentrate his forces in Little Wallachia.

The Africa force intended for service in Turkey will be principally com, osed of two battalions from every regiment of Zouaves. These Zouaves are excellent troops for such a service: they combine the fierce impetuosity of irregular soldiers, with the steadiness, firmness and discipline of the line. The object of the fleet, just spoken of from the position it seems intended to occupy, would no doubt be to cover Constantinople; though with the Black Sea swept by the British and French cruisers, and the impossibility of a Russian army supplying itself from the coast, a march on the capital in that direction, now the support of the Balkans to be forced, would be highly improbable. A BRUSH WITH THE CHINESE PIRATES.—By the last arrival we learn a very interesting affair had taken place between Her Majesty's steam er *Hermes* and the Chinese pirates. In the course of the day a powerful squadron of 37 junks, many of which were filled with new 12, 18, and 24-pounder, of English manufacture, with all the new improvements, e vating screws, compressors, &c., were destroyed, and nine pirate vessels burnt; several of the pirates were killed, and some prisoners were taken. The subjoined summary of these encounters is taken from the *Friend of China*:—"Nov. 25, 19 junks; crews supposed to number 380 men. Nov. 27, 1 West Coast boat; crew 50 men. Nov 28, 3 junks; crew 60 men. Nov. 29, 1 junk; crew 30 men. Dec. 3, 1 West Coast boats; crew 200 men. Dec. 3, 1 West Coast boat, 4 junks, and 2 small boats; crews 4 9 men. Grand total, 40 vessels and 1170 men. These vessels carried an armament of four 24-pounders, seven 18 pounders, 48 12-pounders, 66 6-pounders, and 20 jingalls. Total, 155 guns. It is believed that 90 men were killed and 41 made prisoners, including ten women and four children."

THE ARMY.

(From our Military Correspondent.)

AFTER thirty-nine years' cessation from European warfare, events hourly occurring prognosticate the app each of a fierce and possibly lengthened struggle, in which England must unavoidably participate. National honour demands our interference, and, if engaged in the conflict, the emergency should be met with promptitude and vigour. Past reverses exemplified the error of despatching an inadequate force to contend against superior strength and equipment. If experience has produced salutary effects similar mistakes will be avoided. During the Peninsular War enormous fortunes were realised by contractors, and, in some instances, so carelessly were the agreements framed, that the spirit of the engagements became nullified. It is recorded that a tender for supplying the cavalry with horse shoes having been accepted, the articles were in due course embarked, but as the word "nails" was inadvertently omitted in the bond, the trader shipped the former only. Oversights like this, however, cannot readily evade detection in the present day. Eng and does not profess to be essentially a military nation; but, when necessitated to put forth her strength, she has displayed energy and courage surpassed by no other country.

During a long peace, it might have been supposed improved alterations in arms, clothing, and accoutrements would, by occupying the attention of the authorities have produced beneficial changes; yet, in no degree have we kept pace, in this respect, with foreign troops. The knapsack remains the same cumbrous and ill-adjusted incumbrance as of old; the clothing is as inferior as ever; the sixty rounds of ammunition are disproportionately loaded on the wearer; and, exclusive of introducing the detonating lock, we have made but slight advance towards perfection in small arms. Now that regiments have received orders to hold themselves in readiness for active service, it may well be asked, why points of such importance have remained unnoticed? Until recently, the disadvantages under which the British soldier labours have been disregarded. From time to time professional journals have directed attention to the subject, but without meeting with the success which its importance merited. But a period has at length arrived when investigation into the defects of our military system cannot longer be withheld. Should an English army take the field, the condition of the soldiers must be improved. Pensions on discharge, in consequence of wounds or other injuries contracted on service, should be considerably augmented. Both pay and rations need addition; and, whatever measures may be proposed towards making the army more popular and attractive, should unhesitatingly be compassed.

On embarkation, the heavy baggage, mess apparatus, and other impedi ments to celerity of movement, might well be dispensed with; and women should be restricted from accompanying the troops. A general order promulgated to the effect, that at the termination of the campaign, regiments, unless required for further active duties, should return home, would ensure ready acquiescence to a temporary separation in families. But if the old system of despatching corps, at the close of the war, as reliefs to the colonies and elsewhere—merely to save a few pounds—be adhered to, both officers and men will elude compliance with the command, to the detriment of their own comfort, and greatly to the prejudice of the service. The annoyance entailed on troops by being hampered with a host of non-combatants, has been realised ere now. The less baggage and the fewer followers the better. The latter are sure to accumulate, without adding to the number by exportations from home.

The mass of books now used in the Orderly rooms and Paymaster's offices might remain with the depôts. A volume, the size of a muster-roll, would answer the purpose for records. It should contain each name in rotation by regimental number, as attestations are now posted, with columns affording necessary information for filling up documents. By reference to the court-martial book, a man's forfeited period, if any, could thus be correctly ascertained, and his service accurately balanced. This volume could easily be carried, and would embrace all that is required. The regimental books should be made more portable, and, when filled, transmitted home, where the original forms and records are preserved.

An increase of wages has recently been accorded to the Navy—why should not the boon extend to the latter service? If the married soldier is compelled to leave his wife at home when accompanying his regiment to the field, Government should either provide for his family, or, by adding to his pay, enable him to meet their necessities. A letter recently appeared in the leading daily paper, advocating the continuance of sixpence being deducted for rations from the private's pay. The argument was based on the calculation that the loss to Government of one half penny per diem for each individual would amount to thousands of pounds in the course of a twelvemonth. Possibly the writer harboured the idea that, out of thirteen pence, it was only necessary to di burse sixpence to ensure excellent provisions, clothing, and comfortable quarters; while the remaining sevenpence was left at the soldier's disposal. The impossibility for a private in the infantry to afford so large a sum for his food, and at the same time keep a good kit—which he must purchase, and always have complete—is shown by the following list of necessaries, with the price of each affixed:—

	s.	d.
One pair of summer trousers	5	4
Do., do., boots, as often as required	7	0
Three shirts	8	0
Fatigue jackets	6	0
Three pair of socks	2	9
Stock and clasp	1	0
Pair of braces	1	1
Knapsack and straps	12	9
Forage cap	2	9
Two shoe-brushes	1	1
Tin of blacking	0	4
Clothes-brush	0	10
Case for small articles	0	7
Button-brush and stick	0	5
Sponge	0	4
Comb	0	4
Razor	0	8
Soap and shaving brush	0	4
Pair of mitts	0	10
Knife, fork, and spoon	1	0
Hold-all and cover	1	8
Two towels	1	4
Mon hly average charge for—		
Washing	1	4
Sheet washing and hair-cutting	0	2½
Barrack damages	0	2
Daily charge for messing—		
Breakfast, one pint of coffee	0	0¼
Dinner—One-quarters of a pound of unboned meat, and one pound of bread	0	5 22/28
Vegetables and salt	0	0¼
Evening meal—One pint of coffee	0	0½
Daily pay	8	4 181/196
	1	1

The foregoing return shows that the soldier has but fourpence and a fraction wherewith to keep the articles enumerated in good and serviceable order, and possibly support a family likewise.

The day has gone by when the private was regarded as a mere machine, and expected to yield implicit obedience without possessing reasoning faculties whereby to estimate his position. We have supplied him with schoolmasters and libraries, and held out inducement for unwearying knowledge; and the more enlightened he becomes, the more apt will he be in drawing comparisons between his own case and that of civilian artisans born in the same grade. In time of danger his value is acknowledged; but wherefore is he not equivalently rewarded? Make his condition more desirable; ensure him sufficient support when from wounds climate, and long and faithful service—he becomes incapacitated from fighting his country's battles, and the difficulty now experienced in recruiting would then cease to exist.

MUSIC.

THE concert of the Harmonic Union, at Exeter Hall, on Monday evening, will be memorable for a performance of Handel's "Acis and Galat," the most complete and beautiful impersonation which has ever been given from the composer's own time to the present. This charming work, as our musical readers know, is a dramatic poem by Gay, and set to music by Handel, in the form of a cantata. In the shape it is a regular musical drama, and attempts have been made at various times, to perform it on the stage as an opera. The first was made in Handel's own time when the piece was acted and sung at one of the theatres; but this was not only done without Handel's sanction, but he strongly protested against it as an unwarrantable use of public journals in which he stated that the piece was never intended for the stage, but ought to be simply sung without action. Th s remonstrance, however, has no prevented similar attempts at different times. The last was made by Mr. Macready during his management of Drury-lane, when "Acis and Galatea" was performed as a regular opera, with the utmost splendour and beauty of scenery and decoration. The music, too, was carefully got up and well performed, under the direction of the late Thomas Cooke. It attracted attention, and had a run for a short time; but it was generally admitted to be unfit for theatrical representation. In future, we trust, this piece will be performed according to Handel's own intentions. Mozart, who was a devoted admirer of Handel, and wrote those celebrated additional accompaniments to the "Messiah" which are inseparably connected with that oratorio, also wrote additional accompaniments to "Acis and Galatea." They never become known, even in Germany, where they have been preserved from utter oblivion by the existence of two or three manuscript copies. In this country, till now, they have never been even heard of. Mr. Benedict, in his recent visit to Germany, lighted by accident on some of those manuscript copies, secured it as a precious treasure, and has actually added himself of it, as Musical Director of the Harmonic Union, in bringing out "Acis and Galatea." These accompaniments, accordingly, were heard, for the first time in this country, at Exeter-hall, on Monday. Great interest and expectation were excited in our musical circles; and the audience was not only more numerous than usual, but contained a larger proportion of noted musicians and amateurs. Their most sanguine anticipations were more than realised. Mr. Benedict has an excellent orchestra under his direction, and had evidently taken pains to obtain a good performance. The band went admirably, and Mozart's rich yet delicate additions to the original score charmed every ear. Handel's own concertos were devoutly respected. Mozart's veneration for the mighty master forbade him to change a single note. He added, but did not alter. He added those delicious passages—those streams of harmony—from the soft wind instruments, the flutes, horns, and bassoons, which Handel himself would undoubtedly have employed had he possessed the varied resources of a modern orchestra. Henceforth "Acis and Galatea" can never be performed without the additional accompaniments of Mozart; and, for having discovered and made them known, Mr. Benedict deserves the warmest thanks of every lover of music. The characters were admirably sustained. Mr. Sims Reeves was *Acis*, Miss Stabbach *Galatea*, Signor Belletti *Polyphemus*, and Mr. Champion *Damon*. One error, however, was committed. Two airs belong g to the part of *Galatea* were given to Miss Thirlwall, for no other conceivable reason but that of giving this young lady something to do. This was at variance both with taste and propriety. Though 'Acis and Gal tea" is not acted on the stage, yet its dramatic form renders it necessary to preserve the individuality of each character, and splitting one character into two is a solecism not to be tolerated. Mr Reeves, who made his first appearance in London this season, sang splendidly, and was most cordially received. His "Love sounds the alarm" was sung with remarkable fire and energy, and encored with enthusiasm. Miss Stabbach, a young lacer, who is making great progress and rapidly rising to eminence, did ample justice to the part of *Galatea*. She gave the lovely air, "As when the dove laments her love," with exquisite sweetness and feeling. The giant *Polyphemus* had a magnificent representative in Signor Belletti, who foreigner though he be, is beginning to outstrip every rival baritone as a singer of English music; and his pre-eminence is not confined to voice and execution, but extends to clearness, force, and propriety of his declamation. Was there in his recitative, "I burn!" the beauty of his musical elocution was so striking that he received a round of applause before he commenced the air. As to the air itself, "O, ruddier than the cherry," it was such a marvellous display of vocal power and appropriate expression, that it threw the audience into transports of delight, manifested by prolonged acclamations from all parts of the hall. Such was the success of this performance, that its repetition is announced at the next concert.

Mr. LINDSAY SLOPER gave his first concert of this season, on Tuesday evening, at the Queen Anne street Rooms. It was an entertainment worthy of this accomplished profe-sor, and was attended by a crowd of fashionable company. The instrumental music consisted of Spohr's Concertante Duet in C minor, for the piano and violin, played by Mr. Sloper and Herr Molique; Beethoven's second Sonata in D minor, from Opera 29, performed by Mr. Sloper alone; Weber's Sonata in E flat, for the piano and clarinet, in which Mr. Sloper was accompanied by Mr Lazarus; and lastly, Mr. Sloper played three charming little pianoforte pieces composed by himself. Several beautiful songs were sung by Miss Dolby, Madame Ferrari, and Mr. Benson.

THE Wednesday Evening Concert, at Exeter Hall, had for its principal object of attraction, Mr. Sims Reeves. The great English tenor acquitted himself in a manner deserving of his name. He is in fine voice at present, owing probably to the repose he has been lately allowing himself. His voice, which last season seemed worn with overexertion, has recovered its freshness of tone, as well as its power. On Wednesday evening he sang the great scena of "Oh, ruddier than the cherry no longer," from the "Freischütz;" the popular little air "La Donna è Mobile," from Verdi's "Rigoletto;" and an English ballad. It is hardly necessary to add that he was applauded to the echo. We regretted to observe, however, that he has by no means got rid of the affectations and faults of style to which he has long been addicted. The worst of them—his custom of passing from very soft to very loud—alternately whispering and shouting—without anything in the *sense* to warrant these violent transitions of *sound*—is now more apparent than ever. Things of this sort are thought very fine by the ignorant multitude, and are, accordingly, vociferously applauded; but Mr. Reeves may be assured that they injure him in the opinion of those whose judgment he ought chiefly to value.

THE *Musical World* has very properly called attention to a transaction respecting which the public memory ought certainly to be refreshed. The circumstances, which are given in detail by our contemporary, are briefly these:—

In 1850 a concert was given by a committee of musical professors and amateurs, for the purpose of laying the foundation of a fund to be devoted to a tribute by the English nation to the memory of Mendelssohn. Jenny Lind (it was her last season in England—was appointed to, and, with characteristic zeal, gave her gratuitous assistance. "Elijah" was performed at Exeter Hall, in splendid manner, and to an overflowing audience £1200 were realised after defraying all expenses. It was resolved that the "Testimonial Fund," of which this was the nucleus, should be employed in founding a "Mendelssohn Scholarship" for the gratuitous education of music of a certain number of pupils. It was naturally proposed that this scholarsh p should be founded in our Royal Academy of Music, but superior influence prevailed, and the claim of the Conservatory of Leipsic was unreasonably preferred. To Leipsic, accordingly, the £1200 were sent, and, from that day to this, not another word has been heard of the matter! The London Committee consists of well-known and respectable gentlemen, but they seem to have neglected this matter at large. Among them are Sir G. Smart, Mr. Benedict, Mr. Sterndale Bennett, Mr. K ngeman, Mr. Chorley, and Mr. Buxton (of the firm of Ewer and Co., Mendelssohn's publishers). We are entitled, after so many years of four years, to ask these gentlemen what is become of the large sum sent by them to Leipsic? How has it been disposed of? Where is it lying? If invested at accumulating interest, what is its present amount? And has any step whatever been taken at Leipsic to further the object for which it was raised?

We join our voice to that of our contemporary in calling for explanation, which we cannot doubt will be promptly given.

FREE PUBLIC LIBRARIES FOR SCOTLAND.—At a meeting of the Aberdeen Town Council, on Monday week, Mr. Webster tabled a series of resolutions with a view of the council petitioning the Legislature to bring in an efficient measure for rendering applicable to Scotland the Act in force in England in regard to free public libraries.

GOLD IN WALES.—A mine has lately been discovered on the Pengwern Estate, Festiniog. A quantity of the material was sent to the City-road London, to be tried by the crusher, in the presence of Sir Charles Fitzpatrick and Mr. Goodman, and the result was 1½ oz. of pure gold from one ton of ore.

THE THEATRES, &c.

OLYMPIC.

A new piece, entitled "The Love Lock," was produced on Monday: an eccentric sort of drama, of the nature, we think, of a "morality." An object to form of comparison was not likely to bear revival; and, though well upported and well acted, the adventure proved unfortunate, and the experiment has not been repeated.

HAYMARKET.

A new two act comedy, entitled "Randolph," was produced on Saturday. The plot is principally taken from M M. Carmon and Eugène Grangé's vaudeville, "Un Mari qui se dérange," by Mr. Palgrave Simpson; and was successful. The treatment, however, is not uniformly happy, nor the spirit of the dialogue and situation always maintained. The first act was rather slow and uninteresting—a fashionable husband, in the reign of George II., with the bad habit of leaving his young wife for days parties at Ranelagh, and revealing his vice through accidentally finding a letter in her presence, and talking in his dreams; forms all the action of the introductory portion. The name of the fitful rake is *Sir Robert Rowly* (Mr George Vandenhoff), the part of the unhappy lady is supported by Miss Reynolds, whom, however, we like better become than tears. We are then introduced to *Dr. Coddelove* and his lady (Mr Buckstone and Mrs. Fitzwilliam) who are inexplicable, except when professional duties demand the former elsewhere, in his capacity as physician. This worthy doctor is made the innocent bearer of amorous dispatches from a certain *Florentina*, an actress, with whom *Sir Robert* has an assignation at Ranelagh. His lady is not seen, though much talked of. Another character is more conspicuous, a *Lord Pryington* (Mr W. Farren), who is exceedingly curious to penetrate the secret of domestic uneasiness, and manages to get a duel fixed upon him at Ranelagh, as a reward for his meddlesomeness. The main point of the piece is contained in this adventure. An admirably-painted scene of the gardens and rotunda assists the effect. The gallants assembled are as jealous of their wives and sweethearts as if they were faithful to them, and each suspects *Lady Rowly*, who has, in disguise, followed her husband to the scene of action, to be the very identical fair one in whom he is most interested. *Sir Robert* hits upon the expedient of saying, while yet ignorant of the fact that she is his wife; and is thus rescued from the necessity of fighting four duels; while *Florentina* accidentally falls to the lot of *Lord Pryington*, who is thus made the scape goat in the transaction. *Dr. Coddelove* is mixed up with the affair also, through *Lady Rowly*, who compels his attendance on the spot; and is met there by his wife, who has been made the victim of female friendship," and finds herself in a false position. The humour of this situation saved the piece; Mr. Buckstone and Mrs. Fitzwilliam assisting the effect with some of their best acting. The house was well attended.

SOHO.

On Friday week, Mr. Henry Nicholls, celebrated as a dramatic reader, tried his fortune at this theatre as an actor. This gentleman is not new to the stage, though more frequently met in the lecture-room. The part chosen for the experiment was that of *Shylock*. The other characters were principally attempted by amateurs, who were evidently selected with care, as they all performed with a remarkable degree of smoothness, and nothing took place to disturb the proper stage-business. Mr. Nicholls' excellent voice enabled him to pronounce the Shakespearian text with emphasis and effect; and nothing could be finer than his delivery of the greater passages of the play; but we warn him not to depend too much on this advantage. As an actor, he will find it necessary to subdue the mere declamation of his parts, and to gain voice by more level and flexible elocution. This, we have no doubt, he will do; and his success, so far as it has gone, must, in the meantime, be fairly held to entitle him to a trial in a larger theatre. Once regularly on the boards, he cannot fail of commanding an effective position.

PROVINCIAL INTELLIGENCE.

THE CASE OF MISS CANTWELL.—This protracted case—an action by Miss Margaret Cantwell against the firm of Messrs. Cannock, White, and Co., for false imprisonment and malicious prosecution—was resumed on Saturday, and the jury left for the jury room by the Lord Chief Justice. After the Judge's charge, at two o'clock, the jury retired to their room, and at five o'clock returned a verdict on the first count, for false imprisonment, £200 damages against the defendants, for the plaintiff; on the second count, for malicious prosecution, the jury could not agree, and they were discharged by consent of both parties.

AN EARTHQUAKE NEAR BIRMINGHAM.—About half-past eleven o'clock last Sunday night, a gentleman, near Oscley-hill, Birmingham, whilst reading, felt a severe shock and the fire-irons then bounded from their upright positions with extreme violence. On Monday he mentioned this to a person residing near West Bromwich, who also said that he felt d sturbed at the same time, and heard a rumbling noise whilst in bed.—*Birmingham Journal.*

THE SEAHAM RAILWAY AND SUNDERLAND DOCK.—On Monday the Marquis of Londonderry entered into arrangements for the shipment of his coals at the South Dock, Sunderland, when final agreements were concluded for Lord Londonderry to ship 600,000 tons of coals per annum, the directors undertaking to find temporary accommodation (until the completion of the extension and southern outlet) for commencing on the 18th June next.—*Newcastle Guardian.*

WEST SUSSEX ELECTION.—The election of a representative for the Western Division of the county of Sussex, in the place of Mr. Prime, who had resigned on account of ill health, took place on Monday, at Chichester, when Mr. Henry Wyndham (Conservative), son of Colonel Wyndham, was declared duly elected.

SOUTH DEVON ELECTION.—Mr. Lawrence Palk was duly elected on Tuesday morning, without opposition, Sir Stafford Northcote having res gned.

SOUTH STAFFORDSHIRE ELECTION.—The contest for the representation of the southern division of Staffordshire terminated last Saturday, in the return of Lord Paget. The respective numbers polled were:—For Lord Paget, 4298; for Lord Ingestre, 3769: majority for Paget, 1529. The result is said to have been chiefly owing to the large number of landsociety freeholders.

EXTENSIVE EMIGRATION OF MORMONITES FROM WALES.—The emigration of Mormonites from the southern districts of Wales has, during the past few weeks, been most extensive. Large bodies of men have sold all they possessed, and thrown the money into a common fund. Their numbers embrace all classes—one gentleman, an inhabitant of Merthyr, is of considerable fortune, having contributed £2000 and joined the brethren. Many wealthy members of the sect in the neighbourhood are selling all their property previous to departure. Upwards of 400 of the metropolitan, one an old woman of eighty years, have just left for the Great Salt Lake City, having spent the last night in this country in preaching, praying, singing, &c.—Ninety-nine families, consisting of coal-miners in the neighbourood of Llanelly, have also just left the principality, having been engaged by the West Columbian Mining Company to work the vast coal-mines belonging to them on the borders of the Ohio River.

SUDDEN DEATH.—Admiral the Hon. George Poulett being on a visit to Colonel Wyndham, at his hunting lodge, Drove house, near Singleton, Sussex, rode out with the hounds on Friday week as usual. He appeared in his ordinary health in the earlier part of the day; but while the hounds were running near West Marden, on the South Downs, the Admiral was seen suddenly to fall from his horse. A gentleman riding near him instantly dismounted, and went to his assistance, but found that the vital spark had already fled. The Admiral was, to all appearance, dead before he reached the ground, and there can be but little doubt that a sudden apoplectic seizure was the immediate cause of death.

THE NAVY OF HOLLAND.—A work published recently gives the following statistics of the navy of Holland on the 1st January:—Ships of the line, first class, 84 guns, 3 ditto, second class, 74 guns; 2 frigates, first class, 60 guns; 2 ditto, ditto, 54 guns; 1 steam-frigate, ditto, 51 guns; 6 frigates, second class, 44 guns; 2 ditto, ditto, 36 guns; 1 ditto, ditto, 28 guns; 3 corvettes, 28 guns; 5 ditto, 26 guns; 2 steam ditto, 18 guns; 2 ditto (transports), 22 guns; 1 ditto, ditto, 12 guns; 11 ditto, ditto, 8 guns; 1 ditto, ditto, 6 guns; 1 schooner brig (steam), 8 guns; and 7 schooners of from 1 to 10 guns each, besides steamers, &c.

CURIOUS DISCOVERY OF SNAKES.—A number of labourers were lately employed in blasting and removing some granite boulders scattered about the grounds of Colin House near Auchencairn, Kirkcudbrightshire. On the removal of the stones from the sandy soil on which they were deposited, the workmen exposed to view, in family groups of from eight to ten each, within a space of ground not exceeding fifteen feet square, the enormous number of 134 snakes and adders coiled together in a semi-dormant state. When exposed to the eye of day, and when the workmen commenced a general slaughter among them, they showed much inclination to indicate that they were fully aware of the peril to which they were exposed. The men succeeded in killing them all.—*North British Daily Mail.*

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THEY are talking in theatrical circles (and no wonder) of what of late years has been a very rare occurrence—the complete damnation, the first night, of a new piece by a known author. This was witnessed at the Olympic during the present week, and the author condemned was Mr. H. F Chorley. The house was crowded with the usual frequenters of *first nights*; the Garrick Club emptied its intelligent little hive of theatrical critics, dressed to perfection; men came from St. James's and from St. Giles's, from Houndsditch and from Horsleydown—all, if possible, determined to be pleased. We are assured (by old stagegoers) that the look of the house, as the curtain rose, presented one of the best good-natured audiences that they had ever seen. An old follower of the Kemble school is of opinion that this entire damnation of a play, on good grounds, augurs well or the revival of the drama—that audiences have been too good-natured of late—and that people would not have been so gentle in John Philip's time (for so they speak of the great Kemble) as they have been of late years. An old friend of Elliston's speaks, on tiptoe, thrusting his lean fingers through his thin grey hairs with delight at this change in the feeling of an audience "There is nothing," our old Ellistonian acquaintance assures us, "so detrimental to the drama as being too easily pleased Audiences must not be too indulgent Authors get loose in the concoction of their plays, and actors get slovenly in their words; and, worse still, they get *gagging*. Now a thorough condemnation of a piece puts not only that author, but all authors, and even managers, on their metal. Mr. Wigan will never fall into such a mistake again. Our friend in black and grey hairs would have gossipped on for ever on this subject, and, indeed, we must own he betrayed us into a corner at one of our clubs, and we were induced, over a bottle of fine old port (another bottle), to indulge his loquacity and our own at considerable leisure and length. We ran to olden times, to the thorough condemnation of Ben Jonson's "New Inn," and old Ben's angry title to the piece when he printed it; to the origin of catcalls and their real use; to Dryden's happy description of a piece gently treated by an audience—

> 'Twas neither damn'd nor hiss'd,
> But with a kind civility dismiss'd.

"Faint praise, this," observed our friend; "but the best description of the reception of a play by an audience is, I think to be found in old Downes, or Chetwood, or some of these pleasant talkers about their times—old times. A play was heard, and that is all; the author, in his best wig and waistcoat, was in a fume and a perspiration; the manager, having invested a large sum in its production, was in a fever. What was to be done—was it to be announced for repetition? 'Yes,' said the manager; 'Yes, yes,' said the author. It was announced, but in such a way, that the actor who announced it, and the audience who heard, both fell into a burst of laughter. The play, of course, was never repeated."

Artists who attended, and we have seldom seen such a gathering of Raphaelites and pre-Raphaelites, had a high treat at the second meeting at Campden House of the Kensington Fine Arts Conversazione and Debating Society, to whose modest usefulness we called attention in a former column of our "Talk." On this occasion the works exhibited were all oil paintings, by Creswick, Cope, E. W. Cooke, Webster, &c.—many old favourites, and some new pictures destined to become old favourites. They looked additionally well contrasted with the dark old oak panelings of the house—a second time placed by its kind host and hostess (Mr. and Mrs. Wolley) at the disposal of the Society. Another season, and perhaps Lord Holland will copy the admirable example of his neighbours at Campden House. There are thousands of intelligent people in Kensington, who have never set foot within the threshold of that fine old mansion of the Earls of Warwick, and who modestly wish to do so at the least possible inconvenience to its noble owner

We are this week pleased to see that the old custom of conferring the appointments at Heralds' College on men who have written well about quarterings and supporters, and who have an intimate antiquarian knowledge with ancient monuments and visitations, has just been revived by the appointment of Mr. Planché to the office of Rouge Croix Pursuivant of Arms. Our friend (for useful public men are the friends of everybody) will now have his name connected with Camden as Clarencieux, with Dugdale as Garter, with Sandford, as Lancaster, and with Oldys as Norroy.

The Bill of Lord John Russell, as submitted to the House this week, has led to one or two questions in literary and scientific circles that merit consideration. Lord John proposes (as our paper details elsewhere) to give to the Inns of Court (that is, to the Inner Temple, the Middle Temple, Lincoln's-inn, and Gray's-inn) the privilege of returning two members to Parliament; and to the London University (representing University College and King's College), the privilege of returning one! "Why," it is asked, "as intelligence and honesty are the two great requisites for a member of the Senate, should not other learned societies be enabled to return members?" A fellowship of a learned society at least implies intelligence and a fair position in the world. A man who belongs to the Royal Society holds at least as high a status as a member of an Inn of Court. Surely the privilege of a seat in the House might be given, with every advantage to the country, to the learned societies of London, whose annual receipts are above £1000 a year. Thus, every member of the Royal Society, of the Society of Antiquaries, of the Royal Academy, of the Geological Society, of the Geographical Society, &c., should have one vote in the return of a member to represent the several societies. Sir John Herschel, or Lord Mahon, or Sir Charles Eastlake, would be an addition of moment to the intelligence of the House. It might, perhaps, be found difficult at first to refrain from laughter when a member for a borough was heard referring to the hon. member for the Learned Bodies; but not less eggs will it be to find the hon. member for the Inns siding (as he may some day do) with the *outs* in a vote of want of confidence.

The recent presentation of the freedom of the City of London to Mr. Layard is suggestive of one or two reflections. Mr. Layard is, we believe, the first literary man who has received a distinction of this kind from the citizens of London. Till very lately literature was little thought of east of Temple-bar. The City Poet was generally the poorest versifier they could find and his only employment was in devising a pageant for the Lord Mayor's show. Literary men were taught to dislike the citizens, and the citizens looked upon literary men as madmen or vagabonds, fit only for Bethlehem or Bridewell. This mutual dislike is not generally understood. The citizens, in the reign of Queen Elizabeth prohibited the players from erecting a theatre within the City; and the poets and players in return exhibited every citizen as a cuckold. The courtiers west of Temple-bar were delighted with this exhibition of the rish citizen of London; and to such a height was this dislike carried, that, even in Garrick's time, it was customary to play one particular play on Lord Mayor's Day, and that one play a very gross picture of the citizens, their wives and daughters. Now, however, a different feeling has gained ground, and the precedent of Mr. Layard might, as it will, no doubt, be copied with advantage.

THE GREAT DIAMOND.—The extraordinary diamond alluded to in the daily papers as having lately been received at the Bank of England, from Rio de Janeiro, was submitted to the inspection of her Majesty on Wednesday last, by the consignees, Messrs. Dovey and Benjamin. The diamond weighs 254½ carats, is of the purest water, and likely, when polished, to exceed in size and brilliancy the celebrated Koh-i-noor.

THE ESQUIMAUX FAMILY.

These three native Esquimaux, who had recently the honour of appearing before her Majesty and a distinguished circle at Windsor Castle, have been since exhibited at the Lowther Arcade Rooms. They are certainly among the most singular specimens of humanity that have ever been brought before the public; and their own personal peculiarities would alone be sufficient to attract a large share of attention. The painful excitement which has so long pervaded the minds of all classes with respect to the fate of Sir John Franklin's Arctic Expedition, lends additional interest to the examination of these natives of the dreary North.

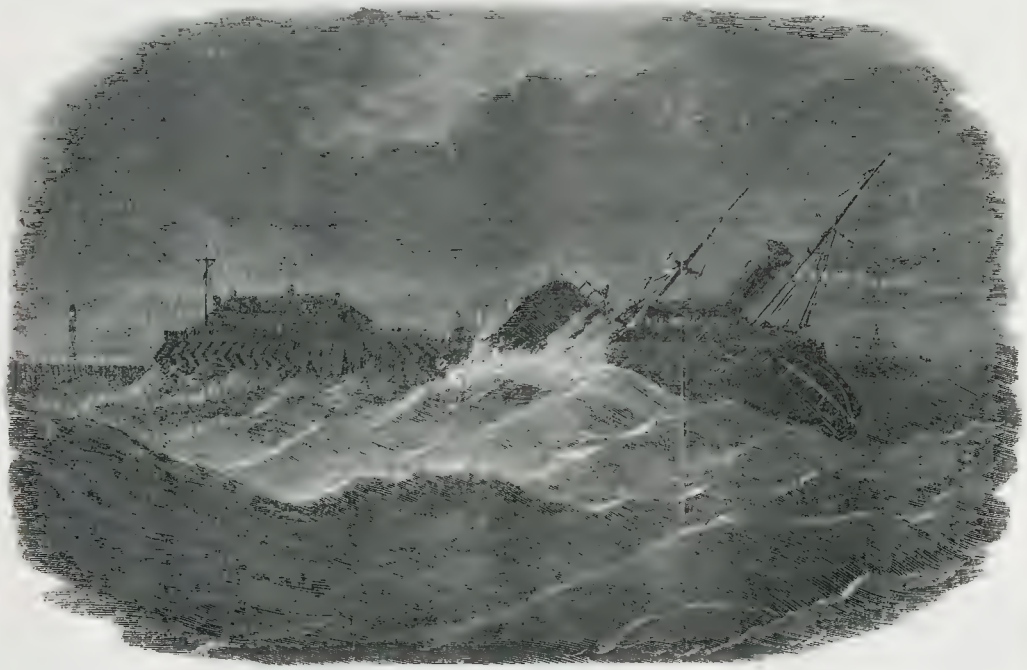
The individuals composing this group consist of a married couple: the male eighteen, and the female sixteen years of age, and a little boy, seven years old belonging to another family. The two former individuals were born at Kelmokoke, on Cumberland Strait; the latter in another locality, about 100 miles farther south than the birthplace of his companions. They were brought to England by a private Expedition, fitted out by Mr. John Bowlbey, a Hull merchant, for the purpose of establishing a species of settlement on the western side of Davis's Strait, similar to those which the Danish Government have long since successfully founded on the eastern shores of the same estuary. This scheme was not carried into execution, in consequence of the loss of one of the vessels belonging to the Expedition, which rendered impracticable the realisation of the original design. These natives are exhibited, mainly with a view of enlisting co-operation in this project, which would not only confer an immense benefit on the natives, but would also be highly advantageous to the interests of British commerce.

The personal appearance of these individuals, who seem by no means wanting in capacity to receive instruction, has been admirably portrayed by our artist. They are short in stature, swarthy in complexion, and possess a physiognomy entirely Tartar in its character. They are clothed in their native costume of seal and deer-skins, very neatly wrought and highly peculiar, especially, in respect to the difference between the dresses of the two sexes; they are surrounded by their huts, canoes, and hunting-implements, many of which display in their construction a vast amount of rude ingenuity; and the illustrative lecture, agreeably delivered by Mr. Leicester Buckingham, conveys an interesting account of the principal characteristics and leading productions of the Arctic Regions, and the manners and customs of the natives. Altogether, this exhibition is well worthy of public patronage, not only on account of the interest attached to it by the circumstances to which we have referred, but also or its own intrinsic merits, and the opportunity it affords of gaining a large amount of information.

ESQUIMAUX RECENTLY ARRIVED IN LONDON.

ACCIDENT TO THE CALAIS STEAM-SHIP "MENAI."

On Thursday week, about nine o'clock in the evening, a serious accident occurred to the steamship *Menai*, Captain Peshley, plying between London and Calais. It had been blowing a gale all the evening, and a very heavy sea was running near the mouth of the harbour when the *Menai* approached. The vessel's stem had just been pointed to enter the harbour when a tremendous sea struck her with terrific violence, causing the ship to deviate from her course, and injuring the rudder to such an extent as to render the vessel altogether unmanageable. The captain at once endeavoured to bring up, but before he could do so the ship was driven ashore, immediately at the back of the west pier, and close to Fort Ruge, the scene of Stanfield's celebrated picture of "The Wreckers." The disaster was observed by several persons who had been watching the approach of the ship from the shore; and when the vessel struck the ground the greatest alarm prevailed for the safety of the passengers and crew, every sea making a clean breach over her as she lay embedded in the sand. Blue-lights having been fired from the ship, and other signals of distress exhibited, every exertion was immediately made by the harbour authorities and others, under the superintendence of M. le Capitaine Follett to get the life-boats afloat; but, owing to the violence of the gale, and the heavy surf running, this was a work of great difficulty. Amongst the earliest at the scene of danger were the officers and crew of the mail-packet *Vivid*, Capt. Smithett, with a supply of life line and buoys. One of the life-boats having been at length launched, pulled towards the stranded vessel; but, owing to the heavy sea, it was found impossible to attempt to land the passengers. Fortunately, it was nearly high water when the accident occurred, and, after due consideration, it was deemed more prudent to leave every one on board until the tide ebbed. About one o'clock next morning the ship was left high and dry on the beach, and the passengers, twenty-one in number, were safely landed and conveyed into the town. At the same time preparations were made for unshipping the cargo. No blame whatever is attached to Captain Peshley, who exhibited great presence of mind, and did everything in his power under the trying circumstances in which he was placed. The gale blew with such violence throughout the night that the *Vivid* mail-packet did not leave the harbour until eight o'clock next morning, instead of at midnight.



"THE MENAI" STEAMER DRIFTING ASHORE, AT CALAIS.

THE CATHOLIC & APOSTOLIC CHURCH, GORDON-SQUARE.

THIS edifice, in plan, consists o chancel, with north aisle, north and south transept, central lantern tower and nave, with north and south aisles. Additional chapels are provided east of the chancel, and in the south transept; vestries are arranged on the north side of the chancel, and likewise on the south side of the south aisle.

The principal entrance is in Gordon-square, under a gatehouse, and covered cloister, leading to the porch connected with the north transept, which is also intended to form the baptistery. Another entrance is provided at the western end of the Church; but, as it is intended to extend the nave and aisles westward, this entrance, together with the west wall of the Church, is of a temporary character.

The general style of the building is that of the Early English period, prevalent in this country during the latter part of the thirteenth century, with features of a later date.

The nave, consisting of five bays of piers and arches, the caps of which are considerably varied in design, is surmounted by a noble triforium of richly-moulded arches, and a very lofty clerestory, formed with coupled lancet windows. The roof is richly carved, of somewhat later date than the general style of the building. The roof, to the aisles, which also forms the floor of the triforium, has the principal timbers moulded, and enriched with pierced braces and flowers at the intersections. The windows in the aisles are simple lancet, with panels on either side, which will admit of fresco decorations. The entire area of the nave and aisles is fitted up with sittings for the congregation.

The four tower arches are exceedingly lofty, and are seen in combination with a good effect; although it is to be regretted that the stone groin in the lantern tower is left incomplete. The pulpit is placed to the west of the north-west tower pier.

The treatment of the transepts is considerably varied. The north transept has two triple lancets, which occupy the entire height above the doorway; while the south transept has a very bold and richly-moulded rose window, concentric with the roof, which has moulded ribs and richly-carved cornice. The organ, built by Gray and Davison, is placed on the floor in the south transept; and the chapel to the eastward of this transept has a three-light window of very pleasing proportion. In this chapel is placed a side altar, where the Eucharist is celebrated on ordinary occasions on week days.

The chancel is treated in a somewhat similar manner to the nave; the piers, arches, and triforium being kept at the same levels; but the detail is of a much richer character. The clerestory, however, differs considerably from that to the nave, the arches in connection with the windows being so grouped as to be concentric with the wall ribs of the stone groin with which the chancel is covered. The stone ribs to the groin are very richly moulded, and a small running ornament is carved in the hollow of the moulding. The bosses at the various intersections are also bold, and highly enriched with sculpture. The vaulting between the ribs is filled in with Bath stone. The floor of the chancel is sub-divided into three divisions—viz., the sanctuary, the upper choir, and the lower choir; each distinguished from the other by steps, as also by the increasing richness of the pavements. Within the sanctuary stands the altar, composed of various-coloured alabasters and marbles. This is the culminating point in the arrangement of the fittings and furniture of the Church, the Eucharistic sacrifice and service being there offered. Upon the altar a cheet (usually called a tabernacle) is fixed for the reception of the consecrated elements, which are reserved for administration to the sick and dying, as well as for other purposes connected with worship. The design of the altar is exceedingly simple, being three foliated circles contained within a square framework, richly moulded, and carved in the centre of the panels, as well as in the hollow of the mouldings. The edge of the altar-slab is delicately carved, and relief, in addition to the various tones of the material, is obtained by the use of colour and gilding.

Descending from the sanctuary into the upper choir, the faldstool, where the intercession is offered at morning and evening prayer, occupies a prominent place in the centre; while, on the north side, is the seat of the Angel, or Bishop, to whom the charge of the particular church is committed, with the table of prothesis on the opposite or south side. A little further west, faldstools are arranged for the four ministers who officiate with the Angel at morning and evening prayer; and again lower down on the north side is the seat occupied by the seven Elders of the Church; the remaining stalls being provided for other priests who may be present at the service, but not officiating. Under the eastern arch of the central tower the upper choir terminates, and the lower choir commences, comprising the area, which is enclosed with stalls set apart for the seven Deacons of the Church, and for others of the deaconal order.

The eastern chapel is separated from the chancel by a close temporary screen, to be replaced by an open screen, rich in alabaster, and various-coloured marbles. This chapel, erected by the pious munificence of two sisters, and decorated by means of the offerings of the faithful in England, who have received the laying on of the Apostle's hands, may be taken as, in some measure, showing the intended decorative completion of the other portions of the Church. On the north and south sides of the chapel is an arcade of richly moulded arches, supported on polished Purbeck marble shafts, the caps of which are delicately carved, as are also the terminals to the hoods, and the medallion heads surmounting the arches. The three easternmost arches of the arcade on the south side are more highly enriched than the others; thereby marking the seat of the officiating priest and his assistants. The piscina is placed to the east of the sedilia, as is also the table of prothesis. The arcade along the eastern wall is similar in character, but not so deeply recessed as the above. The windows on the north and south sides are coupled lances, separated by a detached shaft, and greatly enriched with carving. The east window is a triplet of lances, similarly treated as regards decoration; and is surmounted by a rose window. The roof of a single span is supported by principals, springing from carved corbels, representing angels playing upon various musical instruments. The floor is paved with rich encaustic tiles; and the sacrarium, raised one step above the general level of the floor, is also more richly paved. The whole of the windows in this chapel are filled with stained glass—that in the east windows representing Scriptural subjects; while that in the north and south sides has medallions of single figures. The small rose window is filled with mosaic glass. It is ultimately intended to

INTERIOR OF THE NEW CATHOLIC AND APOSTOLIC CHURCH, GORDON-SQUARE.

THE METROPOLITAN CONVALESCENT HOSPITAL, WALTON-ON-THAMES.—(SEE NEXT PAGE.)

decorate the roof with colour, as also to diaper the plain surfaces of the walls.

The covered cloister has an arcade of interlaced arches upon shafts, with carved capitals.

Thus far we have described the internal arrangements of the structure. Of the exterior, suffice it to say that, hemmed in as it is on every side by secular buildings, the architect has endeavoured to give dignity and grandeur by simplicity of outline rather than by the means to obtain beauty by richness of detail. It is much to be desired that the house now standing at the corner of Gordon-square should be removed, and that the southern chancel aisle should be built acco ding to the original intention.

Provision is made for decorating the principal mouldings and other features of the Church, so soon as funds can be provided for the purpose.

The architects of the building are Messrs. Raphael Brandon and Robt. Ritchie, of Beaufort-buildings, Strand, London, and of Greenwich; and has been admirably executed by Mr. George Myers, of Belvedere-road, Lambeth.

In the Census Report, 1851 (Religious Worship), is a sketch supplied by a member of the, Catholic Apostolic Church; from which we gather that—

The body to which this name is applied make no exclusive claim to it; they simply object to be called by any other. They acknowledge it to be the common title of the One Church baptised into Christ, which has existed in all ages, and of which they claim to be members. They have always protested against the application to them of the term "Irvingites;" which signification they consider to be untrue and offensive, though derived from one whom, when living, they held in high regard as a devoted minister of Christ.

They do not profess to be, and refuse to acknowledge that they are, separatists from the Church estab ished or dominant in the land of their habitation, or from the general body of Christians therein. They recognise the continuance of the Church from the days of the first Apostles, and of the three orders of bishops, priests, and deacons, by succession from the Apostles. They justify their meeting in separate congregations from the charge of schism, on the ground of the same being permitted and authorised by an ordinance of paramount authority, which they believe God has restored for the benefit of the whole Church. And so far from professing to be another sect in addition to the numerous ones already dividing the Church, or to be "the One Church," to the exclusion of all other bodies, they believe that their special mission is to re-unite the scattered members of the one body of Christ.

The only standards of faith which they recognise are the three creeds of the Catholic Church—the Apostles' creed, the Nicene or Constantinopolitan creed, and that called the creed of St. Athanasius—the especiality of their religious b lief, whereby they are distinguished from other Christian communities, stands in this—that they hold apostles, propaets, evangelists, and pastors to be abiding ministries in the Church.

Besides free-will offerings, the tenth of their increase, including income of every description, is brought up to the Lord (it being regarded as a sacred duty that tithe should be dedicated to his service alone), and is apportioned am ng those who are separated to the ministry. In England there are about thirty congregations, comprising nearly 6000 communicants. There are also congregations in Scotland and in Ireland, a considerable number in Germany, and several in France, Switzerland, and America.

THE METROPOLITAN CONVALESCENT HOSPITAL.

ALL who have attended to the manifold evils besetting the lot of the labouring poor in London and other great cities, are familiar with one of wide prevalence, for which, until lately, no remedy was sought to be provided. It is that state of general weakness usually termed Convalescence, which, although short of actual disease, equally with disease incapacitates for labour.

This state, indeed, is to the poor often a more grievous misfortune than even sickness itself. When struck down by actual disease, the doors of dispensaries and hospitals are always open to them; and, in the latter establishments more particularly, they are supplied not only with the best medical advice, but with most of the comforts which the wealthy enjoy in their own houses. When, however, after having derived all the benefit which medical skill can supply in the hospital, they are necessarily discharged, they are frequently thrown into a position more distressing than ever. Many, no doubt, are discharged perfectly restored to health, and able at once to return to their daily labour; but a large proportion are still far from sound and dressed, although free from actual disease. If in this state they resume their duties, as many they are often forced to do, they speedily break down, and are compelled once more to seek shelter in an hospital, with a greatly diminished chance of re overy.

What these poor people want are not hospital comforts, however liberally bestowed, nor medicines, however skilfully prescribed; but the natural restoratives of fresh country air, good food, gentle exercise out of doors, and that mental quiet and freedom from anxiety which cannot possibly be the lot of the labouring man while struggling single-handed against poverty and bodily weakness. A d by the poor such restoratives can only be found in special charities provided for the purpose. Of this kind, and the only one in existence, is the Metropolitan Convalescent Institution.

The idea of a refuge for the convalescent poor originated in the year 1840; and, though at first carried out on a very limited scale, in merely sending a few persons to the cottages of a village in the neighbourhood of London, it soon gradually expanded, and a sum was raised large enough to justify the promoters of the charity to take and fit up the old workhouse, at Carshalton; where it has increased from time to time and flourished to such an extent that it has now passed through its chrysalis state, and is about to occupy a noble asylum, just erected, at Walton-on-Thames

Through the generous gift of the noble president, the Earl of Ellesmere, five acres of valuable ground have been secured to the charity; and by the respond to the appeal made to the public charity a sum was raised large enough to justify the committee in commencing the new work; and, acting still further on that true system of personal charity which sacrifices itself for the real good of others, the novel plan of opening the asylum without a public dinner has been reported to; believing that there are more who will sympathise with poverty in one of its most grievous forms through such an opportunity than in giving under the influence of those feelings, which, thanks to the spirit of the age, are believed to be distasteful to very many of its supporters

The site forms a part of the well-known Oatlands-park, and has been selected on the authority of the medical staff as one of the most healthy spots round London

The new Asylum, of which we give a View, is just open d, and will be, when finished, a large and imposing building—the architect being Mr. Joseph Clarke, F.S.A., of Stratford-place, Oxford-street. At present, the centre part only has been erected; but the offices are extensive, and large enough for any future additions; the cost of this portion, including the fitting up, will amount to £12,000. It is built fire-proof, and contains every convenience and arrangement for the comfort and re-instatement to perfect health of the inmates. The dormitories are large, open, and airy; and so divided that no inconvenience can take place. An infirmary for both sexes is provided, and, both in the day-rooms and general arrangement, perfect isolation and the wants of each are considered. The dining-hall is at the rear, and is a large and well-lighted apartment—which will be used as well for a chapel, till the means are raised for this addition to the completeness of the building, which, it is hoped, some day may be accomplished—a wide corridor extends the whole length of each division, which forms an excellent ambulatory in wet weather. The ventilation has been carefully considered, and every means provided for the heating of the building; the kitchens and offices are as am le and satisfactory as can be well imagined, considering how masterfully they are necessary to the recovery of the poor inmates who very soon, with the good living and the fine air they enjoy, are restored to robust health and fit for their daily toil.

HEALTH OF OMER PACHA.—A private letter from Constantinople, of the 30th ult., written by a gentleman who saw Omer Pacha at the close of last month, states that th General is in excellent health. He was safe y suffering from a severe cold; and the Porte, from anxiety for his comfo t and welfare, sent him a physician; and this is all the foundation for the man stories about ague, typhus, and typhoid fever, excesses at table, and so forth, which the German papers have circulated.

JACK'S ESTIMATE OF THE RUSSIAN SEAMAN.—Our sailors who have visited St. Petersburg and other ports of Russia have generally a very poor opinion of the seamen of that country. They speak of here with a contempt bordering on pity, representing them as feeble in body and devoid of pluck. "How do you account for it?" we asked a veteran Englishtar the other day, who had given us the above estimate of the Muscovite mariners. "Why, do you see, sir," was the answer, "it can't be otherwise. They have nothing to put spirit into them: their mind's not the r own, but the Emperor's, and they're not fed as we are. It's the same with ev ry independence, and the good solid food that he gets, that makes the Britis sailor what he is; and for want of which the Jack-a-Roohian is weak and spiritless." *Swarterland News.*

THE BLUE-BOOKS ON THE TURKISH QUESTION.

(*Continued from page* 119.)

COLONEL ROSE, in all his despatches to the British Government, appears to have been fully aware of the serious results which might ensue if the French and Russian Governments were not severally checked in their endeavours to intimidate the Government of the Sultan. If we may judge from Lord Malmesbury's short reply, the British Government—not having the advantage of such intimate acquaintance with the subject—did not participate in this anxiety. His Lordship, under date of Sept., 1852, informed Colonel Rose that he approved of the endeavours which he had made "to moderate the vehemence of the several parties engaged in the discussion;" but gave him no further instructions. On the same day on which this letter was despatched, Lord Malmesbury received a communication from Lord Cowley, at Compiègne, of a nature to show that the French Government was opening its eyes to the danger of the course which it had hitherto pursued. "M. Drouyn de Lhuys," says his Lordship, "who arrived here from Paris this afternoon, mentioned to me that the question of the Sacred Places was not settled, and, he was afraid, would give rise to further difficulties. He was, he said, most anxious to see it terminated." A few days afterwards, Lord Derby's Ministry resigned; and the future conduct of the affair was left in the hands of the Aberdeen Administration. It was not only at Constantinople and at Paris that the true state of the case began to be visible. Sir G. H. Seymour, at St. Petersburg, saw the matter as clearly as Colonel Rose did at Constantinople; and Count Nesselrode, by exaggerating its difficulty in an expression which he used to Sir George, betrayed the animus of his Government, and put our Ambassador on the alert. The following is an extract of a letter addressed to the Earl of Malmesbury, but received by Lord John Russell:—

(NO. 62.)—SIR G. H. SEYMOUR TO THE EARL OF MALMESBURY (RECEIVED JAN. 11, 1853.)

St. Petersburg, Dec. 31, 1852.

I have held a conversation with the Chancellor, which I commenced by observing that I could not help feeling great anxiety about the continued disputes respecting the rights of the Greek and Latin Churches in Turkey.

"Et vous avez bien raison," Count Nesselrode replied; "d'en être inquiet, car je ne vous cacherai pas que c'est une très mauvaise affaire."

His Excellency proceeded to say that the position of the Russian Government was simply this: That after two years of laborious negotiation an arrangement had been effected, fair to all parties, and by which certain concessions had been made to the Latins, that this arrangement was notified not only by a firman, written in February last, but by a formal letter from the Sultan to the Emperor; that the business was suddenly unsettled by the French Ambassador, who, under threats of violence, had suspended the reading of the firman; that certainly this was a state of things his Imperial Majesty could not tolerate, and the less, as the interests of the Porte, as well as those of Russia, were compromised, the Sultan being very directly interested in attending to the feelings of those large bodies of his subjects who profess the Greek religion, while nothing was to be gained by consulting the wishes of some occasional Roman Catholic tourists.

I begged his Excellency to believe that her Majesty's Government had no further interest in the question than that of preventing misunderstanding between friendly Governments and injury to an ancient ally: itself no way concerned in the matters in dispute.

Upon my remarking afterwards that I thought it highly desirable that the question should be approached in the most conciliatory spirit, and the difficult position of the Porte should not be aggravated by differences growing, as Count Nesselrode had stated, out of the conduct of the French Ambassador, his Excellency replied that he really did not see what middle course ("terme moyen") could be adopted, but that he was ready to examine the business under the influence of such conciliatory feeling.

"The very bad affair" was speedily made worse by the Russian Government. Within a week after Sir G. H. Seymour had reported Count Nesselrode's expression, it became his Excellency's duty to inform the British Government that the Emperor had ordered the occupation by his army, and to march it towards the Turkish frontier. Our Ambassador was of opinion, that a threat employed by the French Government of sending an expedition to Syria in the event of satisfaction not being obtained for the claims of the Latin Church, was the reason for this step on the part of Russia. His Excellency stated (7th January, 1853), that orders had been despatched to the fifth *corps d'armée* to advance to the frontiers of the Danubian Provinces without waiting for their reserves; and that the fourth corps, under the command of General Count Dannenberg, then stationed in Volhynia, was to hold itself in readiness to support the movement. The whole force, according to official returns, was estimated at 144,000 men. Sir George Seymour sought and obtained an interview with Count Nesselrode; and informed the Foreign Secretary that the Count treated as exaggerated the alarm expressed as to the effect that would be caused in Turkey and elsewhere by the appearance of a Russian army on the frontiers of the Sultan's dominions. The Count entered into long explanations and assurances—which events have since proved to have been unreal—that the Czar deprecated the fall of Turkey; and even boasted that under critical circumstances, he had rendered those services to the Porte by which such a catastrophe could alone have been averted. He expressed a hope and a belief that, even at that crisis, affairs would be brought to a conclusion by negotiation, but considered it necessary that the diplomacy of Russia should be supported by a demonstration of force, and ended with an appeal to British diplomacy at Paris and at Constantinople, to support the alleged rights of Russia, and to discountenance the pretensions of the French Cabinet.

The French Government was by this time fully aware of the error which it had committed in allowing M. de Lavalette to threaten and embarrass the Sultan. As a first step towards remedying the mischief which had been occasioned, it recal ed its malad oit Ambassador. Lord Cowley announced the fact to Lord John Russell on the 20th of January, and added, that the display of force on the part of Russia would not prevent the French Government from terminating the question of the Sacred Places. From that time forward, M. Drouyn de Lhuys ably and consistently carried out the enlarged and wise policy of his Imperial master, and the Governments of Great Britain and France acted in perfect accord. The French Emperor, aware of the mistake that had been committed, did his utmost to repair the evil consequences that were likely to ensue, and acted with characteristic sagacity and energy. The hereditary foe of Turkey was too busily at work to allow the friends of that Empire and of the independence of Europe to weaken her by minor pretensions of their own. Both the British and French Governments understood their duty, and kept vigilant watch over the common enemy.

The Russian Government deemed it expedient, at this time, to endeavour to mystify foreign courts, and especially that of England; and Count Nesselrode addressed to Baron Brunnow a long despatch, to be communicated by him to the British Government. But even in this document Count Nesselrode, with his usual want of tact, betrayed many circumstances which a more astute diplomatist would have endeavoured to conceal. He seems to have imagined that Turkey was a dead carcase, and that France and Russia were in the position of two vultures disputing the possession of the prey, and that the Russian vulture had, somehow or other, a right to the whole of it:—

COUNT NESSELRODE TO BARON BRUNNOW.

St. Petersburg, Jan. 14, 1853.

The mischief is done, M. le Baron, and there is no longer any question of preventing it. It is now necessary to remedy it. The immunities of the orthodox religion which have been injured; the promise which the Sultan had solemnly given to the Emperor, and which has been violated, require some reparation. We must labour to obtain it. Such is the present state of the question. If we took for our example the imperious and violent proceedings which have brought France to this result—if, like her, we were indifferent to the dignity of the Porte, to the consequences which an heroic remedy may have on a constitution already so shattered as that of the Ottoman Empire—our course would be already marked out for us, and we should not have long to reflect upon it. Menace, recourse to force, would be our immediate means. The cannon has been called the last argument of Kings: the French Government has made it its first. It is the argument with which, in the outset, it declared its intention to commence its proceedings at Tripoli, as well as at Constantinople. Notwithstanding our legitimate causes of complaint, and at the risk of waiting some time longer for redress, we shall seek to take a less expeditious course. We all desire, as we have always desired, the maintenance of the Ottoman Empire as being, taken all in all, the least mischievous arrangement for all European interests, which would not fail to come into violent collision in the East, if the gap existed. We will, accord ngly, use our utmost endeavours to avoid the last, as far as depends on us, without prejudice to our honour, whatever may be established still further to shake the body, already so feeble and so tottering, at the risk of causing it to fall to powder. Although we were in vain attempted, up to the present time, to make the Porte access ble to reason, we are about to make one further and conciliatory endeavour. We are, consequently, seeking at the present time for an arrangement which may secure to the throne the force of which it has been deprived—may replace at Jerusalem the two creeds on an equal footing, and reconcile their pretensions without prejudice to the rights of either. The object of the pacific but firm advice, with which this proposal might be accompanied, will be to enlighten the Porte as to the consequences of the fau t which, out of weakness, it has committed towards us, and at the same time re-assure it against the contingencies which disturb and alarm it on the side of France. The Emperor has already made up his mind to the principal bases of this arrangement, and has given us his assurance as his Majesty has finally decided upon these, I will not fail (M. de Baron) to communicate them to your Excellency.

But, while firmly desiring and wishing to employ only pacific means, there is one consideration of which we have not been able altogether to lose sight. It is, that the moral ascendancy of France at Constantinople has acquired such dimensions, that it is much to be feared that all our endeavours may fail before the pretensions entertained by the Sultan's councillors of the perceiving that the Porte hesitates, may again have recourse to her system of menace, and press upon it so as to prevent it from fulfilling the most just demands. A state of affairs so unequal between us and the French in all parts of the Mediterranean, and presents its least demand at the cannon's mouth; we allow the notion of our inability to defend them, and likewise to protect our most vital interests, indefinitively to take root in the mind of the Turks. The Emperor has, therefore, considered it necessary to adopt on the outset some precautionary measures, in order to support our negotiations, to neutralise the effects of M. de Lavalette's threats, and to guard himself in any contingency which may arise against the attempts of a Government accustomed to act by sacrifices

The views of the French Government, upon which so much was made to turn by the Czar, having undergone a modification in consequence of the misinterpretation which it suited Russian ambition to put upon them, it becomes of interest to know exactly what they were. That they were not identical with those of M. de Lavalette must have been evident to the Czar by the recall and disgrace of that Ambassador. They were thus expressed in a despatch of Count Castelbajac, the French Ambassador at St. Petersburg, in a despatch dated the 25th January, 1853. This document, and several others relating to the dispute, do not appear in the English Blue Books, but have been published within the last few days in the French official journal, the *Moniteur*, from which we extract the following:—

You know, General, that, yielding by turns to two contrary currents, the Porte has, within the year, issued on the subject of the respective pretensions of the Latins and Greeks, decisions which are in some sort exclude one another, and of which the gravest inconvenients in our eyes is to place—if not in fact at least in public opinion misled by the false appreciations of the newspaper—the two rival Powers of France and Russia at Constantinople in a sort of antagonism, which I take pleasure in believing is not more desired by the Cabinet of St. Petersburg than by us. I am anxious, then, not to delay any longer in fixing the object which we desire to attain; that is to say, clearly to establish the justice and moderation of our demands. A short statement of the facts will render my task easy. I shall not say the Ambassador, but I shall say the Government, on the points of law and fact, which are so completely understood at present that it is not necessary to reproduce it. The Government of the Emperor, General, without hesitating in giving up the claims which it found in its inheritance, has understood that in human affairs nothing is so sure as justice and moderation of our demands. A short statement of the facts will render my task easy. For two years, the Ambassador has not ceased to awaken in the Ottoman empire, which is already so shaken, religious passions which would infallibly have turned against the power of the Sultan; it has found a lively sympathy for them in the personal sentiment of his Majesty the Emperor Nicholas, chief in his country of the Greek religion identically the same as that which the greatest number of Christians in the East profess; and it is all considerations which have induced it without pain to reduce its pretensions to the exact limit of its dignity and its duties. As much as we placed modera ion, prudence, and a spirit of concord in the negotiations which the Porte, as much, I must confess to you, have we been surprised at the efforts which the mission of Russia to Constantinople has made to annul the concessions—which, however, are very important—which have been made by the Cabinet of St. Petersburg, in fact, cannot disregard the validity of our capitulations without making the most serious encroachments on its own treaties with Turkey—treaties far more advantageous, far more important, than that of which we do not even demand the complete execution. This point admitted, General, I do not see on what could be based an opposition which should arise, in our proceedings at Constantinople a character which it has never been our intention to give to them. Not only have we not entered on this ground into a conflict of influence with the Cabinet of St. Petersburg; but we have even thought, in spite of the texts which it would have been easy for us to invoke, to withdraw from the Christians of the Greek Church the right of enjoying advantages which time has consecrated in their hands. Our only object has been to raise the Catholic religion from a state of inferiority as unworthy of it as of us. Can that be the cause of the dissatisfaction felt at St Petersburg? I cannot admit it, after the display, full of measure and of propriety, held by Count de Nesselrode, and which is set forth in your despatch of 1st of April last. It would, in fact, be in our century a strange and sad thing to give to the world the example of a conflict between two great Christian Powers for a question of religious pre eminence, debated exclusively between itself, and in presence of Islamism. Reason, dignity, and the interest of religion, command Russia and France to a line of conduct; and if the misunderstanding which might have resulted from an erroneous appreciation of our proceedings required an explanation, I take pleasure in hoping that the Cabinet of St. Petersburg will be informed on our acts and our intentions, will not hesitate to render homage to our moderation.

Accept, &c.,
DROUYN DE LHUYS.

At this time a new actor appeared upon the scene. A man of the highest consideration in Russia was sent to Constantinople on an extraordinary mission. That personage was Prince Menschikoff, an Admiral in the Russian fleet, whose imperious and haughty conduct not only exasperated the Turks, but convinced many persons who had hitherto judged favourably of the conduct of the Czar, that the dismemberment of Turkey was his object; and that Moldavia and Wallachia were prizes nearer to his mind than any diplomatic triumph over the Ambassadors of France, or in the Councils of the Sultan. The exact state of affairs when the mission of Prince Menschikoff was first announced, appears from the following despatch from Lord John Russell to Colonel Rose. Lord Stratford de Redcliffe was not at his post; and considerable alarm was expressed in the English journals at the time that events of such magnitude were not watched on the spot by Lord Stratford himself—the old and tried friend of the Turkish empire, and a statesman better qualified than any other man in Europe to advise the Sultan in a critical emergency. It will be seen by Lord John's letter to Colonel Rose that Lord Stratford was at this time on his way back to Constantinople:—

LORD JOHN RUSSELL TO COLONEL ROSE.

Foreign Office, Feb., 1853.

The Russian Minister at this Court has read to me a despatch from Count Nesselrode to M. Kisseleff, giving an account of the result of General Castelbajac's explanations of the views of the French Government in relation to the Holy Places.

The open and conciliatory language of the French Government appears to have produced a favourable impression on the Emperor of Russia, yet there is no disposition to recede from the terms of the Firman of Feb., 1852. And it appears that Prince Menschikoff is about to proceed to Constantinople, to express the firm resolution of the Russian Government not to recede from the demands which were then proclaimed by the Sultan and assented to both by France and Russia.

You are, therefore, instructed to hold to the Sultan's Minister, to Prince Menschikoff, and to the French Minister, language calculated to bring back the state of this question to its position of February in the last year. This should be effected in the manner most consistent with the dignity of the French Government, which has been somewhat compromised by the language of M. Lavalette.

It is said that the Emperor of Russia will demand the dismissal of Fuad Effendi. On this question you will take no part, one way or the other.

If the Russian troops should advance to the frontier, you must give immediate information to her Majesty's Government.

I trust I need not suppose the case of their advancing beyond the frontier to the attack of the capital. In such a case, Viscount Stratford de Redcliffe will be on the spot, furnished with the requisite instructions.

The extraordinary insolence displayed by Prince Menschikoff, with the details of which the public is but too familiar, does not appear to have been credited by the British Ambassador at St. Petersburg. Sir George Seymour, in a despatch to Lord Clarendon, dated 26th March, throws doubts upon the reports published in the English and French newspapers, on the authority of telegraphic messages from Marseilles. His Excellency says:—

In a word, then, my Lord (always supposing that no unforeseen and serious complication should have arisen at Constantinople), when I weigh the calm and ancillatory assurances given to me here by authorities not worthy of confidence, against the words of a telegraphic message transmitted from Marseilles, I am bound to infer that the reports which have given me momentary uneasiness are to be entirely mistrusted.

We know, upon certain authority that the Russian Government are not desirous as the Government of her Majesty can be that no serious misfortune should befal the Turkish empire; we are, therefore, fully warranted in assuming that no measures of force will be employed by which the danger of such a crisis would be unnecessarily incurred.

I will only add that, since the foregoing sentences have been written, I am enabled to state, as I do with great satisfaction, that the opinion which I have expressed to your Lordship respecting the accounts from Constantinople is fully shared by the Imperial Government.

The last despatches received by this Government from Constantinople are under date the 9th instant.—I have, &c.,

(Signed) G. H. SEYMOUR.

Colonel Rose was naturally much better informed, and shared, we cannot doubt, the feelings of the other inhabitants of Constantinople who were spectators of the ostentation of Prince Menschikoff, and knew somewhat of the character of his demands.

COLONEL ROSE TO THE EARL OF CLARENDON

Constantinople, March 24, 18 1

On the 17th instant Prince Menschikoff, accompanied by his embassy made an official visit to Rifaat Pacha. The Minister assured me that the visit was merely a formal opening of negotiations than anything else; the Prince Menschikoff had confined himself to stating, in general terms, that the object of his mission was to settle, not to embarrass matters, and to do away with the coldness existing between the two Governments; he added also, that he hoped to find the Sultan animated by the same sentiments as his father alluding, it was supposed, to the treaty of Unkiar Skelessi.

Shortly afterwards I learnt that Prince Menschikoff had left on the 17th instant, a "note verbale" with Rifaat Pacha, containing the Russian demands of the Porte; this Rifaat Pacha denied to me, but I give the following on my part extracted from the Grand Vizier the suspicious statements in the inclosed report. The Turkish authorities were still less communicative to my French colleague.

(INCLOSURE).—M. E. PISANI TO COLONEL ROSE.

Pera, March 19, 1853.

I communicated respectively to the Grand Vizier and Rifaat Pacha your information of this day's date, containing the report which was talked of that the Russians are endeavouring to enter into a secret treaty or arrangement with the Porte. His Highness requested me to say in reply, that as he considers to be at the head of the Ministry, your Excellency can reckon upon the non-accomplishment of the wishes of Russia; but if he is dismissed from office, of course he does not know what line of policy might be adopted by his successor.

His Highness told me that the language now held by Prince Menschikoff is exceedingly mild and very friendly, and gives to understand that the Emperor entertains no intention to exceed from what was done in the question of the Holy Places. But, on the other hand, he got information from good authority, that this moderate behaviour on the part of the Russian Ambassador is calculated to induce the Porte to assent to the conclusion of a secret compact.

Rifaat Pacha seems to be unacquainted with the true intention of Prince Menschikoff to propose a secret treaty, yet he suspects it, and gave me the most formal and unequivocal assurances that, were such a proposal to be made to him, he would lose no time in informing her Majesty's Embassy of it. *(To be continued.)*

LOSS OF THE "OLINDA."

We have been favoured by a Correspondent, with the following letter, received from a passenger in the *Olinda* steam ship, to it in Harry Parking Reef:—

Llanrhwydrys, Anglesey, Wales, Feb. 2, 1854.

My dear ——.—As it appears probable that I can proceed from Holyhead to Oporto, by the *Rattler*, screw steam-ship, which has put into Holyhead about noon, I avail myself of the first leisure, before proceeding to the harbour works and river improvement confided to me by the Portuguese Government, to narrate the incidents of the wreck of the Brazil screw steam ship *Olinda*.

I daily arrived at Liverpool pier at noon, on the 24th January, and then learnt that no steam tender had arrived there for passengers, as advertised; that a vessel, the *Olinda*, was then in the Sandon-dock, two miles from the pier; thither I was taken with my baggage. For three hours and a half my baggage remained on deck, and only after a great stir was it taken below. At daylight, on the morning of the 25th (Wednesday), the vessel was hauled out of the Sandon-dock, into the Mersey, within sight, but seaward of the town of Liverpool. We had hardly proceeded off the pier before something was found to be wrong, and the ship had to return to fresh moorings in the river. It subsequently was known that the engine-room was fast filling with water—some reported from the feed-pipes of the engine, but the bishop has never very distinctly accounted for this explained.

At dawn of day, on Thursday, 26th January, the *Olinda* was again under way. As we proceeded down Channel, the weather thickened, and came on to blow a heavy gale of wind, dead ahead of the course the vessel had to make. The *Olinda* was 252 feet long, and about thirty feet beam. She went through, rather than over, some of the waves, and consequently shipped large volumes of water. We took the North Channel (lit. 6m. a.m.; the mainsails (three) were set evidently with very arduous labour to those on duty. I was on deck nearly the whole time

The ship seemed to wear easier after the sails were set; but the wild impetuous waves, on two occasions especially, took the ship so rugged, that I have yet a keen sense of their danger, and of the confusion thereby occasioned all over the noble ship. The vessel, when thus struck, seemed to heel about with a twisting kind of motion; was again hugged by a burshing wave, that made the deck tremble again under our feet; and whether from the non-action of the screw-propeller, or from bad steering, it was clear to me that the *Olinda* was not so good as she looked; and it was some minutes before she could be properly put to the waves that broke incessantly met her onward course. At the juncture—for I thought, not feared, the worst—I inquired of the captain, if the ship failed to weather the pile, we could make Holyhead, as a harbour of safety? He said, yes; we could not make Holyhead; but that we could return to Liverpool; and added, that all was right below (in the engine-room he meant), and that she could easily weather it.

To keep our present course under sail was hardly possible, and (at length) to tack was determined on, and the ship answered her helm afterwards. The gale, we felt, had slightly moderated, and, eventually I went, when all had been made snug, with the captain to his room on the deck; we found the Admiralty instructions roaring. After rejoining at that good sign, at four p.m. was rung down to dine, but few came to dinner. As night advanced the ship progressed tolerably. Although the gale had moderated, there still was considerable sea on; indeed, few could move on deck either with that degree of safety or surety that landsmen so prize. In the last rays of twilight I saw the Ormsheads, and we were on the look out for the Skerries Lighthouse.

The gale having somewhat moderated, several of us were comfortably seated in the saloon, after tea had been served, when one of the passengers, on coming casually remarked that he was not at ease in shore; and he supposed off Holyhead, with the Skerries Light full in view. I was about to proceed on deck, but stayed to remark, that, I would far rather be out on the broad Atlantic, when, without a shock or remark of "breakers ahead," even from the look-out, the ship struck. The force of that terrible moment one can feel, and never can in its intensity be described. I was near the stern, and the grand saloon forward of the *Olinda* so lifted, that on looking back I expected every instant to see the water pour in. The shrieks of danger, at first so dreadfully appalling, were over in a brief interval; all rushed to the companion ladder on deck; all was confusion, each one expecting a rebound of the vessel to be the signal for her breaking up. In comparative p a few minutes the huge ship "scrunched" the rocks, grounded heavily, and as I expect, permanently. From previous knowledge of the tides, I almost instantly remembered that it was about the time of high water. Sounding were subsequently taken of 15 feet on the starboard or land side (for the vessel had canted, or rather swung round), and about 13 feet on the larboard or sea side; and, upon learning these facts, I at once felt that human life on board was not, with common prudence, in any imminent peril. Going to the pilot on the bridge of the ship, I endeavoured to extract from him some information as to the tidal lift in that locality; but he was without the energy to reply, or had not the requisite knowledge at command. I tried to persuade several of the passengers not to leave the wrecked ship; urging that in a few hours the tide would so flow out that the hull must become high and dry, and that our lives in this raging sea, and off that rugged, rocky coast, might become doubly endangered by taking to the small boats. Many heard, but few believed; and one alone followed my example. Then came the business of the doomed wreck: blue signal lights were hoisted—the cannons were loaded and fired—the steam roared on escaping—the tackle for the boats was promptly rove and prepared—women and children were dragged from their beds to the life boat—and the writer was discharging rockets, and thought himself happy to secure three yards of small cord, to cash himself to the rigging, in the event of the ship going to pieces

In the next berth to mine was a young and apparently consumptive Irish gentleman, going out, as it was thought, to a warmer climate only to die. At the first lull of our work on deck of the wreck, I went below to him. He appeared almost frantic, grasped me tightly, with almost dying energy, and cried aloud for God's mercy. He said he was dying, and implored me to stay by him. I endeavoured to calm him, added, that the stoutest of us might shortly have to meet that fate. Briefly stating the position of the stranded ship, our hopes and means of safety then under adoption, I said there were women and children to be passed over the ship's side first, but that he should come on deck.

By this time the passengers and crew had attained some order, the former more especially. After the ship struck the crew were seemed with a will. The women and children were first passed over the side of the ship into the life-boat of the *Olinda*. Some just roused from their berths had time but to secure a few things.

The consumptive man came on deck just in time to be passed over with the women and children, to whom blankets and other coverings were passed over the stern, as they lay for some time almost perishing in the boat, and hardly knowing where to go, or how to land.

Often amid the most heart-rending scenes there accidentally arise incidents that create positive diversion. During the burning of the blue port-fires, and other distress signals, it was found that the percussion apparatus would not fire the cannons, as then loaded. Burning brands, in a haze, and spray, and wind, were essayed and found requisite and effectual. The guns were about to be abandoned, when up rushed one of the crew, with the sea-kitchen poker, red hot, and with it fired off the cannons in quick style.

Amid this darkness and trouble was an effect too striking not to be readily remembered. After our signals and cannon firing, the pilot sloop approached over the crest of the stormy waves and illumed herself, in full sailing trim, by burning blue lights, to herald her approach, and beacon to us that some refuge was at hand

In a period comparatively brief we saw lights hover about the shore; a dog barked; and, eventually, the pilot sloop showed another blue light to seaward. Again all was dreary and dark; but I saw that the tide was ebbing fast, and was thankful. Two boats came to the ship, and the life and pilot-boats took off all the passengers but two. The crew and engineers seemed to be almost panic-stricken; they bemoaned their hard fate, and would not believe me, that the vessel at length seemed high and dry as the tide receded, probably for a space of nearly two hours

Another Liverpool pilot, from the sloop, came on board the *Olinda* about two hours after the vessel struck. He told us he knew well the position of the rocks upon which the vessel was; that it was called the Harry Furlong Reef, that the ship must become a wreck; but that, in time, we should be able to walk on shore. I wanted them to pass a rope on shore, over the rocks, to give confidence of escape to the crew, in order to urge them to something useful; but it was not done, and they remained inert, if not worse

After a conference that will never be effaced from my memory, it was deemed by the captain expedient to land the mail, specie, plate, and valuables: all hands to abandon the ship as soon as the tide fell, and the high for our return then to watch on shore whether, if with the rising tide and heavy wind, the vessel should go to pieces

Word was passed to prevent the men passing down by lines on to the rocks below; but it could not be enforced. "Sauve qui peut" seemed the motto most regarded

Captain Haram wished us two passengers to arm ourselves with cutlasses to protect the mails, &c., he intended to send over the rocks to us on shore. We both assented, and armed ourselves accordingly; but I can hardly describe how I went over the ship's side, and down a height nearly twenty feet of single rope, on the black slippery rocks, in that dull, dark night, with the sea breaking and roaring around us. But I effected it, and safely, too. After my fellow passenger had descended, four boys, on their first voyage from some naval school, begged me to let them go down, to which I did; and our going down seemed to act like a general signal. The crew, engine-men, stewards and others, one by one stealthily left; and the captain in a very short period, was found to have only his chief officer and my self in command. The night was cold, but serene; and our cutlasses we soon found to be very useless appendages.

At length, the cry was raised that the coming tide would overwhelm us, the men in their hurry, anxiety, and terror to get once again on dry land, often fell between the gullies of the rocks; and the lights some carried became nearly all extinguished, amidst the craggy water-holes one slippery word hanging about the rocky shore. Fortunately, some had secured a few port-fires before leaving the ship. Suddenly one would be lighted, a blue blaze, for a few moments, gave consolation around. Onward all rapidly dashed: some up, others scrambling, and many down: all aimed by the artificial blue-light, but to be again stopped by the hazy darkness and deep cavern, that the very gloom of night seemed to enhance. After some time thus spent, we reached a kind of pebbly, shingly beach; the men took courage, and endeavoured to rekindle the flames; and never did I feel that joyful, corresponding sensation once again upon grassy turf more gratefully than I did on this most eventful night.

The captain, with his chief officer, remained on the beach abreast of the wreck, in order to watch or remark the effect of the rising tide upon his once noble ship; but, having been in sea-water nearly three feet deep, all sought out, and found, a path to a neighbouring cottage, and I was left to any who came to our aid could speak only in Welch—bounding off over mountains and stone fences, to the nearest farm-house, where the passengers and crew had taken refuge, before the dawn of day had fairly set in.

I found them resting on straw, lying about on an uneven earthen floor, around a fire, but huddled together; still there was warmth, a welcome shelter, and rest—and the masters of the house were kind and obliging to my I directed the guide to return to Captain Haram and his officers and inform him thereof, and also to report the safe landing of those from the lifeboat.

They subsequently came to the farm, but I heeded their advent little, for, wet, weary, miserable, hungry, cold and cheerless, I no sooner sat down under that humble roof than that blessing, sleep, came on so overingly to my aid. My head found its only resting place on the corner of the table, yet it was broad daylight ere I again felt sensation sufficient to recognise my miseries, believe me in our personal safety, which I have since, and indeed even then, heartily and gratefully thanked kind Providence for

The *Olinda* struck the rocks at 9.20 p.m.; I reached shelter at 4 20 a.m.—seven long hours of anxiety or anguish that I hope again never to renew. I remain, &c., W. Y. F.

REFORMATION OF ADULT MALE CRIMINALS.—A very interesting meeting of friends and supporters of the Reformatory Training Institution or Reformatory for Adult Male Criminals, was held in the Lecture-hall of the house, Great Smith-street, Westminster, on Wednesday afternoon, for the purpose of bidding farewell to twenty-six of the inmates, who, having served the twelvemonth allowed in the institution in the acquirement of some industrial pursuit, were on the point of leaving it, to commence the response of the charity. The chair was taken by the Right Hon. the Earl of Shaftesbury, who was supported by the Duke and Duchess of Argyll, the Earl and Countess of Ellesmere, Earl Waldegrave, the Hon. George Waldegrave, Mr. Cleetham, M.P.; Mr. Ricardo, M.P.; Mr. Baron M.P.; Captain Trotter, Colonel Wylde, Sir R. Arouthnot, Bart., and many other gentlemen. They had assembled from the examination of Mr. Nash, the secretary, having read several letters from young men who had emigrated at the expense of the charity, which were of the most satisfactory nature, the noble chairman then delivered an impressive address to the young men who were assembled in the body of the hall. He exhorted them to express their gratitude for the kind and liberal manner in which they had been treated in cases of crime and consequent misery, not only by their words, but by their actions; and when in a distant land he hoped they would avoid all those temptations which had doubtlessly overcome them, and maintain a system of sobriety, regularity, and devotion. The Duke of Argyll then made a short address, in which he expressed a hope that Parliament would aid and support the noble example set by Mr Nash, and found institutions for the reformation of criminals. Captain Trotter and Mr Joseph Payne also addressed the inmates. One of the inmates about to depart returned thanks for himself and companions, and said they should at the committee see that their labours had not been misplaced. His Lordship then shook hands with them, and the Duke of Argyll, having said a few words of good speed, the meeting dispersed.

OVERFLOWING OF THE BANKS OF THE THAMES.—The flood-tide of Wednesday afternoon rose to the remarkable height of eighteen inches above the ordinary flood-tides, and to within five inches of the highest level known in the river, in February, 1846. Wandsworth, Battersea, Barnesse, and many other districts along the banks of the Thames were flooded, besides many hundred wharves along Bermondsey, Rotherhithe, and on the opposite side of the river, causing very serious damage.

GREAT FIRE AT BROMLEY.—On Monday evening, between five and six o'clock, a fire broke out at Clausen's Patent Flax, Hemp, and Jute Company's mills, situate at Bromley, near Bow new church. The fire spread with amazing rapidity. The flames issued from every window in the warehouse and mills, and when the roof fell in a tremendous shower of sparks rose high into the air, and falling upon nearly a dozen stacks of jute and hemp in the yard, as well as the greater portion of the goods previously removed from the premises, set fire to the whole. The wind at the same time blew stiffly, and very few minutes elapsed before the various stacks of hemp and other articles looked like so many dwelling-houses on fire. A large number of hands have been thrown out of employment by this destruction of property

EPITOME OF NEWS—FOREIGN AND DOMESTIC

From a return just issued, it appears that, from 1837 to December, 1853, £4 818,500 was advanced from the Consolidated Fund for the purchase of bullion for coinage, and that £4,270,000 was received in repayment.

Mr. W. E. Powell, M.P. for the county of Cardigan, has addressed a letter to the electors of Cardigan, announcing his intention forthwith to retire from parliamentary life

A despatch from the Hague states that the Governments of France and England have informed the Government of Holland that the commercial flag of neutral states will be considered as that of a friendly Power

Sir John Thomas Briggs, Kt., Accountant-General of the Navy has retired from active business, after 57 years' service. Sir John is in his 73rd year.

Habeeb Risk Allah Effendi left the Turkish Embassy, London, on Saturday last, *en route* to Vienna, with despatches for his Government.

The Emigration Commissioners have advertised for two vessels to carry emigrants to Van Diemen's Land and Victoria. One is to be ready on the 25th inst. and the other on the 4th of April.

Lord Palmerston has intimated to the Marylebone vestry, through Sir B Hall, that he will not give his sanction to the establishment of a cemetery in the parish of Willesden

A despatch from Alexandria, of the 4th inst., announces that the exportation of corn had been definitively permitted, but that ships were scarce and the freight high

It is in contemplation to form a carriage roadway for waggons, &c., to pass over Tower hill, instead of, as at present, having to take a circuitous route.

The Peninsular and Oriental Steam Navigation Company are applying for a supplemental charter, authorising them to increase their capital by an amount not exceed ng one million sterling.

Business was almost stopped at Stamford, last market-day, by a blundering telegraphic message from Mark-lane, which buyers would not believe, that wheat had advanced three shillings a quarter

SIR JOHN BOWRING, LL.D., GOVERNOR OF HONG-KONG, AND H.M. MINISTER PLENIPOTENTIARY IN CHINA.

THE interest attaching to the name of Dr. Bowring is of a twofold character. He has for many years been before the public as a politician and as a man of letters, having imbibed, as is well known, his political principles from Jeremy Bentham, who named him his literary executor, and possessing the merit, so far as his literary attainments—and they are great—are concerned, of being a self-educated man. Dr. Bowring is about to leave this country, to assume the direction of British affairs in China; and ere he again visits that country, to assume duties of a higher order than those hitherto imposed on him during his employment in that country, we propose to offer a few biographical words at parting, from which we believe the reader may gather some notion of the consistency which has marked the learned Doctor's political career, the value of his past services to his country, and also the extent of that philological lore in which he has earned an almost universal reputation.

Dr. John Bowring was born on October 17, 1792, and is therefore now in his sixty-second year. His family had for many years been connected with the woollen trade of the west of England. It was at a country school near Dartmoor that he received the elements of his education; but his studies, at the age of fourteen, were arrested, on his being required to assist his father in his trade—which mainly consisted in the preparation of coarse woollens for China and the Spanish Peninsula. Little could young Bowring have dreamt, at that time, that fortune would throw him upon so distant a scene as China, or that the studies for which he then evinced a predisposition would come in such valuable aid of his operations as a British Minister in the Celestial Empire. From a very early age the studious habits of young Bowring became formed, and in seclusion he busied himself with the acquisition of knowledge of every description. Perhaps his principal characteristic was the desire to master languages; and French, Spanish, Italian, and Portuguese he had appropriated before attaining his sixteenth year. In the German and Dutch tongues, also, he obtained considerable proficiency. He studied these and various other languages without the aid of a master; and as he grew older he learned to speak and write the Sclavonic dialects, in Russian, Servian Polish, Bohemian, Bulgarian, Slovakian, and Illyrian; the Scandinavian, in Icelandic, Swedish, and Danish; Teutonic, Anglo-Saxon, High Dutch, Low Dutch, Frisian, and Allemannish; Esthonian, Lettish, and Finnish, Hungarian, Biscayan, French, Provençal, and Gascon; Italian, Spanish, Portuguese, Catalonian, Valencian, and Galleian! Designed by his friends for a commercial life, a great portion of Dr. Bowring's career, after attaining his majority, was passed abroad.

SIR JOHN BOWRING, LL.D., GOVERNOR OF HONG-KONG.—FROM A PHOTOGRAPH BY MAYALL.

First he visited the Peninsula during the war, and had consigned to him very large amounts of merchandise. In turn he visited Northern Europe, Russia, Sweden, Finland, and Germany, and throughout his tours made it his special practice to mix among the various inhabitants.

His official employments in foreign countries have been various. In 1828 he was nominated by the Government at home to proceed to the Low Countries, to examine into the manner of keeping the public accounts; and he was engaged, with Sir Henry Parnell, in a similar mission in France in 1830. His reports in both these spheres were laid before Parliament; and in the following year, in conjunction with Mr. Villiers, he examined the tariffs of England and France, with the view to their relaxation. In 1834 Dr. Bowring proceeded to Belgium, and in 1835 to Switzerland, visiting also Italy in 1836, and subsequently Egypt, with a view of promoting the principles of Free-trade in their application to commerce with this country. The movements of Dr. Bowring, however, in prosecuting his various peaceful missions were not always unobstructed in the countries visited. In 1822 he was arrested in France, on the plea of being a fomenter of Liberal opinions; but it is more probable that his detention was planned in order to obtain possession of some despatches to Spain, of which he was the bearer. His banishment from the French territory was pronounced perpetual, but he again trod French soil in 1830, when deputed by the citizens of London to congratulate the French people on the overthrow of the Bourbons.

Dr. Bowring had been the consistent advocate of Reform in Parliament; and after the measure of 1831 had passed into a law, he was solicited to become a candidate for the borough of Bleakburn. On this occasion, and again in 1835, he failed to get returned, but only by a few votes—a service of plate from the minority testifying the estimation in which he was held by the constituency. His success over the Whig and Tory candidates for the representation of the burghs of Clyde, was however complete; but the same constituency declined his services in 1837, principally on the "No Popery" cry. He continued to represent Bolton until his first appointment to China by the Whig Government.

Dr. Bowring was by no means an idle member of Parliament. He directed his attention principally to financial matters, and matters connected with the Board of Trade; but he was also selected to act as chairman of important committees. He was most active in the committees on the hand loom weavers, Irish education, and on the state of the arts as applied to the manufactures of the country, and spoke frequently on Parliamentary Reform and the education of the people.

Dr. Bowring has written several books in foreign languages. With Don Bernardo O'Gavan, the Deputy of Havana, he carried on a long controversy in Spanish, on

HONG-KONG, FROM THE HARBOUR.

the Slave-trade, and earned the thanks of the African Association. His is known, however, better by his poetical than by his political writings, and has supplied a number of versions of the poetical literature of various races of whom little before was known. His Matins and Vespers, Russian Anthology, and other writings, have found their way in reprints to the United States. Groningen conferred on him his degree of Doctor of Laws and Philosophy; he is also a member of the Institute of the Netherlands, of the Asiatic Societies of Paris and London, and of the Royal Societies of Bavaria and Hungary. The poetry of Bohemia and Hungary were first made known in this country through the medium of his translations.

Not long after the return of Dr. Bowring from China, he was invited to meet the members of the Manchester Chamber of Commerce and Commercial Association previously to the assumption of his new duties. The learned Doctor delivered an address, of which decimal coinage and our commercial relations with China were the more prominent topics. From his own experience he vouched his belief that the Chinese empire is destined to fulfil a great mission through the Eastern nations.

It is, perhaps, unnecessary to add that Dr. Bowring was, for a considerable time, the editor of the *Westminster Review*, which had been founded under the auspices of that band of liberal thinkers of whom Jeremy Bentham was the chief.

The learned Doctor possesses many proofs of the estimation in which his talents have been held by European Sovereigns. From the Emperor of Russia he received a diamond ring, for his translations; a gold medal from the King of Holland, in acknowledgment of his productions in Dutch literature; and he was made Knight of the Order of Christ by the Queen of Portugal.

As a speaker in Parliament, Dr. Bowring had his peculiarities of manner, like most men of strong political convictions; but all outward eccentricity was forgotten in the thoroughgoing honesty of purpose which characterised his whole parliamentary career.

On his way to China, in 1849, the people of Malta presented him with a handsome service of plate as a reward for his advocacy in Parliament of the interests of the Maltese; and he was honoured by a similar mark of regard from the inhabitants of the Isle of Man, whom his public exertions greatly assisted in emancipating from the long-endured bonds of feudalism and monopoly.

Dr. Bowring has paid especial attention to the "the Decimalisation of the Currency, and Accountancy of the United Kingdom;" and the work upon this subject announced by the Doctor, is nearly ready for publication.

At a Court held at Buckingham Palace on Thursday last, Dr. Bowring was presented to the Queen, and received the honour of Knighthood from her Majesty.

HONG-KONG.

THE settlement of Hong-Kong (of which we have engraved a large view from an original drawing) dates from the commencement of the year 1841, when the island was ceded to her Britannic Majesty by the Emperor of China; and immediately afterwards British merchants, induced by the liberal offers of land by the local authorities, settled there, and commenced building homes and warehouses: whence Hong-Kong, from a fishing village, became a British colony, inhabited by many of Great Britain's merchant-princes of the East. The political occurrences at Victoria, the capital of the island, have frequently been illustrated in our pages: English tastes prevail: horse-races are held here (such as we illustrated last year); and, in Victoria, you see such signs as "Roby, bootmaker;" "Buckmaster, tailor;" "Wanning, hydropathy;" "Ford, to the Admiralty;" "Ching Kong, portrait painter, up-stairs"—all of them genuine Chinamen, with tails.

The island has lately been very ably described by Dr. H. A. Hance, in a paper read to the Linnean Society. Hong-Kong, a corruption of Hiang-Kiang ("the fragrant streams"), is situated near the mouth of the Canton river, between lat. 22 deg 9 min. and 22 deg 21 min. N., and long. 114 deg. 6 min. and 114 deg. 18 min. E.; and is distant about eighty-five miles from Lintoon and forty from Macao. Its area is above twenty-nine square miles, and its circumference not quite twenty-seven miles. It consists of a long and precipitous mountain range, running east and west, in some places gradually sloping down towards the sea, where it is met by extensive level beaches of fine white quartz sand; in others terminating abruptly in frowning perpendicular cliffs, more than 100 feet high, perforated at their base by caverns, into which the waves dash. From this ridge spurs diverge at different angles. The peaks vary in altitude, the loftiest being about 1600 feet above the sea. The prevailing rock is syenite, which is found in immense blocks (extensively quarried for building), imbedded in a soil composed of the same rock in various stages of disintegration. Masses of trap are also met with; true deposits of carbonate of lime are not unfrequently found in the centre of the blocks of syenite; and laminated mica occurs in the ravines. No signs of stratification, or of volcanic action, are discoverable. At the base of the primary ridge, and between the spurs, patches of alluvial soil are found, which are carefully turned to account for agricultural purposes. The numerous ravines furnish a never-failing supply of extremely pure water, and a considerable spring rises a little below one of the loftiest peaks: the singular position of which (said to be the belief that it may have a submarine communication with the mainland. The temperature varies from 47 deg. to 93 deg. Fahr., the daily range seldom exceeding 15 deg. Once only during the years 1844-51 did the thermometer sink as low as the freezing point. Towards the end of October the north-east monsoon sets in with a cold, dry, and bracing air; and the atmosphere is wonderfully serene. This is the winter season, which lasts until about the middle of February; during the whole time scarcely any rain falls, and vegetation is dried up and scanty, a few *composites* being nearly all that can be found in flower. Gradually the temperature rises, the branches of the myrtle bushes, &c., display their tender vernal green, innumerable flowers spring up from the turf, and about May summer is heralded by the advent of the south-west monsoon. This season is characterised by intense and oppressive heat, causing extreme languor: rain falls for a week or ten days together in sheets, terrific thunderstorms reverberate among the hills, and such is the excessive humidity, that articles of wood or leather become covered with a thick blue mould in a single night. The rain will then cease for a few days, and the sky remain unclouded, though always more or less hazy. At this period vegetation is developed with wonderful rapidity; a few days suffice to perfect the blossoming of the flowers, which again fade as quickly. About the beginning of September the rain becomes much less frequent, though the heat is still excessive, and the flora assumes a more sober and less attractive habit. At this period, which may be considered as an equivalent to our autumn, the island is occasionally visited by those terrible whirlwinds known as typhoons, which traverse the Indian Ocean and China Sea, causing wreck and devastation wherever they pass. Finally, the temperature decreases, the rains cease, and the vegetable world remains dormant—winter has again returned, completing the cycle of the seasons.

IMPERIAL PARLIAMENT.

(*Continued from page* 143.)

HOUSE OF LORDS.—THURSDAY.

THE LAW OF WILLS.

The LORD CHANCELLOR called the attention of the House to the amendment of the laws relating to the probate of wills and to the grant of letters of administration. The noble and learned Lord described the evils of the present state of the law, arising chiefly out of the enormous number of Courts throughout the kingdom exercising testamentary jurisdiction, and then proceeded to notice the different efforts which had been made since 1830 to amend the law; and the causes of their failure. He now proposed to introduce a measure to transfer all the business of wills from the Ecclesiastical Courts to the Court of Chancery, and to transfer to the latter Court, at that period, officers which at present existed. He also proposed to divide the country into thirty districts, where the wills of persons dying out of London, and leaving property of less value than £1000 should be proved, and where they should remain six months for examination. He intended, ultimately, to get rid of proctors, and to allow solicitors to practise instead. The noble and learned Lord concluded by asking leave to introduce a bill containing the above provisions.

Lord BROUGHAM and Lord ST. LEONARDS, supported the bill.

After some further discussion the Lord Chancellor obtained leave to introduce his bill, which was accordingly brought in and read a first time.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. French, Lord J. RUSSELL said he should not be able to introduce the Irish and Scotch Reform Bills before the 13th March.

Mr. T. DUNCOMBE called attention to the fact that, in consequence of the Order in Council closing the new Bunhill-fields Burial-ground, Islington, on the 31st December last, notice had been served by the proprietors that the bodies of all persons there interred must be removed within one month, the ground being required for buildings. The hon. gentleman asked whether the Government had taken any steps to allay the excitement created by the notice amongst the relations of the deceased there buried?

Lord PALMERSTON said that the act contemplated was alike outrageous to private feeling and public decency. He did not know whether the law at present was strong enough to prevent this act being carried out; but if he found that it was not so, he thought it would be his duty to introduce a short bill to enable him to deal with the subject in a satisfactory manner (Hear, hear).

FRENCH EMPEROR'S LETTER TO THE CZAR.

Mr. DISRAELI asked Lord J. Russell if he could inform him whether a certain document, which had appeared in the public papers purporting to be a letter from the Emperor of France to the Emperor of Russia, and which mentioned the name of her Majesty the Queen of England as a consenting party, was authentic—and, if so, whether the letter had been sent with the sanction and consent of her Majesty's Government?

Lord J. RUSSELL said he had every reason to believe that the letter which had appeared in the *Moniteur* was authentic. With regard to the second question, he had to inform the right hon. gentleman that this Government had received a communication from the Government of France, stating that the Emperor thought it desirable that he should make an effort, by means of an autograph letter to the Emperor of Russia, to put an end to the state of things which had been so long going on. Her Majesty's Government consented to such a step if the letter was in entire accordance with the decision of the Vienna Conference, and with the modifications which had been adopted; and they received an assurance that it was so. They, therefore, consented that such a letter should be forwarded to the Emperor of Russia. They, however, saw no copy of the letter; but they entirely approved of the step, and thought it a most laudable endeavour on the part of the Emperor of France to preserve peace, and they hoped that it would weigh with the Emperor of Russia. He believed no answer had yet been received to it.

THE NEW REFORM BILL.

Mr. BRIGHT asked Lord J. Russell whether his principle of representing the minority was to be applied to the city of London; and whether, in the event of any representative of the minority dying, the minority were to be represented by his successor? (Laughter).

Lord J. RUSSELL said a clause in the bill provided, that although the city of London would continue to return four members, the electors would only have power to vote for three. The second question it was hardly necessary for him to answer (Laughter).

Lord J. RUSSELL then brought up his new Reform Bill, which was read a first time and ordered to be printed, amid great cheering.

BRIBERY AND CORRUPTION AT ELECTIONS.

Sir F. KELLY then asked leave to bring in a bill to regulate the practice at the election of members to serve in Parliament for counties, cities, and boroughs in England and Wales; to prevent bribery, corruption, intimidation, or undue influences at such elections; and to diminish the expenses thereof. The honourable and learned gentleman acquitted candidates generally from all intentional bribery; representing them as being rather the unwilling victims of their agents, than active participators in illegal practices. His bill provided for the appointment of a suitable public officer at every election, to whom all moneys emanating from a candidate, directly or indirectly, should be paid; and that the candidate should be called upon to swear at his nomination that he never had paid, and never would pay (except unavoidable expenses up to that time), under any circumstances, any further sum of money on account of the election. All claims for election expenses must be sent into the election officers, who alone should decide as to their legality, and defray them out of the funds placed in their hands by the candidates, if legal. He proposed that the election officers should be barristers, to be appointed by the judges on circuit. With regard to those who acted corruptly, but now the avowed agents, the bill provided that, upon information upon oath, any person seen in or about a borough, making himself active in the election under suspicious circumstances, such person might be brought before the election officer and compelled to take the agent's oath with regard to the expenditure of the money. He also proposed that the voters might vote by means of voting papers, accompanied by what he considered perfect safeguards against fabrication, mutilation, and forgery, which at times, agitation, and excitement at elections would be got rid of, and a large reduction effected in election expenses, especially under the head of travelling expenses. As to the machinery of action, he proposed that the giving of the vote should be the signing of the voting paper, and the delivery to a competent officer. He proposed that every year the magistrates in counties or towns should meet and determine upon the places at which magistrates, or other persons, should sit for three days, or thereabouts, next before the day of election, to receive these votes forward them to the returning officer. The places must be so situated, that one must be within three miles, at most, of the residence of every voter in the county; while a non-resident voter might make his declaration, and deliver it to any magistrate or barrister near him; such declaration to be made with all the sanctity of an oath, without its form—that he gives his vote free from coercion, intimidation, or undue influence, and without having received any money, or reward, or promise of money or reward, for so doing. All these voting papers to be forwarded to the returning officer, who must examine them by the aid of check-clerks and inspectors, and record them formally before making his return. The bill would permit any voter who chose, to make his declaration at the polling-booth, candidates would be required to pay to the election-officers a sum of £300 for counties, and £200 for boroughs, and to enter into a bond, with two sufficient sureties, for the payment of £1000 for the whole expenses of the election. He had intended to bring in a separate bill, to abolish the property qualifications for members of Parliament; but he was happy to find that the hon. member for Devonport (Mr. Tufnell) had undertaken that task Sir F. Kelly concluded by asking leave to bring in the bill.

Colonel SIBTHORP said he never was able to understand what bribery really was. He thought if they had a more liberal system of conducting elections they would have no paupers in the House (Laughter). Once in the House he would oppose the bill, because he thought they ought to encourage the exercise of Christian charity (Laughter).

The ATTORNEY-GENERAL, on the part of the Government, would not oppose the introduction of the bill, although he thought some portions of it very faulty.

Mr. HUME said that the bill in some respects was calculated to increase the evils it proposed to remove.

Mr. H. BERKELEY expressed his opinion that the bill, so far from stopping intimidation, would give increased facilities for its exercise.

Leave was then given to bring in the bill

Mr. C FORSTER (after some discussion) obtained leave to bring in a bill to alter and amend the act which prohibits the payment of wages in goods, commonly called "The Truck Act."

Mr. Serjeant SHEE obtained leave to bring in a bill to provide Compensation for Improvements made by Tenants in Ireland.

Mr. J. Butt's Committee of Privileges was then nominated, and the House adjourned.

HOUSE OF LORDS.—FRIDAY.

The Royal assent was given by commission to the Assessed Taxes Act Amendment Bill. The Lords Commissioners were the Lord Chancellor, Earl Granville, and Lord St. Leonards.

The Earl of EGLINTON moved for the appointment of a Select Committee to inquire into the system of National Education in Ireland. He grounded his motion upon the circumstance of the secession from the Board of Education Commissioners of the Archbishop of Dublin and two other distinguished members, in consequence of the exclusion of the Scripture Lessons from many of the schools, which lessons had heretofore been used and approved of since the foundation of the establishment.

The Earl of ABERDEEN, in assenting to the motion, expressed his opinion that the national system of Education in Ireland has proved of inestimable benefit to the country.

The Bishop of Down thought that the Board, under the peculiar circumstances of the country, were fully justified in excluding the books referred to.

After some further discussion the motion was assented to. Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Sir F. Kelly brought in his Bill for the Prevention of Bribery and Corruption at Elections. It was read a first time.

In reply to Mr. Warner, Lord J. RUSSELL said that the principle of minority representation which was recognised in his new Reform Bill, would not apply to cases where only two members were returned.

On the motion for going into a Committee of Supply, Colonel BOLDERO, moved that "whereas a resolution was passed by the House on the 8th of April, 1850, to the effect 'that the accommodation provided for assistant-surgeons on board her Majesty's ships of war is inadequate and insufficient for securing the full benefit of their professional services,' the Admiralty regulations since the passing of that resolution their have not been in the spirit of, nor have they fulfilled, the intention of the said resolution, it is the opinion of the House that the above resolution should be forthwith carried into effect."

Sir J. GRAHAM said that the Admiralty had endeavoured to carry out the views of the House; but they found, on inquiry, that additional cabins would interfere with the efficiency of ships of war. He did not think that assistant-surgeons of great ability were deterred from entering the service by want of accommodation; for during the last year they had 118 applications for assistant-surgeonships, of whom 35 had been appointed.

Mr. M. CHAMBERS supported the motion.

After some discussion the House divided, and the amendment of Col. Boldero was negatived by a majority of 216 to 104.

THE WAR IN THE EAST.

Mr. LAYARD then proceeded to call the attention of the House to the present state of the relations of this country with Russia and Turkey. There had been so much reserve observed by the country, that it became absolutely necessary that matters should be cleared up, that they might really know the position in which they stood. He disclaimed any intention of offering to the Government anything like a factious opposition; but he thought it could easily be shown, that if the Ministers had adopted a more straightforward policy, they would never have blundered into the position in which they now found themselves. The statements made by the Russian Government to the British and French Governments were sufficient to disclose the intentions of that power; but, if any doubt could exist, it ought to have been removed by the great military preparations which were making by Russia—intelligence of which was duly communicated to our Government by our Ambassadors abroad. He was quite willing to admit that credit should have been given to the pacific assurances of Russia, as long as her actions were in accordance with her professions; but no credit could be attached to the word of a person who was saying one thing and doing precisely the reverse. The honourable gentleman then quoted various passages from the Blue Books, with the view of showing that our Government had never taken up the Turkish question as it might have been done. He said there was every reason to believe that the Turks would have driven the Russians out of the Principalities before they had time to establish themselves, had it not been for the paralysing advice of our Government. It was alleged, in defence of Her Majesty's Ministers, that their quiescence was attributable to their desire to carry the French Government with them; but, on reference to the Blue Books, and comparing dates, it appeared as if, in every bold movement, the French Government took the initiative, and had to drag the British Government with it. In reference to the melancholy affair at Sinope, he thought that the responsibility of it should be thrown upon the Government, by whose instructions Lord Stratford de Redcliffe had persuaded the Turkish Government not to send its fleet into the Black Sea. Lord Stratford had gone so far as to remonstrate on the vacillating policy that had been pursued by our Government in keeping Europe in a state of neither peace nor war, and which proved most injurious to the interests of Turkey. Although it was well known that the Russians were cruising in the Black Sea, the fleet was kept back, and the result was the dreadful slaughter at Sinope. It appeared as if, by some fatality, that, from the commencement of these transactions, every step taken by our Government was a mistake, and thus rendered it the more necessary to require from them an explanation of the policy which they now were about to pursue.

Sir JAMES GRAHAM, on his own part, and that of his colleagues, asked the indulgence of the House, while he endeavoured to reply to the speech of the honourable member of Aylesbury. While Government deprecated a discussion of this importance, introduced upon a motion for going into a Committee of Supply, they cheerfully appealed to the wisdom and judgment of the House, in justification of the course they had pursued under the difficult circumstances in which they were placed. Let the House do its duty, and Government will do theirs. He thought, however, that upon things like a want of confidence in the Government was not out of place upon the question of going into a Committee of Supply. The question, however, raised, was this—what had been done by her Majesty's Ministers, in respect to her foreign policy, and what were their intentions in respect to the war that was raging in the East? He was not prepared to admit that the course they had pursued had placed this country in any danger and risk. On the contrary, they felt that they had done their best to preserve peace without making any sacrifice of national honour. The right hon. Baronet then proceeded to explain and defend the course pursued by the Government in connection with the pending negotiations with regard to the deception charged against Russia towards England. He suggested that the long alliance which existed between the two countries rendered it not unnatural that the Government should rely upon the assurances of Russia. It had been asked what had the Government done? He would tell the House the Government had cemented firmly the alliance between England and France; they had bound Austria and Prussia with them; and they had insulated Russia, who, if mad enough to persevere in her aggressive career, must make up her mind to contend alone against united Europe. Russia had not yet crossed the Danube, and not one of her ships could venture out of port. France and England were firmly united, and were determined that the evacuation of the Principalities should take place, and that the independence of Turkey should be maintained. This was whatjher Majesty's Government were prepared to enforce, and he trusted that they would be supported by the united voice of parliament. They asked for 10,000 more men, and for a sacrifice on the part of the people of this country amounting to upwards of £2,000,000 per annum. The House would best show their confidence in the Government by granting the supplies as speedily as possible.

Lord JOCELYN was willing to give the Government credit for good intentions towards Turkey, but warned them that they must expect to have their motives—particularly at this critical juncture—severely canvassed and crit cised.

Lord D. STUART condemned the vacillating policy of the Government, which was calculated rather to encourage the aggressions of Russia than to oppose them.

Mr. ROEBUCK said he thought that the Government had mistaken the object of Mr Layard's motion, which was merely one seeking for information, which information he thought that the Government was bound to give.

Lord J. RUSSELL said he was willing to give the information asked for. There was no doubt but that there was concealment and deception on the part of Russia towards this Government. Although giving credit to the assurances of Russia they were still aware that there might be a possibility of ulterior objects, to meet which it was their duty to be on their guard. He believed the Czar was sincere in the declaration that he was not contemplating an acquisition of territory in the policy he was pursuing. He believed his object was to degrade Turkey by defeats, and to force her into terms which would lead at a future period, to its conquest or partition. The noble Lord then proceeded to defend the course pursued by the Government in not precipitating hostilities, and treated the disaster at Sinope as a calamity for which no one was to blame. It was impossible to deny that the instructions given to the English and French fleets, in consequence of the news at Sinope, were as nearly a declaration of war as anything could be, and he was not therefore surprised at the withdrawal of the Russian Ambassadors from Paris and London. As to the future, he had to say that as the course pursued by the Emperor of Russia showed an utter disregard for the peace of Europe, and a contempt for its opinions, he had no doubt but that he would refuse the proposal of the Emperor of the French, and direct all the power of Russia to carry out his unjustifiable designs against Turkey. To meet such a proceeding there was but one course of action,

CALENDAR FOR THE WEEK.

Sunday, February 19.—Sexagesima Sunday. Galileo born, 1564.
Monday, 20.—Voltaire born, 1694. Duke of Suffolk beheaded, 1554.
Tuesday, 21.—Archbishop Cranmer burnt, 1556.
Wednesday, 22.—Sir Joshua Reynolds died, 1792.
Thursday, 23.—
Friday, 24.—Cambridge Term divides.
Saturday, 25.—Earl of Essex beheaded, 1601. Sir C. Wren died, 1723.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING FEBRUARY 25, 1854.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

TO CORRESPONDENTS.

Oltenitsa.—The Queen of Spain has not had a son. Her surviving issue is one daughter.
A Subscriber.—The law is the same. A widow cannot legally marry the brother of her deceased husband.
A. B.—Apply for information at the Colonial-office.
M. H.—Refer to "Glover's Ordinary of Arms." We do not profess to identify armorial bearings from the simple blazon.
Juvena.—The second son of a Piedmontese Count has the right, according to his country's courtesy, to prefix the title of Count to his christian name.
Zeno.—Any respectable seal engraver would be able to cut the arms from the heraldic blazon.
Stafford.—Sir John Burnett Dundas, Bart., is alive, and resides at Queensbury Villa, Richmond, Surrey.
A Constant Subscriber will find the Arms in "Dugdale's Monasticon," a copy of which may be consulted at the British Museum Library.

*** Our second notice of the Exhibition at the British Institution, accompanied by Engravings of some of the pictures, is unavoidably postponed until next week.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 18, 1854.

The discussion raised by Lord Clanricarde in the House of Lords has served no purpose, and added nothing to our knowledge of the Turkish War. If it have proved anything more than the truth of the old saying, "that nothing is easier than finding fault," we confess ourselves unable to discover it. The reply of Lords Aberdeen and Clarendon to their assailants was manly and satisfactory. We do not think that Lords Clanricarde, Malmesbury, Derby, and Grey, will have added anything to their reputation for statesmanship by the *ex post facto* objections which they raised to the policy of the Government. Yet the three Peers first named stand in favourable contrast with the last. Their objection is not to the war, but to the alleged want of vigour on the part of the Ministry in not commencing it at an earlier period.

As it is utterly useless to indulge in further recrimination upon what should or should not have been done a twelvemonth ago, these noble Lords, having discharged their consciences, will doubtless give the Ministry all the aid in their power in carrying on the war. It is vigour which they require in the Ministry, and now that the Ministry has begun to show it in thorough earnest, they cannot do less than encourage and support them. The case of the Earl Grey is very different. His Lordship thinks that we have no concern in the quarrel. We would much rather that the House of Lords should have been unanimous; yet it is, nevertheless, a consolation to think that only one of the Peers of England should entertain an opinion so eccentric, and so difficult to account for.

Of far more interest than any of the debates that have arisen, or are likely to arise, in Parliament, is the letter which has been addressed by the Emperor of the French to the Czar Nicholas. The good intentions of the Imperial writer are obvious; but, with all respect for the talents and sagacity of Louis Napoleon, we doubt the discretion of giving it publicity. As a private and confidential communication, intended for no eyes but those of the person to whom it was addressed, the letter is entitled to the praise of honesty of motive. If it had succeeded in its object, and awakened the Czar to a sense of the danger of his position, it would have been entitled to that higher degree of praise which is attendant upon successful effort in a good cause. Some portions of the letter, if not intended as ironical, which perhaps they are, are too laudatory of the moderation and magnanimity of the Czar to have been wisely expressed at such a time. But there is nothing in the letter to justify the alarm that the French Emperor is wavering in his support of the Turkish cause or in his alliance with Great Britain. Its animus and phraseology are alike hostile to the pretensions of the Czar. It proves, in a striking manner, the desire of Louis Napoleon to maintain an honourable peace, but it also proves his determination, when peace is no longer consistent with honour, to make war upon the aggressor with all possible energy and spirit, and to consider no sacrifice unnecessary which shall secure the defeat of the wrong-doer. At the worst, the letter is but a verbal indiscretion; and it is possible that the Emperor may not be responsible for its publication, but that it may have been sent to the *Moniteur* through the inadvertance of some Ministerial or sub-Ministerial functionary.

It is quite clear, from the temper displayed by the French and English people, that, although the war was not desired by either, it will be actively and enthusiastically prosecuted by both. The naval armaments of Great Britain are unprecedented; and the fear expressed that, although we had fine ships, we might not have a sufficient number of sailors, has proved to be groundless. Volunteers are flocking to the seaports, and our streets present the unusual spectacle of gallant regiments marching for embarkation amid the applauding cheers of multitudes of Englishmen, who hate war in the abstract, but who highly approve of this particular instance of it. The same spirit pervades the French people, and their armaments by land and sea are carried on with an energy which ought to strike terror into the councils of Russia. A rumour has been widely spread, and generally believed in Paris, that large detachments of English troops will arrive in that city by the railway from Calais or Boulogne, and that they will thence proceed towards Marseilles as far as the railroad will carry them; and, after that point, by steam-vessels down the Rhine. We should be delighted to learn that this rumour was well founded. The Parisians would give their English allies a regal reception; and the world would witness a spectacle of unparalleled splendour and good omen. The public fraternisation of the soldiers of France and England in the Champ de Mars would be a scene to be remembered in all future time, and would mark a new era in the history of Europe.

Independently of the new Reform Bill, many important matters have been brought under the notice of Parliament during the few days that have elapsed since the opening of the Session. Three of these deserve especial mention: they are Mr. Baines's Bill for the Abolition of the Law of Settlement, Mr. Phillimore's Bill for the Appointment of a Public Prosecutor in Criminal Cases, and the proposed Reform in the Civil Service of the country. In ordinary times, and if public attention were not to a great extent pre-occupied by an approaching war, each of these measures would excite the liveliest interest, and monopolise for a season the discussions of the public press and of public men. Happily for the country, Parliament will have leisure and inclination, even though the war should proceed, to carry out these great measures. Mr. Baines's Bill, which has been received with approval by the most intelligent men of all parties in the Legislature, will effect a revolution in the administration of the Poor-law. The speech in which the right hon. gentleman explained the principle and the details of his measure, may claim, as justly as Mr. Cobden's orations upon the Corn-law question, the praise of "unadorned eloquence." It was singularly lucid, comprehensive and convincing. Its main features are the Extension of the area of Poor-law taxation, and the Abolition of the Law of Settlement. Under the present system, the man who has no commodity to dispose of, but his labour, is not in reality free to dispose of it where he will. In what are called close parishes the owners of the soil contrive that he shall not have a place to lay his head. He may work in their parish, but he is not allowed to occupy a cottage in it, lest he thereby acquire a settlement by which the burden of maintaining him in his old age, when unfit for work, should thereby devolve upon them. The amalgamation of such parishes with those of the adjoining districts, for the purposes of rating, will doubtless operate injuriously on the interests of such proprietors as, by clever management, have contrived to shift the burden of pauperism from their own backs to those of their neighbours. But the change will, we think, be attended with benefit to all other parishes, and to the labouring classes, who are the parties whose rights should be the first to be considered. Much misconception has prevailed, both among rich and poor, as to the value of the Law of Settlement as constituting the poor man's right to relief in destitution or old age. Mr. Baines has removed the misconception by a few plain words. "Many people," he said, "thought settlement conferred the right to relief. If any person, having no settlement—any foreigner, for example—became destitute, he had a claim to be relieved; and so with regard to a large class who either had no settlement, or whose settlement could not be ascertained—they must be relieved where they became destitute. If a person became destitute in the parish of his settlement, then removal did not attach as a condition of relief; but if in any other parish, then settlement operated as a penalty, because it occasioned his removal to his place of settlement. He was in a position far worse than the destitute foreigner. The foreigner must be relieved where he became destitute, and as long as he was destitute; but, with regard to the Englishman who had a settlement, he, if he received a single farthing, or a single loaf of bread, was liable to be removed to the other end of the country. That was the real sum and substance of the English Law of Settlement." Nothing can be clearer than this statement. Mr. Baines's measure will doubtless excite hostility; but, as the leaders of party on both sides of the House are agreed in support of the principle, and as the people and the great bulk of the ratepayers have nothing to allege against it, the opposition is not likely to be successful. We augur as favourably of the success of Mr. Phillimore's Bill, which, though introduced by an independent member of the House, has been sanctioned—and will, in all probability, be adopted—by the Government. The want of a Public Prosecutor has long been felt, and the appointment of so responsible an officer will be a highly popular, as well as highly necessary improvement in the administration of the law. The proposal for throwing open to public competition all the civil appointments in the gift of the Crown and the Government, will, if carried into effect, be sufficient in itself to earn for the Aberdeen Administration a title to the gratitude of the nation. To abolish patronage by one blow; and to say to the youth of the nation, irrespective of party or party ties—irrespective, too, of wealth, station, and influence—"the State requires the services of the best men; qualify yourselves, by study and education, and the highest prizes shall be given to those amongst you who shall prove yourselves to be the most competent and the most deserving"—this is a proceeding worthy of a great nation. Such a measure will secure for our popular Constitution a higher degree of love and reverence than have ever yet attached to it. It will also help to elevate, in the eyes of all civilised nations, the *status* of the humblest of Englishmen.

Arrival of the "Himalaya."—Southampton, Thursday.—The *Himalaya*, of the Peninsular and Oriental Steam Navigation Company, Captain A. Kellock, with the heavy portion of the India, China, and Australian mails, arrived this day at three o'clock. Her dates of sailing were:—Alexandria, Feb. 4, at five p.m.; Malta, 7, at nine p.m.; Gibraltar, 12, at one a.m. After making one of the quickest passages ever known to Malta, and from thence to Alexandria, the *Himalaya*, on her voyage from Malta to Southampton, experienced seventy hours of hard gales right a-head, but ran the distance—2150 miles—in 8½ days. Had she met with anything like moderate weather, she would have got in on the evening of the 14th—a day and a half earlier. She beat the *Europa*, a fast paddle-wheel steamer, from Gibraltar to Southampton (1150 miles) by 37 out of 108 hours, that ship having left 25 hours before her, and was passed off Portland at eight o'clock this morning. The greatest run in 24 hours was from noon on the 10th to noon on the 11th, by observation 347, or 400 statute miles.

Linendrapers' Institution.—On Thursday evening it was stated at the annual meeting of this body that, although the number of applicants for relief was on the increase, during the last year subscriptions to the extent of £560 had been withdrawn. The sum of £1627 19s. 1d. had been paid, in the relief of eighty-three applicants for pecuniary relief. The receipts for the year fell by £1143 6s. 4d. less than those of the preceding one.

Great Burglary.—A daring robbery was committed on Wednesday night or Thursday morning on the premises of Messrs. Hargrave, 15, Gresham-street. It is supposed that the persons entered by false keys, as it is found that the counting-house had been entered, and cash, bank-notes, bills of exchange, promissory notes, and other documents, to the amount of upwards of £3000, had been carried off; and on looking at the stock it was discovered that shawls and silk handkerchiefs, valued at upwards of £380, were missing. The police believe they have a clue to the thieves.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

Widdin, Jan. 31, 1854.

The chances of an attack upon the intrenchments of Kalafat have within the last few days been changed to something little less than a certainty. The day before yesterday a heavy cannonade was heard about noon, in the direction of Golenz; and it was soon made known that the Russians had advanced from Motzatze, and driven in the Turkish outposts at Maglavitz. It had been rumoured a few days previously, that Prince Gortschakoff, in person, had arrived at Bailleschti, and the Wallachs of Citate came running into Kalafat, stating that the Russian General-in-Chief had been in the village at the head of a large reconnaissance. Nevertheless, the utmost quiet continued to mark the daily routine of the Turks at Kalafat. It was thought necessary, however, to endeavour to ascertain what might be the motions of the enemy in the direction of Bailleschti, and a reconnaissance under Skender Bey took place on the 26th inst. in that direction. It had been stated that five squadrons of Cossacks and Hussars had occupied the village of Piski, and there in fact they were found. They retired, however, before the Turks, and refused the engagement offered them, making their way gradually back into Bailleschti, where the appearance of the Turks was the signal for an instant turn out. The object of the reconnaissance being gained, Skender Bey retired, and did so without being pursued by the enemy. But, although the Russians showed no signs of moving at Bailleschti, it appears that they were making preparations for an attack from Motzatze, for on the day before yesterday they were signalled approaching in force towards Gunia and Maglavitz. The advanced guard of cavalry then occupying the former village, retired into Maglavitz, where Suleiman Bey, at the head of two regiments of Lancers, awaited the coming of the Russians. It was evident, however, that they were not in strength to resist the attack of four regiments of Hussars and Dragoons, supported by batteries and a regiment of infantry; and Ismail Pacha, who had left Kalafat in haste at the news of the Russian approach, ordered the Turks to retire, which they did in good order, as regards the regular cavalry, but in considerable disorder as concerned the Bashi-bozouks, who, for a moment, threw their own line of march into confusion. The Russians, who had commenced a cannonade against Maglavitz, entered that village as the Turks evacuated it, and followed the latter through Golenz. On neither side can it be said that any serious loss was sustained. The Turks lost two privates, and a Captain killed. The peasantry out of the villages fled in every direction at the approach of the Russians, and some of them were killed in their flight. A poor infant, abandoned on the side of a road, was carried into Kalafat by an aide-de-camp of Ismail Pacha. The advance of the enemy having rendered the position at Payana untenable by the Turkish outposts; it was abandoned, and the two regiments on duty there retired to Chupertchin. The utmost activity, meanwhile, was visible in the intrenchments occupied by the Turks. The ditch, behind which they intend to fight or die, has been much improved within the last few days, and the inner parapet has been strengthened and heightened. The troops, which for convenience had been quartered in Widdin, moved across into the trenches in the night, and a reinforcement of about 5000 infantry marched into Widdin, from the Lower Danube, in time to be added to the other defenders of the place.

It was generally expected that the Russians would attack the intrenchment yesterday. Although the day was Sunday, it is well known that these defenders and protectors of the Greek Christians are not in the habit of postponing their attacks for such reasons; they had marched upon the trenches of Oltenitza on a Sunday, and they might do so again; but they did nothing, although the Turks were at their post during the night and early morning, expecting them. A cavalry reconnaissance went out after breakfast, and brought the intelligence that the enemy were lying quietly at Golenz, and would not move. It is true that the weather was detestable. The snow was falling thickly during the morning, and did not cease till the afternoon; but what is snow to Russians? However, nothing has been done up to this time (noon), and hostilities are still a matter of anxious suspense.

The effect produced in Widdin by the near approach of the Russians was miraculous. Although the Danube separates Bulgaria from Wallachia; although Widdin is surrounded by long ditches, walls, and bastions, the Christian population, as well as the Turkish, shut up their shops in alarm, and one might have thought the town deserted by all save the devoted soldiers, who were hurrying to and fro for its defence; so blank did the houses look, and so deserted the windows. The quays, however, seemed to be filled with people, and, perhaps the closing of shops may be attributed to curiosity as much as to fear on this occasion.

There has been little to vary the monotony of Turkish news since my last letter. We have heard here of two or three little affairs of which the intelligence may, already have reached you. With their usual unconcern, the Turks have left the dates uncertain: but the facts are these:—At Nicopoli the Pacha had observed that the Russians were endeavouring to take a footing on the island which separates the Danube into two branches, and forms two channels between the town and Sistov. A small body of Turks crossed over in caïques, and drove away the Russians. A similar affair took place at Matchin, where the Russians occupied an island, and commenced to erect a block-house. Two Turkish half-battalions crossed over and drove the Russians to their boats, and destroyed their work. They were disturbed at their labour, however, by the return of the enemy in greater force; but, after a short conflict, the Russians were forced to abandon the field, leaving six or seven men killed on the spot.

Another high dignitary has been added to the number of those who hold commands in the army of Roumelia. It is a curious thing that, of the Pachas who now have quarters in Kalafat, two—Ismail Pacha and Mustapha Pacha—hold the same rank as the Commander-in-Chief, Achmet Pacha. Having all the responsibilities of his place, the latter is placed in a very peculiar position by this arrangement. The Turkish soldiers value a General only in proportion to his daring in front of the enemy. A General-in-Chief has, however, other matters to attend to, besides showing his personal bravery; and the best commanders are not those who risk their persons. But the result in Turkey is, that, whilst Achmet Pacha is occupied in giving the necessary orders and directions, the other Generals, like Ismail and Mustapha, are giving proofs of personal courage, which endear them to the soldiery, and establish for them a reputation at the expense of that of their Commander. This is a dangerous state of things: and the Turkish Government, if it exercised in this instance its usual discretion, would not run the risk of losses from the jealousies of rival Generals of the same rank, and would take care to avoid the clashing of interests by a change in its mode of proceeding. The Duke of Wellington was superseded in the Peninsula by officers whose only right to superiority over him was their age; and we know very well what disgrace was entailed on us by the Dalrymples and Burrards. But here are Generals of the same rank all remaining in the same army at once, and all jealous of each other; and, as if to feed the discontent, the Turkish Government has sent hither Mehemet Pacha, late Governor of Candia—a tall old gentleman, with but one eye, and the rank of Mushir—to take the supreme command of the Irregulars. Mehemet Pacha, however, does not supersede Achmet Pacha; and this is just as if a Field-Marshal were sent from England to take command of a division under a general of inferior rank.

LATEST INTELLIGENCE.

PARIS, Thursday.—The Bourse was heavy, with little business doing. The Three per Cents closed at 68f. for the end of the month, and the Four-and-a-Half per Cents at 97f. 80c.

VIENNA, Thursday.—Two Greeks, accused of betraying the Turkish plans to Prince Gortschakoff, have been tried by a court-martial, found guilty, and sentenced to death.

CONSTANTINOPLE, Feb. 6.—In consequence of orders from the two Governments, the main body of the French and English fleets will remain in the Bosphorus. Six steam-ships will convoy the Turkish vessels when necessary, and four will be kept constantly in observation.

SWEDEN.—Advices from Stockholm state that preparations for war on a large scale are being made in the arsenal of Carlscrona. Several ships of the line, as well as frigates and corvettes, are being fitted out.

DISTURBANCES IN ALBANIA.

A serious outbreak has taken place in Southern Albania, where the Christian far outnumbers the Mahomedan population, and is also excited by the vicinity of the frontier of the Greek Kingdom. The Turks are said to have lost sixty men in the first engagement; and it is reported that the small Turkish garrison of Arta is besieged by a force of from 1200 to 1400 Greek insurgents. Movements are also talked of in Thessaly, and in the mountains of Suli.

AUSTRIAN MILITARY PREPARATION.

There is some discrepancy between the assurances of Austria, that she will neither make nor meddle in the approaching conflict, and her military preparations. In the present state of her finances every extra battalion is a burden; but, nevertheless, her preparations are for war rather than for an armed neutrality. The force assembled in Hungary is said to be larger than is generally supposed. According to one account there are 20,000 men in Dalmatia; 30,000 in Croatia, Sclavonia, and the military frontiers; and 70,000 placed in *echelon* in Transylvania and Hungary. A few days since the *Oest. Correspondenz* stated that 20,000 men were to be sent to the Banat; and in a telegraphic despatch, received on the 1st from Milan, it is stated that 30,000 Croats were expected in Lombardy, where the fortresses are being filled with stores. It is well known that extreme discontent prevails in the provinces; but there is no reason to suppose that there is any danger of an outbreak, and therefore the warlike preparations excite great attention and uneasiness.

Later accounts from Vienna confirm the foregoing statements relative to the warlike attitude which Austria is assuming. A telegraphic despatch, dated Vienna, Wednesday evening, states that a battering train of guns and 6000 cwt. of powder has been sent to the south-eastern frontier. The same despatch gives the following circular to the diplomatic agents of Austria:—

Austria considers the armed intervention of the Western Powers in Turkey extremely dangerous.

Austria has full confidence in the loyalty and rectitude of the Emperor Nicholas, and will take the necessary measures for securing her own frontier.

LETTER FROM THE EMPEROR OF THE FRENCH TO THE EMPEROR OF RUSSIA.

THE new peace project, from France and England, which the *New Prussian Gazette* spoke of last week, turns out to be something else than a mere declaration. On the contrary, it would, it appears to me, have remained a Cabinet question, if the occupation of the Principalities had not transported all at once from the domain of discussion to that of facts. Nevertheless, your Majesty's troops once entered in Wallachia, we have not on that account the less recommended to the Porte not to consider this occupation as a cause of war, thus justifying our reasons for conciliation. After having consulted with England, Austria, and Prussia, I proposed to your Majesty a note destined to give common satisfaction, which your Majesty accepted. But scarcely was it made aware of this good news, when your Minister, by explicative commentaries, destroyed all the conciliatory effects of it, and thereby gave room for pretension insisting at Constantinople on arms and simple negotiation On its side the Porte had proposed modifications on the project of note which the Four Powers represented at Vienna did not find unacceptable. From that moment, your Majesty, the Sultan, persuaded that it was the means of arriving at an understanding; and the Four Powers came to a new understanding to submit other propositions to your Majesty. Your Majesty, on your side, showing the calmness which arises from consciousness of strength, limited yourself to repelling, on the left bank of the Danube, as well as in Asia, the attacks of the Turks, and would moderate the ardour of the minister of Sinope have echoed sufficiently in the hearts of all those who, in England and in France, have a strong sense of the national dignity. With one common accord the cry was raised, "wherever our cannon can reach, our allies ought to be respected." Hence the order given to our squadrons to enter the Black Sea, and to prevent—by force, if necessary—the recurrence of a similar event. Hence the collective notification sent to the Cabinet of St. Petersburg, to announce to it that, if we should prevent the Turks from making an aggressive war on the coast belonging to Russia, we should protect the re-victualling of their troops on their own territory. As regards the Russian fleet, in interdicting to it the navigation of the Black Sea, we placed it in indifferent conditions, because it was important, during the existence of the war, that we should preserve a pledge which should be an equivalent for the parts occupied of the Turkish territory, and which should facilitate the conclusion of peace, by becoming the title of a desirable exchange.

That, Sire, is the real train and the series of the facts. It is clear that, arrived at that point, they must produce promptly either a definitive understanding or a decided rupture.

Your Majesty has given so many proofs of your solicitude for the repose of Europe—you have so powerfully contributed to it by your beneficent influence against the spirit of disorder, that I cannot doubt your resolution in the alternative which presents itself to your choice. If your Majesty desires as much as I do, a pacific conclusion, what can be more simple than to declare that an armistice shall be signed to-day, that things shall resume their diplomatic course, and that all the belligerent forces shall retire from the places where motives of war have called them?

Thus the Russian troops would abandon the Principalities, and our squadrons the Black Sea. Your Majesty, preferring to treat directly with Turkey, would name an Ambassador, who would negotiate with a Plenipotentiary of the Sultan a Convention, which would be submitted to the Conference of the Four Powers. Should your Majesty adopt this plan, on which the Queen of England and myself are perfectly agreed, tranquility will be re-established, and the world satisfied. There is nothing, in fact, in this plan which is not worthy of your Majesty, nothing that can wound your honour. But if, by a motive difficult to understand, your Majesty should oppose a refusal, then France, like England, would be obliged to leave to the fate of arms and to the hazards of war that which might be decided to-day by reason and justice.

Let your Majesty not think that the slightest animosity can enter my heart; it feels no other sentiments but those expressed by your Majesty yourself, in your letter of the 17th of January, 1853, when you wrote to me, "Our relations ought to be sincerely amicable, and to repose on the same intentions—the maintenance of order, love of peace, respect for treaties, and reciprocal benevolence." That programme is worthy of the Sovereign who traced it, and I do not hesitate to affirm that I have remained firm to it.

I pray your Majesty to believe in the sincerity of my sentiments, and it is in these sentiments that I am, Sire, of your Majesty the good friend,

NAPOLEON.

The letter was not despatched till the 1st, and, allowing eight days for a courier to St. Petersburg, three or four days for the Czar to make up his mind, and eight days to bring back the answer, the calculation of the Paris journals was that the decision would be known by the 20th. But ill news flies fast. On Tuesday the report was current in Paris that a telegraphic despatch had been received from General Castelbajac, with the brief message "I return with refusal." In corroboration of this rumour, it is said that two persons of importance, who must, from their position, know what the real state of things is, were large sellers at the Bourse on Tuesday. The fall in the French Three per Cents, for cash, on that day, was 1f. 40c., and there was a general fall in the Share Market when the report became generally known. The *Moniteur* of Wednesday affirms that the answer from the Czar is not expected for some days.

On Tuesday a Council of Ministers was held, and the telegraph was immediately afterwards set to work to convey new instructions to the ports, and to some of the military districts.

It was said in Paris, on Thursday, that not only did the Emperor of Russia give a flat refusal to the propositions made by the Emperor Napoleon, but that he treated General de Castelbajac with great discourtesy. Others say that the letter was not despatched from Vienna till the 9th of the present month, when Count Orloff took charge of it; and that it must have appeared in the *Moniteur* before it got into the hands of the Czar. M. de Hubner, the Austrian Ambassador in Paris, stated two days ago, in a public *salon*, that the publication of the Emperor's letter had destroyed the last chance that remained for the maintenance of peace.

The letter has been printed in the form of a placard; read publicly in all the barracks of France; and profusely distributed throughout all the communes in the departments. At the corners of every street in Paris it is to be seen in large characters. In short, no means have been spared which could contribute to the making known to the people of France the steps taken by the Emperor to make good his promise—"L'Empire c'est la Paix"—and to rouse their feelings against the oppressor of Turkey.

RUSSIA.

According to the intelligence from St. Petersburgh of the 9th, the result of Count Orloff's mission was known in that capital. That result was not satisfactory.

On the 27th of January the Emperor Nicholas addressed a letter to Prince Cholutoff, the Hetman of the Don Cossacks, in which the following phrases occur:—"In the war which has broken out in defence of the Christian faith, my brave Cossacks of the Don have given new proofs of their devotion and valour. The glorious history of their faithful service to the Throne and country is well known; and I have a firm conviction that during the present year they will be, as they always have been, the terror of the foes of Russia and of the Holy Cross.

The stoppage of the Russian trade has tended very much to allay the martial enthusiasm of the people. The last accounts from St. Petersburg affirm that the efforts made there to exaggerate the importance of the affair at Sinope do not find such an echo among all classes of the people as was expected. A subscription was organised to offer a sword of honour to Vice-Admiral Nachimoff; but the idea was received with such coolness that the execution of it was renounced; and, in order to save appearances, Captain Nachimoff, the brother of the Admiral, came from Sebastopol to decline the honour in his name.

A letter from Warsaw states that a pressing order had arrived from St. Petersburg to suspend the movement of troops. This measure is attributed to the fermentation which has manifested itself in that part of the Russian Empire.

TURKEY.

A private letter from Constantinople, of the 31st ult., announces that the Austrian Lloyd Company had been authorised by the Russian Government to transport passengers, merchandise, and letters between Odessa and Constantinople, and *vice versâ*, notwithstanding the war. The Porte, in pursuance of its system of moderation, had provisionally sanctioned the arrangement.

A grand ball was given on the 30th by General Baraguay d'Hilliers, as a relief to the anxieties of the kingdom, together with the foreign Ambassadors, attended.

THE SERVIAN NEUTRALITY.

The official notice that an Austrian corps was assembling on the Servian frontier appears to have made a greater impression on the Russians than on the Turks, Izzet Pacha having received the most tranquillising explanations from Vienna. Old Milosch declares that he entertains no idea of introducing civil war into his native country, but wishes to see the South Sclavonians in Bulgaria, Turkish Servia, and Bosnia placed on the same footing as the Servians. This is all very well at Vienna, but it is believed that the Hospodar Alexander would at once demand the intervention of Austria should the Russians violate his territory. It is said that the fortresses on the Servian frontier are to be reinforced, as an invasion on the part of the Russians is much feared.

A BRAVE BOYARD.

The Vice-President of Moldavia, Count Oesten-Sacken (not to be confounded with the General of the same name, who is at Cherson), has sequestered the property of Beyzade Gregory Stourdza, the son of the former Hospodar, for giving his service to the Sultan. The Bucharest correspondent of the *Fremden Blatt*, who speaks of Turkuhal as an island, gives the following account of the "devil-may-care" courage of the young Boyard. Russian officers, who were eye-witnesses, state that at the battle of Citate he rode out from the front, and, after coolly taking off his gloves, proceeded to pick off the Russian officers with a rifle. He wounded two or three officers, and knocked General Anrep's helmet off his head. As Stourdza was out of the range of the Russian muskets, he continued his singular amusement until his horse was killed by a cannon-ball.

MOLDO-WALLACHIAN INDEPENDENCE.

Private letters from Bucharest state that it has been confidentially intimated to some of the Boyards by the Russian General, that, while the Emperor Nicholas disclaims all idea of conquest or aggrandisement, he will not permit the subsisting connexion between the Principalities and the Porte to become closer; that his object is to erect these provinces into an independent State, under the protection of Russia, as the Ionian Islands are under that of England; and that the fortresses which line the Danube must be razed.

AMERICA.

By the steamer *Atlantic*, which reached Liverpool on the 16th, we have advices from New York to the 4th inst. She has brought 55 passengers, and 1,000 dollars in specie on freight. The news by this arrival is almost entirely devoid of interest.

From Washington we learn that the Nebraska Bill was still under discussion.

The *New York Herald* states, that no less than eleven vessels were fitting out in different parts of Cuba for the coast of Africa for slavers; also that seven vessels had sailed within six weeks from Baltimore, Boston, and New York, with the direct intention of being employed as slavers.

THE PREPARATIONS FOR WAR.

The following appointments in reference to the military expedition to the East have been determined on:—Lord Raglan to Command in Chief. Lieut.-General Ferguson, C.B., commanding the troops at Malta, to be Second in Command. Major-General the Duke of Cambridge, Colonel Bentinck, Coldstream Guards, Colonel Sir Colin Campbell, K.C.B., Colonel Eyre, 73rd Regiment, to command brigades. Colonel Cator to command the Royal Artillery. Colonel Airey, now military secretary to Lord Hardinge, to be Adjutant-General. Lieut.-Colonel the Hon. A. Gordon, Grenadier Guards, to be Deputy Adjutant-General. Colonel A. W. Torrens to be Quartermaster-General.

The first regiment of the expedition to leave this country will probably be the 50th, which was to embark at Kingstown (Dublin) yesterday (Friday), in the *Cambria*, Cunard steamship. The 33rd Regiment will embark at the same port. Wednesday is fixed for the departure of the 28th Regiment from Liverpool, in the *Niagara*. On the same day the 3rd battalion of Grenadier Guards and the 1st of the Coldstreams will embark at Southampton in the *Ripon*, the *Orinoco*, and the *Monilla*. The first battalion of the Fusilier Guards will go out in H.M. screw troop ship *Simoom*, from Portsmouth. The *Vulcan* will take out the 2nd battalion of the Rifle Brigade from the same port on the 24th.

The 1st battalion of Scots Fusilier Guards, completed for service to 850 strong, was privately inspected at ten o'clock on Thursday morning by the Duke of Cambridge, Colonel-in-Chief of the regiment, on the parade ground of the Wellington Barracks. His Royal Highness was accompanied by General Muldmay Pane and Colonel the Honourable C. B. Phipps. Colonel Bentinck, Colonel Hall (1st Life Guards), and Colonel Brownlow Knox were among the officers present. The men were under the command of Lord Rokeby, being the last occasion upon which his Lordship will appear as the Lieutenant-Colonel of the regiment—the retirement of Colonel Colville, on half-pay, preparatory to receiving his brevet rank as General, allowing the command to devolve upon the noble Lord. After the men had gone through a variety of evolutions, the Duke of Cambridge addressed the battalion in square, expressing his high admiration of the efficiency of their movements.

A Horse Guards Circular just issued provides for the augmentation of the army. The men to be raised will be borne as supernumeraries until the 1st of April next, from which date the increased establishment will be authorised by the War-office. The 1st battalion of the Grenadier Guards is to be augmented from 800 to 1000 rank and file; and the six remaining battalions of the Foot Guards from 640 to 800 rank and file. The following seven regiments are to be increased from 900 to 1000 rank and file, viz.—the 2nd, 6th, 18th, 59th, 60th (2nd battalion), 73rd, and 1st battalion of the Rifle Brigade.

The following fifty-six regiments are to be augmented from 850 to 1000 rank and file, namely—1st Foot (1st and 2nd battalions), 3rd, 4th, 7th, 9th, 11th, 13th, 14th, 16th, 17th, 19th, 21st, 26th, 27th, 28th, 30th, 31st, 33rd, 34th, 35th, 36th, 38th, 39th, 40th, 41st, 42nd, 46th, 47th, 48th, 49th, 50th, 54th, 55th, 57th, 58th, 62nd, 63rd, 65th, 66th, 67th, 68th, 69th, 72nd, 77th, 79th, 82nd, 85th, 88th, 89th, 90th, 92nd, 93rd, 95th, 97th, and 2nd battalion Rifle Brigade.

The service companies of regiments are to consist of 600, and the depôts of 400 rank and file, with the exception of those ordered for immediate active service, and with reference to which special orders will be given. The 71st Regiment, on the arrival of the reserve battalion in this country, will be reduced from 1200 to 1000 rank and file, and will be divided in the manner above specified. The 12th and 91st Regiments are to remain at their present establishment of 1200 rank and file; and the 5th, 20th, 23rd, 37th, 44th, 45th, 56th, 76th, and 98th at that of 1000 rank and file.

FAREWELL BANQUET OF THE GUARDS.—On Thursday evening the officers of the Coldstream Guards and Scots Fusilier Guards partook of a farewell banquet together, at the London Tavern, previous to their embarkation for the seat of war. His Royal Highness the Duke of Cambridge, as Colonel of the Scots Fusilier Guards, occupied the chair; supported on the right and left by Lieutenant-General Sir Edward Bowater, K.C.H., and Lieutenant-Colonel Sir Willoughby Cotton, G.C.B., K.C.H. The principal officers present were General Hope, General Aitchinson, Colonel Berkeley Drummond, Colonel W. T. Knollys, Colonel A. Colville, Colonel Lord Rokeby, Colonel G. M. Eden, Colonel G. Mcneiffe, Colonel Walker, Colonel J. H. Blair, Colonel Sir G. Walker, Colonel Tyrwhitt, Colonel De Bathe, Colonel Onslow, Colonel G. Dixon, Colonel Phipps, Colonel Scott, Colonel Dalrymple, &c. After the banquet, the Duke of Cambridge, in proposing a toast, alluded, in cheering though feeling terms, to the arduous services which, in all probability, the regiments were about to commence. The gallant company separated at an early hour. His Royal Highness Prince Albert, as Colonel-in-Chief of the Grenadier Guards, was expected to preside at a similar banquet to be given by that gallant corps at the London Tavern last evening.

Note.—The sign — denotes below the average.

The reading of the barometer remained stationary at 30.28 inches during the first two days of the week, then decreased to 30.19 inches by the morning of the 12th; increased to 30.57 inches by eleven a.m. on the 14th; decreased rapidly during the night to 29.89 inches by nine a.m. next morning; and increased to 30·05 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.260 inches.

The mean daily temperatures have varied from 6·6° to 9·6° below their average value. During the time they were above their averages—viz., from 7th January to 9th February (except on 3rd and 4th February, when they were below)—the average daily excess was 5·4°.

The mean temperature of the week was 35·6°, being 3·1° below the average of thirty-eight years.

The range of temperature during the week was 22·2°, being the difference between the lowest reading on the 14th, and the highest on the 15th.

The mean daily range of temperature during the week was 12·2°; the least was 5·4°, on the 11th; and the greatest 21·3° on the 14th.

Rain fell during the week to the depth of sixteen hundredths of an inch.

The weather, on the 10th, was fine till noon, but the sky was overcast during the remainder of the day; the 11th and 13th were dull, and the sky overcast; and the rest of the week was fine and the sky clear. The wind has been in gentle motion only.

Lewisham, February 2nd, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending February 11, the births of 925 males and 872 females were registered within the metropolitan districts. The average of the corresponding weeks in the previous nine years, were 786 and 727 respectively. The number of deaths registered in the same period was 1178: of these 583 were males, and 595 were females. The estimated number of deaths for the week was 1202, so that the return is 24 less.

THE CONSERVATIVE PARTY.—A considerable number of the members of the House of Commons met Mr. Disraeli on Saturday last, to consult upon the course which it would be pursued by them in the present condition of affairs. It is understood that the result of the conference was most satisfactory. The Conservative party will not offer any factious opposition to the Government, but will narrowly watch the conduct of the Administration, following the course demonstrated by Lord Derby in the House of Peers on Friday night.

THE PROPOSED NEW LAW COURTS.—On Thursday last a numerous meeting of the owners of property in Lincoln's-inn-fields, convened by the trustees, was held at the Freemasons' Tavern, for the purpose of ascertaining their sentiments on the subject of building the proposed Law Courts in the fields; Dr. Moore in the chair. Mr. H. Gem addressed the meeting in favour of that site, in preference to Carey-street, as proposed by the Incorporated Law Society. The cost of the Carey-street site would, as estimated by the Law Society, amount to £388,574; but he considered it would far exceed that. Lincoln's-inn-fields offered itself as a far more eligible site in every respect, and £300,000 would amply cover the expense of obtaining it. He concluded by moving a resolution embodying the conditions on which the fields would be offered to Government. It proposed that a new street should be made from Little Queen-street to the Strand, and that northern accesses should be opened to Holborn. Mr. Aldermen Copeland seconded the resolution; which was opposed by Professor Owen, of the College of Surgeons, on sanitary grounds. Dr. Guy, of King's College Hospital, supported the resolution. He considered the site offered many advantages. An important northern thoroughfare would be opened, which would admit a current of air from Hampstead in a direct line; and the various dingy houses and close courts would be removed. Improved spots in the neighbourhood would much improve the local health. The resolution was carried by a large majority.

EXPRESS STEAM COMMUNICATION TO AUSTRALIA.—On Thursday a meeting of gentlemen interested in promoting rapid steam communication with Australia was held at the London Tavern, to consider the best means of effecting that object. It was submitted that, by the use of improved machinery, Sydney and Melbourne might be brought within forty-five days of London. Messrs. Newton and Fuller explained the principle of their newly-patented marine engine, by which from 50 to 60 per cent of fuel might be saved, as contrasted with the present system. This would avoid the necessity of coaling at any of the intermediate stations. A resolution approving of the principle was adopted, and measures were taken to bring the project under the notice of the public.

THE COURT.

The Queen and Prince Albert, with the Prince of Wales, the Princess Royal, the Princess Alice, and Prince Alfred, the Princesses Helena and Louisa, Prince Arthur, and Prince Leopold, left Windsor Castle for London by a special train on the South-Western Railway at three o'clock on Monday afternoon. The Royal suite consisted of the Marchioness of Ely, Lady Caroline Barrington, the Hon. Eleanor Stanley, the Hon. Beatrice Byng, Lord Camoys, Col. the Hon. C. B. Phipps, Col. the Hon. Charles Grey, Mr. W. H. Cavendish, Major-General Buckley, the Master of the Household, and Mr. Gibbs. The Royal party arrived at Buckingham Palace at four o'clock, escorted by a detachment of Lancers. The Queen and the Princesses were received at the Palace by the Earl Spencer, Lord Ernest Bruce, Lord George Lennox, Col. Wylde, and Lieut.-Col. the Hon. A. Gordon. The Earl of Aberdeen dined with her Majesty the same evening.

On Tuesday the Queen and Prince Albert, attended by Major-General Buckley and Lieut.-Colonel the Hon. A. Gordon, visited her Royal Highness the Duchess of Gloucester, at Gloucester House. The Prize Consort rode out on horseback in the morning. In the evening her Majesty and his Royal Highness honoured the Princess' Theatre with their presence.

On Wednesday the Queen, attended by the Hon. Eleanor Stanley, visited her Royal Highness the Duchess of Cambridge, at her residence in St. James's Palace. The Prince Consort went in the morning to the New Palace of Westminster, and afterwards visited the Duchess of Cambridge. In the evening the Queen gave a dinner party; the company at which included his Serene Highness Prince Edward of Saxe Weimar and the Countess of Dornburg, the Duchess of Hamilton, the Turkish Minister and Madame Musurus, the American Minister, the Earl of Mulgrave, Lord and Lady Wodehouse, Lord and Lady Raglan, and Colonel Wylde.

On Thursday the Queen held a Court at Buckingham Palace, at which General D'Oxholm had his first audience of her Majesty, to deliver his credentials as Envoy Extraordinary and Minister Plenipotentiary from the King of Denmark. Dr. J. Bowring, Governor and Commander-in-Chief of Hong-Kong, and her Majesty's Plenipotentiary and Chief Superintendent of British trade in China, was presented to the Queen, as an audience, on the occasion of Knighthood from her Majesty. The Queen and the Prince Consort drove out in the afternoon; and, in the evening, honoured the Lyceum Theatre with their presence.

The Marquis of Conyngham has succeeded Lord Camoys, and Lieut.-Colonel the Hon. N. Hood has succeeded Mr. F. Cavendish, as Lord and Groom in Waiting.

POLITICAL ENTERTAINMENTS.

The Earl of Derby had a parliamentary dinner party, on Saturday last, at his mansion in St. James's-square.

Viscountess Palmerston entertained a select circle at dinner on Saturday last. In the evening her Ladyship received a numerous assemblage of company.

Viscount and Viscountess Canning received at dinner, on Saturday evening last, at their mansion in Grosvenor-square, the Marquis of Lansdowne, the Earl and Countess of Ellesmere, the Earl and Countess Grey, &c.

Sir William and Lady Molesworth entertained at dinner, on Saturday evening, the Earl of Aberdeen.

The Right Hon. and Speaker gave his first Parliamentary dinner, on Saturday evening last, at his residence in Eaton square.

THE NEW REFORM BILL.

The following is an abstract of the provisions of the Ministerial measure of Parliamentary Reform, introduced by Lord John Russell on Monday night:—

NEW FRANCHISES COMMON TO COUNTIES AND BOROUGHS.

1. Persons in receipt of salaries, from public or private employment, of not less than £100 per annum, paid quarterly or half-yearly.
2. Persons in receipt of £10 per annum derived from Government stock, or Bank, or India stock.
3. Persons paying 40s. per annum to income or assessed taxes.
4. Graduates of any University in the United Kingdom.
5. Persons who have for three years possessed a deposit of £50 in any savings bank.

NEW FRANCHISE FOR COUNTIES.

6. All occupiers rated at £10 per annum residing elsewhere than in represented towns.

NEW FRANCHISE FOR BOROUGHS.

7. All occupiers rated at £6 who have been resident within the borough two years and a half.

SCHEDULE A.

Boroughs having less than 300 electors, or less than 5000 inhabitants, to be disfranchised:—

Andover, 2 members at present returned; Arundel, 1; Ashburton, 1; Calne, 1; Dartmouth, 1; Evesham, 2; Harwich, 2; Honiton, 2; Knaresborough, 2; Lyme Regis, 1; Marlborough, 2; Midhurst, 1; Northallerton, 1; Reigate, 1; Richmond (Yorkshire), 2; Thetford, 2; Totnes, 2; Wells, 2; Wilton, 1.—Total, 19 boroughs; 29 members returned.

SCHEDULE B.

Boroughs having less than 500 electors, or less than 10,000 inhabitants, now returning two members, in future to return one member only:—

Bodmin, Bridgenorth, Bridport, Buckingham, Chichester, Chippenham, Cirencester, Cockermouth, Dorchester, Guildford, Hertford, Huntingdon, Leominster, Lewes, Ludlow, Lymington, Lichfield, Maldon, Malton, Marlow (Great), Newport (Isle of Wight), Peterborough, Poole, Ripon, Stamford, Tamworth, Tewkesbury, Thetford, Tiverton, Weymouth, Windsor, Wycombe (Chipping). Total, 33 members.

SCHEDULE C.

ADDITIONAL MEMBERS TO COUNTIES.—Counties and divisions of counties containing a population of more than 100,000 souls, at present returning two members, for the future to return three members:—Bedford; Chester, southern division; Chester, northern; Cornwall, western; Cornwall, eastern; Derby, northern; Derby, southern; Devon, southern; Devon, northern; Durham, southern; Durham, northern; Essex, southern; Essex, northern; Gloucester, western; Kent, western; Kent, eastern; Lancaster, northern; Lincoln, parts of Lindsey; Lincoln, parts of Kesteven and Holland; Middlesex; Monmouth; Norfolk, western; Norfolk, eastern; Stafford, northern; Stafford, southern; Somerset, western; Somerset, eastern; Southampton, northern division; Suffolk, eastern; Suffolk, western; Surrey, eastern; Sussex, eastern; Warwick, northern; Worcester, eastern; York, east riding; York, north riding.

WALES.—Glamorgan.

Divisions of counties now returning 2 members to be subdivided, and each subdivision to return in future 3 members:—Lancashire, southern division; York, west riding.

Additional members, 46.

SCHEDULE D.

CITIES AND BOROUGHS TO RETURN FOR THE FUTURE ADDITIONAL MEMBERS.—Cities and boroughs, containing more than 100,000 inhabitants, at present returning, for the future to return two members each, members each:—Birmingham, Bristol (city), Bradford (Yorkshire), Leeds, Liverpool, Manchester (city), Sheffield, Southwark, Wolverhampton.

Borough returning one member to return in future two members:—Salford. Additional members, 10.

SCHEDULE E.

UNREPRESENTED PLACES TO RETURN MEMBERS IN FUTURE.—Towns containing more than 20,000 inhabitants to return in future one member each.—Birkenhead, Burnley, Staleybridge. Inns of Court to return in future two members. London University to return in future one member. Additional members, 6.

SOUTH-WESTERN STEAM PACKET COMPANY.—On Thursday this company held its half-yearly meeting—William Tite, Esq., presiding—when a dividend of five per cent per annum, guaranteed by the South-Western Railway Company, was declared.

NORTHERN AND EASTERN RAILWAY.—On Thursday the half-yearly meeting of this company was held at the Bishopsgate Station—Richard Patteson, Esq., presiding—when guaranteed dividends of five and six per cent were declared.

LONDON AND BRICKLAYS' HALL RAILWAY.—On Thursday, the report of this company for the past half-year was issued. It states the total revenue for the six months to have been £40,268 13s. 2d., and the expenses, £18,682 17s. 1d.; leaving a balance of £24,600 16s. 1d. which, after paying the interest on debentures amounting to £5,462 11s. 1d., would admit of the declaration of a dividend of 4s. per share, making 6s. 6d. for the year.

SCOTCH-WESTERN RAILWAY.—On Thursday the half-yearly meeting of this company was held at the York-road, Lambeth; William Chaplin, Esq., M.P., in the chair. After a long discussion, the report issued by the directors was adopted; the dividend declared at the rate of 5 per cent per annum; the new directors recommended by the two committees of shareholders appointed; the sum of £73,000 standing as a debt against the reserve fund for additional plant, and new sidings, carried to the capital account, to which the auditors declared it properly belonged, and the directors authorised to watch the proceedings of the companies in Parliament, with a view to the protection of South-Western interests.

CHESS.

TO CORRESPONDENTS.

ARGUS, PHILO-STELLA, and others.—The integrity of "Stella's" clever problem, No. 418, may be perfectly restored, we believe, by adding to the diagram a Black Pawn on Black Queen's 7th square.

BELL of Worcester.—You can obtain the *Chess Player's Chronicle*, which is published on the 1st of each month, through any bookseller in your town, or direct from the London publishers, Messrs. Kent and Co., Paternoster-row.

REGINALD and others.—The appointment of solitary to the St. George's Chess-club has been given to Mr. Löwenthal.

A CHESS PLAYER OF MODERATE SKILL is desirous of playing a game by correspondence with some amateur of equal strength. Address to J. C., 17, Tower-street, Portobello, N B.

RICARDO; FITZ, Manchester; F. H.—They are too easy for our columns.

ANTI-HUMBUG.—We have not space this week to expose and refute the incredible misrepresentations to which our attention has been directed; but you may rest assured they shall not be permitted to pass uncontradicted, or unexposed.

V. H-s-d L.—Received with thanks. Another communication shall be forwarded immediately.

F M.—You can Castle under such circumstances.

G. B. F.—It shall be in immediate attention.

SOLUTIONS OF PROBLEM No. 520, by H. T. M., Ball of Worcester, G. B. of Newbury, Germanus, E. J. of Heaver, Pudsea, M. F., S. S., Guy, Ernest, Sigma, are correct.

SOLUTIONS OF PROBLEM No 521, by M. F., F. B. of B., J. F. of Melbourne, Grindoff, F. P. of T., O. P. Q., Quidam, Twoedlums, are correct.

SOLUTIONS OF ENIGMAS, by Henricus, J. F., F. R. of B., Rugby-boy, Lemuel, G., Argent, This, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 520.

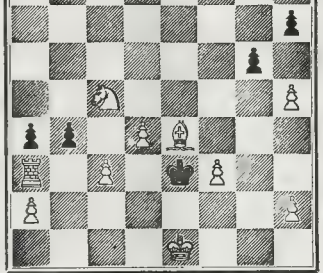
PROBLEM No. 522.

By Signor ASPA, of the Leamington Chess-club.

BLACK.



WHITE.

White to play and mate in four moves.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The immense preparations now making in this country to resist the encroachments of Russia, have not been without considerable influence upon the English Stock Market. Large operations have been entered into for a fall; nevertheless, the decline in prices has not been extensive, from the fact that we continue to receive large remittances of specie from the United States, and gold and silver bullion from other quarters, and that the surplus stock on the Market has been mostly taken off by the public.

The demand for money for commercial purposes has been steady, and the re-opening of most of the mills in the manufacturing districts is calculated to have some effect in the future. For shipment to the Continent, large parcels of gold, estimated at over £900,000 sterling, have been taken this week; and we learn that extensive purchases have yet to be made on French and Dutch Account. However, the supply in the Bank continues to increase.

The exports of the precious metals to the East have been £23,000; of which £20,000 in gold to the Straits, and £3000 in silver to Ceylon. The imports have been on a very liberal scale, viz., nearly £700,000 from Australia, £55,000 from New York, and £28,000 from the West Indies and Pacific.

From a return just issued, we find that the following is the total coinage of the Mints of London, Paris, and the United States, in 1853:—

Gold	..	..	£35,548,703
Silver	..	..	3,076,646
Copper	..	..	101,481
Total	..	..	£38,726,830

The above consisted of no fewer than 174,448,021 pieces, divided in the following proportions:—London, 51,368,185 pieces; Paris, 83,384,257; United States, 69,775,469. Such an enormous amount of coinage, in a single year, is without a parallel in the history of the world.

On Monday Consols were steady, and prices were well supported. The Three per Cents were done at 92, 91⅞, to 93; the Three per Cents Reduced, 92⅞ to 93⅛; and the New Three-and-a-Quarter per Cents, 93⅛ Bank Stock was 216. Long Annuities, 1860, sold at 5. India Bonds were 10s., and Exchequer Bills, 19s. to 20s. prem. The transactions on Tuesday were devoid of interest, and prices were drooping. The Three per Cents marked 91⅞ to 92; and the New Three-and-a-Quarter per Cents, 93⅛, 93¼ to 93⅜. Long Annuities marked 5⅛. Exchequer Bills were firm at 17s. to 20s. prem. On Wednesday, the highest figure for the Three per Cents was 93⅛, the closing quotation being 91⅞, after touching 91⅝. The Three per Cents Reduced were done at 92¼ ⅛; and the New Three-and-a-Quarter per Cents, 93⅜ ⅝, 93¼ and 93⅜. India Bonds sold at from 7s. to 10s., and Exchequer Bills advanced to 21s. premium. The amount of business doing on Thursday was comparatively limited. The Three per Cents were 91⅞ ⅜ for Money, and 91¾ ⅝ for the Account. The Three per Cents Reduced marked 92⅛; and the New Three-and-a-Quarter per Cents, 93⅛ to 93⅜. Exchequer Bills were very firm, at 18s to 21s. prem.

The last return from the Bank of France shows a further considerable decrease in the stock of bullion. The discount accommodation has increased to some extent, but the advances on Railway Securities have been greatly curtailed.

In Miscellaneous Securities very few transactions have taken place. Australian Royal Mail Steam Shares have sold at 3; Canada Six per Cent Bonds, ⅞ ex div.; Electric Telegraph, 17¾ ex div.; General Screw Shipping Company, 16 to 15⅝; General Steam Navigation, 3⅞; Peninsular and Oriental Steam, 62; Ditto, New, 35. Kent Waterworks have been 9 ex div.; South-Western, 90; Trent, 30 to 32; West Middlesex, 110½; Ditto, New, 16½. Insurance Companies have ruled dull. General, 5⅞; Globe, 138; Imperial Fire, 37½; Ditto Life, 10¾; London, 30; Marine, 2¾; Pelican, 6⅝; Phœnix, 186; Rock, 7½; Royal Exchange, 234; Sun Life, 66; Universal, 45¾. Hungerford-bridge Shares have marked 12; Waterloo, 5¾; Vauxhall, 2¾. West India Dock Shares have been 108 ex div.; St. Katharine, 93¾; Victoria, New, 4¾ ex div. Joint-Stock Bank Shares have been Australian, 7¾; English, Scottish, and Australian Chartered, 7⅜; London Chartered Bank of Australia, 2¾; Oriental, 6½; Union of Australia, 6¾; and Union of London, 21¾.

Mining Shares have been much neglected. Agua Fria have sold at 2¾; Australian, 3; St. John del Rey, 9; Linares, 10¾; Nouveau Monde, 1¾; Quartz Rock, 1⅜; United Mexican, 3⅜; Weller, ⅞; and Yuba, ⅝.

There have been no transactions of importance noticed in the market for Railway Shares; in some instances prices have been drooping. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 8½; Bristol and Exeter, 97⅞; Caledonian, 50⅜; Dublin and Belfast Junction, 45¼; East Anglian, 4¾; Eastern Counties, 13¾; Edinburgh and Glasgow, 63; Edinburgh, Perth, and Dundee, 23 Great Northern, 90; Ditto, A Stock, 73½; Ditto, B Stock, 30¾; Great Western, 63; Lancashire and Yorkshire, 60¾; Leeds Northern, 13⅝; London and Blackwall, 8; London and Brighton, 97; London and North-Western, 104¾; London and South-Western, 81¾; Manchester, Sheffield, and Lincolnshire, 23½; Midland 63¼; Scottish Midland, 56; South Devon, 14¾; South-Eastern, 62; Vale of Neath, 18¾; York and North Midland, 49¾.

PREFERENCE SHARES.—Caledonian, 99¾; Chester and Holyhead, 17¾; Eastern Counties, No. 2, 1 prem.; Great Northern, Five per Cent, 120; Ditto, Five per Cent Redeemable at Ten per Cent prem., 10¾; Ditto, Four-and-a-Half per Cent Scrip, 10¼; Great Western, Four-and-a-Half per Cent, 98⅛; Ditto, Irredeemable Four per Cent, 94; London and South Western, A Shares, 7⅜; Midland, Four-and-a-Half per Cent, 1 dis.; Oxford, Worcester, and Wolverhampton, 100½. South-Eastern, 100; York, Newcastle, and Berwick, 34¾.

FOREIGN.—Grand Trunk of Canada, A issue, 7⅜; Great Western of Ditto, Shares, 20¾; Luxembourg, 7⅜; Ditto, Railway, 4¾; Northern of France, 20¾; Paris and Lyons, 22⅜; Paris and Orleans, 42¾; Sambre and Meuse, 6¾.

Friday Evening.

Money Stock having been very scarce to-day, the market for Consols has ruled steady, and prices have been well supported in every quarter. The Three per Cents have marked 91⅝ ⅞ ⅝ 92 91⅞; the Three per Cents Reduced, 92⅜; and the New Three-and-a-Quarter per Cents, 93⅜ ⅝. India Bonds, 7s. to 10s.; and Exchequer Bills, 19s. to 21s. prem. Foreign Bonds and Railway Shares have ruled steady.

THE MARKETS.

CORN EXCHANGE (Friday).—The show of English wheat on sale in to-day's market, coastwise and land carriage, was but moderate, and in very middling condition: nevertheless, the demand for all kinds of grain ruled heavy at last week's decline in prices. The imports of foreign wheat have exceeded 15,000 quarters, and the supply here was good. The transactions were wholly confined to immediate wants, at the late depression. Floating cargoes commanded very little attention. No sales were reported on Continental account. Barley was to good supply, and heavy request. Inferior parcels were a shade lower. We had a very large sale for malt. To effect sales, lower prices must be submitted to. The show of oats was good, especially from Ireland. The trade was dull, at barely late figures. Beans and peas were almost nominal. The flour trade was heavy, and inferior parcels ruled in favour of buyers.

ARRIVALS.—English—wheat, 1746; barley, 4690; malt, 4492; oats, 3570; flour, 1823. Irish: Barley, 3500; oats, 10,220. Foreign—wheat, 15,181; barley, 4300; oats, 2640, flour, 7950 barrels, 190 sacks.

English.—Wheat, Essex and Kent, red, 67s. to 81s.; ditto, white, 71s. to 86s.; Norfolk and Suffolk, red, 66s. to 80s.; ditto, white, 74s. to 85s.; rye, 40s. to 43s.; grinding barley, 25s. to 28s.; distilling ditto, 28s. to 29s.; malting ditto, 40s. to 44s.; Lincoln and Norfolk malt, 64s. to 68s.; brown ditto, 58s. to 62s.; Kingston and Ware, 68s. to 72s.; Chevalier, 72s. to 75s.; Yorkshire, 70s. to 74s. Beans and tares feed one 34s. to 36s.; ditto, new, 30s. to 32s.; Yorkshire and Scotch, black, 32s. to 37s.; ditto, white, 32s. to 35s.; tick beans, new, 44s. to 52s.; ditto, old, —s. to —s.; grey peas, 34s. to 43s.; maple, 42s. to 43s.; white, 40s. to 42s.; boilers, 42s. to 44s. per quarter. Town-made flour, 70s. to 73s.; Suffolk, 58s. to 60s.; Stockton and Yorkshire, 56s. to 58s.; per 280 lbs. *Foreign: From the Continent*—Wheat, 70s. to 80s.; rye, 40s.; barley, 24s. per barrel.

Imperial Weekly Average.—Wheat, 82s. 4d.; barley, 41s. 3d.; oats, 27s. 6d.; rye, 45s. 9d.; beans, 47s. 10d.; peas, 50s. 3d.

The Last Week's Average.—Wheat, 80s. 11d.; barley, 42s. 0d.; oats, 26s. 9d.; rye, 43s. 6d.; beans 48s. 1d.; peas, 51s. 6d.

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d.; of household ditto, 9d. to 10½d. per 4lb. loaf.

TEA.—The shipments from China being considerably in excess of last year, and as the stock here is increasing, the demand is inactive, and common sound congou is selling at 1s. 4½d. per lb.

Sugar.—Very moderate supplies have been on offer, this week; nevertheless, they have proved quite equal to the demand, and prices are barely supported. Fine white Benares, 29s to 31s. 6d.; fine brown Madras, 28s. 6d. to 29s. 6d.; low yellow Mauritius, 33s. to 34s.; low brown, 27s. to 28s. per cwt. Refined goods dull. Brown lumps, 44s.; and grocers', 44s. 6d. to 45s. 6d. per cwt. Crushed dull, but not cheaper. The total clearances to the 11th inst. were 220,647 cwt., against 866,566 ditto, in 1853.

Coffee.—A few parcels of good ordinary native Ceylon have sold at 45s. 6d. to 49s. 6d. per cwt. All plantation kinds are firm, and quite as dear as last week. In foreign, very little is doing.

PROVISIONS.—The demand for Irish butter is very inactive, and prices have a downward tendency. Home foreign is producing rather more money. English is steady, at extreme rates. The bacon-market is dull, at a further decline of 1s. per cwt. Other kinds of provisions have off-slow, to former terms.

Tallow. P. Y. C., on the spot, is selling at 62s. 6d. to 62s. 6d.; and for forward delivery, 63s. per cwt. Town tallow, 60s. net cash. Rough fat, 3s. 5d. per 8lbs.

Oils.—Linseed oil is dull, at 32s. 6d. to 34s. per cwt. Rape is offering on easier terms. Spanm and Seal-oils are on the advance. Very little is doing in turpentine. Sperm, £3 17s.; in puncheons, £2 16s.; rough, 14s. per cwt.

Spirits.—The market for rum is dull, and prices are still improving. Proof Leewards, 3s. 10d. to 3s. 11d.; proof East India, 3s. 6d. to 3s. 6d. per gallon. Brandy is active. Sales of Cognac, from brands of 1851, 3s. 10d. to 10s.; 1850 ditto, 3s. 11d. to 10s. 1d.; older, 10s. 3d. to 10s. 6d. per gallon. Geneva and corn spirits are active, and quite as dear as last week.

Foreign Fruit, &c.—For most kinds of hops we have only a moderate demand, at last week's currency. This week 4 imports are—30 bales from Hamburg, 353 from Ostend, 3 from Oporto, and 33 from Antwerp.—Mid and East Kent pockets, £11 5s. to £19 15s.; Weald of Kent, £9 9s. to £11 15s.; Sussex, £7 15s. to £9 9s.; Foreign, £6 10s. to £10 10s. per cwt.

Coals (Friday).—Hartley, 16s.; Belmont, 20s.; Braddyll, 27s. 3d.; Hetton, 28s.; Haswell, 27s.; Stewart's, 26s.; Casop, 26s. 6d. per ton.

Smithfield (Friday).—A very moderate supply of beasts was on sale in to-day's market. Most trades moved off slowly, but we have no change to notice in the quotations. Although we were but scantily supplied with sheep, the demand for that description of stock was in a sluggish state, at barely former prices. The best old Downs was 5s. 2d. per 8lbs. Calves were in moderate supply, and slow request, at late rates. In pigs very little was doing. Milch cows were dull, at from £14 to £19 each, including their sucklings.

Per 8lbs. to sink the offals:—Coarse and inferior beasts, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. to 4s. 2d.; prime Scots, &c., 4s. 4d. to 4s. 6d.; coarse and inferior sheep, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 8d. to 4s. 4d.; prime coarse-woolled ditto, 4s. 6d. to 4s. 8d.; prime Southdown ditto, 4s. 10d. to 5s.; large coarse calves, 4s. 2d. to 4s. 6d.; prime small ditto, 4s. 10d. to 5s. 4d.; large hogs, 3s. 6d. to 4s. 2d.; neat small porkers, 4s. 6d. to 4s. 10d.; suckling calves, 22s. to 26s.; and quarter old store pigs, 21s. to 27s. each. Total supplies: Beasts, 630; cows, 130; sheep, 2240; calves, 203; pigs, 360. Foreign: Beasts, 204; sheep, 3260; calves, 98.

Newgate and Leadenhall (Friday).—The general trade demand ruled heavy, as follows:—

Per 8 lbs. by the carcase:—Inferior beef, 3s. 6d. to 3s. 2d.; middling ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. 0d. to 4s. 2d.; prime small ditto, 4s. 0d to 4s. 2d.; large pork, 3s. 4d to 4s. 0d.; inferior mutton, 3s. 0d. to 3s. 6d.; middling ditto, 3s. 8d to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 4s. 0d. to 4s. 6d.; small pork, 4s. 4d. to 5s. 0d.

THE ILLUSTRATED LONDON NEWS

No. 670.—VOL. XXIV.] SATURDAY, FEBRUARY 25, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE STATE OF THE NATION.

How do we stand at the opening of a long-averted, but inevitable war? How is the British nation circumstanced at a crisis which, in all human likelihood, is the commencement of a new European era? Never before in our history did we enter on a great struggle under such auspices. Had Heraclitus been a modern Englishman, he would have lost his reputation, for he must have dried his tears. To find any one consideration, or vestige of a consideration, that is not favourable and encouraging, we should have to turn to what might be nicknamed the metaphysics of "croaking;" and, in answer to the query—are we entering well on this pregnant epoch? we should be obliged to foster our despondency by replying, "Too well, if anything; it is over-good to be lasting."

So excellent is our position, so very different from what it was on the eve of any former contest, or of any former re-constitution of the world, to which England was ever a party since she was a nation, that, in contraries alone, could the most determined prognosticator of evil find any countenance; and, luckily, among those contraries, would be the contraries of every ascertained fact and of every permissible calculation—the contrary, in a word, of the truth. The Emperor of Russia, who is, we believe, a votary of the newly-invented patent oracles, in the material construction of which the carpenter and joiner is the most important agent, may make himself welcome to all the irrational consolations of mysticism.

We can do without them, and can look round upon a people and a country, who, in disadvantageous circumstances, both internal and external, vanquished a formidable and great antagonist in their last war; and now, in very different condition, are compelled, by the incurable and intractable infatuation of a far weaker enemy, to engage with greater vigour in an easier struggle.

Never before was England so perfectly prepared for the necessity thrust upon her by the demented ambition of a disturber of mankind. It is perfectly clear to every calm observer that either of the two great Powers of the West, as Lord Palmerston truly said on Monday night, would, singly, be able to bring this embroilment by arms to a speedy and satisfactory conclusion. But they are united; and so united, that, from the very beginning of their history, nothing of the kind was ever known before. On such a scale, for such an object, in so earnest a spirit, it is for the first time; and it is, humanly speaking, impossible that results of a commensurate magnitude should fail to accrue. Those results will, probably, soon be recorded in the annals of Europe, for the instruction and the warning of the remotest generations.

But, leaving France, let us look at home. We have emerged from great evils into incredible prosperity. If men and angels had striven in concert to delay this struggle till the right moment, and to forbid its procrastination beyond that moment, they could scarcely, so far as human prudence can now judge, have timed it more opportunely than this has been done for us by events and by necessity, by the labours of those who loved (and still and always love) peace, and the madness of those who are bent on provoking their own destruction.

Some years ago our population was desolated by a famine in one great department of the three kingdoms; the famine was followed by a pestilence; but both traversed their appointed time, and passed away, without extraneous aggravation. With them passed away the dissensions which appeared to threaten civil convulsions between the two islands. Soon came the crisis of a social dispute on an economical question. Timely legislation assuaged all the dangerous irritations of that formidable emergency. But hardly had it been thus encountered, and thus rendered innocuous, when the strangeness of the evils and the extent of the catastrophes, which we had averted, were made apparent. The French revolution and Continental commotions of 1848 taught us the value of seasonable precaution. The mesmeric contagion of that wild movement found here no morbid nerve (which we could not easily control) responsive to its bloody extravagances. The "State of the Nation!" Why, until yesterday, so to speak, this was the very text of sedition. On that text, "*yet forty days*," was the beginning of every agitator's sermon. Did you wish to call up the Hubbakuk Mucklewraths of the land, and to see them move amongst us with pans of fire on their heads, you had but to demand that people should be enlightened a little on "*the state of the nation.*" Even after that last-mentioned opportunity of the enemy had terminated, we were not yet safe from external aggression. The great soldier who conducted our arms in the late war (no mere speculator, no dreamy enthusiast, but a man "dwelling in *practicals* for ever") had tried in vain to impress on successive Governments the duty and the necessity of providing a lock to the door, behind which so many treasures tempted adventurous cupidity. Our coasts were unarmed, our country was virtually defenceless. And when at length he despaired of arousing into caution the foolhardy tranquillity of our various rulers, he sought his last consolation in this memorable reflection, ending with a prayer: "I have seen nearly seventy-seven years of age, passed in honour; and I pray the Almighty that he will not suffer me to be a witness of the calamities which I cannot persuade my contemporaries to take measures to avert." He did persuade them; and he lived to see the last peril of his country effectually provided against.

Still, to be prepared for attack at home, to put our coasts in a state of defence, to arrange a plan by which an invading enemy should be checked and expelled; to have even repressed an incipient insurrection, adjusted a domestic quarrel, surmounted a financial crisis, and attained a condition in which we might bid defiance to the confederate arms of the world—all this is very different from carrying on with energy a foreign war in a distant scene of action. This has become our duty and our business, in spite of every device of conciliation; in spite, indeed, of almost too many efforts to "keep the peace" by fair means. It is,

FITTING OUT THE NEW STEAM-FRIGATE "EURYALUS," AT CHATHAM.—(SEE NEXT PAGE.)

therefore, with no ordinary satisfaction that we survey the state of our preparations, and find that we are more than competent to the task assigned to us by events. Unanimity prevails amongst us. Great disputes have been settled, and great disasters have passed away. Emigration, aided by our immense commercial resources, has relieved us of the burdens of a supernumerary population; substituting an establishment of thriving customers for every helpless pauper, and solving a problem long deemed insoluble—the puzzle of politicians, and the despair of patriots. This, however, is not all. We were supposed to be a "nation of shopkeepers." Certainly we are; but we are shopkeepers, "and something more;" and they will now find who provoke us to reckon the cost of this war, that we shall wind up by reckoning it against the aggressor, and that we shall use due attention in bringing in the bill, and in enforcing its settlement. We are shopkeepers who, when less prosperous, contrived to keep nearly all Europe in our pay, and yet were not broken by the experiment; since then, while punctually discharging all consequent liabilities, we have managed to increase immeasurably the available resources of our public wealth. The revenue of England was never so abundant, or (in proportion to the amount levied) so little felt. The people were never so unanimous. This is the very home of inventions. All the ameliorations of modern warfare are, without difficulty or delay, embodied in our system. We are more at one with each other in this quarrel than we have been, perhaps, on any occasion in our annals. The nation which, but two years ago, possessed not sufficient defensive resources, has now at its disposal a "mobilized" or aggressive force, which will be soon recognised by those against whom it is destined to act. Pauperism has diminished. Crime is, in general, on the decrease. All who seek employment obtain it; and such is the good spirit, the loyalty, the patriotism, the community of feeling, that, whereas, until war was certain, much difficulty was anticipated in filling up the requisite numbers of our voluntary recruits for the land and sea services; no sooner was the necessity of the conflict made clear, than crowds of efficient men presented themselves spontaneously. The "Baltic Fleet" is not only a finer armament than this country has yet equipped, but than, perhaps, any country ever yet sent forth against an enemy. Lord Derby's Government began what the present Ministry have continued and brought to perfection; and we sincerely hope, and firmly expect, that Russia, which attaches so much importance to the freezing, and consequent inaccessibility, of the Baltic, during five months, will, before summer, have reason to regret that it is not a frozen sea—a "*mare clausum*"—*all* the year round.

Meantime, such is "the state of the nation," that we shall hardly feel, either financially or politically, the strain or the effects of exertion from the measures we are compelled to adopt.

HER MAJESTY'S STEAM-FRIGATE "EURYALUS," AT CHATHAM.

THE fitting out of this truly noble ship for the War in the East, as depicted upon the preceding page, presents an air of order, precision, and regularity, intermingled with bustling excitement, which is very striking; and, echoing as are our Dockyards with "the busy note of preparation," neither of them supplies a more interesting illustration than that which we have selected.

The *Euryalus*, Capt. Ramsay, is a 51-gun screw-frigate, of 400-horse power. Her extreme beam is 50 feet; extreme length, 245 feet; between perpendiculars, 212 feet; tonnage, 2356 feet.

On the 17th ult. she had her steam up, and worked her trunk engines, by John Penn and Son, for two hours, at mooring in the Medway. At one o'clock, next day, she left Chatham, for the purpose of being tried at the measured distance between the Nore and Mouse Lights, when her speed was ascertained to exceed ten knots per hour; the engines working admirably, and making from 55 to 61 revolutions per minute. She anchored about five o'clock, p.m., at Sheerness; and next morning proceeded under steam to Chatham, for the purpose of being made completely ready for sea at the port where she was fitted, and had her engines put on board.

In the accompanying Picture the guns are on board; but carpenters, shipwrights, sailors, &c., are busy—some placing fire-buckets, cutlasses, shot, &c., in their proper positions near the guns; others stowing away the sails; whilst others are employed at the rigging; and at the moment we write the engineers are hard at work, as are also the Dockyard artificers.

The *Euryalus* is now lying in dock bending her sails, and hoisting her boats on. She will come out of dock on Tuesday next, and proceed to Gillingham to take her powder in; and she will be in the Downs to form one of the Baltic squadron on or before the 6th of March.

COLLIERY EXPLOSION AND DREADFUL LOSS OF LIFE.

One of the most fatal colliery explosions on record took place in the Arley Mine of the Ince Hall Coal Company, near Wigan, on the afternoon of Saturday last. The coll ers had gone to their work in the morning at the usual hour. The number is not accurately known; but 240 Davy-lamps had been distributed among the colliers, and of these fourteen had been returned up to noon, accounting for as many persons having left work. The workmen were spread over the north and south levels, the greater number being in the north, which are of great extent, and are well known to be highly charged with carbureted hydrogen gas, so detected by all persons connected with the colliery, on account of its explosive nature. The engine-driver and the banksmen in charge of the "pit-brow" had no suspicion of accident, or danger of accident, until the afternoon, when a loud explosion underground was heard, and this was quickly succeeded by a second report of a similar character. Then came the sudden rush of air, smoke, and dust, from the upcast shaft, which follows these dreadful occurrences. It was now known to those at the top that an explosion had taken place, and they began to take immediate steps to rescue the colliers below. An alarm was spread to the neighbouring mines, so that other colliers might be obtained, or volunteer to go down as searching parties. In the meantime a number of colliers below signalled to be drawn up, and five cageloads (forty persons in all) were wound up by the shaft. These had been at work in the south levels, and came to the top almost unscathed; but they reported that the north levels were on fire near the bottom of the shaft, thus cutting off the retreat of colliers who had escaped with life after the first burst of the explosion, or at least rendering their escape much more hazardous; and it was now that the really appalling nature of the accident became apparent. Nearly three hours elapsed before the fire could be extinguished, so as to enable the searchers to proceed into the levels; and when they did enter, their progress was necessarily slow, on account of the destruction of doors and stoppings by the explosion, some of which had to be replaced before sufficient ventilation could be restored to support life.

One of the first men brought to the surface alive from the north levels was James Murphy, a collier, who had been working at the very far end of the mine, or 1200 yards from the shaft. He and another man, on feeling the shock of the explosion, started towards the shaft; but on reaching a point in the levels where the sulphur was overpowering, his companion turned back, while Murphy, resolutely putting his cap between his teeth, ran towards the shaft and was saved. The other man was lost. In all about fourteen persons made their escape alive from the north workings during Saturday evening, and these were the last—all that were found during the night and on Sunday being dead.

The total number of bodies brought out of the mine up to Sunday evening was eighty-seven; but it was said that twenty or thirty were still missing.

On Tuesday last, the eve of Washington's birthday, G. N. Sanders, Esq., the American Consul at London, gave an international dinner at his residence; when there were present Mr. Buchanan, Kossuth, Mazzini, Ledru Rollin, Sir J. Walmsley, M.P., Garibaldi, Worcell, Orsini, Pulsky, Bertzen, and Mr. Welsh, Attaché to the Legation.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The announcement of the *Moniteur*, on Sunday, that the Emperor of Russia refused to accept the last terms of accommodation proposed, seems effectually to have settled the question of war—which, strange as it appears to us, here, up to the last, was much discussed, notwithstanding the departure of M. Kisseleff, the unchanged attitude of the Czar, and the innumerable other symptoms which, from week to week, have constantly grown more significative and more threatening. It is by many supposed that, the crisis having arrived, affairs will be less fluctuating, and that a term will be put to the feverish and most disastrous excitement that for some time past has been producing the most painful results. The speech of Lord John Russell on this occasion has been received here with enthusiasm by the more enlightened and patriotic, who look to the honour and credit of the nation beyond private and personal considerations of loss or gain in commercial and financial speculation. The *Presse*, in quoting it, says:—"Such is the conclusion of this admirable discourse. Never has the Minister of a great nation held higher or firmer language, never have outraged public morals been avenged with greater eloquence, never have more withering epithets been applied to the conduct of a Sovereign. The enterprise of Russia is a savage enterprise. The Emperor of Russia has deceived England with lying assurances." Of course, preparations for war here are being carried on with increased vigour; leaves of absence (of which but a limited number, and under peculiar circumstances, have for some time been accorded) are being cut short; horses are, provisionally, being taken from the mounted *gendarmerie* to supply the troops, and every other measure adopted that the occasion requires.

It is a point which, apparently trifling, is yet worthy of remark, that in the Sunday *feuilletons*, the *Courriers de Paris*, and other light chronicles of the events of the moment, a much better and more respectful tone is adopted towards the English than it is the custom for the writers of these articles to assume. In general our eccentricities, our peculiarities, our little foibles, are brought forward, exaggerated, misrepresented; we are made the heroes and heroines of all sorts of absurd histories and adventures; and, in proportion as the author of these *mauvaises plaisanteries* is ignorant of our country, manners, customs, language, literature, and ideas, is he severe upon each and all. Now, however, the tone is considerably changed; and if the present occasion can really be made to establish a sincere *entente cordiale* between the two nations, and remove the prejudices that exist so strongly in the mind of the French of nearly every class towards us, much real good will have been effected. A strict *surveillance* also is exerted over the theatres, to prevent the appearance of anything calculated to give umbrage to the feelings of English spectators, even to the changing of the names and periods of historical pieces; and it is to be hoped that the same spirit will be introduced into private society.

The *Patrie*, one of the chief organs of the Government, has been most sharply taken to task by the *Moniteur*, and is, we believe, to receive an official *avertissement* (the second inflicted on it) for publishing, if not false, at least premature, intelligence, respecting the reply of the Emperor of Russia. Other journals are being treated with no less severity: *L'ami de la Religion*, and *L'ami de l'Ordre*, of Amiens, have been visited with *avertissemens*, for criticisms on the *loi d'enseignement*, and on official documents inserted in the *Moniteur*.

The monetary question is one which excites more attention that ever. So scarce is money that the Bank of France last week notified in all its bureaux that all who came to change notes would receive in future half gold and half silver.

A marriage is expected to take place shortly, which will unite two of the most celebrated names of the Napoleon dynasty, in the persons of the young Murat, officer in the Guides, and Mdlle. de Wagram, daughter of the Prince de Wagram, the same for whom a union with the Prince Napoleon was contemplated at the time of the Emperor's marriage.

The Duc d'Albe has arrived in Paris, and is at the Tuileries. The young Dom Pedro's visit to Paris, after visiting London, Brussels, Berlin, and Vienna, is expected with interest.

Paris danse, in spite of "wars and rumours of wars," not *chez lui*, but as he has done all the season, at Court and official balls. The Hôtel de Ville gave its second grand ball on Tuesday. The Ministers of War and Commerce have added their fêtes to the list. The ball of Saturday last at the Tuileries was magnificent, though, as may be supposed, the arrival of the despatch from the Czar caused no small pre-occupation in the mind of the Emperor. A *bal masqué* is talked of at the Princesse Mathilde's; and on the Dimanche Gras (next Sunday) is to take place a brilliant *fête d'enfans*, at the Cirque of the Champs Elysees, for the charitable institution of the Œuvres des Familles.

The position of affairs, and the circumstance that the dullness and rigour of the season have induced a considerable portion of the society of Paris to go to Rome for the Carnival, will doubtless render its conclusion particularly sombre here.

The *bœuf gras* has, on his arrival from Poissy (the great cattle market for the supply of the capital), been named Prince Menschikoff.

The great politico-theatrical event of the day is the appearance, at the Opéra Comique, of Meyerbeer's "Etoile du Nord," the work of which we spoke last week as being stopped by the Censure until the decision of the *Chef de l'Etat* should be given as to the propriety of its appearance or suppression. The *Moniteur* having announced that the Emperor, considering that "an opera was not a *pièce de circonstance* but a musical work, and that it would be attaching to a poem an exaggerated importance to prohibit its appearance," left to this consideration was joined the reluctance of the Emperor to deprive the public of one of its pleasures, and to injure the administration of the theatre, the "Etoile du Nord" would very shortly appear. As may be supposed, these circumstances excited no small interest to that which already attached itself to the name of Meyerbeer. Meyerbeer débutant in Opéra Comique, moreover; and the theatre was crowded to excess, boxes and tickets being, for the last two days, hardly attainable. The success of the piece has more than justified the attention it thus excited previous to its appearance.

SPAIN.

Accounts from Madrid to the 6th inst. state that the Queen intended to spend the Holy Week in Seville; and that she would be accompanied in her excursion by the President of the Council. Cabinet Councils were extremely frequent, but the result of the deliberations had not transpired. The *Diario Espagnol*, of the 14th, had been seized, in consequence of an article in which the conduct of the Government towards Generals O'Donnell and José de la Concha was violently attacked.

The Queen had ordered that the measures adopted in the capital, for the relief of the indigent and labouring classes, should be extended to all the districts of the kingdom in which a scarcity of provisions was experienced.

The Governor of the province of Barcelona had informed the Minister of War that the band of brigands who had made their appearance in the upper mountains of Catalonia, had recrossed the frontier and sought refuge in France, in consequence of the measures adopted for their capture.

BREAD RIOTS IN ITALY.

A letter from Rome, of the 13th, states that disturbances had taken place in the provinces, in consequence of the high price of provisions. They were particularly serious at Ravenna, Rimini, Cesena, and Perugia. Masses of famished peasants entered this last town crying for bread. The Governor of the place, a Swiss, called out the troops, and was on the point of ordering them to fire upon the multitude, when he was prevented by the delegate, Monsignor Loschiavo, who displayed on the occasion the greatest moderation.

THE WAR.

THE CZAR'S REFUSAL OF LOUIS NAPOLEON'S PEACE PROPOSAL.

The *Moniteur* of Sunday announced the arrival of the Emperor of Russia's answer to the letter of the Emperor of the French. It is in the negative. In his letter to the Emperor, the Czar discusses the conditions of arrangement which were proposed to him and declares that he cannot enter into any negotiation, except upon the basis which he has already made known. According to the French Government organ, "this reply leaves no chance open for a pacific solution, and France must be prepared to maintain, by the most effective measures, the cause for which the persevering exertions of diplomacy have been unable to secure the victory." There are several versions of the manner in which the letter of the Emperor of the French was presented to the Czar. The following communication gives some details which are not uninteresting:—

The reply of the Emperor of the French arrived at St. Petersburg on the 6th inst. M. de Castelbajac immediately applied Count Nesselrode that he wished to present a letter to the Czar from the Emperor of the French. Although it is contrary to Russian Court etiquette to speak to the Emperor of Russia on public business after four o'clock in the afternoon, Count Nesselrode apprised M. de Castelbajac that he might present himself at the Palace, although the Emperor was suffering from the gout. M. de Castelbajac con-equent y delivered the letter on the afternoon of the 6th. The Czar appeared to be painfully affected on reading it. He then spoke a few words, in a low tone, in Russian, which M. de Castelbajac did not understand. He recovered his composure almost immediately, and told M. de Castelbajac that he would return an answer in a few days.

THE ANGLO-FRENCH AND TURKISH TREATY.

The text of the treaty of alliance offensive and defensive between England, France, and Turkey, is said to have been forwarded from Paris on Tuesday. Besides the articles already known, which stipulate that Turkey shall not conclude any treaty with Russia without the consent of England and France, and that neither of these two Powers is in any case to derive any territorial advantages from the present war, the treaty is described as containing other articles, which stipulate for the free navigation of the Black Sea, and for the sending of an army of occupation of 100,000 men to Constantinople. Of this number, France is to furnish 70,000 men, and England 30,000. The 100,000 men are all to be assembled at Constantinople about the middle of April.

FRENCH PREPARATION FOR WAR

In addition to the army of observation of 100,000 men to be formed on the frontier of the Alps, it is now stated that the French expedition to Turkey, instead of consisting of 40,000, as was originally intended, will ultimately be raised to 70,000 of the best men in the French army. Generals Canrobert, Pelis-ier, and Macmahon will command three divisions; but there appears to be some difficulty with respect to the appointment of a Commander-in-Chief,

PREPARATIONS FOR WAR IN SWEDEN AND FINLAND.

From Christiania the news is warlike: 6000 men are to be mobilised; of whom 3000 are to be sent to Stockholm, 1200 to Christiansand, 1000 to Horten, and the rest to Kaholmen. A division of the gun-boat fleet is to be got ready immediately.

Russia neglects nothing in the midst of war in Turkey, and intrigues everywhere, not even the continued Russification of unfortunate Finland. Two ordinances have lately been published in that duchy, the one commanding all the scholars in the high schools to wear uniform, and the other rendering the present censorship of the press still more severe.

In Finland 100 gun-boats are to be got ready, and 60,000 Russian troops are to occupy the coasts of the Gulf of Bothnia, the Finnish regiment being prudently sent to other quarters. The visit of the Grand Duke Constantine to Helsingfors has been postponed.

A FINANCIAL CRISIS IN RUSSIA.

A financial crisis prevails at St. Petersburg. Money has become very scarce, and almost all business is at a stand-still. Nothing but paper is in circulation. At the departure of the last mail war was considered inevitable, although it was far from being popular in the capital. The best troops are being directed towards the seaports, where immense stores are collected. If the struggle commences, it will be terrible and decisive, for Russia appears to devote to it all her resources. The bases of a forced loan have been prepared. Foreigners are leaving St. Petersburg and Moscow in crowds. In this last named town the war party has the pre-eminence, not amongst the higher classes, but among the people.

All the Turkish Consuls in Russia are about to give in their resignation. English subjects are placed under the protection of Austrian agents, but only for six months, dating from the declaration of war by the Porte.

The Czar is extremely enraged at the answer returned by Prussia. Prince Radziwitch is summoned from Warsaw to St. Petersburg. Russian troops are to be stationed between Riga and Memel. A ukase, issued by the Emperor of Russia on the 9th, orders fresh levies. Baron Budberg will take a short journey from Berlin. General Benckendorff has received the command of the forces in the Caucasus.

THE RUSSO-GREEK CONSPIRACY.—AN INSURRECTION.

The conspiracy fomented, by the indefatigable agents of the Czar, throughout the dominions of the Sultan, has ended in an insurrection in Albania. From the account we gave last week, it appears that the persons at the head of the conspiracy were ex employés of the Russian Government; and that they had been carrying on their machinations ever since the departure of Prince Menschikoff from Constantinople last spring.

Letters from Janina, of the 8th inst., confirm the telegraphic despatch relative to the outbreak in Southern Albania. It is there stated that several bands of insurgents have joined in the neighbourhood of Arta, near the station of the "Five Wells," they took up a position, and cut off the communication between Janina and Arta. The Government had sent 1000 irregular troops against them with what success is not mentioned. The tradesmen in Arta had fled for safety to the citadel, taking their property with them.

A letter, dated Athens, Feb. 16, states that the Greeks were pressing on against Arta, and had laid close siege to it. What Turkish troops there were had collected in Arta, to which place they had all fled for safety. The Greeks occupied the defile of Pente Pegadia, the only road from Arta to Janina, so that it was hardly possible to send troops to Arta. It could only be done by making a long detour and marching through the revolted districts, supposed to be prudent to empty Janina of its military force. While this movement was taking place on land, there was an action in the port of Arta between the Turkish guard-ship and a Greek cutter. A Greek merchant vessel, laden with corn, wished to leave the harbour. The Turkish admiral made an outcry about this, and threatened the crew. The guard-ship added fuel to the flame, for it threatened to send the merchant ship to the bottom, if it dared to leave its moorings. Of course the Greek cutter, that happened to be at anchor there, took the part of its countrymen; so, after some pros and cons, it poured a broadside into the guard-ship, and the latter went down.

The *Allgemeine Zeitung* has letters from Athens of February 3. They mention that "Lieutenant Spiridiot Karaiskakis, who is attached to the frontier battalion, and is son of the hero of that name who fell at Athens, had crossed the frontier on the 28th of January with 500 Greeks and Albanians. He had effected a junction with the insurgents in Epirus; and his first movements were looked for with great anxiety." "Everything," it is added, will depend on whether his first steps or movements prove successful. If this be the case, Epirus, Thessaly, and Macedonia may very speedily be free from the oppressive yoke of the Porte." Some days ago the well-known Panajiot Sutzo delivered a funeral oration, at the close of which he said—"Death or liberty. Death or a Greek Empire: a Greek Empire is our only salvation. Swear by the ashes of this youth who has now fallen, that you will undertake everything which human strength can compass to effect the restoration of a Greek empire." Such is their tone.

A telegraphic despatch from Vienna, and, therefore, not very reliable, states that the insurgents are nearly 40,000 strong, and that the Greek; that Janina has risen, and has been joined by the inhabitants of Merzowa and Agrafa; and that the Turkish troops from the Montenegrin frontier were marching thither.

A despatch from Vienna, on Tuesday, says that advices from Albania to the middle of February speak of the insurrection as increasing. Bands of armed men go from village to village, urging the inhabitants to rise. Arms and ammunition are distributed gratis, and the Turks everywhere take to flight. The Pacha of Janina has withdrawn the troops from the town to the citadel on Mount Sihanuzza. Inflammatory proclamations are distributed in great numbers. On the 8th and 9th inst a revolutionary movement occurred at Salonica, but the Turkish troops attacked the insurgents at the point of the bayonet, and

seized the ringleaders. Since then the public tranquillity has not been disturbed.

THE FLEETS IN THE BLACK SEA.

On the 6th several large English and four French steamers went from the Bosphorus into the Black Sea, convoying eight Turkish steamers and ten sailing-vessels, with 7000 troops and ammunition, to Batoum. One English and one French steamer had gone to Varna.

The report of an attack on Chef ketil (Fort St. Nicholas), after the combined fleets left for the Bosphorus, is not correct. It was on the 3rd January that the fleets entered the Black Sea. It was on the 6th that the Russians cannonaded St. Nicholas. The allie commanders heard of this, and, expecting to catch the Russians in an act of war, the ships convoying the Turkish transports to Batoum set out from Sin pe with guns shotted, in the hop of a brush. But the Russians had been severely handled by the fortress, and did not wait for the French and British ships.

PORT OF SEBASTOPOL.

Lieutenant O'Reilly of the *Retribution* made, during the recent visit of that ship to Sebastopol, a sketch of the whole place, including the forts, batteries, men-of-war, and the town: a copy of which was despatched to the Admiralty. Lieutenant O'Reilly states that—

Five line-of-battle ships were moored head-and-stern across the harbour, so as to command the entrance of the harbour, which is no narrow that only one line-of-battle-ship can enter at a time, exposed to a cross fire of 400 heavy guns before entering the harbour; and should you succeed in doing so you would have a raking fire of five or six line-of-battle ships; three or whom are of three decks, so there is no chance of attacking it by sea, as they could also easily stretch a boom or chain across the entrance. But by land it is very different, being surrounded by heights, which could easily be carried; and this would place the town, all the heavy batteries, ships, and docks, at the mercy of an enemy. The town is surrounded by a wall loopholed. Within seven miles of Sebastopol there are several deep inlets, where you could land in a day, free of all guns—those of the port out of range; so that you could land a sufficient force to overpower those of the enemy. The place is a complete garrison, and is said to contain 16,000 soldiers.

THE SKIRMISHES ON THE DANUBE.

The news from the seat of war continues to be of a very puzzling nature. One day a d spatch brings a striking account of a Ru sian victory; and a few days later we receive letters showing that it was either without foundation, or else a distorted statement of what has taken place. On Wednesday a despatch was received from Constantinople stating that a great part of the Turkish flotilla on the Danube had been destroyed near Giurgevo. As no date was given, it was thought the despatch probably referred to an affair mentioned in the *Gazette d'Augsbourg*. According to that journal, General Schilder, who had, in the month of January, erected a battery of twelve guns of large calibre on the island of Ruzuadan, opposite Rustchuk, where the flotilla was lying, had seriously injured a Turkish steamer and several smaller vessels. The Russians were said to have had only a few men wounded.

A correspondent of the *Oest Deutsche Post*, from the Lower Danube, professes to be able to give an authentic account of all the little affairs which took place on the Danube between the 5th and the 9th inst. On the 6th, Osman Pacha, with 1400 men and 20 guns, advanced by way of Muglavit towards Mazeozi, in order to see what the Russians were about there. On the approach of the Turks, the Ru sian outposts fell back on Mazeozi, where entrenchments have been made. On the same day, 500 horse, also with 20 gun, left Negco and Girna to reconnoitre the Russian position at Urostkeui. It is probable the reports made by the commanders of the detachments were unfavourable, as Achmet Pacha, the Commander of Kalafat, immediately sent to Omer Pacha, requesting a reinforcement, in order that the strategically important places of Muglavit, Serketz, Negco, Girna, and Nedsje might be occupied. On the 5th and 6th Said Pacha, with 5000 foot and 40 guns, crossed the river at Rustchuk, and Mahomet Pacha, with 4000 men and 30 guns, did the same at Giurakui. Both at Giurgevo and Oltenitza there was a fierce struggle, but the Turks were obliged to withdraw, without having effected more than to secure possession of the island near Oltenitza. On the 8th and 9th, 6000 Turks, under the command of Ismail Pacha, crossed from Kalafat, and advanced as far as Orsech de Floss, whence the Russians fled at his approach. After destroying all the fortifications, the Turks returned in perfect order to the right bank of the river. On the 8th, by order of General Lüders, 2000 Russians crossed the river from Brailo to Measlin, near which place they destroyed some field-works; but, being subsequently vigorously attacked by the Turks, they were obliged to retire.

INVESTMENT OF KALAFAT.

Letters from Constantinople mention that eighty heavy guns were to be despatched to Varna, and thence forwarded to Kalafat. Orders had been issued from the Ministry of War to Omer Pacha to hold the position of Kalafat at any cost. Letters of Feb 1 from the Servian frontier, state that the Russians were daily drawing closer the cordon of troops investing Kalafat. From Jurna, on the left bank of the mouth of the Aluta, and thence in a northerly direction, by Kregesti, Karakul, Dilga, Radovan, Certatesk, Caranga, Driacz, and Grla, and then, farther from Citate, by Matszecag and Csoroja to Ursika, there were stationed, in larger and smaller corps, not less than 35,000 Russian troops, who form an immense semicircle in front of Kalafat. The countless marauders and stragglers, who are affiliated to the Russian army of investment, are collected into the various field-refages of Povar, Sijal, Tugla, Gouvon, Mirila, and even as far as Slatina. In Krajova convalescents only are received, or at least patients whose recovery can be pretty surely reckoned upon, and who can be very speedily restored to duty in the field.

THE ENTENTE CORDIALE WITH BELGIUM.

The *Gotha Gazette* publishes a despatch from M. Drouyn de Lhuys to the French Minister in Saxony, on the subject of the visit of Prince Napoleon to Belgium. He states that there was nothing political in the visit, that it was intended by the Emperor as a proof of his esteem, and that he regarded as a calumny the reports which had been current of the King of the Belgians having attempted to use his influence to prevent the alliance of England with France, and had induced another illustrious personage to co-operate with him. The despatch declares that the Emperor of the French has the highest confidence in the honourable character of his Belgian Majesty.

AMERICA.

The *Asia*, Captain Lott, which sailed from New York on Thursday, the 26th inst., reached the Mersey on Monday. The weather in the United States had been very severe. At Concord, the thermometer had fallen 26 degrees below zero. A fire broke out among the steam-boats at New Orleans on the 4th inst., and fifteen or twenty negroes perished in the flames. Seven steamers, together with several barges, were entirely destroyed, with their cargoes, consisting principally of cotton, and provisions. A bill had been reported to the House of Representatives, annulling the contract with the Collins Mail Steamers, and proposing that the Government should purchase them. It does not, however, seem likely to pass.

The news from Mexico extends to the 19th ult. from the capital, and to the 24th from Vera Cruz. The most important point of the intelligence is the subject of the introduction of colonists, which was being discussed in Mexico.

The Vera Cruz *Eco* of the 22nd of January says:—"It is now understood by the possibility of a doubt, that in the southern portion of the department of Mexico, a rich gold placer has been discovered, extending about eighty leagues in length; and it is highly probable that this fortunate discovery will be followed by others of equal value to the country."

THE NAVY AND ARMY.—Admiral Sir Charles Napier is to command the Baltic fleet; and Major-General Charles Yorke is to succeed Col. Airey as Military Secretary to the Commander-in-Chief.

LIEUTENANTS ON HALF-PAY.—The Lords of the Admiralty have given notice to all lieutenants in the Royal Navy, now on half-pay, or of and below the seniority of 1841 inclusive, that they are required immediately to transmit their addresses to the Secretary of the Admiralty, and such lieutenants as may th nk themselves unfit for service are to transmit medical certificates of their inability, and the cause of the same. The half-pay of all lieutenants neglecting to reply to this notice on or before the 1st of March next will be suspended. A lmates and midshipmen, second masters and masters'-assistants, unemployed, are also to send their addresses on or before the 1st March, or they will be considered as ceasing to belong to her Majesty's service.

UHLAND, THE GERMAN POET.—Mr. Mitchell, in his speech at New York, is said to have stated that Uhland, the German poet, had become an exile, and was now in Ohio. This is a mistake; for Uh and is now living in his native Wurtemberg, and is reported in the papers to have quite recently declined a civic honour proposed to be conferred on him by the King of [illegible] on the suggestion of Baron Humboldt.—*From Notes and Queries.*

PREPARATIONS FOR WAR.

EXPORTATION OF WARLIKE STORES.

In consequence of information received by Government that a large quantity of warlike stores had been entered at the Custom house, for exportation to Odessa, last week, a Privy Council was held at Buckingham Palace, on Saturday, at which the following proclamation was ordered to be issued:—

THE QUEEN.—A PROCLAMATION.

VICTORIA R.

Whereas by the Customs Consolidation Act, 1853, section 150, certain goods may, by proclamation or order of her Majesty in Council, be prohibited either to be exported or carried coastwise; and whereas We, by and with the advice of Our Privy Council, deem it expedient and necessary to prohibit the goods hereinafter mentioned either to be exported or carried coastwise; We, by and with the advice aforesaid do hereby order and direct, that from and after the date hereof, all arms, ammunition, and gun-powder, military and naval stores, and the following articles—being articles which We have judged capable of being converted into, or made useful in increasing the quantity of military or naval stores, that is to say: marine engines, screw propellers, paddle-wheels, cylinders, cranks, shafts, boilers, tubes for boilers, boiler plates, fire-bars, and every article or any other component part of an engine or boiler, or any article whatsoever which is, can, or may become applicable for the manufacture of marine machinery, shall be, and the same are, hereby prohibited either to be exported from the United Kingdom, or carried coastwise.

Given at our Court at Buckingham Palace, this eighteenth day of February, in the year of our Lord one thousand eight hundred and fifty-four, and in the seventeenth year of our reign.

GOD SAVE THE QUEEN.

IMPRESSMENT FOR THE NAVY.

The following well-timed letter puts to rest all fears about the possible revival of impressment for the navy —

Admiralty, Feb. 18, 1854.

Sir,—I am desired by Sir James Graham to acknowledge the receipt of your letter of yesterday's date, stating that an improvement exists among the seamen in the neighbourhood of South Shields that the Government are about to resort to a forced ballot to compel them to serve in the Royal navy, and that impressment itself may be had recourse to. Sir James Graham desires me to express to you his thanks for the information which you have given him, and, in reply, to inform you that the Government have not the remotest idea or intention of resorting to such measures, or to compulsory measures of any kind, for manning the navy.—I have the honour to be, sir, your obed ent servant,

H. O'BRIEN.

James Mather, Esq., South Shields.

THE MAILS FROM THE SEAT OF WAR.

Next in importance to the proper equipment of our naval and military forces, and their speedy direction towards the scene of war, is the necessity for rapid and regular channels of communication, so that instructions may instantly be transmitted to our Admirals and Generals, and intelligence of the progress of events forwarded in return to the seat of Government. The present communications between London and Constantinople are extremely unsatisfactory and uncertain, and are susceptible of great improvement. The Peninsular and Oriental Company have two steamers—the *Vectis* and *Valetta*—running between Malta and Marseilles in forty to forty six hours. It has been suggested that, if the Government were to arrange with the Peninsular and Oriental Company to use these two beautiful packets as despatch-boats, to run direct from Marseilles to Constantinople, without calling at Malta, the voyages might be regularly accomplished in four days. Allowing forty-eight hours for couriers to proceed from London to Marseilles, via Folkestone and Paris, it would be quite possible to reach Constantinople in six days from London; and very pressing instructions transmitted from London by submarine telegraph to Marseilles, and conveyed thence by the *Vectis* or *Valetta*, might be placed in Constantinople in little over four days. It is thus quite practicable, by using this route, to arrange for a regular service of special couriers between London, Paris, and Constantinople in six days.

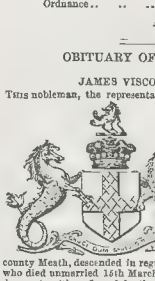
THE WAR ESTIMATES FOR 1854.—The following is a summary of the total amount which Parliament is asked to vote for the year commencing on the 1st of April next, and the extent to which that is an increase on the vote taken last year:—

	Prop sed Vote.	Increase.
Army	£6 757 493	£282,470
Navy	7.487,948	1,352,455
Ordnance	3,865 878	792,311
	£17,637,312	£2,367,236

OBITUARY OF EMINENT PERSONS.

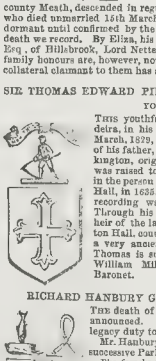
JAMES VISCOUNT NETTERVILLE.

THIS nobleman, the representative of an ancient line, died on the 13th inst., at his residence, 15, Fenubroke-place, Dublin, after a long illness. His Lordship, son of the late Nicholas Netterville, by Bridget, his wife, daughter of Bartholomew French, Esq., of Ballinkeran, had the Viscounty of Netterville adjudged to him by the House of Lords, on the 14th of August, 1824. The title, originally conferred in 1622, on Nicholas Netterville, of Dowth, county Meath, descended in regular succession to John, sixth Viscount, who died unmarried 15th March, 1826; from which period it remained dormant until confirmed by the Lords' decision to the nobleman whose death we record. By Eliza, his wife, third daughter of Joseph Burwan, Esq., of Hillsbrook, Lord Netterville leaves two daughters only. The family honours are, however, not likely to become extinct, as it is said a collateral claimant to them has appeared.



SIR THOMAS EDWARD PILKINGTON, BART., OF CHEVET, YORKSHIRE.

THIS youthful Baronet died on the 7th ult., at Madeira, in his twenty fifth year. He was born 19th March, 1829, and succeeded to the title at the decease of his father, 10th October, 1850. The family of Pilkington, originally of Rivington, county Lancaster, was raised to the degree of Baronets of Nova Scotia in the person of Sir Arthur Pilkington, Kt., of Chevet Hall, in 1635. The gentleman whose death we are recording was the ninth inheritor of the title. Through his mother Mary, second daughter and coheir of the late Thomas Swinnerton, Esq., of Butterton Hall, county Stafford, he was also descended from a very ancient race. Having died unmarried, Sir Thomas is succeeded by his next brother, now Sir William Milborne Swinnerton Pilkington, tenth Baronet.



RICHARD HANBURY GURNEY, ESQ., OF NORWICH.

THE death of this opulent banker has been recently announced. His personal estate is estimated for legacy duty to amount to nearly £600,000.

Mr. Hanbury Gurney represented Norwich in several successive Parliaments. He was first returned in 1818.

The family of the Gurneys—one of great influence in the commercial world—is a branch of the old Norman house of De Gournay, and has been settled in Norfolk time out of mind. The present representative is the learned and estimable Hudson Gurney, Esq., of Keswick, near Norwich, elder half-brother of the gentleman who is the subject of this notice, and who was son of Richard Gurney, Esq., of Keswick, by Rachel, his second wife, daughter of Osgood Hanbury, Esq., of Oldfield Grange, Essex.

JOHN MARTIN, K.H.

OF this distinguished painter, a copious autobiographic memoir appeared in the ILLUSTRATED LONDON NEWS, No 369. Mr. Martin was a native of Northumberland, born at Haydon Bridge, in 1789. He died on the 17th inst., at the house of Thomas Wilson, Esq., Douglas, Isle of Man.

MUSIC IN PARIS.

"L'ETOILE DU NORD," COMIC OPERA, IN THREE ACTS; THE LIBRETTO BY SCRIBE, THE MUSIC BY MEYERBEER.

(From our own Correspondent.)

PARIS, February 20.

MEYERBEER at the Théâtre Imperial de l'Opéra Comique! Meyerbeer again transforming his style, and entering the lists on the stage at which the light productions of Grétry, Hérold, Auber, Adolphe Adam, Halévy, and Ambroise Thomas, have been for so many years in the ascendant—it surely cannot be! Meyerbeer, who wrote the "Margherita d'Anjou" (for Milan) in 1822, the "Crociato in Egitto" (for Venice) in 1824, the "Robert le Diable" in 1830, the "Huguenots" in 1836, and the "Prophète" (for the Grand Opéra in Paris) in 1849, besides the "Camp of Silesia" (for Berlin and Vienna) in 1846—Meyerbeer, whose forte as a lyric composer has been considered to be the grand, the terrible, the pathetic, and the vehement; whose operatic inspirations have so profoundly interested audiences in every part of the world, because they are replete with the most refined sensibility, and filled to overflow with every varied expression of deep feeling—Meyerbeer, the writer of a comic opera! Such were the exclamations heard in the European musical circles since it was made known that the "Northern Star" was to shine positively at the Salle Favart. But the result has proved that the genius of Meyerbeer is not confined to one school of composition. The triumph of Meyerbeer as a comic opera composer is a *fait accompli*. In the presence of the Emperor and Empress—of all that is distinguished in political, literary, and art tic circles—"L'Etoile du Nord" was produced, last Thursday night, with the most signal success—one that does not admit of a "shadow or a shade" of suspicion—one in which the individuality of the composer has assumed a novel aspect. And in this instance, be it remarked, that the popularity of the new work will essentially be owing to the composer hi nself. The tact and talent of Scribe could not, of course, be wanting in certain dramatic situations; but to endeavour to excite emotions in audiences from a sentimental love-story of Peter the Great and Catherine of Russia may be deemed an impossibility; historic reminiscences are opposed to any marked sympathy for such personages. The melodious charm, imaginative imagery, dramatic impulse, and descriptive powers of the great musician, have been victorious over Scribe's elaborate and extravagant incidents—the poetic license in the development of which has been carried to the verge of absurdity. The *Czar*, in the first act, is working as a carpenter under the name of *Peter Michaelof*, at Wiburg, on the Gulf of Finland, where he meets with *Catherine*, who is a suttler, and falls in love with her, for her daring courage, which is shown by her coming in contact alone with a marauding body of Cossacks, and by her enlisting as a soldier, in order to prevent her brother, who has been drawn in the conscription, from postponing his marriage with *Prascovia*, the Wiburg Burgomaster's daughter. In the second act, is the saving of the *Czar's* life, menaced by conspirators in his army, by *Catherine's* discovery of the traitorous documents; the heroine herself narrowly escaping death for having struck a corporal, whilst she is a guard at *Peter's* tent, in the interior of which the *Czar* is seen, deeply intoxicated, in the company of two *vivandières*. In the last act *Peter* is at Moscow, lamenting the loss of *Catherine*, who is, however, brought to his palace in a state of insanity, caused by his infidelity. She is restored to reason by the device of surrounding her with her former village companions, and of playing their favourite airs on the flute—on which her brother and Peter, in the first act, were accustomed to perform. Crowned Empress by the Czar, the predictions of her mother, on the night of her death, that the North Star, which was then shining brightly, destined a high station for her at the hands of a stranger, are thus fulfilled.

Such is the outline of the poem which Meyerbeer will immortalise by his brilliant conceptions. The score contains no less than twenty-six pieces, of which the overture, the gipsy rondo with tambourine, by *Catherine*, in the first act; the songs of the cavalry and infantry soldiers, the chorus of conspirators, a portion of the finale in the second act, and the bravura, with the accompaniment of two flutes, of *Catherine*, in the last act, are avowedly extracted from the "Camp of Silesia," an occasional opera of local interest, which will not admit of transplantation from a Teutonic clime.

The overture consists chiefly of a stately march in E flat, richly scored, in the midst of which steals a delicious melody, frequently heard during the progress of the opera, instrumented with peaceful pungency: the winding up of this imposing instrumental introduction is marked by the co-operation of a military band of Sax instruments, behind the scenes, with the ordinary orchestra. The opening chorus, "Sous cet ombrage," is followed by a song of a vendor of pastry, *Danmoiselin* (Mocker), the boom fr end of *Peter*. A drinking chorus, "A la Finlande, buvons," some couplets by Mdlle. Duprez, who is the *Catherine*; a lively duet, Mdlle. Lind'hre, "Ah! que j'ai peur!" a most original and effective bass air, "Enfans de l'Ukraine," sung by Hermann Léon, as *Gritzenko*, the Cossack chief; the singularly fascinating rondo, sung by Mdlle. Duprez, which has the effect of drawing away the brigands from around the village; a thoroughly dramatic duo between Mdlle. Duprez and M. Battaille (who is the *Czar*), "De quelle ville es tu?" a light, quaint, and crying duo for two sopranos, given by Mdlles. Lefebvre and Duprez; a chorus of soldiers marching to battle, and a prayer finale, sung by *Catherine*, whose voice dies away in the distance, the captivating cadenza, as she is marched off, disguised as the recruit, are included in a first act.

The second act is constructed on loftier proportions. The action passing in a military camp, placed in a rocky defile, on the eve of the battle between Peter and Charles XII, of Sweden, the local colouring of the composer is displayed most felicitously. The orchestral writing is full of novel and picturesque effects, the vocal pieces are replete with animation. The songs of the two soldiers, who in turns boast of the superiority of their claims for the cavalry and infantry, are masterpieces of ingenuity and freshness. The infantry air is interwoven with evolutions and choral ejaculations; the drum imitations by the voices being so curious and startling, that the house demanded an encore. The concerted piece of the tent scene is a continuous gem. Beginning with a bacchanal duo between *Battaille* and *Mocker*, the voice of *Catherine* intervenes outside the tent; then succeed the vivacious couplets of the two *vivandières*, the coming of which electrified the house, and again exacted a rapturous demand for a repetition. After this duo, comes a quintet, the phrases of which have all the fulness of German harmony, with the luminous ing grace of Italian melody. The finale, in which, after the suppression of the conspiracy by the courage of the *Czar*, who throws off his incognito, is overwhelmingly large and impressive. Meyerbeer has interwoven an ancient Prussian march with a march executed by drums and fifer, and subsequently with a march played by the Sax instruments—the three subjects being combined, in the conclusion, with astounding and inspiring force.

In the third act, Battaille has a romance, "O jours heureux de jole et de milère." The instrumentation of this delicious melody is charming. After a comic duo, by Battaille, Mocker, and Hermann Léon, Mdle Lefebvre has an air, which provoked another encore; and the same vocalist a duo with Jourdan, "Fusillé, fusillé"—in which the composer is caught for once napping, the opening bearing an unmistakeable resemblance to the "Pendu, pendu," in Adam's "Postilion de Lonjumeau." The air with the two flutes, forming the finale, is known in this country—as Mdlle. Lind, for whom the heroine in the "Camp of Silesia" was written, has sung it frequently at concerts.

"L'Etoile du Nord" will be, must be, heard in London: the season cannot pass with the omission of the production of such a masterpiece. Its adaptation for the Italian stage will be easy. The dialogue is very limited, and can be reduced advantageously, and turned into recitatives. The French critics are in the seventh heaven in their unending encomiums. Its exactitude and precision as an *ensemble* cannot be denied. The choruses are admirable—the orchestra, conducted by Dimanche, plays and accompanies to perfection; but the manners habituated to the vocal glories of the English capital, take leave to deny that anything like an adequate cast has been secured at the Opéra Comique. Mdlle. Duprez, it is true, vocalises like an angel, but she acts like a *grisette*. Battaille is energetic and coarse, in the *Czar*. The vivacities of the two *artistes* are too awful to dwell upon; and yet, with such marked inferiorities, the careful rehearsals of the opera for six months—hear th s fact, English managers!—under the gifted composer's indefatigable direction, insured for the work a most finished interpretation. Meyerbeer was called for at the conclusion, amidst a storm of cheering, the Emperor and Empress remaining to join in the plaudits. The second performance on Saturday night more than confirmed the verdict of the opening representation. Stalls were sold last Thursday for two hundred francs (£8) each piece!

Our Artists have depicted the most striking dramatic situation in the opera. It is the tent scene in the second act, in which *Peter the Great* (Battaille) and his favourite (Mocker) are engaged in a drinking bout, in the presence of the two *vivandières*. The *Colonel*, who has just

"CAMPAIGN OVENS," FOR VICTUALLING FRENCH TROOPS.

entered the tent, in vain points out to the *Czar* the peril of his position; and *Catherine* (Mdlle. Duprez), disguised as the recruit, views with agony, through an aperture in the tent, the intoxication of *Peter*. She is surprised in the act by the *Corporal* (Hermann Léon), and on his reproving her for abandoning her post as sentinel, in her despair she strikes him. He appeals to *Peter*, who is so far gone that he cannot identify in the young conscript his *Catherine*, and orders her to be shot forthwith. After she is led off for execution a vague recollection of her voice forces itself on his mind, and, after a desperate effort to steady himself, he cries out, "Arretez!" This is finely given by Battaille; indeed, the entire scene is one of exciting interest, both dramatically and musically.

"CAMPAIGN OVENS" FOR VICTUALLING THE FRENCH TROOPS.

The naval and military preparations now in course of operation, both in England and France, present many interesting specimens of the improved state of the arts in their respective departments. Thus, the attention of the French Government has been much directed of late to the victualling of the troops; and a new system has recently been resorted to for the more economical supply of provisions in time of war. This system consists of Portable Baking Ovens (called *Fours de Campagne*), and has, since its first introduction, given the greatest satisfaction. The construction of these Ovens is extremely simple. Each is composed of a series of bars of iron, supporting a vault of thin plate of the same metal, which is covered with earth for the purpose of retaining the heat. The Ovens are of an oval shape, slightly flattened towards the upper extremity; and they are placed on the ground in the position of a bell, or an inverted glass. In the specimens that have come under our notice, there was a hollow place in front of the grate intended for the reception of the baker. This is not a necessary appendage to the apparatus, but is adopted merely to facilitate its operation.

These Ovens are essentially portable, notwithstanding their weight which is about 1000 lbs. They are composed of 137 separate pieces, and can be fastened together, and put in a state fit for use in about an hour. It is difficult to enumerate the precise economical advantages of this system; since they depend in a great measure on the fuel employed, and the nature of the earth with which the roof of the oven is covered, &c. The amount of bread baked by this process is estimated at the rate of 150 rations, or 548 lbs., for the first 80 kilogrammes of fuel when the oven is new y lighted, and for every subsequent 20 kilogrammes of fuel when the bars are in a heated state. The bread thus made is in every respect equal to that baked in the ordinary way, as is testified by the approval of the garrison stationed at Paris, among a considerable portion of whom it is daily distributed

We hear that the French Minister of War has recently issued orders for the construction of a great number of these Ovens, for the supply of the Expedition about to proceed to the East. Orders have also been given for the appointment of military bakers.

SCENE FROM MEYERBEER'S NEW OPERA, "L'ETOILE DU NORD," AT THE THEATRE IMPERIAL DE L'OPERA COMIQUE, PARIS.

DESTRUCTION BY FIRE OF THE PARLIAMENT BUILDINGS, AT QUEBEC.

GREAT FIRE AT QUEBEC.

The *Quebec Mercury*, received by the *Cunard* steamer, which arrived on Monday, contains a full account of the destruction of the Parliament Buildings in that city by fire, on the 1st of February. The fire was first seen about three in the morning, by one of the sentinels on duty. He gave the alarm, and a number of policemen and soldiers were speedily on the spot. At that time the fire seemed so very inconsiderable as to cause little apprehension. In a short time, however, the flames had spread to several parts of the building; and, as the firemen were unable to reach the centre of the conflagration, owing to the singular construction of the building, in little more than an hour from the time the alarm was given, it had become evident that the new wing of the Legislative Hall, which had been finished and furnished only a year ago, at an outlay of £60,000, was doomed to destruction. Gradually did the flames gain possession of the building, till they approached the Hall of Assembly, where for a moment the hope was entertained that division walls and iron doors might stay their progress; but not one, of half a dozen doors connecting the different parts of the structure, was fireproof! Then again, as the fire crossed over the division-wall to the dome, no one could witness its advance, screened as it was beneath the roofing. The firemen were there, but not a single engine could throw water so high as the roof; and even if it had, water could not penetrate the metal covering. The fire inspector proposed to the authorities present that if they would order the blowing-up of the roof, he would, with the assistance of his fire brigade, guarantee the safety of the Assembly Hall, and the dome, together with the wing beyond it. General Rowan instantly ordered Captain Beatson, of the Royal Engineers, to reconnoitre the building, and ascertain how and where the explosion could be effected without knocking down the walls. From his report it appeared that a large charge would be requisite, owing to the immense area of the garret; and further, that it was possible the roof might be thrown to a great height and fall upon the Lower Town, or the walls of the building might be endangered. This mode of arresting the progress of the fire was, therefore, abandoned.

But little property was saved within the south wing until some person opened one of the windows of the Library, from which the police and soldiery, together with the few civilians who had been roused from their slumbers, removed a vast number of books. Sleighs of all kinds were brought into requisition, and some thousands of volumes were thus carried in safely to the Archbishop's Palace, close by—Mr. Todd, the assistant librarian, and several other gentlemen, handing them from the shelves until the close proximity of the flames forced them to withdraw

When the first engine came on the ground, it was placed near the cistern at the foot of the Prescott-stairs, exactly opposite the Parliament-house, but the cistern was discovered to be dry, as it has been since the fire at the foot of Mountain street on the 11th of January. Had the firemen been supplied with water at this early hour, in all probability, something might have been done towards keeping the fire from the main building. As the flames, with awful grandeur, enclosed the whole south wing in their grasp, repeated attempts were made to save the centre building from the same fate. But as the town clock tolled the hour of six, it was plain to every observer that the lofty and reeking dome was gone beyond recovery, for the smoke was oozing out beneath every inch of its tin coating, now and then followed by flames flickering as they were wafted by the wind. In another half hour it tottered over to the southward, and, with its gilded cupola, and iron girded galleries, sank from view among the blazing timbers below.

The walls have not fallen in any part, and are reported by competent judges to be as solid as ever; the vaults and safes also appear to have stood the test without injury. The collection in the library was known to amount to 17,000 volumes; and it is calculated that about three-fourths are saved. A catalogue, which had been in compilation during three years, is said to have been consumed.

"Canada is certainly unfortunate (says the *Mercury*) in her Houses of Parliament; for, if we remember rightly, the Upper Canadian Legislative Halls were burnt down in Toronto about the year 1824; our average consumption in this particular commodity, including the Montreal catastrophe, thus appearing to be one set of Chambers every ten years. Again, this time twenty years ago—that is, on the 23rd January, 1834—our citizens were excited similarly to what they are now, for on that day the tocsin sounded to the cry that the Castle of St. Louis was in flames."

WRECK IN THE BAY OF BENGAL.

(From a Correspondent.)

The following occurrence took place in the recent voyage of the *Prince of Wales*, East India ship, from London to Calcutta. The facts were as follow:—On the 15th December, at five p.m., whilst beating up the Bay of Bengal against a strong equally north-east monsoon, in lat. 9 deg. north, and long. 92 deg. east, a small brig was descried ahead of the *Prince of Wales*, running to the westward directly towards the ship, and, on nearing her, hoisting English colours with a waft, as a signal to communicate, or for a boat. The ship was immediately hove too, when the brig passed astern, the persons on board (natives) hailing in Bengalee. She rounded to under the lee of the Indiaman; and, as it was nearly dark, continued burning lights and shouting, at the same time drifting rapidly to leeward. Captain Hopkins, of the *Prince of Wales*, immediately lowered a cutter, and sent her in charge of Mr. Deacon, his chief officer, with an Indian servant, who spoke English, as an interpreter: this service was not unattended with danger, the weather being squally and unsettled, and a short heavy sea. The chief officer went as close to the brig as he considered prudent, but did not go alongside, fearing a rush to his boat, in which case she must have inevitably been swamped. He ascertained her to be a native brig, commanded and manned by natives; that she had sprung a leak, and, their pump being choked, she was rapidly filling; and the crew wished to abandon her, and be taken on board the *Prince of Wales*. As there was no appearance of her immediately foundering, the officer returned to the ship with this intelligence, and for orders; being followed by the native captain, the owner, and eight Lascars, in their own boat. Captain Hopkins then sent his officer on board to examine the vessel. On reaching her, Mr. Deacon made the signal that she could not be kept long afloat. The Lascars were then taken out of their own boat, and she returned, under charge of the third officer, manned by some of the *Prince o. Wales's* men, to assist in saving the remainder, and their baggage. By eleven p.m. all were taken out, with the whole of their personal effects and some of their stores and articles for barter, and put safely on board the Indiaman; but, before this could be effected, the crew in the brig were compelled to cut away her masts, to prevent her rolling over, and

WRECK IN THE BAY OF BENGAL.—RESCUE OF THE CREW.

filling at once. Fifteen natives, her whole crew, were thus saved, as she must have foundered in a few hours. She proved to be from Moulmein, bound to the Island of Car Nicobar, for a cargo of cocoa-nuts; and she was ballasted with clay, which had choked the only pump. She had fallen to leeward of her port, and could never have worked back again in her leaky state. The brig was abandoned, and no doubt went down shortly afterwards. At half-past eleven the *Prince of Wales* filled, and stood on her course, having been hove to upwards of six hours. The crew received hospitable treatment on board, and was carried to Calcutta.—John B. Collins, Surgeon of the *Prince of Wales*.

CALENDAR FOR THE WEEK.

Sunday Feb 26.—Quinquagesima, or Shrove Sunday.
Monday, 27.—Dr. Arbuthnot died, 1735.
Tuesday, 28. Shrove Tuesday. Montaigne born, 1533.
Wednesday, Mar. 1.— Ash Wednesday. St. David.
Thursday, 2. John Wesley died, 1791.
Friday, 3.—Boileau died, 1711. Otway born, 1651.
Saturday, 4.—Saladin died, 1193.

TO CORESPONDENTS.

A Constant Reader.—Victor Amadeus II., King of Sardinia, left at his decease, in 1730, three sons, then surviving, and three daughters. Charles-Emanuel III., left younger sons and daughters. See "Patricium," vol iv., p. 474.

F. E. R.—A Greting green marriage is legal.

Genealogicus.—The first Viscount created in England was John Lord Beaumont, on whom the title was conferred in 1440. The oldest English titles are Baron and Earl. The first Marquis created was Robert de Vere, Earl of Oxford, to whom Richard II. gave the Marquisate of Dublin.

Erratum.—In the Memoir of Mr. Warner, M.P., at page 100, the date of that gentleman's marriage is stated 1843, instead of 1850.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 25, 1854.

The debate on the Eastern crisis in the House of Commons has enabled every man in the country to form a singularly clear idea of the true merits of the dispute which has at length broken a European peace of nearly forty years' continuance. For the consequences of the ensuing war the Emperor of Russia alone is responsible; but we may now leave him to the impending results which he has himself provoked. The punishment, we suspect, will be as signal as the crime. Already he has seen enough to make him certain, in his own heart, that the end of his enterprise must be, at the best, ignominious failure, if not irreparable ruin. The contempt which he has shown for law, justice, and humanity, was indulged, as he flattered himself, with security; because it was indulged at a craftily selected moment. Turkey was supposed to be in the last stage of hopeless disorganisation; the Greek malcontents were unusually active and alert; disorders requiring the despatch of an army had occurred in the north-western provinces, and that army had been very roughly handled by a few wild mountaineers; our Ambassador was absent from the Porte; Austria had enough to do to control her own chafing, far-scattered, and dangerous populations; between England and France it was imagined that mistrust, and worse than mistrust, prevailed; and thus, while all Europe appeared to be incapacitated for obstructing his designs, and while one of the Powers we have mentioned was even expected to help him, from motives of gratitude, everything seemed to indicate the arrival of the moment long waited for and long watched for by traditional ambition. But, even at this stage, he may perceive the fate that is overtaking him, in the total miscarriage of every one of the calculations on which he relied. On his side of the quarrel is injustice; and, strange to say, where the injustice is, there, likewise, is all the eagerness.

Looking to the other side of the picture, what we should, perhaps, blame the most is only the very excess of what deserves in itself the greatest praise. Our cause is just, and we are determined to make it good against this new disturber of mankind; yet it is with reluctance, and after having exhausted every expedient of conciliation, that we enter on the struggle; with reluctance, indeed, we enter on it, but never to recede while one man, one guinea, or one musket remains in England. In fine, we have been only too moderate and too trustful; and here a distinction must be made between the English people and the English Government. It is now many months since it became our indisputable right to go to war with Russia. But it does not follow that what is a right is immediately a duty; and the Cabinet persisted too long in hoping that the exercise of the right would not become a necessity.

The passage of the Pruth was an act of war; it was more, it was an act of piracy. Now, it cannot be denied that there was too much delicacy used by our Government in communicating to Russia their views of that rapacious aggression. We do not say that it was needful to declare war on the spot; but what *was* necessary, and what was certainly omitted, was to make the Emperor of Russia understand fully, and beyond the possibility of mistake, that, unless he receded before fair measures, he would infallibly have to recede through compulsion. This, somehow or other, he never really believed, or distinctly comprehended. And, in so far, we agree with the Opposition, that the diplomacy of our Government was feeble and inefficient. Nor has Lord Palmerston—whose speech in every other particular displayed consummate ability, both politically and oratorically—at all met the force of this objection. He evaded it, asking—"Would you, then, have us resort to arms at that moment?" as if that was the one other alternative. He proceeded to show, in a very powerful manner, that we should have then engaged in the struggle under auspices much less favourable than those which attend our measures at present. That may be; and therefore it is better to be going to war now, than to have gone to war then. But it would be better still, had war been averted altogether; and we maintain that one means, and certainly the best means, of averting it, was missed by the Ministry, who never, till it was too late for pacific results, succeeded in making the Emperor of Russia feel that they were in earnest. This could have been done without proclaiming an actual and immediate rupture; and if it had been done, perhaps our Guards would not now be on their way to the scene of another and an arduous war.

But the time is irrevocably past, except as a matter of criticism and history, for these censures, however well founded. As things stand we are united to a man; and, since there is work to do, it must be done, and done thoroughly. It is certain that if greater skill might have been shown in the attempt to save Europe from another general struggle, greater zeal at least could not. Our reluctance to shed blood, and to derange the business of nations, is made manifest to the whole world; it only remains to put some proofs on record—not for the first time—that England is as slow to go out of a conflict of this nature, as she is to go into it.

We had intended to express, in very full terms, the disgust, and more than disgust, which the ill-timed and canting imbecility, in Parliament, of the little knot of fallen men called "the Peace Party," has inspired the country. But they are in so forlorn and so marked a state of social isolation and political impotence, that we may spare ourselves the trouble. The best comment on their eccentric conduct and utterly untenable doctrines, is perhaps already pronounced by the people—the people itself—the people who accompanied our troops with cheering and huzzaing, in their departure, and who sent from Southampton along the waves of the Channel the echoes of the most thoroughly English shout that, for half a century, has rung from the shores of our island.

THE COURT.

The Queen held a Court and Privy Council on Saturday last, at Buckingham Palace. The Council was attended by Prince Albert, and all the Ministers and Great Officers of State. A proclamation was ordered to be issued, prohibiting the exportation of arms, ammunition, gunpowder, military and naval stores, and machinery available for war.

The Queen and Prince Albert, the Prince of Wales, the Princess Royal, and the Princess Alice, the Ladies and Gentlemen of the Court, and the domestic household, attended Divine service on Sunday morning, in the private chapel at Buckingham Palace. The Hon. and Rev Gerald Wellesley officiated.

On Monday the Queen and Prince Albert, accompanied by the Princess Royal, and attended by the Marchioness of Ely, took a drive in a carriage and four. Her Majesty and his Royal Highness honoured Mr. Foley's studio, in Osnaburgh-street, with a visit. In the evening her Majesty had a dinner-party, the company at which included the French Ambassador and Countess Walewska, General d'Oxholm, the Danish Minister, the Marquis of Breadalbane, the Earl and Countess of Elgin, Earl Cawdor, Viscountess and Viscountess Mahon, Lord Glenelg, Sir George and Lady Grey, Sir Robert H. Inglis, and Colonel and Mrs. Bentinck.

On Tuesday the Queen and Prince Albert, accompanied by the Princess Royal and the Princess Alice, visited the Zoological Gardens in the Regent's-park. In the course of the day their Royal Highnesses the Duke and Duchess d'Aumale, and her Imperial Highness the Princess of Salerno, visited her Majesty. In the evening the Queen and the Prince, accompanied by the Prince of Wales, the Princess Royal, Princess Alice, Prince Alfred, and the Princesses Helena and Louisa, honoured the Princess' Theatre with their presence.

On Wednesday the Queen held a levee at St. James's Palace. In the evening her Majesty had a dinner party, including the Duchess of Sutherland, the Netherlands Minister, the Saxon Minister, the Marquis and Marchioness of Londonderry, the Marquis of Abercorn, the Marquis and Marchioness of Stafford, the Lord Chief Justice of England and the Baroness Strathheden, and Sir John and Lady Pakington.

On Thursday the Prince Consort visited the New Crystal Palace at Sydenham. The Earl of Clarendon had an audience of the Queen. The Duchess of Kent paid a visit to her Majesty at Buckingham Palace during the afternoon. In the evening the Queen and the Prince honoured the Lyceum Theatre with their presence.

THE LEVEE.

The Queen held a Levee (the first this season) on Wednesday afternoon, in St. James's Palace. Her Majesty and Prince Albert arrived from Buckingham Palace, about two o'clock, attended by the Royal suite, and escorted by a detachment of the Royal Horse Guards, and were received by the great officers of State.

The Queen and Prince Albert entered the Throne-room attended by the Duchess of Suther and, Mistress of the Robes, the Marchioness of Ely, Lady in Waiting; Earl Spencer, K.G., Lord Steward; the Marquis of Breadalbane K.T., Lord Chamberlain; the Marquis of Abercorn, K.G., Groom of the Stole to his Royal Highness, and the other great officers of State.

Her Majesty wore a blue and silver cloth train, with gold stars, and a white satin petticoat; and a diamond diadem

His Royal Highness the Duke of Cambridge was present, attended by Lord William Paulet.

The foreign diplomatic circle having been first introduced, several presentations took place.

Among the more noticeable presentations in the general circle, we observed:—

The Earl of Elgin, on his return from Canada, by the Duke of Newcastle.
The Earl of Perth and Melfort, on restoration by Lord Willoughby de Eresby.
The Earl of Carnarvon, by the Right Hon. Sidney Herbert.
Colonel Lord Raglan, late Fusilier Guards, on promotion to the Lieutenant-Colonelcy of the regiment, by his Royal Highness the Duke of Cambridge.
Admiral Sir James Gordon, on his appointment as Governor of Greenwich Hospital, and promotion, by Sir James Graham.
Captain Sir C. Hotham, R.N., K.C.B., on his return from a special mission to the States of the River Plate, and appointment as Lieutenant-Governor of Victoria, by the Duke of Newcastle.
Captain Sir George Back, R.N, on being nominated to a good service pension, by Sir James Graham.
Captain the Hon. Joseph Denman, R.N., on his appointment to her Majesty's yacht, by Sir James Graham.
Rear-Admiral A. Fanshawe, on his appointment as Commander-in-Chief on the North American and West India stations, by Sir James Graham.
Colonel Ross, C.B., Secretary of Embassy at Constantinople, on his return, by the Earl of Clarendon.
The Rev. Dr. Cumming, Scotch Church, by the Earl of Aberdeen.
The Rev. Henry Melvill, on being appointed one of her Majesty's Chaplains in Ordinary, by the Bishop of London.

Before the Levee, Major-General Foxhall had an audience of the Queen, and delivered the badge of the Order of the Bath worn by the late Sir Frederick Adam, G.C.B. The Attorney-General had also an audience, and delivered to her Majesty the Grand Cross of the Bath of his uncle, the late Admiral Sir George Cockburn

General Lord Seaton has arrived at Farrance's Hotel, from his seat, Deer Park, Devon. It is said his Lordship has been offered the Master-Generalship of the Ordnance, vacan by the appointment of Lord Raglan to the command of the British contingent in the East.

Lord John Russell has issued cards for a Parliamentary banquet this evening (Saturday).

The Right Hon. the Speaker gave his second Parliamentary dinner, on Saturday, at his mansion in Eaton-square. The guests on this occasion comprised the leading members of the Conservative party.

The Baroness Brunnow left London, at half past four o'clock on Monday afternoon, for Darmstadt, where she will join the respected ex-Minister of Russia. The baroness was accompanied by Count Wielhorski. All the secretaries and attachés have now taken their departure.

CHURCH, UNIVERSITIES, &c.

Preferments and Appointments.—*Canonries:* The Rev. W. Procter to an honorary canonry in Carlisle; Rev. W. Greenwell to a minor canonry in Durham. *Rectories:* The Rev. G. A. Baker to Ibstone, near Stokenchurch; Rev. D. Brown to Howick, Rev. G. W. S. Menteath to Hascomb, Surrey; Rev. P. T. Seymour, to Hannington, Hants. *Vicarages:* The Rev. W. Acton, B.A., to Wicklewood, near Wymondham, Norfolk; Rev. T. Badcock, to Fleckney, Leicestershire; Rev. J. G. Edwards to Pittington; Rev. T. Fox to Bedon, near Hull; Rev. O. Goodrich to Tidenham, near Chepstow; Rev. C. J. Hawkins to Haxey, Lincolnshire; Rev. J. R. Jones to Burghill, near Hereford; Rev. A. Manby to Ludd, near Knaresborough; Rev. J. H. Wake, to Sutton-in-the-Forest, Yorkshire; Rev. C. C. Wilson to Eastry, Kent. *Incumbencies:* The Rev. H. Battiscombe to St. German's Chapel, Blackheath; the Rev. Isaac Bowman to Walton, Cumberland; the Rev. H. J. Jackson B.A., to Monk Fryston, near Ferrybridge; the Rev. H. Jackson to Hurstmonceaux, Sussex; the Rev. T. P. Metcalfe to Bilborough, Yorkshire; the Rev. F. Morse to Laywood, near Birmingham; the Rev. H. Leakey to Trinity Church, Swansea.

LATEST INTELLIGENCE.

THE WAR.

Paris, Friday.

The *Moniteur* of this day contains a decree calling into active service the young disposable soldiers of the classes of 1849 and 1850.

The *Moniteur* likewise publishes a letter, dated the 16th instant, recalling General Castelbajac from St. Petersburg.

The *Débats* says that the Cabinet of Vienna appears to be disposed to enter into a treaty of alliance with France, England, and Turkey.

Autograph letters of a very satisfactory nature, it is said, have lately passed between the Emperors Napoleon and Joseph.

Two divisions of the army, intended for aiding the Turks, will leave Toulon and Algiers on the 6th proximo: they will be commanded by Generals Canrobert and Bosquet. General d'Allonville is to have a brigade of cavalry, and Prince Napoleon a reserve brigade of the same force.

Accounts from St. Petersburg, of the 15th inst. represent the extreme excitement of the Emperor on learning the course pursued by Austria and Prussia in reference to the Eastern question. He inveighed against what he termed the "treachery" of those two Powers, and expressed himself in the strongest terms of displeasure.

According to the *Journal de St. Petersburg*, of the same day, the position assumed by the two German Powers constitutes, in the estimation of the Emperor, so serious an attack upon his rights that he has thought it incumbent on him, from this day, to protest against it, reserving to himself the liberty of adopting such a course as future contingencies may render befitting.

The Emperor has ordered the march of a considerable force of the Imperial Guard, with other troops, in the direction of the Prussian frontier.

The state of Poland does not appear to be sure, for a private letter from Warsaw of the 11th announces that the corps of General Ungern-Sternberg, placed on the frontier of Poland towards Turkey, was preparing to leave for the Danube, has just received a coun er-order. Several other corps ordered for the same destination had not yet commenced their march.

Berlin, Feb. 20.—M. von Manteuffel has had a long audience of the King. The discussion was very animated upon the Turco-Russian dispute, but it has led to no change in the attitude of Prussia. The Russian Minister to this Court, and the Resident General in our capital, are both of them here at present. Their absence is considered a proof of great coolness between the two Powers.

Letters from Berlin of the 20th announce that England has informed Prussia she intends sending a fleet into the Baltic in the spring

The Bourse on Thursday was ⅛ higher: the Three per Cents closed at 66f. 55c.

AUSTRIAN INTERVENTION.

Vienna, Thursday noon.—The troops are now ready on the south-eastern frontier. They will put down any attempt at insurrection against the Porte, whether in Servia, Montenegro, or Bosnia.

Gratitude may prevent Austria participating in hostile measures against Russia; but she will positively not assist in supporting her pretensions. Austria is in worse odour at St. Petersburg than either England or France

Twenty-five thousand men are to be forthwith assembled in the Banat of Croatia.

Private letters from Vienna state that the Austrian Cabinet is greatly irritated in consequence of the rejection by Russia of the last propositions of which Count Colloff was the bearer to St. Petersburg. The consequence has been that for some days past a much better understanding has begun to exist between the Austrian Government and the Governments of France and England.

EXPORTATION OF WARLIKE STORES PREVENTED.

The *Hampshire*, barque, having put into Portsmouth through stress of weather, and information being given that she was laden with warlike and engineering stores, an Admiralty order was speedily put in requisition, and proper officers boarded the vessel, which was bound for Odessa with boiler-plates, shot, chain cables, and engine-gear. The officers of her Majesty's Customs have taken possession pending an inquiry.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, FEB. 23.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure from Mean Temperature.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

„ 23	30 326	49 6	26 3	42·6	+ 3·1	69	N.	0.00

Note.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied during the week from 29.41 inches, at six p.m. on the 17th, to 30.57 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29 981 inches.

The mean daily temperatures have varied from 4·3° below, on the 18th and 19th, to 3·7° above, their average values, on the 20th.

The mean temperature of the week was 40·0°, being 0·7° above the average of the corresponding week during 38 years

The mean daily range of temperature during the week was 23·2°, being the difference between the lowest reading of the thermometer on the 18th, and the highest on the 20th.

The mean daily range of temperature during the week was 16·1°. The least was 8·5°, on the 18th, and the greatest was 20·8° on the 20th.

Snow fell slightly at 9 a.m. on the 17th, and to the depth of half an inch on the morning of the 18th.

Rain fell during the week to the depth of two-tenths of an inch (of which nearly one-tenth was melted snow).

Lewisham, Feb. 24, 1854. James Glaisher.

Health of London.—During the week ending February 18, the births of 775 boys, and of 705 girls, were registered within the metropolitan districts. The averages of the same week in the nine preceding years were 747 and 709 respectively. In the same period the deaths of 1154 persons were registered. Of these 575 were males, and 579 were females. The averages of the same week of the preceding ten years were 603 and 589 respectively.

London Orphan School, Clapton.—The anniversary festival of this excellent institution took place on Monday evening, at the London Tavern. Mr. William Kirby, one of the committee of management, presided, supported by about 180 of the friends of the society. In the course of the evening a large number of the children—of whom there are now 382 in the school, 255 boys and 127 girls—were introduced into the room, and did great credit, by their healthy appearance, to those who have the superintendence of the establishment. The amount collected in aid of the funds amounted to about £2300.

City of London Hospital for Diseases of the Chest.—The sixth anniversary dinner of this most valuable institution took place on Wednesday, at the London Tavern, under the presidency of the Right Hon. Lord John Russell, and was honoured by the attendance of Sir W. Clay, Bart., M.P.; T. Wyse, Esq., M.P.; H. E. Gurney, Esq.; E. Ladd Betts, Esq; John Dillon, Esq; J. D. Powles, Esq.; Henry Tucker, Esq; J. A. Gibb, Esq.; and about 200 highly respectable gentlemen. The noble Lord, after proposing the usual loyal toasts, which were most heartily responded to, gave the toast of the evening, "Prosperity to the City of London Hospital for Diseases of the Chest," and, in so doing, called attention to the dreadful evils which resulted from diseases of the lungs and chest. He observed that, of all benevolent institutions, hospitals were best entitled to support, as impostors in them were always sure to be detected by the sagacious eye of the medical attendants. His Lordship made a very energetic appeal in favour of the hospital; and stated that the committee had hitherto met their liabilities, but the wider operations of the charity and the expansion of new buildings, compelled them to appeal to the public for increased support; and which, he doubted not, would be cheerfully accorded. Sir W. Clay proposed the noble chairman's health, to which his Lordship briefly replied. The subscriptions for the evening (including £10 10s. from Lord John Russell), amounted to nearly £3000, besides a legacy of £500

TOWN AND TABLE TALK, ON LITERATURE, ART, &c

WHEN the Nestor of our poets advanced as a great truth, at his own table, that no man became great but by getting on the shoulders of another, Sydney Smith, who was present, was so pleased with the remark, that his favourite expression when he heard anything very good, "bo-ked!" was uttered by him very emphatically on this occasion. By "booked" Sydney meant to imply—accepted, endorsed, and to be repeated.

There is truth in the remark; but is its acceptance universal? We doubt it. Surely there is more truth in the observation that no man (in these days, at least) can be really and popularly great, unless he is original. This was well enforced, by Walter Scott, in a conversation with Tom Moore. The two poets had been remarking, good-naturedly enough, on their own and others' luck in achieving reputations, and the difficulties—increasing every day—that beset every new aspirant for distinction. Their thoughts reverted to a time when reputations were more easily gained than now; and the conclusion they came to—to be short with a suggestive subject—was, that no man would hereafter have a chance of becoming great, unless he were original in his greatness.

We have been led into these remarks by the turn that conversation has taken in literary and artistic circles during the present week, from the announcement (not unexpected) that John Martin, the painter, was no more. Surely, John Martin was a great and original genius! He did not look on nature through the spectacles of Claude or Poussin. He was not raised in the pumpkin-bed of any academy. He looked on Nature for himself, and caught her aspect truly, and with a poet's as well as a painter's eye.

He was, in every respect, a creative artist. Lamb was never more wrong than when he taxed him with a want of imagination. His fault was too much imagination. In what a wonderful manner does he succeed in filling your mind with the subject he undertakes to put before you. Surely, his "Joshua Commanding the Sun to Stand Still," is one of the finest realisations of Scripture upon canvas. Still nobler is his "Belshazzar's Feast." The "ancients" sought only to portray great scenical events by episodes, or portions of those events. The "Handwriting on the Wall" has been painted by many great artists—but in what way? by three or four figures, and a blaze of light. How has Martin treated it? By carrying you into the very scene—by making you not only a spectator, but a living participator in what is before you. He was no borrower. Did any man before him understand distance so well as John Martin understood it, and makes his spectators feel it? Who does not remember his "Curtius Leaping into the Gulf," in which old Rome, as well as the spirit-stirring circumstance itself, are brought unmistakeably before you? Who has forgotten his "Celestial City," in which the noble vision of the Tinker-Dreamer is made all but an actual existence.

Yes; John Martin was in every respect a great and an original artist. His honourable hereafter is secure in the annals of English art. No man is safer, for he was great in more ways than one. Like Hogarth *(that* great original), he was the engraver of his own works. Of no other artists of name in England can it be said but of William Hogarth and John Martin that they were equally excellent as painters and as engravers. Does it not seem strange that so few painters have sought to be engravers? A picture is but as one copy of a book, which the skill of the engraver multiplies in part, and puts in the same position as a book. Wilkie would have translated his "Blind Fiddler" and "Rent Day" even more faithfully than Burnet or Raimbach. Who cares to possess a Hogarth engraving unless executed by Hogarth's own graver? Who would not—nay, who does not, prefer a design engraved by Martin, to an engraving from the same design by another hand? We have lost a great artist in John Martin.

We have been favoured with an early copy of Mr. Croker's "More Last Words" on Moore, in the shape of a little pamphlet of five-and-thirty pages, printed "in a form to be bound up with 'Moore's Memoirs.'" This little *brochure* opens with the printed correspondence on which we offered some remarks a few weeks back; is followed by some of those small paper pellets, to which also, it will be remembered, we directed attention at the time; and concludes with a Postscript, by Mr. Croker, "explanatory of Mr. Moore's acquaintance and correspondence with him." Let us make the reader acquainted with the newer and more salient points of the controversy. Lord John, it seems, renewed the war, and, it would appear, unintentionally: "I may add," says Lord John, "an expression of my regret that, at your age, and in your present state of health, you should have been annoyed by the publication of 'Moore's Diary;'" to which Mr. Croker replies, "I was not annoyed by the publication of 'Moore's Diary,' but by your Lordship's *note*, which was no part of the Diary, but, on the contrary, at variance with the text; and which contained a double imputation, which I felt to be wholly undeserved." Mr. Croker, in the same letter, supplies an account of circumstances likely to have wounded the susceptibility of Moore, and which Lord John, after acknowledging, observes, *finally*, on his part "I do not know that I have anything to add to our correspondence; it would, of course, be useless for us to attempt to persuade one another." Here, again, is occasion for reply—Mr. Croker winding up this controversy by directing his Lordship's attention to "another misconception," on his part, of their late correspondence. "I had no motive," he says, "and no intention, to *persuade* your Lordship to anything. I did not meddle with your opinions. I charged you with a gross and wilful offence against me. The public is now the judge whether I have proved my charge."

This controversy reminds us of the famous war in prints occasioned by Pope's supposed bad conduct to Lord Bolingbroke with regard to the "Patriot King." The ex-Secretary-at-War, indignant at the conduct of one whom he had deemed his friend, vilifies in print the memory of that friend. Pope's editor rushes to the rescue, and a war of words ensues in pamphlets Warburton fighting Bolingbroke behind the shield of David Mallet. What is the Croker case? The ex-Secretary of the Admiralty, indignant at certain entries in the diary of one whom he had deemed his friend, sharpens his pen, and condemns in print the memory of that friend. Moore's editor replies in a note; a long correspondence ensues; the columns of the *Times* exhibit the combatants. The public is with Mr. Croker; but Lord John has his party, and now the whole affair appears as a supplement to Moore's memoirs much in the same manner as Warburton's defence of his friend appears in the appendix to "Ruffhead's Life of Pope."

The certainty of war has not any effect on the sale of old books of real value. English books have been selling at Sotheby and Wilkinson's during the present week, at prices quite equal to those mad days of buying when the Dukes of Roxburgh and Marlborough contended with Earl Spencer for a "Caxton" or a "De Worde." We shall have something to say about the prices next week.

Mr. Hallam, the great historian of the Middle Ages, has been very ill, and in danger; but he is, we are happy to say, at least out of danger.

LUMLEY *v.* GYE.—This case, which came on for trial, at the Court of Queen's Bench, on Monday, lasted three days, and ended in a verdict for the defendant; on the ground that, when he induced Miss Wagner to break her engagement with Mr. Lumley, he did not know that that engagement was still in force as a binding agreement.

THE PEACE DEPUTATION AT ST. PETERSBURG.—Mr. Joseph Sturge and his two friends had an interview with the Czar on the 10th inst., and were listened to with great attention while they read the pacific address from the Society of Friends. They were afterwards introduced to the Empress, by whom, Mr. Sturge says, they were "most graciously received." Mr Sturge intended to be home by Monday; but, at the request of the Emperor, the deputation determined to wait a day or two longer in St. Petersburg.

THE THEATRES.

PRINCESS'.

All that art and munificent expenditure can do for the illustration of the revived drama has been again accomplished on the boards of this theatre. We regret, however, that Cibber's "Richard III." has been substituted for Shakspeare's "Life and Death" of the same monarch; and that Mr. Kean has not had the courage to follow up the reform initiated by Mr. Phelps. With all the store of scenery and costume bestowed upon the present revival, more might yet have been done for the original tragedy, reproduced in its ancient integrity; which, besides, would have demanded a restudy of the hero from Mr. Kean, and have thus enabled him to make an entirely new part of it, in which no doubt he would have been eminently successful. As Mr. Kean, however, has published his defence of his own mode of proceeding, we have nothing further to urge, except that, in the discussion, it has been too readily assumed that the pure Shakspearian version never thoroughly succeeded on the boards. This is manifestly an error; as for two seasons, the unsophisticated original play, had great success on the Sadler's Wells stage. The introduction of *Queen Margaret*, indeed, was proved to be a powerful agent of effect, both in the persons of Mrs Warner and of Miss Glyn. The performance at the Princess's wants this heroine, to give depth and tone to the colouring of the age and time represented. Let us, however, be thankful for what we have—a comp'ete archæological array of accessories, scrupulously correct in every detail, for the purpose of giving fresh piquancy to a drama now so much at all are familiar. In his previous productions Mr. Kean tells us he has "selected different periods of history for illustration, and endeavoured to arrive at every available authority, with the view of transferring, as far as possible, to the stage, a living and pictorial embodiment of the past King. Richard III. affords (he proceeds to add) a new epoch distinct from all the foregoing, and he has taken the same pains to give proper scenic and decorative effect to this most busy and eventful of our annals."

The boast is not vain, nor illaudable. Mr. Kean, so far as the spectacle is concerned, is entitled to take credit to the utmost extent, both for his design and its results. He has produced, indeed, a gorgeous exhibition, founded on the best authorities. The differences in armour and bearing of the rival hosts are carefully preserved; costumes, weapons, and accoutrements are appropriately distinguished. The white rose and the red, the green dragon and the cumrow, offer unmistakeable contrasts—red shirts and blue leggings, ecclesiastical robes, military cross bows and long bows leathern jerkins and blue breeches, arbalists, battle-axes, halberds, glaives, arquebusses, and other of the ancient heavy artillery, all find their proper place in the scenic picture, and conduce to the general effect.

Mr. Kean's performance of the character of *Richard* was frequently illuminated with those flashes which undoubtedly characterise his, as they did his father's style, and entitle it to the appellation of the "transitional." Assuredly, there is much of mannerism in these effects; but mannerism has always been the co-mate of specific genius, of which, in fact, it forms the limits and outward sign. The suddenness of the transition excites invariable surprise; and the opportunity for this mode of dialogue is not only frequent in this character; but, we may add, proper for it. We take no exception to Mr. Kean's acting, therefore, on this score, and are ready to bestow almost unqualified praise upon it. He rose with the occasion, and painted the design of the last act with as much force and effect as he had already portrayed the subtlety of the previous scenes, with all the resources at command of the long-experienced actor. A word of praise must also be permitted to Mr. Ryder and Mr. Graham for *Richmond* and *King Henry*; nor to Miss Heath, as *Lady Anne*, and Miss Murray, as *Queen Elizabeth*, must be denied commendation, as respectively giving promise of more excellence, and realising an earnest of it with a pleasing degree of success. Elaborate as were the arrangements of the scene, they were all accomplished without hindrance or mishap; and Mr. Kean was summoned at the end to a well-deserved ovation, accompanied with repeated plaudits.

DRURY-LANE.

On Wednesday "Richard the Third" was produced at this theatre, in apparent rivalry with another establishment; the very ion being, of course, the same (that of Colley Cibber), though the actor different—Mr. G Brooke for Mr C Kean. On the acting of the character by the former gentleman we have already, on previous occasions, tendered our decision, and have nothing now to add or alter in respect to our decided opinion On this occasion, however, he was less effective than usual. The getting up of the tragedy was respectable, and accomplished from the materials in the house derived from former performances, and as reminding us of them, not without pleasant and pr fitable associations. But it would be absurd to compare it with the elaborate originality of the spectacle at the Princess's; and, such being the case, we doubt whether the revival at this time was entirely judicious We can, however, speak in terms of high praise of Mr. George Bennett's *King Henry*, and commend with much justice the acting of Mr Mead in *Richmond*. The other parts were but poorly supplied—we dare not say supported.

MARYLEBONE.

A new version of the French piece concerning the appetite for gold finding was produced at this theatre on Monday, under the title of "The Struggle for Gold, or the Orphan of the Frozen Sea." It has been well adapted by Mr. E. Stirling, and the scenic arrangements have been pictorially managed. The Sea of Ice has received, also, an accession of effect in the addition, at the close, of the Danish vessel, to which the safety of the survivors of that dreadful scene is to be attributed. The concluding scene was brilliantly illuminated. The cool, calculating, and iniquitous hero was most artistically interpreted by the manager; and Mrs. Wallack—first as the Indian girl, and afterwards as the avenging daughter—rose to a manifestation of wild grandeur that was very impressive. The production of the piece on the present scale is a further proof that at this theatre things will henceforth be done with as much cost and care as at others more favourably situated, but not more meritoriously conducted.

ASTLEY'S.

A new piece has been produced here, called "The Woodman's Horse; or, the False Knight." This is truly an equestrian spectacle, for the horse performs the part of a moral agent in the drama, by its sagacity effecting the delivery of its virtuous hero, and by its bravery, coming to the rescue, whenever a crisis is imminent. It is not necessary to detail the story, which has been invented for the introduction of such equine feats. They are exceedingly curious, and must be witnessed to be appreciated.

MUSIC.

A CONCERT was given at the New Beethoven Rooms, on Tuesday evening, by Signor Noronha, a violinist newly arrived in England. He comes from Rio de Janeiro, where he held the situation of Musical Director of the Italian Opera. Signor Noronha confined his performances on this occasion to music of his own composition. He played three long Fantasias on opera-airs, and showed himself to be a thorough master of his instrument—possessed of a fine tone, and that command of bow and rapidity of finger which enable him to conquer every difficulty which has as yet been contrived for the violin. His performance, in short, was a surprising display of executive skill, almost as wonderful as Paganini's used to be. But he is not aware of the fact that this style of performance is now at a discount in England, both on the pianoforte and the violin. On the former instrument, Thalberg for a time was all the rage; but, with all his astonishing powers, he would, were he to appear, be but a no longer, unless he betook himself to a higher class of music than his own gewgaw Fantasias. The same thing is the case with the violin. The greatest violinists who come to England occasionally play their own compositions, and give pleasure by doing so: but they must show how they interpret the conceptions of the great classical masters—Mozart, Beethoven, Spohr, Mendelssohn, &c.—before they can obtain the suffrages of the really musical part of the public.

WHILE Mdlle. Wagner is giving full employment to lawyers' tongues in our Court of Queen's Bench, she is running her course triumphantly at Berlin. Weber's "Euryanthe" has just been revived there with great splendour; and Wagner's performance of *Eglantine* is described as a great exhibition of power both dramatic and vocal.

LONDON REFORMATORY, 9, GREAT QUEEN-STREET, WESTMINSTER.—WE are requested by Mr. Nash to acknowledge the receipt of £5, from "A Friend to Reformation," who is desirous that the acknowledgment should appear in this journal.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Sir John Bowring, Governor of Hong-Kong, and Chief Superintendent of British Trade in China, left town on Saturday last, for Southampton, *en route* to the seat of his government.

The Royal Institute of British Architects have, with the approbation of her Majesty and Prince Albert, as patrons of that institution, just awarded the Royal Gold Medal, the highest professional distinction in the art, to Philip Hardwick, Esq., R.A.

Among the Irish towns having over 5000 inhabitants and not returning a member to Parliament (eighteen in all), are Kingstown (near Dublin) with 10,453 inhabitants, and Queenstown (near Cork) with a population of 11,428.

A decree has been promulgated containing a convention entered into between France and the Principality of Schwarzburg-Rudolstadt, for the reciprocal guarantee of literary works and works of art.

The Duke of Alba and Berwick, nearly related to the Empress Eugenie, has arrived in Paris from Madrid to visit his brother, the Count de Galva, Secretary to the Spanish Legation.

The Thornton Free Schools, in Yorkshire, for about fifty children of each sex, have been erected and endowed by Mr. Richard Thornton, a well-known merchant in London, at a cost of £16,000, to commemorate the place of his nativity.

Amongst the petitions presented to the Encumbered Estates Commission, is one praying for the sale of an estate, the gross annual rental of which is £40 a year, and the incumbrances on which reach over £38,000.

The Prefect of the Seine has issued an order for plans of a railway to unite the line round Paris with the central markets.

It has been positively stated, by a person who has visited Stirling within these few days, that six ounces of pure gold have been picked up at a place called "Letters," in the parish of Balquhidder.—*North British Mail.*

The *Giornale di Roma* announces that a Company is forming at Rome for the establishment of a new line of steamers along the western coast of Italy.

The Scotch mails to Dublin are to be conveyed over the line of the Londonderry and Coleraine Railway Company, as soon as the Post-office can make the necessary arrangements.

The boys of the Ragged School Shoeblack Society earned the sum of £863 by blacking shoes in 1853. Of this, £470 was paid to the boys; £193 was deposited in their bank; and £191 was retained for expenses. 264,750 pairs of boots and shoes were cleaned by thirty-six boys in the year.

Lord Lisburne has issued an address to the electors of Cardiganshire as a candidate for the representation of the county in Parliament, vacant by the resignation of Colonel Powell.

Lieut. Engeldue, having refused to serve on board the *James Watt*, screw, 90 guns, has been a second time struck off the Royal Navy list.

Last week, the estate of Ballintraine, Carlow, consisting of 414 acres, and producing £265 a year, was sold for £10,200, or 38½ years' purchase; another property in Roscommon fetched only 18 years purchase.

It is estimated that the epidemic at Newcastle-upon-Tyne has cost £3800 for medicine and burials alone, and will cost it £50 a week for eight years to support the widows and destitute—nearly £30,000.

A new 90-gun ship, the *Donawerth*, was launched last week at Lorient, amidst loud cries of "Vive l'Empereur."

A portion of the large tobacco warehouse at the London Docks has been set apart and added to the cigar warehouse, expressly for the stowage of cigars to the trade.

A couple of female slaveholders, Madame Chauveau and her daughter, have been held to bail at New Orleans for starving their slaves, and for torturing them with iron instruments, pans, fire, and other means still more horrible in their revolting descriptions

Information has been received of the loss of the barque *Countess of Derby*, in Moreton Bay, on the 31st October last. The captain, crew, and passengers, were all safely landed at Brisbane, by the *Rosen*.

The post of Accountant-General of the Navy, vacant by the retirement of Sir John Briggs, has been conferred on Mr. Bromley.

It is said, in the fashionable circles, that at a *conseil de famille*, held at the palace of the ex-King Jerome, a separation *de corps et de biens* has been agreed upon between the Prince and Princess de Canino.

Upwards of one-third of the cargo of the wrecked steamer *Humboldt* has been sold by auction at Halifax, but the articles did not bring one-fifth of their value.

The *Moniteur* announces that Baron Brenner has repaired to Florence to negotiate a postal treaty, and that the other motives ascribed to his mission are without foundation.

A murderous attempt has been made on the lives of two farmers named Sides and Brophy, at Castlewood, near Burrow. The Irish Government have offered a reward of £50 for such information as will lead to the arrest of the party implicated.

A deputation upon the subject of the Manchester and Salford Education Bill had an interview with the Chancellor of the Exchequer last week, at his official residence in Downing-street

The Emperor has forwarded a sum of 100,000f. to the Prefect of Police, for distribution at the residences of artisans out of work, and the needy families of the capital.

A letter from Mannheim of the 15th states that for three days past the river had been full of floating ice, and the Rhine was also so full of it that the navigation was interrupted.

The Lord Mayor entertained, on Wednesday evening, in the Egyptian Hall, about 100 gentlemen connected with the colonial interests of the city of London; the banquet was on a scale of great magnificence.

At a Court of Directors held on Wednesday, at the East India House, the Right Hon. Lord Harris was appointed Governor of Madras.

Letters from Athens state that the Queen of Greece intends to make another visit to her fatherland this summer, and to stay some time in Vienna.

A lady of Glasgow has recently bequeathed £1000, and the residue of her estate, for the purpose of building and repairing churches in the diocese of Glasgow. She has also left £500 to the Cathedral of Perth.

The trials of the persons charged with Ribbonism are fixed to commence (before Mr. Serjeant Howley) on Tuesday morning, the 28th inst., at Dundalk assizes. The Attorney-General goes down to prosecute.

Mr. W. A. Wilkinson, M.P. for Lambeth, delivered to the working classes of that borough an interesting lecture on the subject of "Wages," on Wednesday evening, at the new Vestry Hall, Kennington-green.

A magnificent stained-glass window has been erected in Worcester Cathedral, in memory of the late Queen Adelaide.

The American steam-ship *Atlantic* sailed from Liverpool on Tuesday. As she sailed down the Mersey, she saluted the *Niagara*, on board of which were 1000 British soldiers, bound for Turkey.

The Duke of Buccleuch has most handsomely given a field near Dalkeith, to be made into a public park for the inhabitants of that pleasant little town.

Mr. Baron Pennefather has not yet sufficiently recovered to undertake the duties of Circuit; and Mr. Justice Moore, of the Queen's Bench, in Dublin, is also indisposed, although it is hoped he will be enabled to proceed on Circuit.

The Council of the Liverpool Chamber of Commerce, at a meeting on Monday, adopted a resolution in favour of an amendment of the law of partnership.

The nomination of candidates for the representation of Louth, took place on Monday, amidst much uproar. Mr. Fortescue charged the Leaguers with colleaging with the Tories, which Mr Cantwell repudiated. A poll was taken on Thursday, Mr. Fortescue had a majority of 148: his return is certain.

The new Theological Training College at Cuddesdon, will be opened for students at Whitsuntide; the Bishop of Oxford is to have the immediate superintendence.

Postage stamps of sixpence each will be issued by the Board of Inland Revenue to the public on the 1st March.

The sum of £66,912 10s. 10d. has been paid for land for a harbour of refuge and for fortifications in Jersey; and in Alderney, for similar purposes, as much as £13,336 6s.

Salmon fishing in the Tweed commenced on Wednesday week, and with every prospect of a successful season.

The small village of Grifoglietto, in Piedmont, was nearly all burnt down on the 10th. Upwards of ninety persons have been deprived of a home by this calamity.

The report issued by the Admiralty on the proposed Wellington Docks is of a favourable character, no objection being made to the bill as regards its effect on the navigation of the river.

The Hon. George Dalrymple, son of the Earl of Stair, who sold out of the Scots Fusilier Guards on Friday week, was compelled to take this step in consequence of fracturing his collar-bone while hunting a short time since.

The French Benevolent Society gave a ball on Tuesday night, at the Hanover-square Rooms, in aid of the funds of their useful charity wh ch was well attended.

RIFLE VOLUNTEERS ON DRILL, AT PORTSMOUTH.

RIFLE VOLUNTEERS, AT PORTSMOUTH.

The parade-ground of Portsmouth being within the fortifications, is necessarily of too limited dimensions for evolutions on a large scale; but it has been very much used during the past fortnight for testing the military training of such contingents as have joined to complete the war complement of the regiments destined to embark at Portsmouth. Here is acquired that knowledge of drill which constitutes the basis of martial science. Our Illustration represents one of those details which are all summed up in the general term "drill." They are proceeding at double-quick pace—running, in fact, but not merely to save themselves from an overwhelming force; they are rallying to one particular point denoted by an officer with his sword raised aloft and pointing upwards. Here a square is formed, which, when the present danger is past—a squadron of cavalry, for instance—deploys itself into line, or assumes some other form suited to the occasion. The Garrison Chapel (represented in our Engraving (is the only vestige of the *Domus Dei*—a religious establishment founded by Peter de Rupibus, a Bishop of Winchester in the early part of the thirteenth century. Judging from its external aspect, one would not think so, as it partakes more of the barn order of architecture than of that which prevailed at the period of old Peter of the Rocks. It has been repaired in a fashion creditable to the zeal, but not to the taste, of those who directed the renovation.

BATTERY PRACTICE AT PORTSMOUTH.

Peter Heylin said, a long time ago, that Paris was a strong place—it took you by the nose. If abominable smells were calculated to keep out an invading force, Portsmouth would be impregnable on the land side, where the convicts are kept continually stirring up the black mud in the moats. The Battery covering the entrance of the harbour has recently undergone a change, by the elevation of the embankment several feet above its former level. Guns of a large calibre have been substituted for the old ones, which, for any purpose of defence, were useless. The handsome stone facing has been replaced by one of earth: balls striking against stone cause splinters to fly, and are destructive; they find, like most other things, a quiet bed in earth. The inhabitants of the neighbouring houses tremble for their windows. We congratulate them—ventilation will be improved.

INSPECTION OF THE GUARDS BY PRINCE ALBERT.

The parade and inspection of 1800 picked men from amongst the finest troops in the British Army, by the Prince Consort, attracted a large assemblage to the Parade-ground of the Wellington Barracks, St. James's-park, on Monday morning.

The troops paraded fully equipped in heavy marching order at ten o'clock. After having undergone ordinary morning inspection, the two battalions formed in columns at quarter distances—an arrangement which had the effect of covering the whole parade-ground—the men facing Buckingham Palace, with the military chapel in their rear.

The General Commanding-in-Chief (Viscount Hardinge) arrived at the barracks, attended by his sides-de-camp, at half-past ten o'clock. The noble Viscount, who wore the uniform of a full General, was received by the officers of the two regiments, the troops presenting arms and saluting. His Royal Highness the Duke of Cambridge had previously arrived, wearing his uniform as Colonel-in-Chief of the Scots Fusilier Guards. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary, attended by Baron Knesebeck and Lucy Augusta Cadogan, came shortly before eleven o'clock. Their Royal Highnesses alighted from their carriage on reaching the parade-ground, and were received by the General Commanding-in-Chief, who, with a group of distinguished personages, was at this period awaiting the arrival of the Prince Consort.

Precisely at eleven o'clock the Prince Consort, wearing the uniform of the Grenadier Guards, of which his Royal Highness is Colonel-in-Chief, walked across from Buckingham Palace to the barrack-yard, where the Prince was received by the General Commanding-in-Chief, the Duke of Cambridge, and the officers of the staff. His Royal Highness was accompanied by Colonel the Hon. C. B. Phipps, Colonel the Hon. Charles Grey Lieutenant-Colonel the Hon. A. N. Hood, Colonel Wylde, and Major-General Buckley. The Prince, observing the presence of the Duchess of Cambridge, and the Princess Mary, shook hands cordially with their Royal Highnesses, and, having acknowledged the presence of several of the distinguished personages around, proceeded to inspect the troops. As the Prince advanced, the two bands of the Grenadier and Scots Fusilier Guards played a bar of the National Anthem. His Royal Highness walked, with the General Commanding-in-Chief, the Duke of Cambridge following, with the Duchess and Princess Mary. A brilliant staff of officers followed.

The Prince walked up every column of each regiment, and minutely inspected the appearance of all the men. This occupied a considerable period. At the close of the inspection, his Royal Highness and the staff took up a position in the centre of the parade ground, while both regiments marched past, the bands playing "The British Grenadiers."

After the battalions had marched past, the Prince Consort accom-

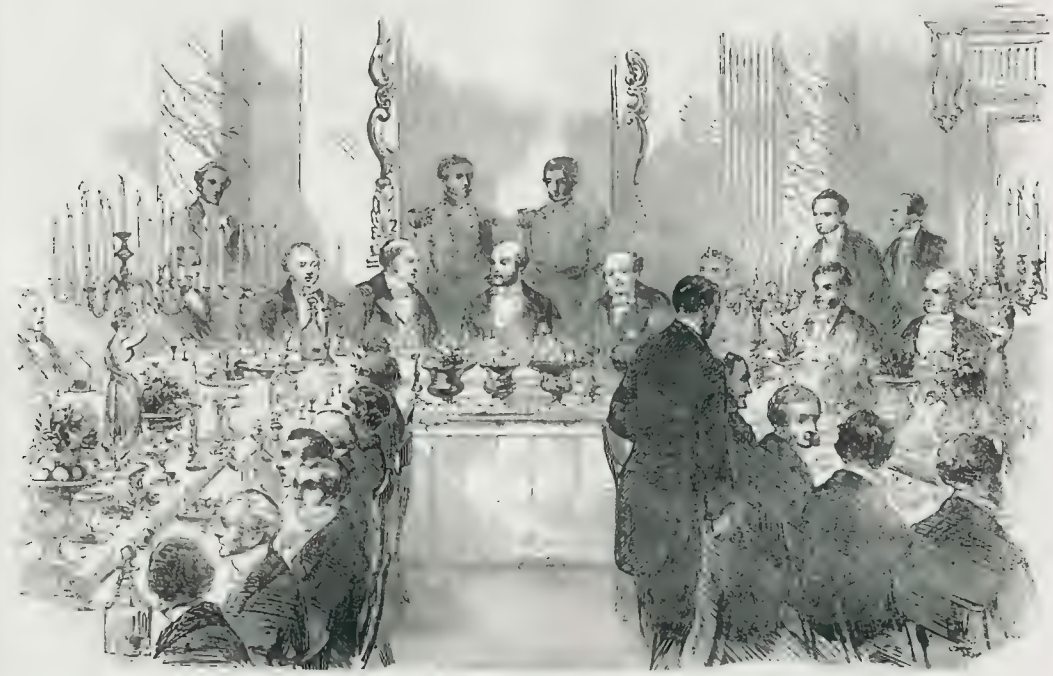
BATTERY PRACTICE, BY HIGHLANDERS, SPUR REDOUBT, PORTSMOUTH.

INSPECTION OF THE 1st BATTALION OF THE FUSILIERS, AND THE 3RD OF GRENADIER GUARDS, BY H.R.H. PRINCE ALBERT, AT THE WELLINGTON BARRACKS.

panied the General Commanding-in-Chief to the orderly room, where his Royal Highness remained some time, returning to Buckingham Palace on foot, shortly before one o'clock.

Among the members of the nobility present on the parade-ground we remarked—the Duchess of Cambridge and the Princess Mary, the Duke and Duchess of Richmond, the Duchess of Montrose, the Duke of Newcastle, the Marchioness of Ailesbury, the Marquis of Ormonde, the Marchioness of Ely, the Earl of Cardigan, the Earl of Euston, the Earl and Countess of Bruce, the Countess of Essex, Viscount Sydney, Viscount Seaham, Viscount Raneiagh, Viscount Chelsea, Viscount Emlyn, Lord de Mauley, Lord and Lady Charles Pelham Clinton, Lord Robert Pelham Clinton, Lord George Paget, Lady Caroline Murray and Lady Georgiana Murray, Lady Marian Alford, Lord and Lady Arthur Lennox, the Right Hon. the Secretary-at-War and Mrs. Sidney Herbert. In the evening the following announcement appeared in brigade orders:—

The field officer in brigade waiting has received the commands of his Royal Highness Prince Albert to express to the officers and men of the third battalion of Grenadier Guards, and the first battalion of Scots Fusilier Guards, the pleasure and gratification which their splendid and soldier-like appearance gave him when these battalions paraded this morning, and to assure them at the same time that his Royal Highness's most cordial good wishes will constantly attend them in the service abroad on which they are about to proceed."



FAREWELL BANQUET OF OFFICERS OF THE FUSILIER GUARDS, AT THE LONDON TAVERN —(SEE NEXT PAGE)

FAREWELL BANQUET TO THE OFFICERS OF THE GUARDS.

On Thursday week the officers of the second battalion of the Coldstream Guards, and the officers of the 1st battalion of the Scots Fusilier Guards, partook of a farewell banquet at the London Tavern, previous to their embarkation for the seat of war. H.s Royal Highness the Duke of Cambridge occupied the chair, supported on the right and left by Lieut.-General Sir Edward Bowater, K.C.H., and Lieut.-General Sir Willoughby Cot on, G.C.B., K.C.H. The principal officers present were —General Adye, General Aitchison, Colonel Berkeley Drummond, Colonel W. T. Knollys, Colonel A. Colville, Colonel Lord Raksby, Colonel G. M. Eden, Colonel G. Monorieffe, Colonel Walker, Colonel J. B. Blair, Colonel Sir G. Walker, Colonel Tyrrell, Colonel de Bathe, Colonel Onslow, Colonel Gerard G. Dixon, Colonel Phipps, Colonel Scott, Colonel Dalrymple, &c.

After the banquet, which was of the most *recherché* description, his Royal Highness the Duke of Cambridge, in proposing a toast, alluded in appropriate terms, and amidst enthusiastic cheers, to the arduous services in which the Guards would probably be engaged in a short time. A number of toasts were afterwards given, and animated speeches delivered, and the gallant company broke up at an early hour.

On Friday evening a numerous and distinguished party of the officers of the three battalions of the Grenadier Guards partook of a farewell banquet at the London Tavern, previous to their entering upon actual service. It was at one time expected that his Royal Highness Prince Albert, as Colonel-in-Chief, would preside; but, if such an arrangement was contemplated, it had been altered, as the Senior Lieutenant-Colonel, Colonel Stanhope, presided. The banquet took place in the large room, which when fully lighted up, presented a brilliant appearance. Among the officers present were his Serene Highness Prince Edward of Saxe-Weimar, the Hon. Colonel Cust, Captain Lord Mandeville, Colonel B Wood, Colonel Thornt n, Colonel Brownrigg, Colonel Sir William Davis, Col.-nel Golding, Colonel Lindsey, &c. The company did not break up till an advanced hour on the evening.

This evening (Saturday) the members of White's Club give a grand farewell dinner to the Duke of Cambridge, at the club-house, on the occasion of his going on foreign service. We believe this is the first time this club, composed of the principal aristocracy and gentry of the empire, have paid such a compliment to any one, except the Emperor Alexander and the King of Prussia, in 1814. Boodle's Club, also, have invited his Royal Highness to a similar entertainment.

It is said the Lord Mayor has invited Lord Raglan, his Royal Highness the Duke of Cambridge, and the other distinguished officers of both services, who are ordered to embark on foreign service, to a banquet at the Mansion-house; and that his Royal Highness Prince Albert will probably honour the entertainment with his presence.

DEPARTURE OF THE GRENADIER GUARDS FROM LONDON.

On Wednesday morning the several companies of the Grenadier Guards left London *en route* for Constantinople. The men were mustered at three o'clock a.m.; and, although their leave was not restricted, not a man was absent when the roll was called. Notwithstanding the early hour fixed for the departure of the Guards, an immen-e crowd had assembled to see them off. For hours several thousand people of all ranks had occupied what Peel called the finest site in Eu ope, looking intently to an opening which most Londoners imagine to lead only to the ground floor of the National Gallery, but which, in fact, is the south entrance of St George's Barracks behind that building. The multitude were tolerably patient, but decidedly loyal, and finding by repeated tut-dentitory experiments, that it availed but little to call, for the Grenadiers before they chose to come, they sang the National Anthem and "Rule Britannia" with much vehemence, perhaps, but with a body of sound which must have filled the whole space down to Whitehall. Soon after five, with a clash of music, the band emerged, to the immense delight of the multitude, and marched straight towards the Strand, when it took up its position. After the pause of a minute came the famous Grenadiers. They rushed forth without order from the narrow portal, and ran, or rather bounded, down the descent towards the Grenadiers. It seemed as if every man, on reaching the street, was cheered afresh by the multitude which received him, and in which he was sure to see some friend. But, continuing their pace, they ran with a running escort of friends and noisy admirers to join the column in the Strand till the whole had emerged. When formed, the regiment—about a thousand strong, and just show ng their bayonets and black fur caps above the heads of a vast multitude which filled the Strand—marched over Waterloo-bridge to the station. The incessant cheering which the men made, and occasionally the wild but hearty chorus of the mob, soon brought the sleepers in their windows, and many a strange figure was seen waving and shouting a farewell through the dusk. The light was still that of the lamps, and a stranger suddenly roused from his bed to look down into the scene might have dreamt of the French Revolution and its nocturnal horrors. The men escorted the Guards marched to the Waterloo station, and were there welcomed by fresh thousands, as they were again at Southampton.

EMBARKATION OF THE GUARDS.

The 2nd battalion of the Coldstreams and the 3rd of the Grenadier Guards, embarked on Wednesday at Southampton for Malta. The former arrived from Chobham last night in the morning, perhaps, at once went quietly on board the *Orinoco*. The Grenadiers reached Southampton about ten, and embarked in the *Ripon* and *Manilla*, to the mus'c of the screw band. The *Manilla*, the smallest of the three ships, and which is fitted with but few berths for her, led the way at noon, 300 o'clock, having 250 rank and file of the Grenadiers, and six officers, with a large quantity of baggage and stores on board. Soon after three the *Ripon* paddle-wheel steamer followed, having on board 600 rank and file of the Grenadiers, 26 to 32 officers, and 32 women. Last of all, and detained for more than two hours later by the want of water in the dock, the *Orinoco* took her departure, with 854 rank and file of the Coldstreams, 26 to 32 officers, and 32 women. She had also on board of her Colonel Bentinck, Colonel Eyre, and their respective staffs. The three steamers remained in Southampton Water all night, and proceeded on their voyage next morning. As the ships passed out of dock the crowds that lined the quays rent the air with their cheers, which were returned again and again with a hurtling effect, by the soldiers.

The *Himalaya* was to leave Southampton yesterday (Friday), taking with her 150 Sappers, 211 of the Rifles, 8 officers, 12 women, and 20 children. From Plymouth, on Monday, she will take on board, in addition to these, the 93rd Highlanders, consisting of 650 rank and file, 31 officers, 44 sergeants, 16 drummers, 54 women, and from 75 to 100 children. She will thus have on board 1320 effectives and 186 non-effectives, besides 12 horses, all accommodated in a manner hitherto unknown to the transport service.

BOSTON, SLEAFORD, AND MIDLAND COUNTIES RAILWAY.—The first half yearly meeting of this company was convened for Saturday last, at the Euston Hotel, but there not being twenty members present, the meeting could not be constituted; but Mr. Hewitt Ingram, the chairman, laid the report before the proprietors present, from which it appeared that the directors are quite prepared to commence the works at as early a period as possible, but that they cannot, on the capital of the company, they do not recommend that an outlay should take place until it be ascertained that the principal landowners are disposed to accept such terms as may be thought fair and reasonable. The directors hope that those parties will enter into such arrangements for the sale of their land as will enable the directors speedily to commence the works; and that they may be enabled again and again to have cheering to report on making a call of £1 per share, payable on the 1st of June next. As regards the probable amount of traffic on the proposed line, they remark as about £13 per mile per week will pay a rate of £5 per cent on the capital of the company, and this rate of mileage being considerably less, it is believed, than that earned by any existing railway, there is a fair prospect of an ample return to the shareholders for the capital embarked.

LEAGUE COAL COMPANY.—Several gentlemen are now endeavouring to form a company under this title, for the purpose of supplying the metropolis with the best coal, at a greatly reduced price. The promoters are said that they have at their command the right of taking coal from an extensive coal-field at Newcastle; and that, when the line from there to London, all the year round, at something less than 16s. per ton. They propose to raise a capital of £100,000, by means of £1 shares; the holders to be entitled to have one ton of coal per annum for each share, at cost price. The profits to arise from the sale of coal to the public will be divided among the shareholders, and the promoters of the undertaking are very sanguine of a good dividend being realised. Meetings have taken place at various parts of the metropolis, for the purpose of explaining the objects of the proposed company, and to take the necessary steps for its formation.

SOCIETY OF ANTIQUARIES.—At the weekly meeting, on Thursday—Lord Mahon, President, in the chair—the Rev. Collingwood Bruce, and others, were admitted Fellows; after which the rev. gentleman read a very interesting paper on the "Roman Wall in Britain," illustrated with a series of elaborate drawings. At the conclusion the learned author was kindly cheered. Messrs Battam, Timbs, and Nichols, were balloted for, and duly elected Fellows.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE RUSSIAN AGGRESSION.

Lord BEAUMONT gave notice that on Friday he should submit a resolution affirming the necessity of immediate and vigorous measures being taken to repel the unjust aggress on of Russ a; and to place the relations of the Porte upon such a footing as will secure a durable peace, and enable her to develope her resources.

HOUSE OF COMMONS.—MONDAY.

PREPARATIONS FOR WAR.

Lord J. RUSSELL, in answer to Mr. Cobden, stated that no order had been issued for the blockade of the Russian ports.

Mr BRIGHT, in reference to the proclamation just issued against the exportation of warlike stores and machinery, which may form component parts of marine engines, spoke of the inconvenience it would occasion to builders of steamers in this country who were executing large orders for other countries than Russia, and w shed to know whether machinery destined for friendly or neutral countries would not be permitted to leave England?

Mr. WILSON explained the origin of the proclamation. Last week the Commissioners of Customs intimated to the Treasury that a large quantity of arms and ammunition had been shipped for Odessa. The Secretary at once prohibited the exportation; and with the view of preventing the like shipments, it was resolved to exercise the power given in an act last year, and issue the proclamation in question. The Customs have instructed the officers at the various ports in the United Kingdom to prevent the exportation of the articles specified where they are not satisfied by documents that the goods are intended for countries to which no objection can properly apply.

RUSSIA AND TURKEY.—ADJOURNED DEBATE.

Mr. COBDEN commenced the adjourned debate on the Eastern question, by remarking upon the extraordinary difficulties imported into the controversy be ween the Western Powers and Russia by the heterogeneous population and the feudal policy, by the weakness and barbarism of Turkey. A majority of the inhabitants of the European provinces looked with hope upon the prospect of change which Russia, for sinister purposes, held out to them. The British Ministry also had formerly believed in the necessity of change in the same direction, and had both spoken and acted under the impression that the Ottoman empire was doomed, unless the treatment of its Christian subjects was rendered more enlightened and humane. He argued at great length and cited various extracts from the recently issued official despatches to prove that view of the question. In the tyranny practised towards that section of its population, Lord Clarendon himself had found the seeds of internal dissolution existing in the Turkish body politic. He contended therefore that it was our duty to obtain guarantees for the better condition of the Christian, before we interfered to fortify the predominance of the Mussulman. The Sultan had appealed to the fanaticism of his Mahometan subjects, but he trusted that English soldiers were not to be arrayed on the same side, or used to coerce one section of his subjects in the interests of the other. Comparing the commercial value of the two countries, he calculated that from Russia we imported produce, on an average, to the value of twelve millions sterling annually, while our trade with Turkey amounted to barely a quarter of the sum. Russia, in fact, stood second only to the United States among the nations with whom we carried on trade. Mr Cobden then contended that the objects for which England was now arming were fictitious; the dangers of Russian aggrandisement were non-existent; and the whole war policy was taken to the point of insanity. Finding nothing to object against the terms of the original Vienna note, he thought it might still be made the basis of negotiation.

Lord J. MANNERS trusted that the people of England would never consider whether they were going to war on behalf of the majority of the inhabitants of Turkey or not, nor whether the balance of trade was in our favour or the contrary, but whether the will of the Autocrat of Russia was to overbear that of the free Parliament of England.

Mr. HORSMAN expressed his surprise and regret at many of the statements in Mr. Cobden's speech. The question was not one relating to Turkey alone, but a question of Russia and Europe: it was not what would become of Turkey if the Emperor of Russia did not shall become Emperor of Turkey. The conquest of Turkey would not only be an extension of empire to Russia, but it would carry a dictatorship over Europe. The balance of power would be disturbed, and our Indian empire more than hazarded. The encroaching spirit of Russia, and the course pursued by Russia has been characterised by ferocity, fraud, and falsehood; and her deed of crime has been consummated by the daring pretence that all has been done for the protection of Christianity. On the contrary, Turkey has ever been the admiration of Europe. There is not a Christian Cabinet in Europe who may not gain something from studying her conduct; and there is not a Christian in Europe who may not consistently pray for her success in arms. He approved of the conduct of Ministers. Throughout the whole of the negotiations they used the utmost desire to avoid the calamity of war. As to the Czar himself, he had been completely unmasked, and shown to be the greatest marauder and revolutionist in Europe. Mr. Horsman hoped that peace would not be concluded without such a guarantee against the recurrence of the like necessity for an appeal to arms.

Mr. DRUMMOND did not think that any good reason had been shown why England should go to war. He believed that we were going into a religious war—a war for the preservation of the tombs—fomented, as all such wars have been, by the author of all mischief, the Pope. He would not countenance a captious vote to weaken the Government, but he should like to know who was to be the Minister that is to preside over the war. He had no confidence in the pilot who now held the helm. If a blow was to be struck at Russia, let it be struck at her heart, and not in the Black Sea. Let the kingdom of Poland be re-established, and England's object would be go ned.

Mr. ISAAC BUTT thought he was speaking the sentiments of every section of the community when he said that if Ministers are bent on vigorously carrying on the war, they will meet with a vigorous support in return.

Mr. S. HERBERT said the Government was placed between two fires; but though gentlemen of opposite views had censured Min sters for the course adopted, both had declined to test the feeling of the House on the subject. It would have been vain for Government to assume a hostile attitude towards Russia at an earlier period, as that power had twenty-eight sail-of-the-line in the Baltic, which we had no fleet ready to cope with; whilst Turkey had no army. He did not look upon the coming struggle as a slight and paltry one: it would be a fatal mistake to underrate the power of our adversary. We were about not so much to defend Turkey, as to oppose Russia, which, although a nation of slaves, might yet be strong and formidable. If it were the interest of Europe that a barrier should be placed against Russian aggression, England had the greatest interest in seeing this effected, as also one almost as great. The people of England were now satisfied that the Government had done their best to preserve peace; and although we were placed in difficult circumstances, it was satisfactory to see that the country was animated with the best spirit.

Mr. DISRAELI thought it essential that the fullest information should be had as to the cause and object of the hostilities which now seemed inevitable, with a view to avoid such a prolongation of the struggle as had occurred in the last great European conflict produced by the French Revolution. Twenty-five years ago there was a war between Russia and Turkey, in which France and England took part against Turkey, and levelled a blow against the Russian power, which was indirectly the cause of the perils and perplexing circumstances we had now to contend. He could not understand how they were to obtain any clear know edge regarding the cause of a war, except by studying the papers laid before them by her Majesty; and without access to knowledge of the cause they could have no clear idea of the object. He was, therefore, far from agreeing with those gentlemen who told them that they had no business to look at the past, for the past clearly involved the future. After the speech of the Minister for Foreign Affairs, which was in effect an admission to suppose that we were not at war, and we had since had an authoritative statement that the last effort at negotiation had failed. The question to consider now, was how had this state of things been produced. The policy of Russia was unfolded in Count Nesselrode's despatch of January, 1853. It was obviously to obtain an ascendancy over Turkey, not by conquest, but to exercise a particular influence over twelve millions of the Sultan's subjects. This might be done on the base of the diplomatic concert which ensued. Subsequent correspondence showed still more clearly Russia's line of policy, and Mr. Disraeli wished to know how her Majesty's Ministers had encountered it. Lord John Russell complained that Count Nesselrode would not tell what his intentions were. But had the question ever been fairly put to Count Nesselrode? After the question of the Holy Places was admitted to be settled, and the forces of Russia were still hovering on the Turkish frontiers, why was an explanation not demanded of what was meant? Russia had demanded a concession to the Greek Church as an equivalent for the concess on made to the Latin Church; but no demand was made by the English Government for an explanation of what was wanted. Quoting Lord Clarendon's "lecture" to the Porte about the abuses of its Government, Mr. Disraeli referred to it as an indirect injunction to Turkey to comply with the demands of Russia. Upon a review of the whole case his opinion was, that the real cause of the war was that the British Government was influenced throughout by that fatal error, misplaced confidence amounting to credulity, or by connivance: and it was most important to ascertain by which. If the war was the result of credulity, it might be a long and a severe one; but it might end in restoring Bessarabia to Turkey—in erecting the Crimea into an independent state—in freeing the navigation of the Danube, and opening up the Euxine to the nations of the world. If, on the other hand, it was the result of connivance, the result might be a warfare carried on in a weak and vacillating spirit, and terminating in some compromise as disastrous in its consequences as the Vienna Note. He feared we were under the auspices of those who knew neither how to make war nor how to make peace, and that the result might be that a disastrous war might be followed by an ignominious peace.

Lord PALMERSTON said he should not be doing his duty if he did not make some observations on the speech of the right hon. gentleman. The country was, he feared, on the verge of war, and the events which led to it were to be found in the blue books laid upon the table by the Government. Had he felt that any Government were fairly chargeable with credulity or connivance, he should feel that he had no alternative but to withhold from that Government his confidence, and he was surprised at the course pursued by the right hon. gentleman.

There are many charges (said the noble Lord) which may be made against a Government. It might be said that it ought to be accused of having rashly, im rovidently, and without due regard to he heavy responsibility which devolved upon them, brought the country to the condition of being dri ged to draw the sword and rush into war. That is a charge which no one has made against us (Hear, hear). That charge would, indeed, have been a heavy one; and if it had been proved, we should have deserved the severest condemnation for the country. Another charge might be, that by delay, credulity, and the absence of sufficient vigour at the proper time, we allowed matters to come to this pass, which they would not have come to if other measures had been pursued a different course. I think that charge is one which cannot be brought against the Government, but, on the contrary, I am ready to maintain that as far as our conduct is to be measured by the language we have exhibited, I think we are entitled to the favourable consideration of the country. If it is said that we have forborne to the last moment, and exhausted every means of negotiation before we had recourse to the last terrible alternative, in an amicable way the dispute which threatened the peace of Europe—that we have trusted even those who were unworthy of being trusted—(hear) that we left no assertions unexplained, and shrunk from no sacrifice; in short, that we have postponed to the utmost that decision to which, at last, we may be forced to come—I think that cannot be urged as a charge against the Government; but, on the contrary, the result must be that—which I think has taken place—the country, seeing there has been no precipitation, no desire for war, but rather the greatest anxiety to avoid it, and that the Government have clung to every hope of peace—the country, I say, seeing that, will rally round us as one man, feeling that the war is a necessity which we cannot avoid: and it will be prepared to make those sacrifices which every war necessarily involves (Cheers). We are accused of credulity. I say that the facts in the blue-bo ks before the House justify us in having for a long time reposed belief and confidence in the assertions of the Russian Government. The right hon. gentleman has quoted my noble friend the Secretary of State for Foreign Affairs when making misled Parliament on the 25th April, by declaring at that time, that Russia asked for nothing beyond a settlement of the question of the Holy Places; whereas, says the right hon. gentleman, at that time Prince Menschikoff had left Constantinople; and the Government knew then that he had begun to make demands of a very different character. What are the facts? Prince Menschikoff left Constantinople on the 2nd May (Hear). What was the latest declaration which our Government had received?—not from the reports that appeared in newspapers, which, however much they might be entitled to some credit, yet, as we all know, were to be received with allowance and abatement—but, on April 25, what was the last communication received in this country? Why, that made by Count Nesselrode from the mouth of Count Nesselrode? On the 28th March, Sir Hamilton Seymour asked Count Nesselrode whether the settlement of the question of the Holy Places did not terminate all differences between Russia and Turkey? Count Nesselrode said, "It will. That question once settled, there will remain but some small chancery matters, private claims, and such things as may exist between Governments which have any commercial and intimate intercourse." That was again repeated on the 30th April, when Count Nesselrode declared to Sir G. H. Seymour that he was authorised to say that assurances were made by the Government of a great country like Russia, her Majesty's Government were entitled to believe them (Cheers). But it is said, "Aye, but you heard of military preparations, and you ought, therefore, to have inferred that some other demands were going to be made." Why, we were ourselves told by the Russian Government of these preparations; but we were likewise told that they were precautions to counteract the menacing language which was used by France, and that they were made solely and entirely with reference to the question of the Holy Places. We were also told that Russia demanded some proof of confidence some reparation from Turkey for the offence which had been committed by the abandonment of the pledges and changes made in regard to the Holy Places, and for future considerations, and that security for the future, was to be a treaty about the Holy Places—a treaty confirming the firmans which the Sultan had given for the settlement of that question; but there was the slightest intimation that the treaty was to apply to any other question, and I must say that, when Count Nesselrode said, at a later period, that her Majesty's Government knew what were the demands which he should make, he stated that which, I must say, was utterly at variance with the truth (Cheers). It is painful to speak of a Government like Russia in terms of contemnation and censure; but I must say, with a full conviction of her Majesty's Government, that throughout the whole course of that negot ation, the Russian Government, by its various agents, and by itself, exhausted every modification of untruth (Laughter), hypocrisy in insinuation, and ending in assurances of a positive fact (Hear, hear). Co nplaint has been made of the forbearance shown by the Government in these negotiations. I must say that, in the course of last summer, a step might have been taken which would have brought matters to the point at which they now are—if we had found ourselves in June or July on the brink of a rupture with Russia—our position would have been just as it is at the present time. But many men say, Russia would have given way, if you had shown more vigour (Hear, hear). Well, I admit that is a very plausible opinion. Many men may be justified in entertaining it; but, after all it is but an opinion (A laugh). It is but an opinion, and may turn out to be a wrong one (Hear, hear). Now, if it had turned out to be a wrong one, and if, instead of obtaining concessions from Russia we had urged Russia to the point at which we are now likely to find her, we should have made a great political mistake, and this country would not have been in the position she is at the present moment.

At all events, he believed that the conduct of Austria and Prussia, in the event of a war, would be now different from what it would have been had they adopted the bold policy referred to. The object of the war was essentially for the maintenance of the integrity and independence of Turkey, to prevent Russia from possessing herself to an extent of territory and power which would render her dangerous to the other powers of Europe. At present the power of Russia, however great for defence, was infinitely exaggerated as regarded aggression; while, on the other hand, Turkey stood in a degree of energy and patriotism which argued strongly for a favourable result of hostilities, with aids from France and England, or from either of them alone. With both united, the chances of Russia were nothing less than desperate.

And I think we are entitled to expect that, if the war should continue, Austria and Prussia will not remain idle or passive spectators in the conflict (Hear, hear). If there prevails here and elsewhere any of the spirit of old Frederick, she will not fail to come forward to bear her part in the struggle; and Austria will have forgotten all her former policy, and have become sufficiently enlightened as to her best interests, if she permit the advance of Russia without making an effort to resist it (Hear, hear). Well, then, I say, with England and France actively supporting Turkey—with the whole population of Europe sympathising with not a single ally to support her in her injustice—I cannot bring myself to doubt what must be the result of the contest (Cheers). I must say it is a noble sight to see England and France, who for centuries have been engaged in rivalry with each other—to see them now united in one course of action, and bound by reciprocal engagements to seek, as the result of their operations, no selfish object—to see them entering into a defensive, not of their own interests only, but of the welfare of the whole of Europe (Great cheering). It is a noble sight to see those fleets and armies, which hitherto have only met in hostile conflict ranged side by side as friends, and armed, not for purposes of conquest, not for the oppression of the liberties of mankind, but armed in a noble and a generous cause for the defence of right against might, and of justice against oppression (Cheers). I care not, sir, for imputations of credulity or connivance (Cheers); we are willing to throw our case before the country, to be judged by this House and by our fellow-countrymen—and I am convinced that the people of England will be satisfied that we have not involved them needlessly, or without due cause or necessity in war (Cheers). That war—though I do not wish to underrate its

consequences, or the exertions that it may require—will, I take it, be very different from any other war in which, in former times, we have engaged. But I feel no hesitation in appealing to the country for assistance; but this, at least, I will say, that if the country or the House should think that we have manifested in thereto the weakness of credulity or the infamy of connivance, let them take from us the conduct of the war, which we should be totally incompetent and unworthy to conduct, and let them place it in the hands of others in whose judgment and sagacity they may place confidence, and on whose integrity they may rely (Cheers).

The House shortly afterwards went into Committee of Supply, and a vote was passed to defray the charge of outstanding Exchequer Bills.

On the motion of Sir J GRAHAM, a sum of £2 192,671 was voted to defray the wages of 58 000 seamen and marines during the ensuing year.

The House having resumed, an adjournment took place shortly after two o'clock.

HOUSE OF LORDS.—TUESDAY.

No business of importance was transacted.

HOUSE OF COMMONS.—TUESDAY.

PRIVATEERS.

Mr. HORSFALL wished to know from some member of her Majesty's Government—the noble member for the City of London not being in his place—whether the treaties with foreign nations, or the steps which her Majesty's Government are prepared to take in the event of war, are such as will effectually prevent privateers being fitted out in neutral ports to interfere with British shipping?

Lord PALMERSTON said that, in the present state of things, an explanatory answer could not be given.

MANCHESTER AND SALFORD EDUCATION BILL.

Mr. ADDERLEY moved the second reading of this bill, by which, he said, the ratepayers of Manchester applied to the Legislature to enable them to rate themselves to a common fund, which, by a proportionate distribution amongst the schools, would supply adequate education to all classes, according to their own views and inclinations (Hear, hear).

Mr M GIBSON thought it was an abuse to bring in a bill like this, on the subject of education, as a private bill. It would commit the House to a principle of national education subsequently to be carried out, and was, therefore, a public bill. The Corporation of Manchester protested against the scheme of the bill, and were anxious to defeat it. Under these circumstances he moved as an amendment, "That education to be supported by public rates is a subject which ought not to be dealt with by any private bill."

The LORD ADVOCATE said he would not throw any obstacle in the way of the second reading of the bill.

Sir G GREY thought the bill was one of such importance, and the principle of it was capable of such general application, that it ought not to be promoted as a private bill. He suggested that the bill should be treated as a public bill, with a permissive power for other places besides Manchester to avail themselves of its provisions, as was done in the case of the bill for the establishment of baths and wash-houses some two years ago.

Mr NAPIER supported the second reading of the bill.

After a short discussion, Lord J. RUSSELL said there were great difficulties in the way of dealing with this bill. He could not agree with the amendment as an abstract proposition, because it might be desirable to allow a community, the whole of whose members were agreed upon the subject, to rate themselves for the purposes of education; but in the present case the whole of the corporation had announced their opposition to the bill. He thought it would be better to adopt the suggestion of Sir George Grey than to proceed further with the measure during the present session.

Mr. J. G. PHILLIMORE supported the bill.

Mr. W. J FOX opposed the bill, as calculated to continue an inefficient system of education.

Sir J. PAKINGTON hoped that a bill of such importance would not be pushed aside by a paltry dispute as to whether it was a public or a private bill.

Mr. BRIGHT could not see why Manchester should be experimented upon by such a scheme as the bill proposed, more particularly when by the municipal authorities of that city it was condemned and denounced

Mr. HENLEY strongly opposed the bill, unsupported as it was by the members for the town, and opposed by the corporation.

Mr. W. PATTEN supported the bill, believing the voluntary system to be wholly inadequate to the wants of the country, while it was hopeless to expect a good system would ever be adopted.

Mr. PETO was of opinion that the voluntary system was quite adequate to the wants of the country, more particularly when he looked to the aid it derived from mechanics' institutes and ragged schools.

Mr. T. CHEETHAM SALT supported the bill.

Mr. WALPOLE thought they ought not to establish such an important principle as that of compulsory rating, without a fuller and more ample discussion than it could be expected to have upon the second reading of a private bill

Mr. MIALL advocated the voluntary principle, and opposed the bill.

The House then divided, and the numbers were—For the amendment, 105; against it, 76: majority, 29. The bill was consequently lost.

HOUSE OF COMMONS.—WEDNESDAY.

LIBERATION OF MR. SMITH O'BRIEN.

Lord PALMERSTON, in reply to Mr B-amish, said her Majesty's Government intended to recommend that Mr. Smith O Brien should be set at liberty.

THE WAR.

On the bringing up of the report of the Committee of Supply, Mr. HUME expressed his very great satisfaction at the conduct of Government in using every means to avoid the horrors and expense of war, it was clear that they had been deceived, but the shame of that was not with them, but on those by whom they had been deceived. Under these circumstances he was prepared to support to the fullest extent the measures of Government in the impending struggle. As to the Estimates, he was happy to find that they were so moderate. He thought the preparations made by Government to stay the encroachments of Russia on the liberties of mankind had been conceived and executed in the best and most economical manner. The only point on which he found fault with Ministers was for the secrecy with which they had conducted their proceedings

Mr MONCKTON MILNES felt grateful to this member for Montrose for his frank and well-timed observations, to which the country would heartily respond He perfectly agreed with what had been said about the evils arising from want of information. Had the first volume of the Blue Books on the Eastern question been laid on the table at the end of last session, the House would have given its hearty support to Ministers, had they been disposed to act energetically.

Sir De L. EVANS also blamed the Government for not having laid the information before the House at an earlier period.

Lord PALMERSTON could assure the House that, if any delay had taken place in their communicating to the House despatches which showed the progress of negotiation, it had not in any degree arisen from distrust of the House or of the country, or from any desire to conceal from the House or the country the course of the negotiation which had been carried on. He could assure the honourable member for Pontefract that the premature publication of papers connected with unfinished negotiations might essentially prejudice the successful results of those negotiations, and, until they had been brought to a termination, favourable or unfavourable, they might entirely defeat the chance of a successful issue by prematurely publishing to the world the proposition made, the refusals given, the modifications which had taken place, and the difficulties which might have arisen in the course of the transactions. Therefore it was—which might be right or wrong, he however believed it to be right—their opinion of what was best for the public interest by which Ministers were guided in choosing the moment at which the communications should be made to the House.

Mr. MUNTZ contended that if Government had acted with more energy we should not have been placed in our present position. It was said that Ministers had been deceived; but the Emperor of Russia had also been deceived. He had been led to believe that the labours of the Peace Society had been attended with great success in England, and now he found that he had been misled on that point.

HOUSE OF LORDS.—THURSDAY.

In reply to the Earl of Derby, the Earl of ABERDEEN said that the Government felt they were possessed of sufficient information to justify them in introducing a measure for the reform of the University of Oxford: and he could not give any pledge that such measure would be submitted to a meeting of convocation before it was laid before Parliament.

OUR EXPEDITION TO THE EAST.

The Earl of CARDIGAN drew the attention of the Government to the danger and inconvenience of sending our cavalry by sailing vessels to Constantinople, and asked the Government whether, in the present flourishing state of our steam navigation, it would not be practicable to transport our whole armed forces by steam?

The Duke of NEWCASTLE said the Government were fully alive to the superior advantages of steam for the transport of our army to the East; but, after the most mature consideration, they came to the opinion that it would be impracticable, without entirely upsetting our postal arrangements, to send the whole of our troops by steam. The difficulty of transporting so large a body of men as 12,000 to Constantinople had been greatly overcome by the patriotic readiness shown on the part of all our steam companies. It was only due to them to say that the arrangements of the Government in regard to our armed expedition to the East, would prove a serious inconvenience to those companies; and he was confident that the remuneration they were to receive for this service would not repay them.

The Earl of ELLENBOROUGH admitted the great difficulty of sending all our forces by steam, but he hoped that the Government would, as far as it was possible, secure that mode of transport for the conveyance of our troops

The Earl of DESART inquired of her Majesty's Government whether an arrangement had not recently been made for the withdrawal of troops from the smaller West India Islands?

The Duke of NEWCASTLE said that the troops had been removed from four of the smaller islands, in consequence of the local bodies having neglected to provide a body of police, and having depended on the troops to perform such duties. The troops would, however, be concentrated at Barbadoes, to prevent any disturbance arising. Although the Government believed it to be their duty to defend our colonial possessions at all risks; still they did not feel warranted in providing that protection which the local authorities ought to provide for themselves.

The Marquis of CLANRICARDE gave notice of a motion with a view to the improved ventilation of the House.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Sir J. WALSH gave notice of his intention upon going into a Committee of Supply on the Military Estimates, to submit to the consideration of the House a question as to the inadequacy of our military establishments, in reference to the war in which we were about to enter.

In reply to Mr. French, Lord J RUSSELL said that the agreement made with France in reference to the aid to be afforded to Turkey did not include the allies of Turkey

In reply to Mr. Horsfall, Lord J. RUSSELL said that the Government had under their anxious consideration the question in relation to the policy to be pursued towards neutral powers by the country, with respect to privateers The subject was one of great difficulty. Every care would, however, be taken to avoid proceedings of a hostile character towards the subjects of neutral powers.

Mr GROGAN called the attention of the House to the necessity of maintaining, if not of increasing, the grants now made to the Hospitals of Dublin, instead of withdrawing them, as was proposed; and moved the appointment of a select committee to inquire into the subject.

Mr. WILSON, on the part of the Government, having assented, the motion was agreed to.

Mr. OLIVEIRA obtained the appointment of a committee to inquire into the adequacy of the metropolitan bridges to the increasing traffic, and into the propriety of throwing open those bridges now belonging to public companies

EDUCATION (SCOTLAND).

The LORD ADVOCATE moved to bring in a Bill to make Further Provision for the Education of the People in Scotland, and to Amend the Laws relating thereto. Scotland for nearly 300 years had enjoyed the advantage of schools in every parish, supported by the land, without the option of the land-owners being consulted. The bill merely proposed to extend this plan, and to give to Scotland a much more extensive system of education than had hitherto existed, under the inspection of a board, which should report from time to time to Parliament. The schoolmasters were now maintained by a rate laid upon the heritors, calculated upon the price of grain, and paid salaries, varying from £19 to £25 a year—sums quite inadequate to maintain them. He proposed by his bill that the salary of every ordinary schoolmaster should be £50, with a retiring allowance of £25 per year. Every schoolmaster was also to have a house containing at least three rooms. The schoolmasters at present were appointed from the members of the Kirk, but it was considered that he should be required to take no denominational faith, or make any religious profession. The election of schoolmaster would rest, as at present, with the heritors and minister, who would also have the superintendence of the schools, under the control of inspectors. He proposed that a rate not to exceed one penny in the pound upon the entire value of Scotland should be raised for educational purposes. Having referred to several minor details of the measure, the right hon. and learned gentleman concluded by asking leave to introduce the bill.

Mr HUME supported the proposition of the Lord Advocate.

After some discussion, the general tone of which was approval of the measure, the motion was agreed to.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

THE WAR.

Lord BEAUMONT, according to his notice, moved the following resolutions, viz :—

That it appears from the documents which her Majesty has been graciously pleased to communicate to the House, that the efforts of her Majesty and her Majesty's Allies to establish, without recourse to arms, amicable relations between the Sublime Porte and his Imperial Majesty the Emperor of Russia, has been unremitting; that it appears, also, that these efforts have failed to produce the desired effect; and that the Emperor of Russia continues to hold by force of arms two important provinces of the Ottoman Empire.

That it is, therefore, the opinion of this House, that the honour and best interests of this country require that immediate and effectual means be taken to repel the unjustifiable aggression of Russia upon the territory of the Sultan; and that the power and influence of this country should be exerted to place the relations of the Sublime Porte with the rest of Europe upon such foundation as shall be calculated to secure a durable peace, and to afford the Ottoman Empire a fair opportunity of developing its natural resources, and of proceeding with its administrative reforms.

The noble Lord then proceeded to comment upon the course pursued by our Government in connexion with the various negotiations that were on foot; contend ng that, if the Government were really desirous of assisting Turkey, they ought not to have controlled the patriotic sentiments of the British people by giving utterance to language worthy only of the Peace Society. He blamed the Government for its backwardness in affording information to the public with regard to the position of affairs from time to time, and expressed his approbation that the Vienna note must still be regarded as being open to the acceptance of Russia. He protested against a compromise, which would put Russia in a better position than she had occupied before the outbreak of hostilities. War was far preferable to a dishonourable peace; and England ought at once to make some declaration—and that declaration should be war.

The Earl of CLARENDON said, that though some parts of the resolutions were unobjectionable, he thought that it would be most unwise in their Lordships to bind their hands in reference to a war which had not as yet been declared. The resolutions were wholly unnecessary, and he trusted that the noble Lord would not press them. The noble Earl then proceeded to vindicate the course taken by the Government throughout those transactions. If we had gone to war when Russia entered the Principalities, there was nothing to prevent the Russian army marching upon Constantinople, the Turks being at that time wholly unable to defend themselves. He believed that it was owing to that policy of the Government which was so much condemned, that Austria and Prussia had been converted into friendly allies, instead of joining with Russia. It was only that day that he heard, by electric telegraph, that Austria had collected an army of 45,000 men, in addition to her former force, whilst we had ourselves as fine a fleet as had ever sailed from the Downs. He had no hesitation in saying that we no longer had any reasonable hope of peace.

HOUSE OF COMMONS.—FRIDAY.

In reply to Sir H. Willoughby, Lord PALMERSTON said that his attention had been called to the practice of tying up the bells of certain workhouses at night, which had the effect of preventing the administration of relief in urgent cases. He had ordered steps to be taken to prevent the recurrence of such a practice in future

In reply to General Wyndham, Sir J. GRAHAM said that the cavalry horses required for service in the East were to be sent in sailing-vessels, because it was thought that they would be better accommodated in such vessels than they would be in the steamers that were at the disposal of the Admiralty.

In reply to Lord D. Stuart, Lord PALMERSTON said he had, in the course of the present session, to be able to bring in a bill for the better regulation of the medical profession; and also a bill for granting a New Charter of Incorporation to the Royal College of Physicians.

In reply to Mr. Macartney, Mr. S. HERBERT said that the usual number of women allowed to go out with troops had been reduced in the instance of the recent embarkation for the East. The course to be taken towards the wives and children of the soldiers left behind was under the consideration of the Government. He, however, thought that the Government would not be justified in making public provision for the wives of soldiers, but they would be forwarded to their homes and friends at the public expense, while special provision might be made for those who had peculiar claims.

Lord J. RUSSELL brought up his Bribery Bill, and Controverted Elections Bill, which were severally read a first time.

In reply to an hon. member, Mr. WILSON said it was intended by the Government to introduce a bill having reference to assurance associations generally, as soon as they had received the report of the commission that was now sitting upon the subject.

On the motion for going into Committee of Supply, Mr. MAGUIRE called attention to numerous cases of illegality and inhumanity in the removal of the poor from this country to Ireland. He thought that it was absolutely necessary to make some alteration in this practice, in order to avert an explosion of popular feeling in Ireland.

Mr. BARNES admitted the unsatisfactory state of the law upon this subject and promised to inquire fully into the practice, with a view to enable the House to legislate upon the matter.

Lord C HAMILTON stated that within one month 435 persons had been shipped from this country, and landed destitute in a single union in Dublin.

THE WAR.

Sir J WALSH called the attention of the House to the inadequacy of our military establishments of the country to meet the exigencies of the war into which we are about to enter. He warned them of the danger of undervaluing the power of Russia, which he believed to be far greater than was generally supposed. He referred to the insurrection among the Greek subjects of the Porte; and observed, that it was not at all improbable that this insurrection might diffuse itself over a wide extent of country, and even embrace the Christian population of Syria. It was evident that war, for some time to come, would be the normal condition of Europe; and it was, therefore, necessary that our military and naval preparations should be on a scale equal to the emergency. We were on the brink of war, and yet our army was not much larger than that of Belgium. Such a force could only be called a liberal peace establishment.

Mr. ALCOCK was of opinion that the turning point of the whole subject of our relations with Russia and Turkey depended upon the command of the Black Sea. It was much to be regretted that the combined fleets had not entered into the Euxine, and established the ascendancy of England there, immediately after the affair of Sinope.

Sir DE LACI EVANS said that, in his opinion, the war estimates now proposed to be voted ought not to be entered on without a pledge from the Government that the force of 47 000 men now stationed in the colonies be promptly diminished, as involving an expenditure and dissemination of the military strength of the country, specially inopportune at a moment of impending war.

After some further discussion, the House went into Committee of Supply.

THE DERBY BRIBERY CASE.—A crowded meeting was held at Derby on Tuesday evening, to protest against the compromise made in reference to the recent trial for alleged bribery of the Derby electors. A letter was read from Mr. Coppock, in which that gentleman denied that the Liberal party in Derby had connived at any compromise. A resolution was carried expressive of the disapprobation of the electors at the "clandestine" compromise made in the case of "The Queen *v.* Waterford and others;" and a petition was also agreed to, praying the House of Commons to institute an inquiry into a state secret that a sum of £1000 had been paid as the price of the above-named compromise.

THE NEW REFORM BILL.—A large and influential meeting of Liberal members, convened by Mr. Hume, was held in Committee-room No. 12, on Monday, to consider what line of policy should be adopted with reference to the New Reform Bill. Mr. Hume having explained the object for which the meeting had been summoned, a long discussion took place with respect to the provisions of the bill, the merits of which were frankly admitted, while the more questionable portions were minutely criticised. Many objections were taken to several of its details; but the grant street stress was laid upon what was termed the minority clause, which was strenuously opposed by many of the hon. gentlemen present. Much disappointment at was also expressed at the exclusion of the ballot. After three hours' discussion it was unanimously resolved to support the second read ng of the bill; and it was agreed that another meeting should be held, for the purpose of considering what steps should be taken with regard to the minority clause.—At a meeting of the Council of the National Reform Association, held on Wednesday evening, it was unanimously resolved that, although the proposed measure falls short of what is due to the unenfranchised, "it deserves the strenuous support of all Reformers, as a large and invaluable instalment of the objects they seek."

FACTORY MACHINERY.—One of the most numerously attended and influential meetings ever held in Manchester took place in the Town-hall, on Tuesday, for the purpose of protesting against the order recently issued by the Factory Inspectors, requiring all mill gearing to be fenced off. Resolutions against the order in question were passed unanimously, and a deputation was appointed to wait upon Lord Palmers on on the subject. Mr. ARCHWRIGHT (Mayor of Bolton) complained that the resolutions were not strong enough. The factory owners ought to ask to be emancipated from the Factory Act; and, if they were all of his mind, they would lock up their mills, and refuse to work them under the present Factory Act. The meeting then broke up.

VIEW OF SEBASTOPOL, AT THE GALLERY OF ILLUSTRATION.

THE proprietors of the Gallery of Illustration have lately enriched their diornamic entertainment, "The Ocean Mail," by the addition of a view of the town and harbour of Sebastopol, with the Russian fleet represented lying at anchor within the latter. The view is taken from the open country in the direction of the ancient fortress of Inkeman the evening being between the spectator and the town, which rises, amphitheatre-like, at the back. Altogether, though not what may be termed picturesque, it is a striking scene; and has been produced in a style to redound great credit to the known talent of Messrs. Grieve and Telbin, the artists. We have great pleasure in presenting an Engraving of it.

This famous stronghold of the Russians in the Black Sea is one of the most modern creations in the rapidly-growing empire of the Czars. Its site, until 1783, having been occupied by nothing more pretentious than a miserable village of Tartar huts, named Akhtiar. The splendid natural advantages of its harbour for a first-rate naval port, however, attracted the keen notice of Catherine II., and, in 1786, the first stone of the new fortress and arsenal was laid, and from that period it has rapidly increased in strength and importance.

It is to English talent that Russia is, in great measure, indebted for the important works in this port and arsenal. Mr. Hupton, assisted by his sons, have for years conducted these immense undertakings, which are executed with the aid of an army of military labourers. M Demidoff in his "Travels in Southern Russia," gives the following account of the basins and docks—

The importance of Sebastopol, and the happy peculiarities of its position, having been once recognised, the next step was to form basins and docks for refitting; these objects have been admirably accomplished by Mr. Hupton. A spacious basin has been sunk at some distance from the sea, and on a higher level. On the sides of this basin are five dry docks; three of these are for first-class vessels, the remaining two for frigates. With a sea almost without tides, the draining of these docks was a difficult problem to solve; it was accomplished in the following manner.—At a distance of eighteen verste, at the bottom of the great valley forming the inner road, flowed, on a level of suitable height, a small river abundantly supplied with water. This river was taken possession of by the engineers, turned into another bed excavated in the rock, and passing at one time through a tunnel, at another over an aqueduct, the Tchernaia-Retchka (black rivulet) was made to furnish the necessary supply of water to the docks As all this water came from a considerable height, it was easy, by means of an ingenious combination of locks, to bring into the large basin three hundred feet by four hundred, then being lined with splendid masonry—one vessel of 120 guns, two of eighty, and two frigates of sixty, to be placed into the five dry docks, which could be drained or shaved at pleasure.

The population of Sebastopol, which consists of little else than the military and the labourers employed in the works, is, in ordinary times, about 30 000 in number; but when the fleet is in port, and any considerable works are in progress, it amounts to double that number.

VIEW OF SEBASTOPOL, FROM "THE GALLERY OF ILLUSTRATION," REGENT-STREET.—(SEE PRECEDING PAGE.)

OPENING OF THE POPLAR SAILORS' HOME.

The inauguration of this excellent institution, which is destined, we trust, to work a great reformation in the habits and morals of the seafaring population in its neighbourhood, took place on Tuesday, at half-past two o'clock. A large party of distinguished visitors were present on the occasion—among whom we observed the Right Hon. Lord Byron and Lady Byron, the Hon. Mr. and Mrs. Vereker, the Hon. James Byng, Captain Hall and the Hon. Mrs. Hall, the Hon. Captain Denman, R.N., Alexander Matheson, M.P., and the Hon. Mrs. Matheson, Admiral Sir Edward Parry, Admiral Sir George Sartorius, Sir Joseph Copley, Bart., Sir M. Crear, Mr. Oliveira, M.P., and Mrs. Oliveira, James Forbes, Esq., Miss Forbes, the Messrs. Somes, &c.

The "Home" was formerly a private house of a superior class, and was presented, rent free, to the Sailors' Home Institution by the Messrs. Somes. It is situated near the termination of the City Canal, in an open, healthy situation, forming a pleasant contrast to the wretched ill-ventilated dens to which the majority of sailors are now forced to resort, or want of proper accommodation. The building at Poplar has been fitted up under the direction of Captain Hall, the managing director of the Sailors' Home Institution, in Craven-street, whose unwearied exertions in this too much neglected field of philanthropic labour have been so successful; and the whole of the arrangements are admirably adapted to secure the comfort of the inmates and visitors. There are already beds to accommodate fifty persons; and even double that number could be provided for without much difficulty. A large kitchen forms part of the establishment, in which a well-skilled cook presides over the concoction of tea, coffee, soup, and whatever else may be required in the way of dietary. Branching out from this most useful part of the Institution, Captain Hall has contrived a very comfortable range of refreshment and reading-rooms for persons connected with the docks and shipping, where, at a very moderate rate, they will be able to obtain a basin of wholesome soup, or a cup of tea or coffee; those who may care for neither will have access to the reading-room on payment of a penny. It is much to be desired that reading-rooms of this kind could be provided plentifully in all such neighbourhoods; the result would be a very great improvement in the health, intelligence, and morality of the working classes.

After the company had viewed the establishment, they adjourned to the dining-room, where a number of seamen of every class—Greenwich pensioners, men-of-war's-men, boys, merchant seamen, apprentices, and foreign sailors—having taken their seat at a table loaded with a substantial and excellent repast, the Rev. Mr. Gribble invoked the Divine blessing upon the undertaking.

Admiral Sir Edward Parry then addressed the company, expressing the gratification it gave him to be present on an occasion so interesting. For too many years it had been customary to regard the sailor as a rough, reckless creature, who was, on landing, to be allowed to take his fling; and therefore there had been no precaution taken to provide for him that which he most required after returning from sea—the comfort and security of a home. When necessity for such institutions was urged by Capt. Hall, who had done so much to promote the establishment of these houses, the answer was that the sailors did not want them. In fact the system had been such as to drive them, on their arrival in port, to miserable and rascally pothouses with which our ports are crowded, or to those dens of infamy, the brothels. They first made them brutes and then called them so. He wished now to give a practical answer to those who had objected to the foundation of Sailors' Homes, and had prophesied that the sailors would not go to them. The following were some of the facts connected with the Portsmouth Home:—It opened with 30 beds. In six months time 26 more were required. At the end of the year they numbered 91, and even that number was not sufficient for the wants of the sailors. On several occasions it had been thronged by as many as 200 additional men, who chose to sleep on the floor rather than go to their former haunts. They were so much pleased with it that they preferred, in nautical language, to prick for a soft plank in the Sailors' Home to entering the vile dens they had been formerly compelled to inhabit, and many of them left their shillings in advance to secure the first vacant bed. They might rest assured that if they gave them the means of being so, no men would be more respectable in their conduct or less reckless than the British sailor; and he must congratulate Captain Hall on the success which had attended him in his philanthropic exertions of establishing these Homes.

Captain Hall thanked Sir Edward for the interest he had always taken in this movement. As for what he himself had done he felt he had only performed his duty in endeavouring to benefit his brother sailor.

Various presentations of books were then made through the Rev. Mr. Gribble, to the Home—including a Bible from the hon. Mrs. Hall, the lady of the gallant Captain, a Prayer-book from the Dowager Countess of Torrington, the mother of Mrs. Hall; the "Nemesis in China," by Captain Hall, being an account of the late war in that country, in which it will be recollected the gallant Captain took so distinguished a part.

Some other gentlemen having addressed the assembly, they proceeded to partake of the refreshments provided for their entertainment; and the friends of Captain Hall afterwards lunched together in another apartment.

The band of the Royal Marines was present to enliven the proceedings; and the approach to the Home was gaily decorated by the ensigns of the various nations, that of Russia being reversed.

The Opening of the Home has been somewhat expedited, in consequence of Captain Hall having volunteered to serve in the Baltic, with the navigation of which he is intimately acquainted.

THE POPLAR SAILORS' HOME.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

SCHUMLA, January 17.

VERY much against my wishes, I have been obliged to prolong my stay in Constantinople, waiting for the renewal of intercourse between Trebizond and Batoum. But it is, at present, and will be for a month to come, absolutely impracticable by land; and, as it is out of the question to attempt to go by sea, I thought I had better go, in the meanwhile, on the Danube, where there is some hope of enjoying, now and then, a bit of shooting. In pursuance of this, I embarked on board the *Lloyd* steamer for Varna; and I had the good luck to meet with two English officers going with the same object—Major Toombs and Capt Austin (both of the Bengal Horse Artillery), returning from India on their route to England. These gentlemen were provided with letters of introduction to Omer Pacha, from the English Ambassador; and, in their company, independently of the advantage of enjoying their society, I availed myself of many facilities which I could not obtain in ordinary circumstances. But for meeting them, I should have been obliged to stay here or at Rustchuk at the utmost, where nothing could be seen; whilst we are going to Widdin and Kalafat, where the last

PANORAMIC VIEW OF THE TOWN AND FORTIFICATIONS OF SCHUMLA.

engagement took place, the details of which will probably reach you before this letter, in a more complete form than we have heard them here in Schumla.

This trip (supposing the hostilities should not be carried on on a larger scale than hitherto) will last about a month. We intend to pass again through this place (Schumla); the season will be far advanced (the winter nearly over); and, as Omer Pacha led us to expect some serious business, I shall remain at head-quarters, and follow him everywhere. There is certainly a prospect of witnessing some rough work; else I would return to Constantinople, thence to embark for the coast of Asia.

We are without any news since we left Constantinople. We arrived yesterday, after two days' travelling (twelve hours in the saddle) through roads that beat description. We visited to-day the Marshal, to whom we had before (last night) written a letter, begging an audience. He sent us word that he would receive us at eleven o'clock. We went on horseback to his house—a very humble one, much more like a farm-house than a villa. It is situated in a narrow muddy sort of street—two sentry boxes at the open gate. The guard presented arms. We went up-stairs and entered his room, with our travelling boots on, the curtain hanging over the door, according to the Turkish fashion, having been raised by a soldier so very quickly on our having ascended the stairs, that we had no time to conform ourselves to the usual formalities—viz., the taking off of our boots (these boots are large ones, and admit of small boots inside)—the door was open, and the Marshal, who stood inside, advanced to meet us, and invited us to step in at once.

We immediately were asked to take our seat near him on the Divan coffee and pipes were brought in, and conversation began. Omer Pacha speaks Italian fluently, and French tolerably; in fact, well enough to render uncalled for the apologies he prefaces generally his conversations with. Both Major Tombs and Capt. Austin speak French. The Marshal told us that he had received, the day before, the news from Kalafat—the engagement I spoke of just now—said that the loss of the Turks had been about 400 dead and 800 wounded; the Russians 4000; and such hyperbolic figures that I do not like to repeat them. The Marshal addressed us singly in turn. I regretted very much that I had not received the Christmas Number of the ILLUSTRATED LONDON NEWS when I left Constantinople, as it would have been a very acceptable present. Those copies I had with me were so crumpled that I could not think of showing them; and, besides, they wanted interest for him. We talked about the state of the Russian army, which he described as being very inferior to his. I asked him whether he had any French officer in his head-quarter? He answered very quickly, "No, I have no foreigners. *Tous mes officers sont Turcs, et j'en suis tres content*" (All my officers are Turks, and I am very well pleased with them). He took great care to mention the necessity of giving his soldiers full liberty in the action, as to making no prisoners. He repeated several times: "*Que voulez vous? On a provoqué ces gens là—on les a blessés dans ce qu'ils ont de plus cher—leur religion, leur honneur—ils sont indignés—ils tuent. Eux mêmes ne veulent pas de grâce, ils n'en font pas—nous ne pouvons pas les arrêter; c'est malheureux—mais que voulez vous?*" (What would you have? They have provoked these people; they have hurt them in what they hold dearest—their religion, their honour; they are indignant; they give no quarter. They themselves do not wish for mercy, and they show none; we cannot check them, poor wretches; but what would you have?)

He asked us several questions about the fleets, where they were going, if they had gone to Sebastopol or Batoum, and if they were disposed to fight against the Russians? He very sneeringly added: "*Mais qu'est ce donc qu'elles sont venues faire dans le Bosphore? En vérité, je ne comprends pas de tout: de tout! Nous verrons! Nous verrons!*" (But what is it that they have come to do in the Bosphorus? The truth is, I cannot understand it at all. But we shall see; we shall see.) I told him that Lord Palmerston *had given* and *withdrawn* his resignation, and for what motive it was supposed he had done so—the want of energy of the Aberdeen Cabinet in the Oriental Question. I observed him very closely, then, waiting for what impression his face would betray, but he did not seem any more moved about it than if he had no knowledge of Lords Palmerston and Aberdeen. In fact, it appears to me, from many little incidents in our interview, that he looks on himself as the best defender of the Empire. He is evidently reverenced by everybody here (not only in the army, but also by the peasantry, &c.,) not on account of his rank alone, but really for his supernatural genius. The people know that he does everything himself: he is his own Quartermaster-General, his *Chef d'Etat*, Major, &c.; and, as Governor of Roumelia, he is almost worshipped by the Bulgarian peasantry. He is the first (I should say the only) engineer of the Turkish army. The fortifications of Schumla, Varna, &c., and all those along the Danube, have been erected from plans drawn by himself. Every military establishment has been organised by him, or according to his plans. He seems very anxious that it should be known all over the world that he does not want foreign advice. However, a French Colonel has arrived to day, so that some reserve must be made in trusting to his declaration.

We asked leave to visit the fortifications. He immediately clapped his hands twice. A servant entered. He ordered an aide-de-camp to be sent for, and when admitted he told him to show us everything we wished to see.

We asked him what road we were to take which way we ought to turn, in order to be present at the next battle. He smiled, and said: "*Ma foi, je ne sais pas plus que vous, mais si vous allez à Vidin et Kalafat, sans doute il y aura encore quelque chose, et vous verrez comment ils se comporteront nos soldats—vous verrez*" (I know no more than you do what they are about at Widdin or Kalafat. No doubt there will be something done soon, and you will see how our soldiers will behave—you will see). Then we talked about the horses, which are really excellent, but look rather too small for cavalry. In reply to that remark, he said: "*Sur ce chapitre nous sommes bien supérieurs aux Russes, qui n'peuvent pas supporter le choc de notre cavalerie*" (On that point we are much superior to the Russians, who are unable to withstand the shock of our cavalry).

While talking on this subject, he mentioned that he had for his favourite charger an Arabian, twenty-four years old, and that he could not find, in all the empire, a better horse. It had been wounded, and had lost one eye, and yet he would not mount another upon any account. He clapped his hands, and ordered it to be taken out of the stable. he then got up, opened the window, and showed it to us. On our expressing our admiration the animal being really a superb one, and the tallest Arabian horse we ever saw—he expressed

almost infantine delight. We approached him, and conversed most familiarly, standing on our feet as in Europe, to the great amazement of the Turks present, who held their seats in silence. At last, begging to be excused for so ong an intrusion, we took our leave. He accompanied us to the door of the room, which is not a common compliment; he bowed very low, and we made our exit between two lines of *ill-dressed* soldiers (in the vestibule, r open gallery) presenting arms.—*(We shall next week engrave our Artist's Sketch of this interesting visit.)*

Our *valet de place* was in the yard holding our horses. Our servants came to help us to mount them, holding the bridle and stirrups. The aide-de-camp, with two horsemen holding their carabines, were waiting, and we came out of the gate, sentries presenting arms, &c.

We visited the barracks—which are rather large, containing 4000 men—cavalry and foot. I shall say more about these on a future occasion. We then went to a fortress, about a mile and a half from town, a View of which I enclose. *(This Illustration will be engraved next week.)*

Next we ascended the mountain, on which is erected the fortress that commands the surrounding valleys; then the hospital, which is the general dépôt, and central establishment of the army of Roumelia. We visited every department of these establishments; but I have no time to give a description of them at present; I shall only remark that they are not *so much inferior* to establishments of the same kind in Europe, and infinitely superior to what we had a right to expect from the general state of the civilisation of the country.

We live in one of the richest houses of the town; and we should desire very much to be treated as well as the soldiers are *in the hospital*—as regards bedding and cleanliness. The medical officers are *all* French and Italian.

After a ride of five hours, night coming on rapidly, we re-entered the town through the muddy roads; and, after having, in our turn, offered the coffee and pipe in our rooms, to our Turkish cicerone, the aide-de-camp, we dismissed him with many thanks, "Selam Alekums," and a *baksheesh of a sovereign*, very adroitly slipped into his hand, and accepted very humbly. The two cavaliers of the escort had a proportionate share of our generosity, viz., ten plasters each. We were delighted with our visit and promenade. We enjoyed very much a very bad dinner, smoked a pipe, and then employed ourselves in writing and sketching.

To-morrow, or rather this morning (it is past twelve) we set off at half-past seven for Rustchuk—three days—ten or twelve hours in the saddle. It freezes rather hard. The roads, if such they be called, are horrible; and no certainty of having a house or a supper when we arrive at the end of the journey; so that it is no joke, after all.

I will write from Rustchuk. This will be sent to Omer Pacha with a parcel of letters that we request him to send (through his courier) to Constantinople.

We are sadly victimised by the money-changers. The pound sterling is worth 135 plasters in paper in Constantinople. H. gives me only 28 when he pays me; he then gives me Turkish gold pieces, at the rate of 120 each, and these here, in Roumelia, we cannot pass for more than 100, so that I lose altogether 25 per cent. You have no idea of the financial estate of this country. The paper money is of no value out of Constantinople.

The accompanying Panoramic View of the Town and Fortifications of Schumla is from a Sketch taken by Capt. G. Rhodes, her Majesty's 94th Regiment, and obligingly forwarded from Tortokan, on the Danube. The Portrait of the Governor of Schumla is from a Sketch by another Correspondent.

CHESS.

TO CORRESPONDENTS.

E. T. W., Ipswich. It is an ordinary three-mover, marked with one of the many syllable notations that were used to facilitate the record up or playing over games.

J. L., Devizes. Yes to a very clever stratagem. Is it original and unpublished?

A CANDIDATE.—The St. George's Club—in its new abode, and under its present active and energetic management—is certainly increasing in numbers and importance, but there is ever prospect of its being enlarged, or long to retain its accommodation by adding more rooms to insure a ready reception. The newly-nominated President is the gentleman who Vice-President to Viscount Cremorne—viz., R. M. Arbuthnot, Esq., M.P.

H. W. of Wakefield.—Hard p zzles enough, though clever, for a stage.

F. S. A.—The story in Scottish—three days ago—is the original "Costa Romana rum. Let us a collection of tales, supposed to have been written by an English monk, in imitation of that celebrated work. It is related of "Antony, Emperor of Rome."

J. R., of Hebron.—The solutions were correct, but it is quite useless to send solutions after our own have appeared.

TURNBULGENSIS should procure some Chess Primer, he has not yet mastered the more A B C of the game.

CHARITY, Manchester.—Rather neat, but too easy

CHARLEMAGNE. The same observation applies to your Problem. Try again.

VIVE LA BAGATELLE. What kind of book is that? A rudimentary treatise suited for a beginner, or a scientific work adapted for a proficient?

J. S., Newport.—We know of no rule positively applicable to the case you mention; but we think Black, *if he chose to be excessively strict*, might insist on his adversary moving the King.

A. K. They shall be examined and reported shortly.

F. E. of B. It shall have attention.

W. F. L., Penzance.—Our opinion of its merits shall be given next week.

W. H. J., Cowes.—Correct, as you will see by our Solution.

A MATED CHESS PLAYER.—A player advancing a Pawn to his eighth square may claim, for such Pawn, a second Queen or third Rook, or any piece he pleases to have, without respect to the fact of his having already on the board.

SOLUTIONS OF PROBLEM No 521, by Argus, True Blue, M. P., Durham, Jack of Worcester, Ernest, Admiral, Old Norna, T. T. of Hunworth Dereham, J. F., F. K. of S., J. S. of Montrose, F. S. A., Rocky Boy, Delta, Phiz, Peter, are correct.

SOLUTIONS OF ENIGMAS, by Sigma, O. P. F., R. S., M. P., Omicron, D. D., Jack of Worcester, Dereham, Argent, Philo, S., Mungo, Orestes, are correct. All others are wrong.

PROBLEM No. 523

This very clever stratagem is the invention of MR. GRIMSHAW.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

A great scarcity of money-stock having been experienced during the w'ole of the week, the prices of Consols have been fairly supported. Of course, numerous rather extensive fluctuations have taken place in the quotations, arising from the great activity apparent both here and in France, to check the preten ions of Russia in the East, but up to the present time the operations of the *Bears* have not been very successful. In the event of a protracted war, however, prices must of necessity further decline; because it is obvious that a new Loan will become absolutely necessary. The leading figure for the Three per Cents has been 91, Exchequer Bills, in which large investments have been made for temporary purposes, have steadily advanced up to 22s. premium. This is the highest figure touched for many months past.

On Monday, the Three per Cents Reduced were marked 91¾ to 91⅞; the Three per Cent Consols fluctuated between 90⅝ to 91¼, and the New Three-and-a-Quarter per Cents, 92¾ to 93. India Bonds were 84; and Exchequer Bills, 19s. to 22s premium. Long Annuities sold at 8 5-16. The Market, on Tuesday, was inactive. The Three per Cent Reduced marked 91⅛ ⅜; the Three per Cent Consols, 90⅝ to 91; and the New Three-and-a-Quarter per Cents, 92¾ to 92⅝. Long Annuities were 8⅜. India Stock sold at 223 to 226. India Bonds, 78.; Exchequer Bills, 19s. to 22s premium. On Wednesday, prices were rather on the advance—the Three per Cents having advanced to 91⅜. The Three per Cents Reduced were 91⅛ ⅜; and the New Three-and-a Quarter per Cents 92⅝ to 93. The New Five per Cents sold at 101⅝. South Sea Annuities were 104. Exchequer Bills, 18s. to 22s premium. On Thursday, the Three per Cent Consols were firm, at 91⅛ ⅜ to 91⅜ for Money, and 91⅜ ½ for the next Account. Exchequer Bills were steady, at 20s premium.

A return has been printed of the result of the last Act for paying off the South-sea Stocks. It shows that £1,129,190 4s. 2d. Consols, £430,736 18s. 7d. Reduced, and £168,800 Exchequer Bills, were voluntarily exchanged for other Securities. The new Securities created are £258 811 4s 1d. Three-and-a-Half per Cents; £2,911,870 16s. 1d. Two-and-a-Half per Cents; and £412,300 Exchequer Bonds.

The Foreign House has been in a depressed state, and prices almost generally have given way. Austrian Five per Cents have been done as low as 78¾. Brazilian Six per Cents, 102¾; Granada Onsand-a-Half per Cents, Deferred, 8¼; Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 67; Portuguese Four per Cents, 38; Russian Five per Cents, 100; Ditto Four-and-a-Half per Cents, 86¼; Spanish Three per Cents, New Deferred, 18¾; Dutch Two-and-a-Half per Cents, 63¾; Ditto Four per Cents, 88. At a meeting of the Venezuelan Bondholders, it was announced that, with the funds in hand, it was proposed to pay the October dividend of 1851, subject to a deduction of 2s 6d. on every £100 Stock.

The imports of bullion the week, have been under £100,000. The shipments to the Continent have exceeded £200,000, and to the East, £170,000 has been forwarded. It is asserted, on good authority, that the new French Loan of 250,000,000, 3 per cent, will come out at 66f. 10c.

Miscellaneous Securities have been in a depressed state, and prices have marked it. East London, 131 ex div.; Grand Junction, 74 ex div.; Grand Junction, New, 12¾ Ditto Bonds, 80 ex div. Southwark and Vauxhall, 93 to 92. County Insurance have sold at 2¾ to 3. Australian Agricultural has fallen to 41¾. Australian Pacific Mail Steam Company, 11; Canada 76; General Screw Steam Shipping Company, 18¾; General Steam Navigation, 27; Peninsular and Oriental Steam Company, 82; Royal Mail, 47½ ex div.

Joint-Stock Bank Shares have met a dull market. In prices, however, no material change has taken place. Australasia, 77; Chartered Bank of Asia, 3; Commercial of London, 22¾ ex div.; London Joint-Stock, and Australian Char ered, 7; London Chartered Bank of Australia, 14½; London and Westminster, 24; South Australian, 40; Union of Australia 67¾

Although the various half-yearly meetings have been rather dull, the market for Railway Shares has ruled du l, yet no material depression has taken place in the quotations. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 95; Caledonian, 95; Chester and Holyhead, 14; Eastern Counties, 13¾; East Lancashire, 88; Great Northern, 94; Ditto, A Stock, 87; Ditto, B Stock, 111¾; Great Western, 84¾; Hull, Barnsley, and Yorkshire, 67¾; Lancaster and Carlisle Northern, 125; London and Blackwall, 8¾; London, Tilbury, and Southend, 8¾; London and Brighton, 97; London and North-Western, 104¾; London and South-Western 81; Manchester, Sheffield, and Lincolnshire, 23; Midland, 63¾; Newport, Abergavenny, and Hereford, 14; North Staffordshire, 11¾; Scottish Midland, 86; South Devon, 15¾; South-Eastern, 67¾; South Wales, 84; South Yorkshire and River Dun, 12; Vale of Neath, 13¾; York, Newcastle, and Berwick, 70½; Ditto, G.N.R. Purchase, 9; York and North Midland, 49¾.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 11¾ Hull and Selby, 120 ex div.; Ditto, Half Shares, 52¾ ex div.; London and Greenwich, 34; Wear Valley, 80 ex div.

PREFERENCE SHARES.—Aberdeen 82, Caledonian, 106¾; Chester and Holyhead, 7¾; Great Northern Five per Cent, 110; Ditto, Red eemable, 1 r Cent, 1 ; Ditto, Four-and-a-Half per Cent, 1 ; Lancaster and Yorkshire Six per Cent Stock, 137; Co-solidated District and Birmingham Six per Cent, 137; Ditto Four per Cent, 105¾; Oxford, Worcester, and Wolverhampton, 103.

FOREIGN.—East Indian, 92¾; Great Indian Peninsular, 58; Grand Trunk of Canada, 2¾; Great Western of Canada, 21¾; Luxembourg, 6¾; Ditto, Railway, 4¾; Madras, 10¾; Northern of France, 29¾; Norwegian Trunk Preference, 8¾; Paris and Lyons, 92¾; Paris and Strasbourg, 2¾.

In Mining Shares very few transactions have been recorded. On Thursday Agua Frias were 2¾; St. John del Rey, 29¾; English and Australian Copper Smelting Company, 2¾; Quartz Rock, 1¾; Rhymney Iron, 29¾; Weller, ¾.

Friday Evening.

The business doing in the Consol Market to-day has been very moderate. Prices, however, have not given way from the previous rates. The Three per Cents Reduced have been 91⅛ ⅜; the Three per Cent. Money, 91⅛ ⅜; Ditto, for the Account, 91⅜ ½; and the New Three-and-a-Quarter per Cents, 92⅝. India Stock, 226. Exchequer Bills, 18s. to 21s. premium. Foreign Bonds and Railway Shares have ruled steady.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up-to-day the arrivals of English wheat, coastwise and by land carriage, were on a very moderate scale. The show of samples was small, and the attendance of buyers by no means numerous. On the whole, a steady business was transacted in wheat of home production, fully equal to those obtained on Monday. The imports of foreign wheat have amounted to nearly 13,000 quarters. All descriptions moved off steadily, and, in some instances, the quotations were the turn in favour of sellers. Fresh cargoes were quite as dear as on Monday. We were reasonably well supplied with barley, for which article the demand was by no means extensive. There was rather more inquiry for malt, at the late decline. About an average business was done in oats, at full prices. Beans, peas, and flour sold and former to me. Imports of the week large.

ARRIVALS.—English, wheat, 1860; barley, 4140; malt, 6040; oats, 850; flour, 1870. Irish, wheat, 3270; barley, 2400; oats, 6400; flour, 2270. Foreign, wheat, 12,770; barley, 5 0; oats, 6 0; flour, 2270 barrels.

ENGLISH.—Wheat, Essex and Kent, red, 47s. to 54s; ditto, white, 51s to 56s; grinding barley, 35s. to 36s; Suffolk, red, 48s. to 50s; ditto, white, —s to —s; rye, 36s. to 38s; grinding barley, 35s. to 36s; brewers ditto, 36s. to 37s; malting ditto, 38s. to 40s; Lincoln and Yorkshire, 44s. to 46s; Kingston and Ware 48s to 52s; Chevalier, 52s. to 56s; Yorkshire and Lincolnshire fed oats, 21s. to 23s; grey ditto, 23s to 25s; Youghal and Cork, black, 22s to 23s; ditto, white, 23s to 25s; dark beans, new, 44s. to 45s; ditto, old, —s. to —s; grey peas, 44s. to 45s; maple, 47s to 48s; white, 46s. to 48s; boilers, 46s to quarter. Town-made flour, 70s. to 75s; Suffolk, 58s to 60s; Stockton and Yorkshire, 60s to 65s. per 280 lb. *Foreign.*—Wheat,—s. to —s. per 280 lbs; American flour,—s. to —s. per barrel.

Seeds.—The market for clover seed is steady, and prices are well supported. Spring tares and linseed command extreme rates. In other articles very little is doing.

Linseed English, sowing, 56s to 58s; Baltic crushing, 48s to 50s; Mediterranean and Odessa, 52s to 56s; hempseed, 42s to 44s, per quarter. Coriander 17s to 19s per cwt. Brown mustard-seed, 12s to 14s; white ditto, 12s, to 16s., and tares, 7s. to 9s. per bushel. English rapeseed, £20 to £20 per last of ten quarters. Linseed cakes, £ar 5s. £10 5s. to £11 5s.; ditto, foreign, £10 to £11 10s. per ton. Rapeseed cakes, £6 10s. to £7 per ton. Canary, 54s. to 60s. per quarter. English clover-seed, white, 64s. to 70s.; ditto, red, 56s. to 63s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11½d.; of household ditto, 9d. to 10d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 80s. 1d.; barley, 36s. 11d.; oats, 27s. 5d.; rye, 40s. 1d.; beans, 42s. 1d.; peas, 51s 7d.

The Six Weeks' Average.—Wheat, 81s. 7d., barley, 41s. 10d.; oats, 27s. 1d.; rye, 40s. 6d.; beans, 42s. 1d.; peas, 51s. 7d.

Dutch.—Wheat, 8s. 1s.; barley, 5s.; oats, 5s; rye, 5s.; beans, 5s.; peas, 5s.

Tea.—The public sales held this week have gone off slowly, on former terms. Privately, this day and to-morrow, a good consumptive demand appears to be setting in at full prices.

Sugar.—Our market has a firm appearance. Prices are well supported in every instance. Jan sales have sold at 32s. to 32s. 6d., Demerara, 33s. to 37s. 6d., and Madras 30s. to 31 s 6d. per cwt. Foreign sugars, also, command very little alteration. Crushed sugars former terms. Refined goods are steady. Brown lumps, 44s. 6d. to 45s.; and low to fine grocery, 45s. 6d to 48s 6d per cwt.

Coffee.—The trade is inactive for immediate wants only. Good ord. native is quoted at 48s per cwt.

Rice.—The article is firm, and quite as dear as last week; but the business doing in it is by no means extensive

Provisions.—The demand for Irish butter is very inactive, at drooping prices. Foreign butter moves off slowly, at a decline of from 2s to 4s per cwt. English is 2s cheaper. The arrivals of bacon be g large, the demand is heavy at 2s. per cwt. less money. Lard is offering at 4s to 5s. beneath last week's currency. In other articles very little is d ing.

Tallow.—Our market is firm at 42s to 42s. 6d. for P. Y. C on the spot, and 43s. 6d. for fore-and delivery. Town tallow, 41s. net cash; rough fat, 2s 4½d per 8 lb.

Oils.—Linseed, on the spot, is quoted at 32s. 9d per cwt. Rape is offering on lower terms. Stores and fish oils remain nearly the same. Turpentine is dearer. Spirits, 43 18s. in puncheons, 43 17s 6 to 44 per cwt.

Seeds.—Current contracts of upwards of 100,000 gallons of rum have been taken, within a fraction of 5s 11d. proof. The demand for that article is firm, at extreme rates. Wood Leewards, 5s. 3d to 5s. 11d., East India, 5s 3d to 5s 9d. Brandy is in good request, at extreme prices. Geneva and sorts quite steady at full prices.

Hay and Straw.—Meadow hay, 3 0s. to 5 5s.; clover ditto, 4 4s. to 6 6s.; and straw, 1 17s. 6d. to 2 2s per load

Potatoes. The supplies being large, the demand is inactive, as follows—York Regents, 120s. to 130s.; Scotch ditto, 110s. to 120s.; Irish Vigil, 90s. to 105s. per ton.

Hops. Friday). The business doing in our market is very limited. Two large supplies of foreign have been offered, but we have no change to notice in prices. In pkts very little was doing. Mitch cows and heavy, at from £14 to £15 each, including fatted small calf.

Veals.—Since the offals closure and increased supplies, 3s. 4d. to 4s. 6d.; second quality ditto, 3s. 8d. to 4s 10d.; prime large ones, 4s. 8d to 4s 10d.; prime Scots, 4s. 4d to 4s 8d.; coarse and middling sorts, 3s. 2d to 3s. 6d.; prime small ditto, 4s. 4d to 4s. 8d.; prime coarse ditto, 4s. 0d. to 4s. 4d.; and inferior ditto, 3s. 6d. to 3s. 10d per 8lbs. sinks.

Pork.—Since last week's decline, the demand has been heavy, at 3s. 4d. to 4s. 4d.; large hogs, 3s. 0d. to 3s. 4d.; small porkers, 4s. 4d. to 4s. 10d; sucking calves, 22s to 28s; and coarse old store pigs, 21s. to 26s each. Total supplies Beasts, 1949; sheep, 13,360; calves, 232; pigs, 305. *Foreign:* Beasts, 61; sheep, 1000; calves, 15; pigs, 1000.

Smithfield and Londenhall (Friday).—Such kind of meat was in fair request as follows:—Inferior beef, 3s. 2d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 4d. to 4s. 8d.; inferior mutton, 3s. 2s. 8d.; middling ditto, 3s. 10d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 8d.; veal, 3s. 10d. to 5s. 0d.; small pork, 4s. 4d. to 5s. 0d. ROBERT HERBERT.

N.B.—Mr. Richardson continues to give Lessons at the above address.

PIANOFORTES for INDIA and the COLO-NIES.—THE ROYAL PIANOFORTE, prepared expressly to resist the effects of tropical climates, in mahogany or rosewood, securely packed in tinned cases, and delivered at the P. and O. Wharf, 30 Guineas each.—D'ALMAINE and Co., 20, Soho-square. Estab lished 1785.

CONCERTINAS.—Messrs. KEITH, PROWSE, and CO.'S 48, Cheapside, have always on SALE every variety of the Concertina Instrument, the same as used by Regondi, Case, Wells, and Sharrock. New 48-keyed, at six, eight, and ten guineas. Also their New Model Concertina, made expressly for drawing-room use and which, for purity and delicacy of tone, stands unrivalled twelve guineas.

HARMONIUMS at TOLKIEN'S, 27 and 28 A, Poland-street, near Oxford-street. A large variety in Oak, Mahogany, and Rosewood cases, with 1, 3, 5, 8, and 12 Stops, by the celebrated Alexandre of Paris which he is enabled to offer at very moderate prices An excellent instrument for £10 10s.

PIANOFORTES, 25 and 27 Guineas each.— D'ALMAINE and CO., 20, Soho-square (established 1785), by the suppression of long credit, are enabled to reduce their charges for first-class instruments in the above cases, viz., the Royal Pianofortes, compass 61 octaves, in rosewood and mahogany cases, 25 guineas; or, with Cylinder Full Organ, 27 guineas, net cash. The Pianofortes of D'Almaine and Co., though cheaper than the productions of makers devoid of reputation, are equal in quality, tone, workmanship, material, and durability, to those of any manufacturer in the kingdom. And every instrument leaves their establishment, whether of the cheapest or most expensive description is warranted
D'Almaine and Co., 20, Soho-square. Lists and Designs gratis.

HARMONIUMS at CHAPPELL'S, 50, New-Bond-street.—The HARMONIUM by ALEXANDRE, of Paris, is the only true organ-toned instrument that requires perfectly in tune; and, from the simplicity of its construction, is but slightly affected by any change of weather, and is also admirably adapted for the Church, Chapel, School, or Drawing-room.
The following are the varieties now in stock:—
No. 1. In oak case, with expressal stop, price 10 guineas
No. 2. In mahogany case, with expression stop, 15 gs.
No. 3 In oak case, with three stops, 15 gs.
No. 4. In oak case, with five stops, 22 gs.; to rosewood, 23 gs
No. 5. In oak or rosewood case, with eight stops, 25 gs
No. 6. In oak or rosewood case, with twelve stops, 35 gs.
No. 7. In mahogany or rosewood case, with the patent percussion action, and one stop, 18 gs
No. 8. In oak case, with percussion and twelve stops, 40 gs.
No. 9. Ditto, in elegant rosewood case, 45 gs
No. 10 The New Patent Model, with expression à la Main. The most perfect Harmonium that can be made; 15 stops, elegant rosewood case, 60 gs.
Full descriptive Lists sent on application. 50, N w Bond-street.

CHAPEST MUSIC REPOSITORY in ENGLAND.—Music, of every description, at one-sixth, one-fourth, and one-third of the published prices. New and fashionable music half-price. Old music taken in exchange for new. A Professor attends to try music from Two to Five.—H. D'ALCORN, 32, Rathbone-place, Oxford-street.

NEW MUSIC, &c.

D'ALBERT'S SULTAN'S POLKA, splen-didly Illustrated. Solo or Duet, 3s.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S WAR GALOP. Solo or Duet, 3s 6d.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S CONSTANTINOPLE QUA-DRILLE, with a magnificent View of that City, 4s.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S BO-PEEP QUADRILLE, on Nursery Rhymes, 3s.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S NEW LANCERS' QUA-DRILLE, with the Figures and New Music, splendidly Illustrated, 3s.
CHAPPELL, 50, New Bond-street.

THE ANONYMOUS POLKA, as played by special command at Windsor Castle by the Band of the First Life Guards. Another edition of this elegant Polka is now ready, price 3s., postage free.
HAMMOND, 9, New Bond-street.

THE ROCHESTER POLKA, by CALLCOTT, with (ad lib.) Cornet accompaniment, elegantly illustrated, Postage free, 2s. 6d. The melody of this polka is extremely pleasing, and the tune for dancing or executing is very well marked Band Parts, 1s.
HAMMOND, 9, New Bond-street.

LA REINE DE MAI: Valse de Concert. By BRINLEY RICHARDS
"The last composition by this favourite composer, and in elegance and beauty of melody unsurpassed by any of his previous works."—Musical Review. Price 2s., postage free.
HAMMOND, 9, New Bond-street, opposite the Clarendon Hotel.

MAY LILIES. By LINDSAY SLOPER. Price 2s. A charming Pianoforte piece, intended as a companion to "Water Sprays," by the same composer. A Third Edition of "Water Sprays" is ready.
CHAPPELL, 50, New Bond-street.

LA VALSE des DÆMONS. By BRINLEY RICHARDS. A most brilliant arrangement for the Pianoforte of the celebrated Valse "Robert le Diable." Price 3s.
CHAPPELL, 50, New Bond-street.

THE ELECTRIC GALOP. By GOLLMICK. —A Second Edition of this celebrated Galop is just published. For the Pianoforte, 2s. 6d.; and Orchestra, 6s.
BOOSEY and SONS, 28 Holles street.

THE CLOSE of the BALL GALOP. By MONTGOMERY. Price 2s 6d "The sparkling character of this, the popular dance of the season, renders it equally brilliant as a pianoforte composition, or for the music of the dance."—Review. Sold by all music and booksellers. Conductors of balls, &c., can obtain orchestral parts by application to D'Almaine and Co., 20, Soho-square.

JULLIEN'S ALBUM.—Just published, JULLIEN'S ALBUM for 1854. It contains six beautiful Illustrations by BRANDARD, printed in colours, vocal and instrumental. By the most popular writers of the day. Price, in illuminated covers, 14s.; French enamel, 21s.; gilt, 31s. JULLIEN and Co., 214, Regent-street.

JULLIEN and CO.'S MUSICAL PRESEN-TATION and CIRCULATING LIBRARY combined. Subscribers to this Library can select their music from upwards of 200,000 separate pieces, and from 5,000 volumes of books. Terms (if subscription, three guineas per annum. The principal feature which distinguishes this Library from all others is, that the subscribers, besides being liberally supplied on loan during the year with all standard and new vocal and instrumental compositions, are also presented with three guineas' worth of music every year gratis, which may be selected by the subscriber during the term of subscription. Prospectuses forwarded (free) on application to JULLIEN and Co., 214, Regent-street.

JULLIEN'S CADEAU, for 1854, price 5s.— This elegant musical present is now published, and contains a set of Quadrilles, a Waltz, and two Polkas, the latest compositions of Jullien, Koenig, and H. C. Jullien, and a new Illustration in gold and colours by Brandard, beautifully printed on full music size paper, 5s. gilded, and 6s. elegantly embossed cover. Postage free.—JULLIEN and Co., 214, Regent street.

THE MODERN PIANOFORTE TUTOR is by THOMAS BAKER, and Published under the immediate Patronage of her Majesty the QUEEN and Co., London. Price 4s.

JULLIEN'S ETRENNES for 1854.—Jullien and Co. have much pleasure in announcing their collection of MUSICAL ALBUMS, ANNUALS, BIJOUX, ORDEONS, and all musical publications suited for Christmas and New Year's Gifts, the whole of which are arranged for inspection similar to the Exposition du Jour du Nan, à Paris. The great advantage of this exposition is, that purchasers can select the music from the works published in London and Paris, and after comparing the merits of each, secure a more satisfactory selection than can always be obtained
JULLIEN and Co., 214, Regent-street.

MUSIC.—CATALOGUES of the MUSICAL PUBLICATIONS of the firm of ROBERT COCKS and CO., reduced from sixpence to THREEPENCE each. 300,000 pieces in every department of the art, may be had (gratis and postage free) upon application, which must specify the class of music required. Also, Lists of Pianofortes, Harmoniums (a great variety), and other Musical Instruments. Prices very moderate. Also, Specimen Pages of Note Standard Octavo Editions of the Overtures, &c. &c.
London, ROBERT COCKS and Co., New Burlington-street, Publishers to the Queen; and of all Publishers

DIATONIC FLUTE.—By Royal Letters Patent. Full particulars, with Testimonials of Professors, including Mr. Richardson, Flautist to her Majesty, forwarded free. Manufactory, 13b, Fleet street. A. SICCAMA, Patentee.
N.B.—Mr. Richardson continues to give Lessons at the above address.

PIANOFORTES for INDIA and the COLO-NIES.—THE ROYAL PIANOFORTE, prepared expressly to resist the effects of tropical climates, in mahogany or rosewood, securely packed in tinned cases, and delivered at the P. and O. Wharf, 30 Guineas each.—D'Almaine and Co., 20, Soho-square. Estab lished 1785.

CONCERTINAS.—Messrs. KEITH, PROWSE, and CO.'S 48, Cheapside, have always on SALE every variety of the Concertina Instrument, the same as used by Regondi, Case, Wells, and Sharrock. New 48-keyed, at six, eight, and ten guineas. Also their New Model Concertina, made expressly for drawing-room use and which, for purity and delicacy of tone, stands unrivalled twelve guineas.

HARMONIUMS at TOLKIEN'S, 27 and 28 A, Poland-street, near Oxford-street. A large variety in Oak, Mahogany, and Rosewood cases, with 1, 3, 5, 8, and 12 Stops, by the celebrated Alexandre of Paris which he is enabled to offer at very moderate prices An excellent instrument for £10 10s.

PIANOFORTES, 25 and 27 Guineas each.— D'ALMAINE and CO., 20, Soho-square (established 1785), by the suppression of long credit, are enabled to reduce their charges for first-class instruments in the above cases, viz., the Royal Pianofortes, compass 61 octaves, in rosewood and mahogany cases, 25 guineas; or, with Cylinder Full Organ, 27 guineas, net cash. ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, FEBRUARY 25, 1854. [GRATIS.

PRINCE JEROME BONAPARTE.

JEROME BONAPARTE, the youngest child of Charles and Letitia Bonaparte, and the youngest brother of the Emperor Napoleon I., was born in the year 1784, we believe at Montpellier. To this place his father and mother had proceeded in consequence of the illness of the former, which terminated in his death in the following year. The first training was imparted to him by his mother, with whom he passed through some of the stormy scenes which in Corsica followed the first French Revolution. When his brother first began to attain distinction, and was able to make provision for him, he was placed, with his sister Caroline, at the establishment of Madame Campan, in Paris. Here he remained till the return of Napoleon from his first campaign in Italy. He was then transferred to the College of Juilly; and, on his brother being elevated to the First Consulship, he was designed for the naval profession, which he entered in his fifteenth year. Napoleon had hoped that his brother would become distinguished as a naval commander, and strove to excite in him the necessary emulation. In 1801, when he was in his 17th year, he was appointed to the command of the corvette *l'Epervier*, and he sailed in the expedition to St. Domingo, which was under the command of General Le Clerc, the husband of his sister Pauline. He had sufficiently distinguished himself to be entitled to bring home the despatches, and received his full meed of adulation from the French people, who anticipated for him much glory. Some escapades of his on shore at Brest, and a letter of his to Bourrienne, detailing them, led to his receiving a rebuke from his brother, quite characteristic of Napoleon. "I have seen your letter, M. l'Enseigne de Vaisseau," wrote the First Consul, "and am waiting with impatience to hear that you are on board your ship study. . . a profession intended to be the scene of your glory. If you ever intend to disgrace your name, die young; for, if you live to sixty, without having served your country, you had better not have been born." The hint produced the desired effect. Young Jerome sailed soon after for Martinique, where lived Madame de la Pagerie, the mother of Josephine. Soon after, when the war broke out between France and England, Jerome sought in vain occasions to fulfil the injunctions of his brother, and, after a cruise of several months on the southern coast of America, he put into New York. Here he was, of course, a "lion." He visited Philadelphia and Baltimore—in which latter city an event occurred that tinged his future life. He married, on the 24th Dec., 1803, Miss Elizabeth Patterson, the daughter of a merchant of Baltimore, descended from a Scotch family settled in the north of Ireland.

With this marriage Jerome's troubles began. Although the lady was beautiful, accomplished, and in every way worthy the hand of a young man in Jerome's then position, the ambition of Napoleon had already marked out for himself a career which, in his eyes, was incompatible with such an alliance by his brother. After a year spent in the United States, Jerome was compelled to return to Europe, and to brave the anger of his brother. In May, 1805, Jerome and his wife arrived at Lisbon, in the American ship *Erin*. Jerome left for Paris, and Madame went on in the ship to Amsterdam. On arriving in the Texel, she found that an order had reached forbidding her to land; and she accordingly came to England, where she resided at Camberwell. On the 7th of July her son, Jerome Napoleon Bonaparte, now a citizen of Baltimore, and an officer in the United States army, was born; but the Emperor Napoleon would not recognise the marriage, nor was Madame Jerome Bonaparte permitted to come to France. In the March previously the marriage had been, by a special decree of the Council of State, declared null and void. The next step of the Emperor (as that decree could only relate to the civil ceremony) was to apply to the Pope for a bull annulling the marriage. The following is given in a book, entitled "The Napoleon Dynasty," written by the "Berkeley Men," and published by Cornish and Co., of New York, as the letter addressed by the Emperor to the Pope on the occasion.—"I have frequently spoken to your Holiness, of a young brother nineteen years of age, whom I sent in a frigate to America; and who, after a sojourn of a month, although a minor, married a Protestant—a daughter of a merchant of the United States. He has just returned. He is fully conscious of his fault. I have sent back to America Miss Patterson, who calls herself his wife. By our laws, the marriage is null. A Spanish priest so far forgot his duties as to pronounce the benediction. I desire from your Holiness a Bull, annulling the marriage. . . . It is important for France, that there should not be a Protestant young woman so near my person. It is dangerous that a minor, and a distinguished youth, should be exposed to such seduction against the civil laws and all sorts of propriety." The affair was not so easy as the Emperor supposed. The Pope found that the power did not rest with him to annul the marriage, and he wrote a long explanatory letter to Napoleon announcing the reasons.

Meanwhile Jerome, who was passionately attached to his wife, resolved to temporise, rather than further to provoke his brother. He went on a mission to Algiers, from whence he returned with 250 Genoese captives, whom he landed at Genoa, being rewarded by the inhabitants with a brilliant reception, and a triumphal arch, inscribed "To the young Napoleon of the Sea!" We next find him in command of the *Veteran*, a line-of-battle ship, in which he accomplished an eight months' cruise in the West Indies. On his return thence he took six English merchantmen; but, being pursued by an English fleet, in the effort to escape, the vessel was stranded off the coast of Brittany. On reaching Paris, Jerome received the cordon of the Legion of Honour was

PRINCE JEROME BONAPARTE.

promoted to the rank of Admiral, and created a Prince of the Empire. Notwithstanding the success of his début on the sea, however, his predilection was for the army, and shortly afterwards he obtained the command of a body of Bavarian and Wirtemburg troops. He directed the blockade of Glogau, and reduced the fortresses of Silesia; for which services he was made a General of Division in the imperial Army.

Whatever may have been the secret wishes of his heart, Jerome was either forced, or tempted by the Emperor, into the alliance with the Princess Frederica Caroline daughter of the King of Wirtemburg. By this alliance, which was solemnized on the 12th Aug., Napoleon's ambitious desire was gratified, for the proclamation of Jerome, as King of Westphalia, followed immediately upon the marriage. On the 15th of Dec., the constitution of the new kingdom was published, and on the 21st the new Monarch entered his capital in regal state. The demeanour of the young King (he was then exactly two-and twenty) was made the subject of much criticism. It was complained that he brought to the throne the habits and the manners of a school-boy, and that the kingly dignity was set at nought. These strictures came from hostile writers only. By the general body of his subjects he was beloved, and in his administration of affairs his address and skill startled the world in the same way, although not in the same degree, as has the talent of the present Emperor of the French. Finding, on his accession, an empty exchequer, and an exhausted revenue, he had recourse to the Jews for loan. He repaid their assistance by the concession of perfect religious freedom; and, in the course of a short time, the Council of State was almost monopolized by Jews. It is recorded that, in his answer to the Jewish deputation, asking for the removal of their disabilities, he marked his sense of the injustice of proscription in these words:—"No law ought to interfere with the exercise of the religious worship of any man. Every object ought to be as free to observe the rules of his faith as the King himself. It is the duty of the citizen only that the laws of the Government ought to regulate. I hope I shall never have cause to regret that I favour and protect the Israelites of my kingdom." These sentiments—as liberal as they were just—were denounced by the opponents of Jewish Emancipation all over Europe. They have not obtained a full recognition in our own country yet, after a lapse of nearly fifty years of social progress and civilization.

When the empire of Napoleon came to an end, with it closed the reign of Jerome, King of Westphalia. This Prince had succeeded, however, in leaving behind him traces of good government which successfully resisted detraction. He developed the resources of his kingdom, and was ever in the van of progress and material improvement. When Napoleon's reverses began, his brother Jerome was summoned to assist him. After sharing in the vicissitudes of defeat at the hands of the Allies, Jerome sought refuge with his wife at Trieste and at Paris. In the crowning battle of Waterloo Jerome played a conspicuous part, being chosen by Napoleon to open the battle at the head of 6000 men.

Between the period of these eventful scenes of his early life and his nomination to the Presidentship of the French Senate, under the present Emperor of the French, Jerome lived in retirement. He has resided at the Castle of Ellwangen, in Wirtemburg, at Vienna, and Trieste, occasionally visiting Rome and Florence. His other members of his family. Three children were the issue of his marriage with the Princess of Wirtemburg—Jerome Napoleon, born in 1814; Matilda, born in 1819; and Napoleon, born in 1822. His only son by the amiable and accomplished Elizabeth Patterson married a lady of fortune in America. He is a man of estimable character and literary tastes; and his son, Napoleon Jerome Bonaparte, now holding a commission in the United States Army, has given evidence of high qualifications for the military life.

THE ARTIFICIAL PROPAGATION OF SALMON AND OTHER FISH

The Messrs. Ashworth are a Quaker family, wealthy manufacturers in Lancashire. They have purchased an Irish estate under the Encumbered Estates Act, for the purpose of trying to improve the condition of the people; and, among other means, have turned their attention to the experiments recently and successfully made in Paris, for artificially breeding salmon and other fish. They have been enabled to at once the streams of the district in which their estate is situated, with an unlimited number of thriving salmon fry, and they now publish the result of their experience, and a translation from French treatises on the same subject, for the benefit of all those who have rivers, lakes, or ponds, suitable for breeding any kinds of fish.

The following extract from a report on the experiments made by Messrs. Ashworth, at Outrard, "a fishery extending from Lough Corrib to the sea," explains the whole process, with the assistance of the lithography attached to the pamphlet:—

Robert Ramsbottom, from Otterbourne, was sent over by Messrs. Ashworth. The plan tried was by spawn boxes, prepared, and by an artificial rill-bed, running parallel, and both were equally successful. On the 16th December, 1852, a small but efficient rill was prepared for the experiment; by a rude check thrown across a foot of water-head we carried over a few square yards, to ensure regularity in the supply. From this head, that is not under surface level, three wooden pipes, two inches square by a few feet long, drew off respectively to the rill-bed and to the boxes all the water required the surplus of the supplying rill passing away in its usual course. The boxes are six feet long, eighteen inches wide, nine inches deep, open at the top, set in the ground in a double row, on a slope of two or three inches on each box, the end of the one set close to the end of the other, in continuous line, and carried up to within one inch of the top. They are partly filled first with a layer of fine gravel; next, coarser; and lastly, with stones, coarser somewhat than road metal, to a total depth of six inches. A piece of wire inches wide by two inches deep, is cut from the end of each box, and a water-way of the same dimensions, with a turn-up on either side to prevent the water from escaping. These cut the line of boxes, and the water in the supreme one, whence it is made to drop into the pond which receives and preserves the young fish. The artificial rill is in all respects similarly prepared, excepting that its channel course is in the soil itself. The pipes were inserted into the upper box of each line, and of the water head, the spawn-bed is prepared, 24 hours' running will clear away the earth from the stones. The water will be found about two inches in depth, over the average level of the stones in the boxes. By an iron wire grating, the boxes can be isolated, and the pipe protected against the passage of insects and trout. The salmon were brought by nets on the stones, under which a night, from the 20th of December, 1852 till after the 1st of January. When taken, they were instantly, and without injury, put into a tub, one-fourth full of water. The female fish was first taken over, one man holding the tail, another running his hands down each side from the head, and pressing lightly with both thumbs, the ova was readily strained into the tub; a similar course was pursued with the male fish, both fish name lately, and apparently without the smallest injury, were returned to the river. The contents of the tub were then mixed by a motion of the hand. In one minute the water was poured off, and fresh put on, which was also poured off, and the ova put into the vessel, to carry to the prepared hatching ground. In pouring off the water from the ova, the vessel is held so as to preserve it from the air. Into the carrying vessel a second pouring and a fresh portion of water, the ova will not be sufficient pressure in the vessel, no more should be used, but the whole returned to the river, and fish of a more advanced stage taken. In distribution, the ova intended for one box should be put into one vessel, and this poured out gradually at the upper end of the box; the water flow downwards will carry it along the stones, under which it will settle down; and, wherever too thick, by raising some water in the vessel, and pouring it down, this will distribute it. Half the spawn in a moderate distribution last should, if possible, be set in the upper boxes. We consider the boxes used of sufficient size for 2000 ova each; and, with reference to the quantity found, an English half-pint will contain about 1000 in number. We consider the ova reserved for the pond, assuming that one-third may not have come to maturity, we may consider that we have upwards of 20,000 young salmon now living in these ponds, beyond the reach of their natural enemies.

Besides Outrard, two other beds were made successful. Commencing [illegible] the first arrangements, with but small [illegible] the 6th of January when they [illegible] be shown the [illegible] Their spawn of salmon, trout, and other fish, judiciously packed in boxes filled with wet soft moss, has been successfully conveyed to great distances and the principle applied to restore and replenish with fry many rivers, waters that had become comparatively barren. A quantity of young salmon, three inches and a half in length, were sent alive as a contribution to the Dublin Exhibition.

The value of this discovery may be judged from the fact, that in two months a five-inch long smelt will grow into a beautiful grilse of five or six inches weight, and a spawned grilse of four pounds, grow to a salmon of sixteen pounds.

THE CAUCASIAN TRIBES.

(From a Correspondent).

The lowering aspect of the political horizon, and the long impending, and now apparently inevitable, war with Russia, has actually turned the public attention towards those among the neighbours of this vast Empire, who are likely either to assist or to thwart her in the present juncture. The Caucasian tribes have lost no time in evincing their hostility, and much in consequence has been written concerning them; but many of the publications on this subject are very far from correct, and are calculated to mislead persons unacquainted with those countries. I have, therefore, made the following extracts from notes and journals kept by me during a residence of nearly twenty years in those and the adjacent States, at which time I was intimately acquainted with several of the most influential among the chiefs, both of Georgia and Daghestan.

In a late publication it is erroneously stated, that all the Caucasian tribes speak the same language. Klaproth and others who have studied the subject, give seven as the number of totally different languages in use among them; and of these the Georgian alone is written. If any of the other tribes possess books, they will be in the Arabic character, which they adopted at the time they embraced Mahomedanism. The Lesghis followed the faith of Islam at a much earlier period than the Circassians and the people of Western Caucasus; who not only waged a long and bloody war with the Crim Tartars, but formed an alliance against them with the Russians during the reign of Peter the Great. They appeared at that time well inclined towards Christianity; but they are said to have been deterred from embracing it by the scandalous lives and general misconduct of some Greek priests sent into their country by Russia.

It would be both useless and unprofitable to inquire from what origin the Circassians and Abbasians are derived. Their language has no resemblance to any one known in Europe or in Asia; a similarity with the pronunciation of the Chinese has been fancied by some, but even this is very doubtful.

Since the conquest of the Crimea by the Russians, a considerable number of Tartars have emigrated and settled in Circassia, and these have not yet lost their original language, but speak both Circassian and Turkish. The chief town in the Circassian territory was Anapa, which, though taken more than once by the Russians, only passed actually under their Sovereignty in 1829, when it was taken, after a long siege, by Prince Menschikoff.

The Abbasians extend on both sides of the Caucasus, and from Anakria, a fortress of Georgia, to near Anapa. They are a very wild and savage people, and hold the Russian garrisons in a state of blockade as they formerly did the Turks. Their principal export trade consists of slaves, skins, and of dried meat, and wood. Sokum Kulla (or the slaughter-house) was their chief post, but it is simply an enclosure of four walls, about 400 yards of a side, without a ditch or flank defences, and was built by the Turks. The slaves were principally Georgians, carried off from Mingrelia and Imeretia; but they sold indiscriminately every person they could lay their hands upon.

The Abbasians are divided into a great number of small clans, and have no leading chief. Their forces are entirely infantry; and, if all could be united, would amount to 30,000 men.

The Circassians, who occupy the Great and Little Cabarda, once formed a powerful nation, though never united under one head. They have a number of hereditary chiefs, called Usdens; and the submission of their vassals is most perfect; the feudal laws exist in their worst form. It is seldom the Circassians make a combined movement, but they carry on a perpetual desultory war with Russia. Whenever a chief is elected, it is only for the time the expedition lasts; and his authority ceases on the return of the troops to their own country. Their troops consist almost entirely of cavalry; and, at one time, they could have sent 50,000 excellent horse into the field. I much doubt whether at present they could muster half that number. The combined forces of Circassia and Abbasia, assembled for the defence of Anapa, did not exceed 20,000 men.

The Circassians extend along the whole bank of the Cuban and the mountains as far as its eastern branch. The little Cabarda extends from the western sources of the Terek to a distance of twenty miles from that river. This is but a precarious possession of the Circassians; but Russia has not been able, hitherto, to establish posts with any degree of security; and the great military road which leads through this tract cannot be traversed without convoy and artillery.

From Vladi Caucas (the gates of the Caucasus) the mountains on both sides are occupied by the Ossatiians, speaking a different language; and, fortunately for Russia, still in the darkness of Paganism. Without the assistance of this nation, the Russians would never have succeeding in carrying the road across the Caucasus, nor in maintaining it even in the imperfect and unsatisfactory state it is at present. The posts are numerous, but are merely a very inferior kind of redoubt which could easily be carried by assault by determined men.

Vladi Caucas is a considerable station, with a ditch and a rampart of earth, but it is not in a state to resist a powerful attack, even without artillery. From this place the route lies through the most frightful narrow defiles I ever beheld; the road has been made with great labour and difficulty, and runs along the edge of precipices which could be held by a few men against any number.

We now meet the tribes of the Mutsidjia, of which the principal are the Ossatiians, the Ingusi, the Bouriens, and the Kisti. These, with several minor clans, are Pagans, and, with a little management, would probably have been good subjects of Russia, as they are continually plundered, and carried into slavery by their Mohamedan neighbours, especially by the Chetchens, although a branch of their own race. They have not been well treated by Russia; still their dread of their Mahomedan neighbours compels them to court the Russians, and they would not serve against them even if they dared to do so.

The Chetchens extend along the Terek from its junction with the Sundja to the territory of the Tartar tribes of Kermont. They are most determined enemies of Russia; and General Yermoloff met with but trifling, if not doubtful, success, in two or three campaigns he undertook against them, though they did not muster above 20,000 fighting men. They, however, received assistance from the Lesghis; and this enabled them to hold out against a force they had, apparently, no means of resisting.

The Lesghis carry their slaves and merchandise through the country of the Chetchens and Circassians to the Black Sea, and find means of exporting them from the coast of Abbasia into Turkey.

The Tartar tribes of Yakse and Yermoul do not make incursions into the Russian territory, and are not ill affected towards them. They were once governed by a chief, with the title of Osmey, who held his court in the town of Andis, and by whom Peter the Great and his Colonel Cathcart held, were entertained, on that Monarch's advance to Persia.

From the southern branch of the Terek, including both sides of the Caucasus to the country of Daghestan, inhabited by the four great tribes of the Lesghis—by far the most powerful and civilised portion of the Caucasus. The four great divisions are—the Kafis Kamouks, the Kasi Kamouks, the Awars, and the Akoucsai. Each of these tribes speaks a different language, bearing very little resemblance one to another. They are further divided into numerous clans; but the whole of the Lesghi race was formerly subject to one chief, called the Schumkhal, to whom all disputes among the tribes were referred, and to whom was entrusted the power of calling out the whole force of the State.

For many years I was intimately acquainted with Surkhi Khan, formerly Chief of the Kasi Kamouks. He was expelled from the Kasi Kamouk country by his nephew, assisted by the Russians, and retired with his family to Persia, where he was surrounded by the disaffected of all the Lesghi tribes; and, notwithstanding all the precautions of Russia, these men appeared to have no difficulty in keeping up a constant communication with their countrymen.

Surkhi Khan informed me the Kafis Kamouks reckoned 25,000 families, the Awars 32,000, without including the branches of their tribe inhabiting Balear, Jar, and Elisoo, on the frontiers of Georgia, amounting to about 20,000 more, and rendering this the most numerous of all the Lesghi tribes; the Kasi Kamouks (Surkhi Khan's own tribe), and the Ak Louschas 12,000.

Originally the office of Shumkhal, as well as the chief of the four languages, was elective. He received his investiture from the King of Persia: and he (the Shumkhal) confirmed the election of the chiefs of the four great tribes. These offices, however, had become hereditary, and neither the Shumkhal nor the chiefs usually led the troops on any distant expedition; for that purpose a bullad (guide) was chosen, whose office expired with the campaign.

Hanway mentions that when the Lesghis solicited the assistance of Russia against Nadir Shah, they gave in a return of 64,000 men ready to take arms, and I do not think the number would be smaller at present. The Mountains of Daghestan, by which this part of the Caucasus is best known, are inhabited entirely by Lesghis; besides which, the lowlands, a considerable extent of country of great fertility, lying between the mountains and the Caspian, are occupied by Persian and Turkish peasants, who were formerly subject to the Lesghis, but are now under the Russian rule.

Many manufactures are carried to a high degree of perfection among the Lesghis. Their arms of every description are in the highest repute—fire-arms, sword-blades, and kangiars, much resembling the Scottish dirk—and their gunpowder is good and abundant. They have mines of lead and iron, which they work to advantage. Their felt and cloth cloaks are used all through Persia and Asia Minor, and even by the Russians and Georgians; and their gold and silver ornaments for sword-belts and saddlery find a ready sale in every market. They have, besides, schools, or colleges, bearing a high character for theological learning; and the Moollahs, or Mahomedan priests, throughout the whole Caucasian district have almost invariably received their education there.

I believe the office of Schumkal has been abolished. In 1828 it was held by Mekdis, of the tribe of Awars, who still resided in some sort of state at Teski, between Dasbeul and Kishan. His submission to the Russians, and his connection with them, had, in a great measure destroyed his influence with the tribes; and though it was still sufficiently strong to induce the clans of which a list is given below, to send in their nominal submission to Russia, yet I doubt whether most of their best men would not be found among the followers of Schamyl. I have not been able to ascertain to what tribe this Chief belongs, or whether his name is now a European corruption of the title of Shumkhal, which it is probable he may have assumed. The whole of the Lesghis are ill-disposed towards Russia, and would certainly give no assistance against their own country men.

The following list was given me by Surkhi Khan: Mehdie Shumkhal, of Toreh; Ameer Khamsa, of Kitah; Ahmed, Sultan of Elisoo, on the frontier of Georgia; Aslar Beg (nephew of Surkhi Khan, of Kasi Komauk); Kasi Zitan, of Jar, near Georgia; Mohamed Ballad, of Bunam. These Chiefs had, with the Shumkhal, given in their submission to Russia, but it could be but little relied upon. Those who refused submission were Achmet, of Zouri; Hussien Beg, of Kiculi; Kasi Mohamed, of Avar; Kasi Kulhda, of Sir Khan; and the Chief of the Ak Louschas.

In fact the Caucasus now, as in all former ages, has made good the saying of Timour—"If a Sovereign is too prosperous, let him attack the Caucasus." Timour went further towards the conquest of the mountains than any other Sovereign—but he lost 80,000 men in his different exped tions.

Nadir Shah's war in Daghestan cost more than the capture of Delhi, and he left 30,000 of his best troops there; yet, within twenty five years afterwards, the father of my friend, Surkhi Khan, led a body of 20,000 Lesghis to within 30 miles of Tabreez.

The Georgian States, on the southern side of the Caucasus, may amount to 150,000 families; of whom, probably 50,000 are Armenians. The atrocities committed by the Turkish troops in the neighbourhood of Akkiska will oblige the whole of the Christian States to take up arms to defend their lives and families. Formerly, full 5000 Christian slaves were annually sold at Akkiska, and on the Turkish frontier. Had the Russians not occupied the country, it would have been depopulated, or the inhabitants would have been compelled to change their religion.

This was the case at Akkiska, which was once a Georgian city; and, subsequently, became the greatest scourge of that province. Numerous bands of Lesghis, Adchara, Kagi, and Turkish slave-hunters were established at Akkiska, Kars, and Batoum; and the nature of the country (rugged mountains, covered with forests) enabled these miscreants to penetrate into every part of Georgia, and carry off the people.

The towns of Akkiska is open, and only defended by a small citadel. When attacked by Prince Paskewitch, it made a short, but desperate resistance, and suffered much; but few of the houses being capable of defence. The Roman Catholic church and enclosure resisted the attack for several hours, even though artillery was employed against it. The lower stories of the buildings are generally of stone, and very solid; but the upper part was almost invariably of wood; and, therefore, easily set on fire; when they, of course, became untenable. The women and children had taken refuge in the citadel; and, the store, escaped the destruction which so justly fell upon the male population. A Russian general officer was killed by a shot fired through a hole in the roof of a terraced house; but the total loss of the Russians did not exceed 500 men. The loss of the Turks must have been much more extensive.

The south-eastern shores of the Black Sea are inhabited by the Adsharn and Lazi, who have no connection with the Lesghis. They are the best soldiers of Asia Minor, and the most determined banditti. During the last war, the Russians were defeated with great loss near Batoum; and this tract of country is probably stronger than the Caucasus. These two tribes never were subdued by the Turks—it is probable their country be ng of so little value, was its protection—but it is, or was, the resort of all the bad characters of the neighbouring states. Batoum, though not a port, has excellent anchorage, and vessels can lie very near the shore, which is not the case with any other port on the northern or eastern side of the Black Sea.

The countries recently conquered from Persia will probably willingly act against the Turks; and the Kurdish tribes on that frontier are by no means well disposed towards the Government of the Sultan.

There appears to be a considerable error entertained regarding the nature of the defences on the general line of the Caucasus. The army (detaché du Caucase, as called by Russia) consists of 80,000 men, of whom about 30,000 are on the line of the Cuban and the Terek. The line of the Cuban was formed by 20,000 Cossack families, transplanted by Potemkin from the banks of the Dneiper. Their being found incapable of resisting the Circassians, three brigades of regular troops were detached from the island of Tomaum to Modask. The 6 Cossacks are superior as troops to those of the Don, and have no connection whatever with them. From Modask, along the Terek, the Cossacks are again distinct. I was told that they were the descendants of the Streltzes, and that when that body was destroyed, the few survivors were placed on this line; here, also, they have been strengthened by several brigades of infantry and some artillery.

On the great Steppes between the Black Sea and the Caspian, wander the remnants of the Calmuck nation—once the dominant people of this part of the world; but now unwarlike and harmless. They furnished amount to 50,000 kaltkas, or felt tents, on cards. They furnished about 3000 camels, with their Calmuck attendants, to Prince Paskiewitch's army in Persia; and a few hundreds are dispersed among the various regiments of Cossacks—the number never exceeding 160 men in a regiment.

THE NON-COMMISSIONED OFFICERS OF THE BRITISH ARMY.

MILITARY men are fully cognizant how much the interior economy and well-being of a regiment depends upon the efficiency, intelligence, and respectability of its non-commissioned officers. Holding a highly-responsible position, the sergeant forms the connecting link between the higher grades and the private: and to the impartial exercise of authority may, in a considerable degree, be attributed the discipline and good conduct of those committed to his charge.

Removed by promotion from intimacy with his former associates, and yet far separated in rank from the possibility of admission to anything approaching equality with his superiors, it requires considerable tact on his part to ensure the regard of the men in place of incurring their dislike. At the same time, he must so depart himself during convenient intercourse with the officers as to avoid the slightest approach to any semblance of familiarity. In short, nothing on either side should be breathed of to his disparagement. The difficulty of such a position may be well imagined. The present object is to demonstrate the hardship resulting to the good soldier by virtually depriving his pecuniary advantages by the very notice whereby his merits are acknowledged. For instance, a corporal never could be selected for promotion had his previous character well earned the distinction. Nevertheless, from the date of his receiving sergeant's pay, the good conduct allowance which he had previously gained is withdrawn. This is obviously an injustice, and contradictory in its application. Hence naturally arises the reluctance so frequently evinced by the corporal to accept promotion. By the existing regulations, after five years' service, and two years' good conduct, a man may claim his "ring," together with 1d per diem. After ten years' service, and four years' good conduct, he is entitled to an additional "ring," and 2d. a day. At the expiration of fifteen years' and six years' good conduct, he receives a third "ring" and forepence; and so on in progression, increasing his pay for every five years. If, therefore, this extra pay be with old on promotion, it is made manifest that, the older the soldier, as regards service, the less will such elevation tend to his emolument. For example: a corporal of four years' service, and one of similar rank of eleven years', are promoted. The younger gets *sixpence* a day increase; while his more ancient comrade only benefits by *fourpence*. Again: a corporal with four "rings," 1s. 4d. pay; which, added to his "good conduct" money, makes a total of 1s. 8½d. daily. A sergeant, he will receive 1s. 10½; leaving him with 2d. only in addition to what he received in the lower rank. This, indisputably, is not right.

The duties of a sergeant are infinitely more onerous and severe than those devolving on the corporal. It is not only on parade, or in the field, that his qualifications are displayed. He must be practically acquainted with the method of keeping accounts, good penmanship is indispensable, and being, in a great measure, entrusted with the management of the men, he must be implicitly relied on for honesty. He takes his turn of guard, and is held responsible for order and cleanliness in the barrack-rooms, which are expected to be maintained in strict regularity at all hours. It is his duty to make out the "daily state" of his company, fill up the small books; and, in fact, he must not alone be fully conversant with the debts and credits of his men, but likewise make himself acquainted with their habits, dispositions, and temper. To attain these ends is not an easy task. To make a valuable non-commissioned officer requires more than the dash of a pen elevating him to the rank.

From the hour of enlistment, the recruit should be encouraged to devote his energies towards advancement. But, in order to incite him to so laudable an exertion, he must be furnished with inducement. It cannot be expected that every man in a regiment is qualified for advancement; but there are many deserving and competent in every corps, who, weighing the trifling additional pay against the fatigue duties and responsibilities of the higher grade, rest content with the benefit which excellent conduct is certain to ensure. Were the authorities to rescind the objectionable edict now in force, the greatest incentive to good behaviour would be opened to every soldier in the ranks; the higher the position he attained, the more increased would be his means for upholding his rank; and the longer the non-commissioned officer remained in her Majesty's service, the greater would be the inducement against his leaving it.

Unhappily, a boon is seldom conceded to the British army without bringing it clogged with harrassing provisions, neutralising, in a great measure, the intended good; but such is undeniably the fact. Until the case in point has been submitted to the consideration of the present Secretary-at-War it is needless to inquire; but that it is a subject well deserving attention cannot be denied.

Like most changes, to accomplish what is thus pointed out as desirable additional expense must be incurred; but, were the outlay considered in opposition to the benefits to be gained by the army, the balance would greatly preponderate in favour of reform.

THE FIRST POLITICAL INTERCOURSE BETWEEN THE TURKS AND AUSTRIANS

occurred towards the middle of the six century. [illegible] to persuade [illegible] Gog Mongols then ruled by the great Khan formed the first of the three great Turkish empires which have exercised an important influence on the [illegible] of the Christian nations, both in Europe and Asia. The second of these empires was that of the S. Jouk Turks, which, after the Crusades, had ruined the Byzantine empire. And the third was that of the Ottomans, [illegible] both the master, patron, or tyrant of the Patriarchs of Constantinople, Jerusalem, Antioch and Alexandria.—*Bunsen's Magazine.*

THE LATE LIEUTENANT BELLOT.—The family of the late Lieut. Bellot have just given to the Master of Rochester, as a striking proof of their gratitude, for his having projected and promoted a subscription for a monument to their relative, the Cross of the Legion of Honour, which Lieut Bellot had with him on board the *Phenix*, at the time of his last and dreadful expedition to the Arctic Seas.

LITERARY MISCELLANIES.—No. X.

A FEW WORDS ON THE LOVE OF ORNAMENT.

THERE is scarcely an object to which our attention can be directed that does not owe more or less to the love of adornment inherent in mankind. Rarely to be despised, the machinery of civilisation has ever held an important place in the moving panorama of the world. It has swelled the pomp of empires; the brows of kings have ached under its burthen; the fronts of armies have groaned beneath its motley mask. Nature herself, profuse in beauty, has been, in all ages, the great suggester of the ornate to man: revealing herself to his sight in all her countless aspects of grace and graciousness, raising and exalting his faculties by her divine presence, till, out of love and reverence, grew beauty and art. From natural objects, indeed, have ever been drawn some of the most perfect transcripts of the beautiful wrought by the living hand, whether in architecture, or in other forms of design. The idea of the Corinthian capital itself is said to have been borrowed from an accidental arrangement of foliage. A virgin of Corinth having fallen a victim to a violent disorder, her nurse collected together in a basket those articles for which her young charge had shown a partiality when living, and carried them to her tomb, carefully placing a tile over the basket, the better to preserve its contents. This basket, so we are told, was accidentally placed on the root of an acanthus, which, at the return of spring, sent forth its luxuriant foliage, and, spreading its branches round the angles of the tile, formed volutes at the extremities. "Callimachus, who for his great ingenuity and taste was called Catatechnus by the Athenians, happening to pass by the tomb, observed the basket and the delicacy of the foliage that surrounded it. Pleased with the form and novelty of the combination, he constructed, from the hint thus afforded, columns with capitals of this species about Corinth, and arranged their proportions, determining their proper measures by perfect rules." Our own Gothic architecture abounds with foliated and floriated ornament—witness its pointed windows, with their beautiful trefoil, quartrefoil, and cinquefoil [illegible], together with the numerous floral forms which lend a living grace to its solid masonry. The stems of trees, particularly those of the yew, closely resemble clustered columns; and we have instances of elegant tracery imitating the climbing branches of certain plants. Dallaway cites the plant symbolum, from [illegible] as the origin of the crope, or finial, while Sir James Hall derives crockets, foliated capitals, and pinnacles from sprouting buds, and cusps from the curling up of dead bark. The trefoil ornament, with long curling stalks, belonging to the same period is by some said to be derived from the palm-leaves of Palestine brought over by the Crusaders; by others, asserted to be borrowed from the common avens, or herb bennet. Earlier still, we might instance the derivation of the noble Byzantian [illegible] from the [illegible] in Egyptian [illegible], which [illegible] in the form of a cup-like shell. But these suggestions are [illegible], and would lead us into too wide a field.

We have seen how, in applying, by way of ornament, the forms of nature to the works of art, the result has been beauty. The converse, it must be conceded, does not always hold good. Art directed to the embellishment of nature must be dealt in sparingly, and with a fearful hand. The Dryad needs no tutelage for her myriad forms of loveliness. The oracular in landscape speaks not from the brisk living crown of the pollard elm, but from the waving summits of the lordly oak. To the genius of the Chinese we would willingly resign the pruning knife, which can ruthlessly transform the wild woodland grace into so many Gorgons. In fine, and the similar for wood-carving in the green has formed [illegible] Here and there, it is true, the [illegible] where such fantasies still obtain, we may yet see whole avenues of goodly box tortured into shape resembling the oil jars which contained the Forty Thieves or set up like a row of nine pins, more unearthly than those which met the astounded gaze of Peter Schlemihl. Pleached bowers, too, out of the shrunk holly, varieties of animal conformation scarcely to be met with in any museum of zoology, seem to the shocked and distorted senses of the lover of nature, to "squeak and gibber" with more terrible intonation than did the "sheeted dead," congregated in the Roman streets.

But if directed to inanimate nature, we find the mania for transfiguration playing "such fantastic tricks before high heaven," what shall be said when we see the "unfleshed biped" undergoing the same process of improvement in his own proper person? To begin with the skin. Many savage tribes, it is well known, are addicted to the practice of beautifying the natural man by means of various devices somewhat startling to the refined notions of more civilised communities. "Painted like a Pict" is a common saying; but from revelations which have reached us in comparatively modern times, we are disposed to conclude that our early historical acquaintances, the Picts and Scots, were yet but in the infancy of those decorative arts which have since been the pride of astonished travellers. Sir Thomas Mitchell's record of a native Australian who painted his thighs white, black chequered in it, which made him seem resemble the dress of a harlequin, sinks into insignificance before the splendour of skin-ad-mant-dressing which prevails in other parts. Certain tribes of the Rio Caura, in South America, besides staining themselves with annatto, make transverse stripes on the body, with a unctuous substance, on which they stick spangles of silvery mica-covered thus, they are said to "appear at a distance as if covered with lace." Other natives, of both North and South America, use gold dust and other shining materials, with which they sprinkle their bodies, deriving from this simple process all the advantage, without the cost, of being gilt! Other tribes again [illegible] ambitious of the splendours of the toilet, are content with merely depicting and indenting that hue with which it may have pleased nature to adorn them. The natives of Adventure Bay, for instance, described by Captain Cook as being of a dull black colour, scarcely as deep as that of the African negroes, are in the habit of heightening their dark colour by smoking their bodies! So deeply do they begin themselves, that any clean substance, such as white paper handed to them, becomes instantly discoloured. The [illegible] at least a moral mode of applying smoke, and one which it is devoutly to be hoped will never supersede among Europeans the use to which that sooty exhalation has hitherto been diverted. Besides such devices—are they not matters of fact, there are many similar practices among rude nations all tried to as merely conjectural; such as the use of the hematic. Pendant ornaments composed of this material and found in certain Indian graves, in mounds, were supposed to have been carried about the person for the purpose of readily supplying, when wanted, a decorative paint. Rubbed upon any rough substance with water, the hematite furnishes a red pigment. The conclusion as to its use was derived from the discovery of irregular fragments of the same material bearing marks of frequent friction.

Among the more *external* ornaments of the various aboriginal races—for when we think with horror of the work of the [illegible] as continually going on in relation to this buried flesh, it becomes necessary to discriminate—may be comprised bones, feathers, stones, the claws and teeth of animals, quills, grasses, plants, beads, rings, &c. Were it not that the subject trenches with somewhat close proximity on a pendant weakness of the present day, we might enlarge more highly on bands and the shape of ear-drops, on the theme of nose-rings alone much might be said. With regard to this favourite but barbarous ornament, a variety of tastes prevail. In the East, it would appear to be used to connect with certain ceremonials. An Oriental Prince weds his bride in a nose-ring, which is equivalent to putting the wedding ring on the finger in Europe; in this case, it will, perhaps, be a large hoop of gold, on which rubies and pearls are strung. The Bedouin Arab women wear in the same way a coarse hoop of silver, adorned with gems and coral. Among the inhabitants of New Guinea we find a deviation from the circular form of this nasal appendage; here, the men [illegible] women, pierce their noses merely for the purpose of inserting small bodies of bone, which project on each side. These [illegible] have other modes, equally striking, of adding to their personal [illegible]. Twisted rushes, or [illegible] stained of red colour are placed on [illegible] arms at an early age, and adorn [illegible] [illegible] [illegible]

"SPRING."

"SUMMER."

ALTO-RELIEVOS, BY ALEXANDER MUNRO.*

THE spirit of Spring unto the woods hath flown;
Like love—the untiring, ministering to death—
She stands, with Heaven's own light around he thrown,
Feeding the violets with her patient breath!
They, bursting from their clay-cold wintry bed,
Spurn the forsaken earth where late they grew
But to give back—like memories of the dead—
The soul of sweetness born in them anew!
Fair are ye in your lowly-hidden vale,
Children of Nature's bounty, blest and blessing,
Returning soft on every loaded gale
Your grateful odours to the Spring's caressing;
Pure as that one wild flower of youth's brief day,
Whose sweetness time nor change can steal away!

JOY! for the Summer's smile is now at hand,
And flowers grow voiceful as the breezes hush;
And sweetest, loveliest lady of the land,
The Rose is queen, and ruleth with a blush!
The airy butterfly is on the wing
Robed in the colours of the golden day,
Luring, like pleasure through its mazy ring,
The heedless steps that chase it on its way.
And youthful hearts, whose hopes are bright and brief,
Where fairy forms o'er circled meads sweep by,
Are met to choose between the "Flower and Leaf"
All mingled harmonies of sea and sky,
Offering up notes of incense, fill the air;
Joy is on earth—and gladness everywhere

* Mr. Munro exhibited at the Royal Academy last season four small alto-relievos in plaster, representing the Seasons; which, despite their comparatively diminutive dimensions, were not be overlooked by those having an eye to discover real merit, even when buried in the obscurity of the miserable pantry which the Royal Academy appropriates to the department of sculpure. We may here observe that the models so exhibited were merely the studies for larger works in marble, which, we understand, the young artist has executed, to fill four panels in the terrace front of the Duke of Sutherland's mansion of Cliefden, near Maidenhead, built for his Grace by Sir Charles Barry. And most appropriate to the purpose are they, in our opinion; the subjects being drawn from incidents in rural life, and pleasingly illustrating the vicissitudes of climate to which we are subjected in the course of the year. "Spring" is typified by a lamb, which three young children are decking with field flowers; above, the trees are just beginning to put forth their foliage, whilst young birds flit and frolic in mid-air. In "Summer," we have a charming group of children—two boys and a girl—the latter sits as a little queen in the midst; one of the boys covers her with a wreath of roses, whilst the other, less forward, reclining lowly at her feet, renders her a single flower. "Autumn" takes us into the vineyard—the fruits of which are being gathered by three boys; whilst the fourth, who is sprawling on the ground, receives some of the spoil. In "Winter," we have a young girl riding on a goat, which a boy is urging onward; whilst his brother trudges behind with a faggot of wood on his back. The trees are leafless, and the blast blows bitter cold. The children bend forward to make head against it, and the little girl makes a vain attempt to wrap herself up against its fury. All these groups are very spirited in design, and graceful in outline; full of contrast in the arrangement, yet sufficiently in unison as to the idea to make a very compact and perfect series.

"FISHING-BOATS IN A SQUALL." BY TURNER.
IN THE BRIDGEWATER GALLERY.

BY the kind permission of the Earl of Ellesmere, we this week produce an Engraving of a remarkable picture, by Turner, and commonly known as the "Bridgewater Turner." As this great artist, in many of his works, emulated the sunny skies of Claude, so, in the work before us, he competed with the renowned sea-pieces of Vandervelde; and it is as a sort of companion to a picture by the latter celebrated master that it occupies the site allotted to it in Bridgewater House. It is painted in the artist's early and best style, and is a production of remarkable power and singular effect. The sea in the foreground, lashed by the impetuous gusts of a land squall, is broken into foam, forming a broad but chequered mass of subdued light; the sails of the two boats appearing in the midst in still higher light. The coming storm has not yet reached the offing, where some ships of large class ride proudly at anchor.

An able and judicious critic, Mr. Burnet, in his handsome volume "Turner and his Works," thus sums up the comparison between this picture and the Vandervelde with which it is held in competition:—

In comparing the two pictures, as works of art, Vandervelde's must have the preference as far as priority of composition is concerned; but Turner has had the boldness to tell the same story, clothing it with all the grandeur and sublimity of natural representation. The light and shade is very excellent; the mass of dark sky brought in contrast with the sail of the advancing boat, is broad in the extreme. I may here notice that the work is in beautiful preservation, and painted with a full, bold pencil of colour; it is on a rough canvas, without any coquetting between oil or water-colour. In this respect it is one of Turner's most genuine works, and, certainly, in his best time; for, had he never painted another picture, this would stamp him as the greatest artist in this department of the art.

FISHING-BOATS IN A SQUALL."—PAINTED BY J. M. W. TURNER, R.A.—FROM THE ELLESMERE GALLERY.

"AUTUMN."

"WINTER."

ALTO-RELIEVOS, BY ALEXANDER MUNRO.

So soon departed is the Summer's prime,
And lo! comes Autumn with his laden brow,
Of all the kindred seasons by stern Time
Most prized. Like a red sun down-dying low,
His is the crowning grace of all things fair.
Amid those locks whereon the night-dew weeps
Float the vine-tendrils through the burthened air:
His voice with harvest hymns rich concert keeps;
And glad as love that hath forgot its dreaming
In the heaped fullness of mature delight,
He cometh;—from his steps long shadows stealing,
Softer than sleep on sorrow's aching sight.
Though Earth's more quickening tides have ceased to flow,
Deep beauty lingers where the leaves lie low.

Lone Patriarch of the year! thy step hath come
To steal sweet Autumn from our yearning eyes,
And chase all Summer memories from our home:
Grey-headed priest of ancient prophecies!
Thou dost foretel us of the coming time
When Spring's first dews shall the green earth be steeping,
And the glad hive-bee haunt with early chime
The snow-drop, yet beneath thine altars sleeping.
Thou stand'st, a rock between two changing streams—
Mysterious tides!—the coming and the past:
Grave of dead flowers! thou cradlest the beams
Which make each new world fairer than the last;
And scatterest snows above the grateful sod,
Better to trace the footsteps of a God!—Mrs. Hervey

THE BRITISH INSTITUTION

WORKS OF BRITISH ARTISTS.

(SECOND NOTICE.)

We now resume our examination of this Exhibition in more detail than we attempted in our last.

The "place of honour," as it is termed—that over the chimneypiece of the North Room—is occupied by a large picture by Inskipp, entitled, "Coiners." It is a group of four figures. Two men, at a table—adepts at the trade—are exhibiting the process of making crown-pieces out of pewter pots to a novice, who appears to be a man on town "out of luck;" and triumphantly appealing to him to assist them in "passing" the spurious coin. The latter looks rather reluctant—dubious, perhaps, of the result; and that there is a consciousness of danger shared by them all is shown by the expression of the female, who is looking anxiously through the garret-window into the recesses of the court below. It cannot be pretended that this picture is either very agreeable or instructive in the subject; but the execution of it is, in some respects, clever—particularly the figure of the woman, about whom there is a suggestive aspect of melancholy, seen though a subdued medium. The same artist has also two female studies, in which his peculiar "manner" in colouring is unflinchingly adhered to. In "A Country Girl" (30) the prevailing hues are those of green, brown, and yellow; in the "Bouquet" (169) we have a lady of florid complexion, dressed in black silk, with a dab of scarlet ribbon or gauze in her black head-gear—the colours in both pictures being laid on broadly and rather coarsely.

Close at hand to Inskipp's "Coiners," is a pretty little contribution from T. Creswick, entitled the "Kingfisher's Haunt" (1)—a cool, umbrageous dell, with a bright little stream trickling along; a dapper kingfisher perched on a rock in the very middle of the picture, where his bright red plumage singles itself out like a coal of livid fire yet lingering on a dark neglected hearth. "One who has Braved the Battle and the Breeze" (2), by H. J. Pidding, is a veracious portrait of a Greenwich pensioner—a personage who at this particular crisis must be looked upon with more than usual interest and respect, and who evidently thinks no "small beer" of himself. From his rubicund and weather-beaten countenance, the eye alights painfully upon a pale, unhealthy face of "Ophelia" (5):—

Alas! sweet lady.

Her sickly hue, truth to say, partakes more of pearl-powder than internal emotion. Nevertheless, as a specimen of careful painting, this picture

"THE ROCKY PATH OF A MOUNTAIN BURN."—PAINTED BY H. JUTSUM.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

is creditable to the known talent of the artist (W. C. Frost). "L'Allegro" (24), by the same artist, is a more cheerful subject, and more healthy; treated—a small group of dancers, full of life, and the colouring bright and harmonious.

F. Goodall won so many golden opinions by his picture of the "Royal Wedding party at Hampton Court," in the Academy Exhibition last year, that he was been tempted (probably by a handsome commission) to produce a *replacement* of some of the component parts of it in a smaller work, entitled "Feeding the Swans" (48). The pompous nigger holding the plate of cake is the identical of his prototype; but the rest of the figures are fewer in number, and less important in character; and the incident altogether less striking. The finish, too, is not so high.

The above is not the only case of making up old materials in the present Exhibition; indeed, the are struck with a most unusual number of instances in which the exhibitors have evidently resorted to old and favourite studies, rather than seek for new subjects. Everybody remembers—and with well-merited admiration—Sant's beautiful little picture of the Infant Samuel, in last year's Academy Exhibition. Well, he has here reproduced this same pretty and intelligent little boy in the character of a "Youthful Artist;" the full, speaking eye, and the noble pose, being nearly the same—some paint-brushes and colours alone indicating the change of circumstance. "Melancholy Discovered in the Act of Rocking his Infant's Cradle" allowed A. Johnston the subject of a good picture for the Academy last year; and here we have it repeated by him and very similarly treated. In Rochers's beautiful group of a mother and child, also, under the name of "Contemplation" (70), no admirable f expression, and the roun and tender fulness of the flesh—we surely recognise a repetition of a very charming picture last year exhibited by him at the Academy. The number of "Interiors," with old women making lace, old men drinking beer and playing cards, boys dressing over dog-eared spelling books, or asleep in cradles, &c., which come out year after year, without material change, in our Exhibition, is really marvellous; yet there is a public for them all.

Mr. Sant, whose metamorphosis of the "Infant Samuel" we have just spoken of, and who is generally very successful with female studies, has one in the present Exhibition, in which he is said to be happy as usual. It is supposed (58) to represent the "Woman taken in Adultery," at the moment after her persecutors had been rebuked by the Saviour—

> And Jesus was left alone, and he woman standing in the midst.

The woman alone is represented; but, except for the inscription in the catalogue, we should never have so divined her. Perhaps, it may be observed, that it would be hardly possible to identify this person, wholly removed from the interest which constitutes and illustrates the moral, preserve incident in which she was concerned; but the study before us would not be a successful one, even if introduced as part of a group—the picture on the subject. There is no scriptural dignity or calm in the character, the attitude is constrained and inappropriate, and the expression by no means that of shame and contrition. The colouring is a mixture of pink and buff—a compound Mr. Sant is rather fond of, and which, though it comes out pretty well against a bright, healthy skin, has almost universal failure, by being in the extreme to a sallow complexion and uncomfortable mien, which we find here.

Mr. Cope's Hayter has, and one very carefully painted picture of "The Visit of Us dinal Wolsey for Is Ge reason" (74). The event is narrated by Stow:—

> In the y " 1530 Cardinal Wolsey was at Cawood Castle, the archbishop of the ho... and ... when he arrested Sir George Lakes ... Knight, ... and others of the household of the said archbishop, for which cause he, followed by a great train of the gentlemen of his house- hold, and the surrounding country ... he Cardinal to Ecclesfield, on the Lord ... and there ... ing and banqueting, and finding her they were ... ected by the Lord Talbot, with ... Lord ... and the Lord Cobham, with a ... ny, ... ing the hand ... on her ... " ... ... arrest ... ... which words marvelously astonished the Cardinal ... Lever recovered from the shock, he gave a new duty unto ... required at Leicester Abbey, on his way to the Tower of London.—*Stow's Annals* p. 560-7.

Where the picture chiefly fails is in the figure of Northumberland, who is tame, and nakedness, more like a Bond-st cet dandy in plate-armour than a knight of the sixteenth century; and one manner in which he lays his mailed hand upon the arm of the Cardinal, as if he were gently enforcing an invitation to dinner "at the club," instead of to "a stop" at the Tower. On the other hand, the ... gentleman, and wild terror of the Cardinal are unmistakeably real, but painfully human. Sir George also exhibits a "subject for the Te Deum Laudamus," Sir George also exhibits a "subject for the Te Deum Laudamus," Sir George also exhibits a "subject for the Te Deum Laudamus," (a group of three heads in a chapel, which, probably, would e gave profit—ably, and the "Portrait of the Queen taking the Coronation Oath" (the Archbishop of Canterbury being seen partially in the gloom of the background), which is already well known by the large engraving published of it.

Mr. Grant, whose "Night March" attracted considerable notice last season, has indulged in a subject of a very similar character in the present one, which he has elaborated upon even a larger surface of canvas. It represents "A Halt on the Scottish Border," and consists of three pictures united in one frame. In the "Rendezvous" we observe the marauding chieftain proceeding at early morning to the foray, surrounded by his lieutenants and dependants; on the opposite side, in the "Return," we and the predatory heroes making their way home—tired at eventide, laden with booty, and having prisoner a young girl, who sits in melancholy mood on the back of a pony, her hands tied before her, and little wotting of the sidelong and significant glances directed at her by the victorious chief, to whom she has fallen an enviable prize. In the middle compartment, which is of larger dimensions than the other two, we have the "Rescue," at dead of night, the hero of the day is pursued by a vigorous and devoted knight—the steed of both fiery hot and foaming—who overtakes him, and with unerring pistol-shot aimed at his very teeth, finishes his evil and hateful career. The whole is "tragic" and extravagant, but will, nevertheless, command the attention of those who like bustle and excitement.

Pickersgill exhibits a half length figure of "Laban" (56), which is carefully studied as relates to costume, and generally executed with much firmness of pencil; but the expression is tame, and the character, albeit not free from common-place, sufficiently historical to identify it with Laban in reference to any other of the Patriarchs. On the opposite wall the pendant to this artist has another imaginary figure subject—"The Favoured Knight" (157), who stands erect, cloth d in polished steel armour, his helme ... hand, as if in the act of receiving the homage of the fair ... who ... and ... ir ... ed ... ir heroic but there is little attempt at the ... ... ideal in the character of those features, and Lancelot ... ripped hair. The armour is admirably painted, the sharpness and colour of the material being perfectly retained.

Those who are addicted to sentiment, even when run mad, will mightily enjoy a representation by A. Hunt, of "The Princess Ida, disowning the ... to ... a hearse" (22), ... being "borne by ... ... of love." In event this commingled descent is interpreted "Princess"—

the various attempts at improvement, during the subsequent fifty years; and there seems to be a general impression that there is still much room to alter it for the better

We are amused with the tone of the various communications which this announcement of Colonel Lurard's intention to publish a book on this subject seems to have drawn from many officers in the British army, and from whichhe has printed extracts in his preface Most of them express decided dis-atisfaction at the present state of things Some wish that more attention should be paid to the private wants of the requirements of the different climates in which British troops are required to serve. Some of these complainants are all for utility, others for appearance. A cavalry officer is of opinion that the re-should be "no distinction of light and heavy cavalry;" a Highland officer grants the colonel "will say nothing against the bearskin cap;" and another urges the necessity of regimental white jackets for India. Others condemn almost every article of the present dress of the army; while we have every variety of suggestion for its improvement. A few correspondents appear to have been alarmed at the very idea of innovation; and one "distinguished officer," expresses rather confidently the opinion that "such a work as this will have no effect, but to make young officers dissatisfied with their present dress!"

Colonel Luard has fairly considered the soldier's dress at all periods which furnish sufficient materials for appreciating it, with its inconveniences, as well as its conveniences. The real question, however, which he undertakes to discuss, lies chiefly within the last few years and a half, during which he gives in his plates and letterpress sufficient information to enable his readers to appreciate the judgment in which he has arrived. He has a right to speak as an experienced judge himself, for he tells us that "during the Kaffir War, he wore the heavy dragoon cocked-hat, as well as the heavy dragoon helmet; at the battle of Waterloo, the light dragoon shako; at the siege and capture of Bhurtpore, in India, the Lancer cap; since that time, both in England and in India, he has worn the staff cocked-hat." His own proposal, while it simplifies their dress, goes to assimilate, greatly, the costume of the different descriptions of troops. He proposes a helmet of simple construction, to serve with very slight variation, for the cavalry and the infantry. In the dress, also, there is to be a close similarity, in all descriptions of troops, cavalry and infantry, with a total absence of every thing cumbersome or unnecessarily inconvenient to the person. It would be difficult, indeed, to give any exact notion of Colonel Luard's proposed military costume, without copying his engravings, and we prefer sending our readers to the book itself. Whatever be the defects of Colonel Luard's "history" of the dress of the British soldier, his proposals for its improvement, are certainly deserving of attention. For this as well as for the great mass of general information it contains, it deserves to be circulated through all branches of the service.

ROME, REGAL AND REPUBLICAN. By JANE MARGARET STRICKLAND. Ad ted by AGNES STRICKLAND, Author of "Lives of the Queens of England." Arthur Hall, Virtue, and Co.

What made Miss Strickland's stories was a little combination of causes, which we will mention with great conciseness. First, her subject was good, and filled a neg ected gap in our annals: secondly, she laboured manifestly in a conscientious spirit, both as regards the truths themselves, which it was necessary to set in a clear nigh; and as regards the amount of honest downright labour and research which the accomplishment of that object required. She not only wished to speak fair, to tell the real truth, to overcome prejudices, however inveterate, and to dissipate errors, however popular, but she took all the pains incumbent on the adventurous writer who could and make so arduous an emprise. In the third place she was a lady, and her theme was women. There were, doubtless, some subsidiary side lights to obtain for her book a respectful and highly favourable reception. But we have indicated, as we believe, by far the most prominent causes of that rather remarkable success. We could not include in the many merits of a lady writer, the moderate ones. She is by no means an eminently good writer: her style is prolix; her arrangement of topics is unskilful and confused; she has not the least pretension to that simplicity of eloquence of which even history admits: she is simply an honest woman, a lady det ermined to tell her fair and just view, who has a good cause and a good subject, and who tells the tru h about the one, and does not spoil or disfigure the other.

Her namesake, now publishing a volume of her edition, is still more distant from the all pure literary qualification: and this is but any of the extraneous advantages which protected and recommended the really valuable production of Miss Agnes Strickland. In so far as this first volume of the "Family History of Rome" is concerned, the subject is not, by many degrees, so advantageous as that of the Queens of England. We cannot say that there is here a literary gap to be filled. Nor is it peculiarly a woman's subject—a book on ancient politics, any more than on English politics, is out of the course interested, by national feelings. In the third place, so far from discerning here the evidences of painful and extraordinary research, the manifest proofs and fruits of conscientious and really valuable historical labour, the reader will be disappointed in the execution of the theme, we have an exceedingly cursory compilation from the best-known parts of the best known records on the best-known of all annals. We confess that we cannot see the great force or virtue of the title, by which a lady would justify the telling of a story, which has already been all ready told as well and as often to us all "A fam ly history of Rome" certainly the phrase is new—that is, these words thus arranged, are not prefixed to any former record. But is it meant that families, have hitherto been debarred from an acquaintance with Roman history? That the mind of each member of the family, as his or her pe easure, has hitherto been instructed in this matter; but that the family mind as something distinct and separate, is now for the first time to be rescued from ignorance on the subject? We should like to learn what is the family mind in this novel sense, in this sterling view of its requirements and wants. Surely Miss J. M. Strickland does not mean merely that there are passages in Roman history which cannot, with propriety, be read aloud at the domestic circle. And if this can be said still more truly of English history, it can be said of all history. If her object be merely to leave out impurities, to give us an expurgated edition of the old story, she would have admitted the lowliness and indelicacy of her handling, and she would doubtless have taken some fine work already completed, and simply omitted from it what she deemed objectionable.

Still we must not forget that this first volume forms really no part of her greater plan, and is but an introduction to the history of the early Christian Church We have said that Miss Agnes Strickland, as a lady, was peculiarly felicitous in the choice of her subject The present authoress is just as strangely unlucky, in the self-same all-important particular: and if she write a good Church history, her glory will be all the greater.

The present volume we need not analyse. It extends from the foundation of Rome to just a century before Christ, to "Cornelia's proud matronity."

It has been our duty to hint that the authoress is the reverse of a good writer; and we really must say that it is not creditable to present a large work on such a theme to the public as it is before us. It is not grammatically composed That is the very least which we should have a right to expect, where so many illustrious authors have preceded the new recruiter of them all At page 3 6 this sentence occurs:—"Aware of the defect of Plautus, who—he had heard was a rough, but headed man," &c.

Whom was? We thought few *indeed* in this style; yet this book is written, corrected and published in the same slip-slop way throughout.

VICTORIA (LATE AUSTRALIA FELIX) OR PORT PHILLIP DISTRICT OF NEW SOUTH WALES. AN HISTORICAL AND DESCRIPTIVE ACCOUNT OF THAT COLONY AND ITS GOLD MINES. By WILLIAM WESTGARTH. Edinburgh: Oliver and Boyd.

In 1834 the site of the city of Melbourne was a waste, in the occupation of a few scene of wandering savages. The interior was only known to the neighbouring colonies by the reports of two adventurous stockmen, (Messrs. Gellibrand and Hume), and one settlement formed on the coast was at Portland Bay, by a whaling firm, consisting of three persons, for curing down their products. In 1836 the first family arrived from the opposite shores of Tasmania. Very soon, in spite of the discouragement, and even direct opposition, of the Home Government, a flourishing colony of stockowners arrived with their flocks and herds, and established themselves on the rich pastures of Australia Felix, lying around the shores of Port Phillip. Wild speculation in land, a vast influx of emigration from England, profuse expenditure, were followed by a crisis of bankruptcy, in which almost all the dwellers in town suffered But while the unfortunate land purchasers and enterprising merchants "were discharging their liabilities through the Insolvent Court, the grass was growing and the flocks and herds were multiplying," and when the days of bankruptcy were forgotten, the Port Phillip district found itself endowed with a population of some 40,000 souls (of whom 15,000 were settled in the town of Melbourne) a staple of export in the shape of the wool of some six million sheep, and a steady demand for labour at wages which ensured to the sober early independence. In the same period, the Port Phillip district acquired diverse political and ecclesiastical rights, which were completed in 1852, by its erection into a separate province under the name of Victoria. It was in the full tide of solid, although not brilliant prosperity, that the gold discoveries of Ballarat and Mount Alexander followed, and more than rivalled the yield of the rivers and creeks of New South Wales. Two years have elapsed since the gold regions were first tapped, and now Victoria can number a population of 250,000 souls, and a revenue of 500,000. Melbourne is a metropolis in fact, and is encumbered round Melbourne, arriving and depart ing at the rate of thousands per week. The imports for the quarter ending 31 July, 1853, amount to £4,113,870; the exports to £2,1 1 886 The weekly wages of a skilled mechanic are from £7 to £10; those of a common labourer from £3 to £4

The annual consumption of these well paid workers (according to a calculation of the *Argus* colonial newspaper) is not less than 14lb o. z. of lb of coffee, and 8½ lb. of tobacco each. The population is swelled by immigration from Europe at the rate of 40,000 a year, beside the natural increase consequent on early marriages and easy circumstances. With these solid elements of material prosperity, with a representative institution which affords the colonists a virtual independence of the mother country, and what may be called the complete theory of Utopia, it must be confessed that Victoria is one of the most uncomfortable residences in the wo ld for those who have been accustomed to the comforts of civilised life. Every man is actually dependent on his own resources. Service is not to be had for love or money. Extravagant rents do not lead to the building of comfortable houses; much needed public works are at a stand-still. Almost the only servants are broken down clerks and ruined gentlemen. Judges black their own boots, and ladies wash and mangle. Dirt and misery are huddled together in the sight of the most wasteful profusion. Water-works, gas-works, roads, bridges, railroads, piers, quays, docks, churches, schools—all are wanting, and likely to be wanted; while diggers' wives parade forth gorgeous in yellow satin, crimson velvet, ostrich plumes, flowers, lace, and cachmere shawls over unpaved streets

It is the rise, the progress, and the present condition of this strange colony of Victoria that Mr. Westgarth has undertaken to write; and he has had more than ordinary advantages for the task. He has resided many years in Melbourne, where he was one of the first merchants, Chairman of the Chamber of Commerce, a member of the Legislative Council, and a man respected in private life for his zeal and humanity in promoting every progress, educational, or other movement likely to be of advantage to the colony which he has adopted as his permanent home. But, with these good qualities and assisting qualifications, we are sorry to find that Mr. Westgarth's work is a sad failure, whether regarded in a literary or a utilitarian point of view. It is very dull, much too long, contains very little information, and that information is conveyed in a style more than ordinarily involved and obscure. To the art of condensation he is a total stranger. In two chapters, of nearly five hundred pages, we search in vain for something that has not been told, and much better told, by writers who have preceded him, until we come to the visit to the Good Diggings, and there his descriptions will not bear comparison with the letters of the correspondents of the leading journals of Sydney and this country; or with the simple, unaffected narrative of a lady, Mrs. Clacy.

The big books in handsome type and well-printed paper are becoming a nuisance. All that Mr. Westgarth has to say (and it might have been much better said in 200 pages; but he is one more instance of the axiom that "easy writing is very hard reading!" We remember hearing Mr. Justice Creswell, when at the bar, in a jury that they must not put too much trust in the evidence of a clever, pretty woman's "pet," as he called her, "pretty women can be very wicked." In the same style we would observe that respectable, impartial, industrious, honest men can be wonderfully prosy, circumlocutory, and pointless, even when treating very amusing subjects.

As a specimen of the style in which Mr. Westgarth tells page after page, we take the following sentence, in which he discusses the best mode of appointing a Colonial Governor

I will not pretend that the Home Government, as regards some particulars in its selections, has shown more care than might have emanated from the colonists. Perhaps, on the contrary the former might be estimated more liberal in short in this respect. But, in fauny cases, there is, at all events, a less vicarious pungency;—a certain stimulus of personal responsibility, consideration, administrative vigour, and intensity of watchfulness, when the people and their authorities are represented in the case, against all the glitter of a prestige in the other, which has been weighed against real quantities, and that every interval of social and political progress leaves in less considera ion.

Every body of our English readers can understand what the ex M L C and Victoria means, so will deserve the largest prize ever bestowed by a magazine on the solver of a conundrum

We turn over page after page without being arrested by a quotable fact, anecdote, reminiscence, or description. History there is none. The romantic incidents of the first settlement, the starving agents of the land man a of 1842, and the gold discovery of 1851, are passed over in a string of vague phrases.

The most original and intelligible chapter of the book, is that on the Newspapers of Victoria, which we condense, and very much improve by condensing.—

Two years and a half after the first family settled on the shore of Port Phillip—that is to say, on the 1st of January, 1838—Mr. John Pascoe Fawkner brought out a MS sheet, the first one of "the settlement," as the village was designated to be Melbourne was called. On the 16th February, 1838, appeared the *Melbourne Advertiser*; about the same time the *Port Phillip Gazette*; and in October, 1840, the *Port Phillip Herald*, which is up among them a daily newspaper. Geelong has for some time enjoyed a daily paper. Portland, with 800 inhabitants, has three had three newspapers. Two other towns, Belfast and Williamstown, have each one. The three original sheets published in Melbourne are now merged in the *Melbourne Morning Herald*. The *Argus*, the most successful paper in the colony, was founded in October, 1846, and appears as a semi weekly paper, the *Melbourne Argus*, with a circulation of 625 copies advertisements yielding about £13, while the weekly expenses were about £20 In June, 1849, they issued a small daily paper, towards the end of 1851, the advertisements yielded £80, and the circulation had risen to 1,050 a week. The gold discoveries and consequent dearth of labour ensued, and the proprietors of the *Argus* purchased for £300, a rival paper, the *Daily News*, with 600 subscribers, and a publication which could show off 400 copies per hour In July, 1852, after the price had been reduced one third, the advertisements yielded £900 a week, and the circulation on the utmost limits of their machine power viz, 10,800 copies daily. 160 hands were employed. Compositors are paid 8s a thousand. The cost of the news paper was £40 a week, and other expenses were estimated at £80, but the price to each town subscriber, delivered at his residence, was 1d

We may add that it is the extent to which advertising has always been carried in Australia—the long columns of cattle pounded, stolen, and strayed—the unknown's advertisements of property of every description from a jar of pickles to a full rigged ship—that have supported the newspapers and village populations. With rare except ions the paper sold at early contributions are nominal. Advertisements, prize currents, shipping lists, police reports, extracts from English newspapers, local correspondence, and a leading article abusing somebody, form the staple of Australian journals. In violence and vulgarity of tone they are equalled only by the press of India and the United States. Recently however, an improvement has taken place in the literary quality of some of the Australian newspapers.

Mr. Westgarth threatens to publish another volume, on his next visit to this country Let us advise him, in the most friendly spirit to confine himself to statistics, or dull facts in the hands of some friend with a talent for condensation, able to write English.

LIFE IN ABYSSINIA: Notes Collected During Three Years' Residence and Travels in that Country. BY MANSFIELD PARKINS. Two Vols, With Maps and Illustrations. Murray.

For three years the author, an English gentleman of fortune, a graduate of Cambridge, lived in Abyssinia, as an Abyssinian—not surrounded by guards, attended by a crowd of servants, and a caravan of luxuries, but as one of the people: he lived as they lived in their dwellings, copied their dress, ate their raw food, and joined in their sports: in fact, he Africanised himself. He gives us the results of his experience in two volumes, full to overflowing of interesting and novel information His adventures are rendered still more attractive by strange trait of personal character which drop out, from page to page, in a very natural manner.

Our traveller's armoury consisted of a double-barrelled gun, a small single rifle carrying an ounce ball, and a pair of double pistols. He had also a heavy Bowie knife, "warranted to cut off a tiger's head at a blow;" but he recommends, in preference, a knife about the size of a butcher's knife and an axe. After crossing the Desert by the usual route to Suez, he sailed thence in a miserable Arab boat bound to Jedda, thinking apparently that there was nothing like beginning to rough it as soon as possible. The hold was full of merchandise the deck was covered with passengers of all races—Turks, Greeks, Albanians, Bedouins, Egyptians and negroes. Packed among these ragged, dirty, picturesque, particoloured strangers, in a few days Mansfield Parkyns became accustomed to the myriads of animals on that swarmed: made himself comfortable; and, by dint of good humour and sixpences, of which item was a large ingredient, became a great favourite on board. Once they were in imminent danger of being all burned alive Finding that he could be of no use, from his ignorance of the language, he sat down on his iron box of gunpowder, and smoked his pipe in peace until the fire went out. Some turtles having been caught, they were made into a stew, and turned into a wooden bowl, round which sat twenty hungry fellows, each armed with a piece of bread, which they alternately dipped into the mess. At last the news of communism shocked our traveller; but he says that afterwards, having been in the constant habit of dipping his finger into the dish with niggers, he became accustomed to it, and thinks even now that that mode of eating is far more convenient, and, as practised in the East, quite as cleanly as the use of knives and forks.

The introduction is sufficient to show that Mr. Parkyns is the man to go through a world of savage life with ease, if not comfort.

Here we must leave our readers to pursue the adventures of this bornt raveller in his own work To read how, barefooted, clad only in a skin kilt, he pursued the Black Barea murderers of his friends. How, when "hard up," at one time he became assistant to an exhibitor of monkeys, keeping off the crowd with a rope and two balls; at another, contemplated becoming an Abyssinian Viceroy; and everywhere found kindness and hospitality, until, he came among Europeans at Khartoseen. The second volume contains a complete and curious account of the manners, customs, religion, and witchcraft of the Abyssinians, fully confirming all that Bruce said, and more.

It is right to add that Mr Parkyns not only made himself thoroughly acquainted with the language and resources of this comparatively unknown district, but formed a large collection of objects of natural history, part of which seem to have been stolen in our English Customs warehouses.

The two volumes are illustrated by a number of engravings from drawings by the author.

HEATHFIELD'S ESSAYS. Longman and Co.

In 1819 Mr. Heathfield published a pamphlet, which rapidly passed through seven editions, entitled "Elements of a Plan for the Liquidation of the Public Debt." It is not the province of the volume before us; which also contains Mr. Heathfield's contribution to a defunct periodical, called "Postulates and Data." These collected Essays are all of a financial and commercial character. A separate article is devoted to each of the recent Budgets of Mr Disraeli and Mr. Gladstone; and appended are suggestions for a future Budget. In 1819, Mr. Heathfield proposed to levy a tax of 16 per cent on all property, and to apply it to the reduction of the National Debt; and he appears to be still convinced of the soundness of that principle. He contends that industry is the vital principle of property; abstracted from labour, the land, the spindle, and the loom are alike inert and unproductive: a free course to honest exertion, and protection and compensation to the industrious are therefore first principles in the "social compact." It is then argued that a public debt contravenes the healthy action of these principles, since it necessarily enhances the price of all commodities, and disturbs the relation between the rate of labour and the cost of subsistence. Undoubtedly, it is easier to contract than to discharge debt; but in all honour and justice the attempt ought to have been made after the battle of Waterloo had restored peace to Europe. But a very different policy was adopted. One of the first measures was the repeal of the Property and Income-tax, then yielding £15,000,000 annually; that gave an immediate relief, but it proportionately extinguished the power of paying off the debt, which, in reference to the principal sum, can only be redeemed by a surplus of income over expenditure. The next measure was the resumption of metallic payments, which, by raising the nominal paper pound, worth only about 18s. 4d., to the gold value of 20s., added 9 per cent to all public and private indebtedness. We are not entering the historical lists, without offering a opinion on prior parliamentary engagements, which were the cause or the pretext of the two measures to which we have referred. They are only mentioned to show that at the end of the war certain acts were done, not to liquidate the debt, but to render it more and more difficult, if not impossible. In reference to Mr. Heathfield's Essays, we can commend them to all investigators of commercial and financial problems, as the thoughts of an experienced observer possessing a discriminating intellect.

JUVENILIA: A NEW PASTIME.

If it were truly said that the man who caused two blades of grass to grow where only one blade could grow before, was a benefactor to his kind, it may surely (though in a lower degree) be allowed that the person who contrives a new pastime for family circles, what in shall be at the same time an amusing and instructive exercise of mind, deserves the approbation of the community. The remark is induced by having seen, in a nursery in the American part of Islington, called the "Little Pilgrim," a card addressed to the juvenility of the States, by Grace Greenwood, a brief description of a game or play invented for their delectation, and which, we think, merits to be imported into England as much as bread stuffs or cotton. In fact, we have tried it and like it, and are of opinion that many a social party will thank us for descending from the high subjects of public wars, and matters of war, in order to teach them how to while away a pleasant hour in a manner to cultivate the talents of the young, and even to entertain the graver spirits of their elders. The game we may term—for we mean "telly" sense—no teaching is necessary for the simple recreation of

RIDDLE PLANTING AND PRODUCE,

the whole of which consists in some one planting anything they like, and expecting in answer to the question, "What would come up?" the name of a vegetable produce bearing an analogy in nature, sportive or serious, to the matter communicated to mother earth.

As this easy as it is, may not be understood at a glance, we add an example from half an hour's trial by a merry mixed company of all ages, looking, amid laughter, the bottony of the Juniors and the memory of the seniors.

Q. If I saw Botany Bay what would come up?—A. All sorts of trees and shrubs, and flowers. Q. If the housemaid was planted, what would come up? A A broom. Q If the coachman? —A. A horse radish, or Coach Lace. Q If the groom? A. Cucumber and mare's tail. Q. If a waiter? A. Cummin. Q If the Lord Mayor? —A. London pride.

Another line was broken into.—

Q. If I planted a cover, what would grow?—A. A passion flower. Q If rejected—what? A. Pine, or love-lies bleeding. Q. If dressing for a cheese cake?—A. Lettuce, or if, or chive. Q. If accepted? A. Thyme? Q. If I planted mamma and baby?—A. Baby suckle. Q. If we planted the Queen and the Royal Family, what would sprout up? A. Victoria Regia, crown lilies, prince's feathers, and Miss Arbor Penny royal.

The Alphabet was given to the children, and out of a number of absurd and forgotten guesses were—

A Hay (rather cockney) B Orchis, C-dar, Heart's Ease, P, T, LM IV, and U (a simultaneity and jerk)

Q. If a mushroom was planted what would come up?—A. Parsnip. Q. If a [illegible]—A. Holly and rosemary. Q. If [illegible]—A. Duck. Q. If [illegible] A. Bantam fowl. Q. If [illegible] A. Cuckoo. Q. If [illegible] A. Lobelia or Q If a cheese? A. Beet.

At last, a dangerous class of our readers will, we are sorry to find, take to so encroaching on a small space, to put them in the way of engaging this pleasing and useful amusement.

THE BRITISH INSTITUTION.

(*Continued from page 178.*)

cross or inverted triangle; their heads projecting at top, whilst the hard surface of the full moon forms a sort of mystic halo behind them. The faces of the three hags are remarkable as studies of the supernatural being completely removed from the simply human, and yet not altogether caricatures. The position of their arms also, as they clutch one another in wild embrace, betrays considerable power and originality of conception. This little picture, however, is hung so high, that it is a bold act to say anything of it at all; and we speak of it only as imperfectly seen, and as regards the general impression produced by it upon us.

"Charming!" (86) by T. Landseer, is an incantation scene, performed by witches in a fog, boldly executed; and quite as imposing as such performances are generally supposed to be.

Mr. Hemsley, who takes pleasure in the troubles and vexations of boyhood, has a little picture, entitled "Crab Catchers" (241), which exhibits a young urchin who has been making free with he piscatorial spoil just landed, paid out for his impertinence by a crab, who fixes his claw to his finger. The pain of the infliction is well depicted in the poor boy's countenance; and the rest of the family group sympathise with him in various ways and degrees—the elder ones laughing, whilst the younger whimper and tremble with affright. We give an Engraving of this spirited little affair.

Rothwell, whose picture of "Contemplation" we have already incidentally mentioned, has another smart, sprightly affair, "A Thing of Beauty is a Thing of Life" (263), and realising Moore's sparkling lines, beginning—

Rich and rare were the gems she wore.
And a bright gold ring on a wand she bore,
But, oh, her beauty was far beyond,
&c.

A pretty subject, conceived in great exuberance of feeling, and dashed off with a florid pencil.

"The Eastern Story-teller" (471), by John Smythe, is a small picture of more than ordinary merit. It represents an excitable Egyptian, of the vagrant class, perched up on a high bench, in the midst of a miscellaneous assemblage of both sexes and all ages, to whom he is reciting some tale of wonder or terror. The various expressions on the countenances of his audience are admirably conceived, and the whole most cleverly executed.

"Marking the Covey" (216), by H. Hall, is a capital little sporting bit, evidently from the hand of one to whom fields sports are every day familiar. The old gamekeeper, seated on his shooting pony, and pointing out the covey, is the perfect picture of English sporting life. The donkey, dogs, &c., are also admirably real; and the scene is doubtless some favourite haunt.

"The Rabbit Fancier" (226), by T. Earl, is an amusing sketch of a sharp terrier, looking wistfully through the bars of a rabbit-hutch, his tongue, in the excitement of the moment, thrust half out of his mouth as he contemplates the delicious morsel with which he would fain make better acquaintance. It is impossible to pass this little group unnoticed, nor to turn away from it without a smile, and a recognition of the artist's talent.

"Cat and Kittens" (466), by F. W. Keyl, must also be mentioned as a highly-successful study of animal life in the comic vein; the cat gambolling joyously with a pair of plump sleek kittens, who do justice to their parentage, and to the artist's choice of them.

Ansdell's animal subjects are as life-like in character and as admirable in detail as ever; indeed, we find considerable improvement as respects some of the higher qualities of the art, in his contributions to the present Exhibition—more vigour of design, as well as more richness and depth of colour. His donkeys are, perhaps, his speciality; and how real and rough, and wise-looking they are; and how he takes pleasure in making them disport themselves upon the sandy common, in all the variety of attitude which it is possible for asinine agility to assume!

"CRAB-CATCHERS."—PAINTED BY W. HEMSLEY.

In the little piece which we engrave, entitled "Lytham Common," we have a group of three—one of which a young colt, is stretched upon the plain, basking in the sun; the other two looking as wise as they can; whilst near at hand are two old wethers; and in the distance, on the left, a sprinkling of their comrades. In "The Interrupted Meal" (153) the artist takes a different range, and upon a larger scale. We have here an eagle about to devour a sheep which he has just killed, when he is scared and interrupted by a large shepherd-dog, of fine mountain breed, who flies furiously at him. There is a wonderful degree of spirit and fire thrown into this production, which in all respects is of a high order of merit. "The Game Bag" (564) affords the artist an opportunity for displaying his delicate command of brush, in the effective colouring and soft textural execution of the plumage of various kinds of game—the distinguishing characteristics of which are well preserved.

In landscape Linnell first startles us with his glowing picture of a "Harvest Home" (50), the sun being represented as setting in the midst of the background, and tinging with fiery red every object in the mid-distance and foreground. But is there not a little too much intensity of effect here?—a little too much variety of colour, too, in that spotty and streaky sky, particularly in the distance, where all the hues of the rainbow come in for a share, without any attempt to blend them as Nature blends in her own transparent medium? In this artist's other picture, "The Refuge" (165), we have an effort in a different style—a storm cloud, rent with forked lightning; and a delicious bit of village scenery in the mid-distance, with a cool, watery atmosphere overhanging. The cloud, perhaps, is a little leaden in material; but the greens of the foliage and vegetation generally present a delicious contrast when compared with the preternatural ardency of the "Harvest Home."

Jutsum, so conscientious in treatment and so unassuming in style, yet withal so effective, exhibits three landscapes. "The Rocky Path of a Mountain Burn" (152) exhibits a wild, waste, rugged pass, the granite rock rent with innumerable fissures, and sparsely covered with fern and various coloured heaths, upon which some wethers are browsing and sniffing the air. In the background is a bold mountain range. "Autumn in the Highlands" is somewhat similar in character to the last, but more subdued and domestic. A straggling valley stretches into the far distance, through which flocks of sheep are being driven towards the homestead. A rude bridge of trees crosses a noisy brook in the foreground. "A Sylvan Dell" (295) is one of those subjects in which Mr. Jutsum is always happy, and of which he has here produced a most agreeable picture.

Sidney Percy displays his cold clear pencil and artistic finish in a view of "Llyn Cwm Dulyn, North Wales" (38). He is very successful, also, in a scene of a different character—"Woodland Pasture" (441).

J. Middleton has a very unpretending, but very meritorious, little landscape. "The Woods in Autumn;" and a larger picture, "Glensherag, Isle of Arran," in which is much cleverness.

T. Danby displays his gold glitter of surface in a very carefully-painted picture, "A Summer Evening in North Wales;" and is quite at home in "A Quiet Spot" (313).

C. Branwhite attempts, upon a somewhat ambitious scale, "A Sunny Afternoon, late in Autumn" (7[illegible]). The scene represents an old mill, wooden stage &c., over some water, with an open space and broad sky. But the local colour is intense, and the water surface hard and opaque—air, life, and motion being altogether wanting.

Amongst C. E. Herring's three exhibits we were agreeably struck with his "Angers, Lago Maggiore" (214), which is delicately painted, under a clear sky.

H. J. Boddington paints a little scene of smiling verdant freshness on his favourite Thames—time midday (498); and "a Brook through scape.

E. W. Cooke only favours us with one of his fine Dutch coast scenes, but it is a very effective one: "Scheveling Shore, low water; Finks preparing for sea." The perspective of the flat far-stretching sand, the moisture which glistens here and there, and the details of the shipping, are alike admirable.

W. Wyld exhibits a large picture of more than common merit: "A View of the Port of Oran, in Algeria" (499). The view is taken from the sea, looking in shore; and various shipping are scattered about on either side, their sails hanging motionless in the sultry sky. The distant buildings of the town are delicately painted in; there is much breadth in the general treatment; and as the mid-day sun soars high in the midst, the canvas glows with a warmth and subtle glitter, experienced only in a southern atmosphere.

There is considerable merit of intention in J. Holland's "Deal Beach" (44), with a rolling sea on, and boats in the distance; but the water is rather hard, wants fluidity; and the colouring of the rainbow is excessive in intensity, and wants the evanescent ethereal character of atmospheric phenomena.

the Wood" (424); both agreeable specimens of genuine English land

"LYTHAM COMMON."—PAINTED BY R. ANSDELL.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little 198, Strand, aforesaid.—Saturday, February 25, 1854.

THE ILLUSTRATED LONDON NEWS

No. 671.—VOL. XXIV.] SATURDAY, MARCH 4, 1854. [WITH A SUPPLEMENT, SIXPENCE.

READY FOR THE CONFLICT.

It seems to have puzzled various members of the British Legislature to decide whether we were actually at peace or at war with Russia. The manning of splendid fleets, the embarkation of regiments, and the voting of increased Army and Navy Estimates, were, it is true, highly suggestive of a state of war. But then it was asked how can we be at war unless there have been a formal declaration of it? Lord John Russell and Lord Clarendon severally did their best to explain to these dubiously-minded men the true state of the case, and how it was that certain formalities due to the dignity of the Sultan and to his estimation among his own countrymen, had to be gone through before war could be officially declared on his behalf by his faithful allies. Practically we are at war; theoretically the Emperor of Russia has yet a few days before him, in which he may indulge the notion that he is at peace with all the world, except with Turkey. Messengers were despatched on Monday morning, from London and Paris, bearing to the Czar the ultimatum of those powers, to the effect, that if he do not by the 30th April next ensuing evacuate the Danubian Principalities, they will immediately resort to force to compel him to do so. The haughty refusal of the Czar is easy to anticipate, and will, in all probability, reach London and Paris about the 21st inst. Before that day the magnificent Baltic fleets of Great Britain and France will be in readiness to try their strength with Russia before Cronstadt; and by the same day Sebastopol will, doubtless, be invested both by sea and land.

In the meantime all will proceed *selon les règles*. If not striking heavy blows against the enemy, we shall be ready for him at all points on a moment's notice. There are many calamities that are far worse in the anticipation than in the reality. The pangs which a man has never suffered, but of which he has heard much from the reports of others, he is apt to exaggerate. Nations and generations born and nurtured in peace, that know nothing of war but the burdens which it has entailed upon them, and the miseries which it inflicted upon their forefathers, cannot but look with dread upon its renewal in their time and in their own persons. But these feelings seldom last beyond the hour when war is known to be inevitable. The vague dread of the unseen giant is far more terrible to bear than the actual presence of the monster. It is the uncertainty that causes more than half the mischief. A few months ago, when there seemed a reasonable hope that, by a few mutual concessions and sacrifices, the peace of the world might be preserved, there was not a state in Europe, except Russia, in which war was not considered as the direst of afflictions. But at the present moment, when all uncertainty is at an end, and when the nations of Europe know that there is a sharp conflict before them, a feeling of positive satisfaction has succeeded to that of alarm. Now that there is to be no more "pottering" between Ambassadors, and Consuls, and that we are to have a fair stand-up fight with the common enemy, the world seems to be relieved of a load. The anxiety is no longer to prevent war, but to go into it manfully, and fight it out heroically. There is not a shadow of discouragement in the counsels of the Allies; there is not the remotest faint-heartedness on the part of the people. Enthusiasm is, in France and England, at its fever-height. All the generous sentiments of humanity have been aroused against the wrong-doer. Old Europe feels herself youthful and vigorous, under the strong stimulus of her outraged sense of honour; and, such is her present temper, as represented by her two foremost nations, that the prevention of Russian encroachment is no longer sufficient. It is felt that, not only must we teach the great criminal his duty to the present, but we must punish him for the past, and restrain him for the future.

England enters upon her task with a cheerful spirit. Certainly, all the circumstances of the case are such as to warrant her hopefulness and alacrity. She takes up arms with no selfish object. Her cause is that of public law, morality, and order. She aims at no increase of power or territory, and struggles for no advantage peculiar to herself. It is a war of principle that she wages, and none but the enemies of justice can be arrayed against her. Did she stand alone in such a cause, there would be no reason to fear her discomfiture; but, supported as she is, discomfiture is a word that has long ago been erased from the imagination, as well as from the calculation, of her people. That she has any allies is a fact for which to be grateful; but that she should have an ally like France merits more than gratitude. When two great and noble nations, "separated by a narrow frith," and who, till within a period yet remembered by living men, considered themselves natural enemies, born to "abhor each other," unite in the face of the world, forgetful of their old traditionary feuds, and show the bright example of union in support of European order against the Barbarian who would reduce it into anarchy, the risks and evils of the war are cheaply purchased. Such a spectacle is of itself sufficient recompense for a host of sacrifices. It proves that the commercial spirit has not deadened the heroic sentiment—that nations capable of acting together in support of principles so lofty are yet in the early vigour of their history; and that semi-barbarous countries, such as Russia, must keep their own place, or learn to compete with them in civilisation, and in respect for public justice, before they can hope to struggle against them successfully at the cannon's mouth. There was never a time in which the real interests of countries situated towards each other as Great Britain to France, and France to Great Britain were not in reality identical. All the wars between these great nations have been mistakes. The fact has long been apparent to the popular mind in this country. It

INTERVIEW OF BRITISH VISITORS WITH OMER PACHA, AT SCHUMLA.—(SEE PAGE 196.)

bids fair to become equally apparent to the popular mind of the French. Their generous emulation when the two shall fight side by side against the same enemy will do more than has ever yet been done to render all future wars impossible between them.

So much for the moral aspects of this great struggle. The material aspects of the question are in no degree less inspiriting. Eight or nine years ago, when the national energies were depressed by an unwise commercial and fiscal system, it was easy to form gloomy anticipations of the fortunes of England. Such anticipations were widely indulged in. Groping among blind Statistics, and armed with proofs from the voluminous Blue-Books of Poor-law Inspectors, Prison Inspectors, School Inspectors, and Lunacy Inspectors, our modern Habbakkuks denounced wrath and woe upon their country. "So miserable," said they, "is the state of the honest English labourer, that every man among them is burdened, not only with his own support, but with that of a pauper, a criminal, a soldier, and a sailor." But the shadow has passed from the face of the country since then. The pauper and the criminal are no longer the burdens that they were. Fair play to honest labour has relieved us of all but the inevitable residuum of both classes; and, so far from feeling it an infliction to have to support a soldier and a sailor during the approaching struggle, honest John Bull will willingly support half-a-dozen of each. His lassitude and decrepitude have passed away; and England is at this moment—when she is about to fight one of the noblest wars she ever was engaged in—stronger, richer, and more united, than ever she was in any previous era of her history.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Dear readers, we purposed giving you some account of the *fours gras*, the conclusion of the Carnival, but really it is such a dismal affair, that there is nothing worth saying on the subject. The mummeries of this season have long been on the decline; people have for a considerable time been learning to discover that marching about the streets in hideous, ridiculous, shabby, unmeaning costumes, at the risk of being frozen to death, was not amusing; and, in proportion as this conviction gathers strength, the said costumes become fewer, the wearers of them feel more ridiculous, shabby, and unmeaning, and the whole thing becomes threatened with speedy dissolution. The procession of the *bœuf-gras*, aided by the brilliant sunshine, has certainly not been without considerable effect; and this is well enough in its way, but it is the individual tomfoolery of the *masques* that we view with each derision, and that we hope to see shortly brought to a conclusion.

It is said that the manufactory of porcelain at Sèvres is busily occupied on a number of magnificent specimens of this beautiful china—to the execution of which a new impulsion has within the last few years been given—for the Great Industrial Exhibition of next year. Nothing can surpass the beauty of some of the modern productions of this long-celebrated manufactory, where neither art, labour, expense, nor research is spared, in order to produce the utmost perfection of form, design, and colouring; and few objects are more worthy a visit of amateurs and sight seers in general than this establishment, situated within less than an hour's drive of Paris, and open to the inspection of all respectable comers.

The certainty of war does not seem to have much effect on the projects, public and private, entertained respecting the Exhibition. Strangely enough, it is Spain—seldom in the van in the march of intellect and improvement—that has set an example, which is likely to be followed by more active and civilised nations, by establishing, among a company of Spanish merchants residing in Paris, a monthly publication, specially intended to represent at the Exhibition the interests of Spain, her dependencies and colonies in Europe and America. The first number of "El Precursor de la Exposcion de 1855"—such is the name of the periodical in question—appeared last week. A certain portion is devoted to art and literature; but the principal subject of the work is the commerce, industry, and mechanical improvements and interests of the Spanish.

M. H. de Villemessant is about to renew the *Figaro*, which has had an interregnum of some years. It is to be of a character exclusively literary, without any mixture of politics; and is to be brought out weekly, beginning on the 1st of March.

Our plan of a Railway Library is coming much into vogue here; a great number of short works on all subjects being printed, in a particular form, with this intention. No less than seven or eight houses of importance are at this moment particularly employed in this commerce, which a year ago was unknown, or nearly so, in France.

A new and most valuable discovery in the application of chloroform has just been made here by the *docteur* Delabarre, whose name, in connection with the study of this medical agent, is already honourably known. In order to perform an operation, instead of producing general insensibility in the patient, which, in many cases, has been attended with dangerous, and even fatal, results—Dr. Delabarre has found the means of directing a jet of the vapour of chloroform on the part affected, so as to produce merely local insensibility; thus obtaining all the desirable results of the system without any of its risks or disadvantages. At a meeting of medical men, on Thursday last, Dr. Delabarre operated on nine patients, in each case with success more or less marked; some having experienced no sensation of the operation whatsoever, others merely a consciousness of it, but without pain.

The clergy in France, having made some discoveries relative to the organisation and strength of the order of Freemasons, has declared war on the whole body, as enemies of the faith. As, among the ranks, some of the high dignitaries of the State are placed—the Prince Murat being the present Grand Master, and the other members of the Imperial family holding posts of note therein—the combat will be one of no mean importance and difficulty; but the clerical party is not easily discouraged, where there is a question of defeating an enemy; and there is little doubt but that Gallicans and Ultramontanes will, for a moment, cease their internal squabbles to join against the common foe. The most formidable part of the affair is, that the said foe, counting, it is computed, as many as 75,000 or 80,000 strong in its ranks, has established a *caisse de suscription*, containing an annual contribution of an average of twelve francs for each member. It is true that the sum in question is exclusively employed in works of charity, and the relief of misfortune, but that is nothing: *le diable n'y perd rien*, and his emissaries must be annihilated.

The illness of the Abbé Lamennais, which, in our last letter, we announced as having taken a favourable turn, has terminated fatally; greatly aggravated by his having imprudently received visitors, contrary to the advice of his physician. The most alarming symptoms attended with delirium, declared themselves, and on Monday morning he expired, without having made any alteration in the testamentary disposition for his funeral which we recorded.

Nearly all the Russians have left Paris, the Princess Lieven at their head, in consequence of an intimation of the Czar's surprise and dissatisfaction that they had not sooner attended to the intimation relative to the necessity of their departure contained in the circular of M. Kisseleff, distributed previous to his quitting Paris.

A sale is now taking place of the furniture, library, and personal property of M. Armand Bertin, the late director of the *Journal des Débats*, which is attended with great interest from the singular beauty of the china and articles of *vertu*, and the extreme value and rarity of the books, which form one of the most curious and valuable small collections that could be brought together. It is said the Duc d'Aumale purchased most of these, with a large portion of the shelves which contain them, and which are in magnificently-carved oak, with Caryatides and ornaments of Florentine bronze.

It is with great pleasure we have to announce the triumphant success of the new piece of Madame Emile de Girardin, "La Joie fait Peur," which appeared on Saturday, at the Théâtre Français. This little *chef d'œuvre* is in one act, and turns on an incident so simple that it cannot be called a plot; the whole charm, therefore, lies in the treatment; and never could the most exciting tragedy or *larmoyant* melodrama call forth more tender interest, or cause more lively emotion, than is felt from the rising to the falling of the curtain over this little gem.

M. DROUYN DE LHUYS' CIRCULAR.

The following circular from the Ministry of Foreign Affairs has been addressed to all the diplomatic and consular agents of France, ordering them to give their support to the subjects and the commerce of England in every case where they may be menaced by the common enemy:—

Sir,—Being compelled to admit the possibility of hostilities between them and Russia, the Government of his Imperial Majesty and that of her Britannic Majesty have thought that the alliance which they have contracted in view of a common danger should cover the interests of all those who might suffer from the consequences of the war. Whatever may be the extent of the resources at their disposal, particularly at sea, they have to take into account unforseen circumstances. Should war break out, it might happen in embarrassing where the naval forces of each of them might not constantly present themselves, that their subjects or their flag might not have, at the needful moment, all the protection necessary for their security. The two Governments have found a means of providing for these eventualities in the concerted adoption of a system of reciprocal protection embracing these interests, which are scattered over every latitude. The diplomatic and commercial agents, as well as the commanders of the naval forces of each of the two nations, must therefore give their support to the subjects and the trade of the other, under every circumstance, where they may be attacked by the common enemy. You will, sir, in consequence, consider the English subjects and vessels within your jurisdiction as having the same right to French subjects and vessels to all the assistance which comes within your attributions; and you will give notice of this prescription to the officers of the Imperial navy, who may be in a position to concur in the measure which circumstances resulting from the state of war may render necessary. The agents and officers of her Britannic Majesty will receive similar instructions; so that the subjects and commerce of the two nations will be authorised to rely on the reciprocal protection of the Consuls, and the navy of the two Powers. You will understand, sir, that I do not attempt to point out to you beforehand all the cases which may call for your intervention. It is for your own judgment to apply the principle by which your conduct is to be regulated. The two Governments have thought less of pointing out the forms in which this protection is to be exercised than of marking the character which it is to assume. In giving to the world this fresh proof of the unity of their views and the sincerity of their alliance, they are persuaded that, in order to secure to this common measure all desirable efficacy, their agents have only to be inspired with the same spirit of joint responsibility which has influenced the minds of the two Cabinets.

(Signed) DROUYN DE LHUYS.

THE RUSSIAN ARMY ON THE DANUBE.

The Russian forces in the Principalities, which are generally considered to number 200,000, do not much exceed half that number, according to the most trustworthy on the subject. They are composed of the 3rd *corps d'armée*, which has up to the present time only two divisi ns of infantry and one division of cavalry in Wallachia, the other division being quartered in Bessarabia. The whole of the 4th *corps d'armée* is in Wallachia; and one division of infantry and one of cavalry, belonging to the 5th corps, are likewise there. The rest of the 5th *corps d'armée* is part in the Caucasus and part in Bessarabia. The total of the Russian forces on the Danube, therefore, does not exceed 120,000 men. There are, consequently, in the Principalities but six divisions of infantry, three of cavalry, and several regiments of Cossacks. Of these forces, three divisions of infantry guard the Danube from the mouth of the Danube from Widdin to Galatz, opposite to the Turkish posts; as also the greater part of the cavalry. It is, therefore, evident that only three divisions remain at the disposal of Dr. Commander-in-Chief to be brought to attack in a body. These divisions are, the 8th, 9th, and 12th, numbering 36,000 men, considering them as fully complete. It is, however, still doubtful whether Prince Gortschakoff has marched all this force from the centre, in order to attack Kalafat, which is from sixteen to twenty marches distant from Bucharest, leaving the Danube defended by a simple cordon of troops, stretching along its banks; for although it is not considered likely that the Turks will pass the Danube at Rustchuk or Silistria, it were great temerity to leave the banks of that stream so exposed. It may therefore be presumed that the forces with which General Gortschakoff would advance on Kalafat are the following:—Two divisions of infantry, and the division of cavalry (Fleischbach) already quartered at Krajova; some battalions of the 10th division, and some regiments of Cossacks. These troops may amount to from 30,000 to 35,000 men, and this is no doubt a considerable force; it by no means, however, equals the number generally assigned to the army now quartered at Krajova.

RUSSIAN DIPLOMATIC SPIES.

The *Breslauer Zeitung* mentions a circumstance which shows how faithfully the Czar is served by the people whom he employs in every Court in Europe. Some time back, before any contingency of war in Europe was contemplated, a new plan for the mobilization of the Prussian army was drawn up by the Minister of War; and, being a confidential document, only ten copies were struck off after it had been lithographed, and these were distributed only to certain privileged persons. One of these ten copies of this important document has found its way just lately into the hands of the Emperor of Russia, who has shown it in his possession with an air of triumph. The document was not drawn up with reference to the calling out of the army at any specified time but was a general plan for arranging how it should be *mobilised* when occasion should require; it had, therefore, intrinsically, no worth to the Emperor, but is of immense value to him as proving how admirably he is served by men to whom orders, gold snuff-boxes with portraits set in diamonds, &c., are of greater attraction than their country's welfare. The man who thus purloined and misapplied this document, which gains now an additional value from the consideration that the possibility of the two countries being soon engaged in war, would in gladly have forwarded him a more valuable memorial. Public suspicion, which is prevented by the nature of the case from seeking the offender in a low sphere of life, does not hesitate to affix itself to more than one person in a very high region.

THE "FRIENDS" AND THE CZAR.

The interview between the deputation from the Society of Friends and the Emperor Nicholas took place on the 10th ult. The address was of the usual tone of such documents—praise of peace, and horror of war being the only topics. The members of the deputation have published the following report of their reception:—

The Emperor, after listening with kind attention to the address, said he wished to offer some explanation of his views as to the causes of the present unhappy difference. His observations in the course of the conversation, were nearly as follows:—

"We received the blessings of Christianity from the Greek empire; and this has established a bond maintained ever since a link of connection, both moral and religious, between Russia and that Power. The ties that have thus united the two countries have subsisted for 900 years, and were not severed by the conquest of Russia by the Tartars; and when, at a later period, our country succeeded in shaking off that yoke, and the Greek empire, in its turn, fell under the sway of the Turks, we still continued to take a lively interest in the welfare of our co-religionists there; and when Russia became powerful enough to resist the Turks, and to dictate terms of peace, we paid particular attention to the well-being of the Greek Church, and procured the insertion in successive treaties of most important articles in her favour. I have myself acted as my predecessors have done; and the treaty of Adrianople, in 1849, was as explicit as the former ones in this respect. Turkey, on her part, recognised the right of religious interference, and fulfilled her engagements until within the last year or two, when, for the first time, she gave me reason to complain. I will not now advert to the parties who were her principal instigators on that occasion. Suffice it to say that it became my duty to interfere, and to claim from Turkey the fulfilment of her engagements. My representations were resisting, but friendly, and I have every reason to believe that matters would soon have been settled if Turkey had not been induced by other parties to believe that I had ulterior objects in view—that I was aiming at conquest, aggrandisement, and the ruin of Turkey. I have solemnly disclaimed, and do now as solemnly disclaim, every unjust motive. . . . I do not desire war; I abhor it as sincerely as you do; and am ready to forget the past, if only the opportunity be afforded me. I have great esteem for your country, and a sincere affection for your Queen, whom I admire, not on y as a Sovereign, but as a lady, a wife, and a mother. I have placed full confidence in her, and have acted towards her in a frank and friendly spirit. I felt it my duty to call her attention to future dangers, which I considered sooner or later likely to arise in the East in consequence of the existing state of things. What on my part was prudent foresight, has been unfairly con-trued in your country into a designing policy and an ambitious desire of conquest. This has deeply wounded my feelings, and still rted my heart. Personal insults and invectives I regard with indifference. It is beneath my dignity to notice them, and I am ready to forgive all that is personal to me, and to hold out my hand in the true spirit of the Christian spirit. I cannot understand what cause of complaint your nation has against Russia. I am anxious to avoid war by all means. I will not attack, and shall only act in self-defence. I cannot be indifferent to what concerns the honour of my country. I have a duty to perform as a Sovereign. As a Christian, I am ready to comply with the precepts of religion. On the present occasion, my great duty is to attend to the interests and honour of my c untry."

The deputation remarked that, as their mission was not of a political character, but intended simply to convey to the Emperor the sentiments of their own society as a religious body, they did not feel it to be their place to enter into any of the questions involved in the present dispute; but, with the Emperor's permission, they would be glad to call his attention specially to a few points. . . . They said that they and many others in their own country had incurred the disfavour of the secretaries of the treasury in refusing to pay by advocating the settlement of international disputes by arbitration. They also remarked that, seeing that, while Mahomedanism avowedly justifies the employment of the sword in propagating its doctrines, Christianity is emphatically a religion of peace, there appeared (with reference to the present dispute) a peculiar propriety in a Christian Emperor's exercising forbearance and forgiveness. And they added that, in the event of a European war, among the thousands who would be its victims, those who were the principal causes of it would probably not be the greatest sufferers, but that the heaviest calamities would fall on innocent men, with their wives and children.

The Emperor, before quitting the apartment, informed the deputation that the Empress was desirous of seeing them. They were accordingly at once introduced to her, and to the Grand Duchess Olga, with whom they had an agreeable interview.

The deputation were subsequently informed, through Baron Nicolay, that the Emperor desired to transmit to the Society of Friends a written reply to their address, which was accordingly forwarded to them previous to their departure for St. Petersburg.

ROBERT CHARLETON, of Bristo..
HENRY FEASE, of Darlington.

London, 25th of 2nd month, 1854.

THE RUSSO GREEK DISTURBANCES.

The Vienna papers state that the Insurgent Greeks in Albania had possessed themselves of the city of Arta. Arta (or Norda) is situate not far from the gulf of the same name, and is surrounded on three sides by the river Arta, which falls into a small bay that forms the harbour of the place. There is a large fortified Turkish castle, situated on a hill to the east, and which commands the place and the harbour; it is a town of 8000 inhabitants (who are chiefly Greeks), and it is also the seat of a Greek Bishop. The fortress of the five fountains was still in the possession of the Turks so recently as the 13th ult. It is said that, although no open insurrection had broken out in Macedonia, still the premonitory symptoms of such an event were not wanting there, and that the provinces of Acarnania and Anatolia, and the districts of Ibbesson and Delonia, were already in a state of disorder. It was stated that the Turks had abandoned the city of Janina, as it might be at any moment occupied by the insurgents, when they had sufficiently consolidated their strength. Janina, in the district of the same name, is a Greek Bishop's metropolitan see, and has a population of 30,000 souls, who are chiefly Greek Christians. It was built in a remote period by John Cantacuzenus, the nephew of the Greek Emperor of that name; its fortifications were destroyed in the last siege. The Turks had advanced with considerable forces from the interior of Albania against the insurgents; and, by way of relieving the forces who were blocked up in Arta, martial law had been proclaimed against the rebels. The insurgent army in Albania was said to amount to 5000 men Our Government has remonstrated very strongly with that of Greece on these frontier disturbances, in which Greek subjects appear to be the parties chiefly implicated; and the Greek Lieutenant-command ng the insurgent Demetrius Ypsilanti Tharakanis, has been summoned to return to his duty on pain of expulsion from the service.

In the districts which adjoin the Greek frontier, the Greeks had begun, as they did in 1820, with holding secret meetings of the old Hetæria, so well worked by Russia, previous to what is called "the War of Greek independence," and now they are looking forward to fresh days of victory. The papers of Bosco Visnar, which were seized at the time of his arrest at Constantinople, have, by order, been revealed to the Government the most minute secrets of the Greek con-pirators. To the Pachas both of Janiesa and of Larissa the most energetic instructions have been sent. Measures already had been taken by them against the insurgents, and now 10,000 men have been placed at the disposal of each Pacha, and the very fullest authority has been intrusted to them. Large bodies of troops have been stationed in reserve at Argyrocastro, Therbene, and Biacho Livado, which the Pachas are to employ, if their present forces prove inadequate.

Letters from Odessa of the 18th ult., state that Halim Pacha, at present Commander of the Turkish troops in the Dobrudshia, is to conduct the operations of the campaign against the insurgents. He is considered to be one of the ablest generals in the Turkish army, and chiefly signalised himself in 1831, and likewise in a campaign against the rebellious Albanians. The latest advices from the Montenegrin frontier state that the Turkish corps of observation is in sufficient strength to paralyse any attempts that might be made to form a junction between the insurgents of Albania and the warlike inhabitants of Montenegro. The Pacha of Scutari had arrived in person on the frontier, to superintend all the necessary movements. Gr-ruli, Gari shani, and Zabuljac, were the principal stations of the Turkish corps of observation.

A letter from Corfu of the 12th ult states that English troops had been embarked there, who, it was understood, were destined to be sent to the opposite coast of Albania. From the rest of the Ionian Islands, we also hear that similar expeditions were in preparation. These energetic measures for the suppression of the revolt in Albania will, no doubt, be effectual. From Salonica we have letters of the 12th, from which we learn that symptoms of disorder had begun, on the 8th and 9th, to display themselves among the Greek population in that city also; but it was speedily suppressed by the sudden and energetic operations of the Pacha.

The French and English Ambassadors have sent two steamers to the assistance of the Turks, and probably the Gulfs of Contessa and Salonica, and the coast of Albania, will be declared in a state of siege.

RUSSIAN TOLERANCE.

The kind of tolerance that prevails in the Russian empire—the Government of which has now drawn the sword on behalf of the privileges of the orthodox church in the East—may be judged from the fact that the Catholic missionaries in Transcaucasia have been peremptorily commanded to make no proselytes. Only a short time ago, a large number of Suanetes and Abchases, nearly all of which tribes are still heathens, applied to the prior of the convent in Kutais, requesting to be baptised. The prior was obliged to decline, and to send them away, for transportation to Siberia awaits any priest that dares to convert a worshipper of idols into a Roman Catholic Christian.

RUSSIAN INTRIGUES IN INDIA AND PERSIA.

The intelligence of the establishment of a Russian army on the Oxus is confirmed by the papers received by overland Mail; also, that an alliance, offensive and defensive, has been concluded between the Russians and Dost Mahomed, the Khan of Khiva, and the Khan of Bokhara. The following is from the Cabul Correspondent of the *Delhi Gazette*:—

The Russian army had halted within two marches of Khiva, and was employed in the construction of cantonments. Four Russian agents had reached Dost Mahomed, bearing a message from the Russian general. The message was to this effect:—Dost Mahomed was solicited to proceed with his camp to the banks of the Oxus; there to meet two Russian Envoys with letters from the Czar—one addressed to the Ameer himself, and the other to the King of Bokhara—proposing the formation of a quadruple alliance between the Czar, the Khan of Khiva, Dost Mahomed, and the King of Bokhara, the alliance to be agreed upon on the right bank of the Oxus. Should Dost Mahomed agree to the proposal, the

at Constantinople. The nomination of Marshal de St. Arnaud to this important command makes the immediate appointment of another Minister of War absolutely necessary; and General Randon, the present Governor-General of Algeria, has been summoned to Paris by telegraph. For the present he will only be appointed Minister of War *ad interim*. General Pelissier, who it was in the first place intended should take the important post of *chef de l'état major* of the Commander-in-Chief of the expeditionary army, is to be the Governor-General of Algeria.

Steamers are being prepared at Toulon for taking on board several regiments of cavalry. The workmen at the arsenal are employed night and day.

THE TURKISH ARMY UNDER OMER PACHA.

The *Soldaten Freund* of the 22nd February contains some interesting information from the seat of war, from which we learn that Omer Pacha's great object has been to form three army-corps, with their head-quarters at Karasou, Sistow, and Widdin; each corps to consist of 24 infantry battalions, 30 squadrons of cavalry, and 60 guns, in all respects well appointed. The effective force of each corps is 26,000 Nizam (regulars), 10,000 Redifs (militia), and the auxiliary contingents of Egypt, Tunis, the Herzegovina, and Albania. Egypt has sent excellent and well equipped regulars, the other provinces only irregular troops. The reserves form the second or Balkan army. The strength of the army now under Omer Pacha is said to be not far short of 220,000 men, and although it is far from being all that could be desired, the spirit with which it is animated is excellent.

The news of the insurrection of the Christians in Epirus had produced an alarming effect on the Arnauts and Albanians on the Danube, who loudly demanded permission to return home. The Generals of Brigade, Hussein Bey and Soliman Pacha, had lost all their influence over their wild troops, and it was feared that, if an attempt were made to detain them by force, there would be an open mutiny; while if they were permitted to return, they would ravage the Christian districts on their way home. The attention of the Turkish army was, therefore, for the moment, more directed to the movements of the Greeks, Servians, and Montenegrins than to those of the enemy on the left bank of the Danube. If the hostile movement of the Christian population in the west should assume more formidable dimensions, the west wing of the Turkish army would be obliged to make a retrograde movement, which would more than counterbalance the check which the Russians have received by the entry of the allied fleets into the Black Sea.

The powerful batteries constructed by General Schilder, on the island of Radovan, between Giurgevo and Rustchuk, were said to have silenced the batteries of 36-pounders on the right bank. There is a ford below Giurgevo, and close to this General Martinez had formed a strong *tête-du-pont*; but strange to say, the Turks had neglected to take any precautions against a passage of the river at that point, and it was even understood that the Russians were fully prepared to attempt it as soon as the fine weather sets in. Omer Pacha had gone to Sophia. The loss of the Russians in officers has been so great that General Schilder has ordered changes to be made in their uniforms, so that they may not be so easily distinguished from the common soldiers.

RUSSIAN PREPARATIONS FOR WAR

The advices from St. Petersburg reach to the 18th ult., and do not inspire any hopes of peace. The most absurd exaggerations, manufactured by Government, are given of the ardour of the people. One Russian patriot is reported to have presented the Emperor with 18 millions of silver roubles (nearly £3,000,000) for the purposes of the war. The rate of exchange continued with a declining tendency, and it was expected that an order prohibiting the exportation of bullion would be issued in the course of a week. In the recent interview of the British ambassadors with Sir Hamilton Seymour, all the preliminaries of diplomatic relations, they were told that they would have, for the present, the Danish Minister as intermediary.

All the naval officers who had been pensioned off are summoned to resume active service. The marines on furlough are already collecting at the different harbours assigned to them. They are under orders to be perfectly armed and equipped by the middle of March. Both the army and fleet in the south are being provisioned on a colossal scale. According to a report from the frontiers of Asiatic provinces to the amount of 100,000 lbs. are to be sent to Tuganrog in March or May. The magazines on the coasts of Mingrelia, Guria, &c., are being stocked in an equal degree with flour, groats, biscuit, and the like.

The *Invalide Russe* publishes the following ukase of the Emperor of Russia:—

We, Nicholas I, &c.—Our manifesto of the 1st of August last established the order for the annual levy of troops in our empire. Considering that, in consequence of circumstances of war, it is indispensable to maintain our army and our fleet on a war footing, and to have reserves ready, without being incessantly obliged to complete the active part of the army, we ordain:—1. A levy of nine men per thousand shall take place in the western governments of the empire, in virtue of the ukase addressed to the directing Senate under this day's date. 2. This levy shall commence on the 1st of March and terminate on the 15th of April, 1854. 3. Whereas the citizens of the governments of Witebsk, Mohilew, Kieff, Powolia, Volhynia, Minsk, Grodno, Wilna, and Kowno, have demanded exemption from the levy, and, in its place, a levy of nine men per thousand shall also take place there. 4. The Jews subject to recruiting shall furnish ten men per thousand. 5. The government of Cherson, of the Crimea, as also of Bessarabia, which are in a state of war, are exempt from recruiting.—Given at St. Petersburg, Feb. 16, 1854.

(Signed) NICHOLAS.

The levy just ordered will yield about 200,000 men. The districts or parishes that have to furnish the recruits, and not the latter, are bound to pay ten silver roubles per man. They have, therefore, 2,000,000 of silver roubles for a contribution, which must be added to what they already had to pay last November.

The official *Journal de St. Petersbourg*, of the 16th ult., announces the rupture of diplomatic relations between Russia and the Western Powers, in the following terms:—

The Governments of England and France have pretended not only to protect the Turks against Russia by sea on the part of Russia, but also to assist them in provisioning their ports, at the same time forbidding Russia to victual its own forces; in a word, depriving her, if not de jure, of free navigation in the Black Sea. The attitude thus taken by the two Powers constitutes, in the eyes of the Emperor, not only a serious infringement of his belligerent rights, but moreover, an effective co-operation in a war, of which they had until lately remained spectators. His Majesty has deemed it right from this day forward to protest against such infringement, reserving to himself that line of conduct which shall become him in future contingencies. Meanwhile, he has judged that provisionally the position in which his representatives at Paris and London have been placed could not be any longer reconciled with the dignity and honour of himself, and of those relations which, however delicate they have become of late, had, nevertheless, not yet lost entirely the nature of mutual friendship and goodwill. In consequence, Baron Brunnow and M. de Kisseleff, acting on the order which they had received from him, eventually demanded their passports immediately on receiving the answer made to them, and have just quitted England and France. Diplomatic relations being thus suspended between Russia and the two Governments, Sir H. Seymour and the Marquis de Castelbajac are likewise on the eve of quitting St. Petersburg.

The regiments in the army of the Czar which bore the names of the Austrian and Prussian Sovereigns have been commanded to change their designations. The Military Commissioner or Envoy of Russia, who has habitually resided at Berlin, is ordered to join his regiment on duty; and Russian officers are not to wear Austrian and Prussian decorations.

THE CZAR AND THE FRENCH AMBASSADOR.

The Russian courier, with intelligence of Baron Brunnow and M. de Kisseleff having actually demanded their passports, arrived at St. Petersburg four-and-twenty hours before the French and English concerns, with instructions to the representatives of those Powers to demand theirs. The consequence was, that the Emperor acted on the intelligence brought by his courier, and, without permitting the time to pass which would have allowed of the arrival of the French and English couriers, sent their passports to Sir Hamilton Seymour and General de Castelbajac. Another account, in the *Independance* of Brussels, states, that the Emperor made a great distinction between the French and English Ambassadors. Sir H. Seymour was told immediately that his passports were ready—which was equivalent to desiring him to leave with all possible haste. Nothing of this kind was done with General Castelbajac: and the latter, wishing to convince the Emperor that if he had carried his politeness and attentions to the Russian aristocracy farther than Sir H. Seymour had done, he was not the less disposed to do his duty, informed Count Nesselrode that he wished to be treated as his colleague for they represented Governments whose policy was the same. The Emperor, however, sent word to General Castelbajac, that he wished to see him before he left, and the General having complied with his wish, the Emperor decorated him with the order of Alexander, with his own hand.

THE EXPECTED BATTLE AT KALAFAT

The last accounts from Constantinople show that the same anxiety is felt there as here with regard to the next move of the Russian forces against Kalafat. A letter from Constantinople, of the 18th ult., says:—

We are anxiously awaiting the result of the battle which is expected to take place at Kalafat. Military men see the importance of that position, and all feel instinctively that the fate of the imminent campaign will mainly depend on the maintenance of that post. The main importance of Kalafat lies in the fact that its position covers Servia, whilst many persons attach a great value to its possession by the Turks, because it shuts up the way that, by Sofia, leads to the southern extremity of the Balkan and to Adrianople. To look upon things from these points of view, with reference to Kalafat, would, however, be putting aside the real principles of war. The Russians could not throw a division of their army into Servia without dividing their forces. You cannot threaten the flank or rear of an enemy, either on the field of battle or in a strategic line, unless you feel certain of a victory in front. The Russians have not more forces disposable on the Danube than the Turks; they cannot therefore feel certain of victory; consequently the result of the principal operations would be compromised, were they to move into Servia with considerable force, by giving their enemy an advantage which is frequently only the result of well-calculated and able manœuvres, namely, of being placed between two portions of their forces with the bulk of his army, and thus able to fall upon either separately, and at the moment he deems most propitious. The fear of an advance by Sofia, across the Balkan, by a large Russian force, is very general. However, any person who is at all acquainted with the principles of strategy knows that these apprehensions are vain. There can be no doubt that Kalafat will decide the campaign of this spring, by the moral effect of a defeat or a victory with either army, in the event either of the Russians being driven back, or the Turks ejected from their entrenchments.

FAREWELL ENTERTAINMENT TO THE DUKE OF CAMBRIDGE.—A sumptuous entertainment was given to the Duke of Cambridge, at White's Club, St. James's-street, on Saturday last. Though the Duke of Cambridge has not been nominated, at present, to any command at the seat of war, yet it is well known in military circles that he is included in the arrangements for carrying on operations in the East. The banquet was laid in the drawing-room of the club house, the usual dining-room being too small to accommodate the number of distinguished guests invited. Throughout the whole length of the festive board was displayed a superb collection of plateaux, epergnes, salvers, racing-cups, candelabras, &c., the magnificent workmanship of which well became the costliness of the material—in all cases either solid gold or silver. The banquet was fixed to take place at eight o'clock, and shortly before that hour the guests commenced arriving. The Duke of Hamilton occupied the chair. On his right was his Royal Highness the Duke of Cambridge, and on his left the Duke of Montieri. After the banquet, in the course of the speeches made during the evening, the subject of the approaching war was freely alluded to, and at such times the cheering was enthusiastic. The members of White's Club have not given a banquet since 1815, when they had the Emperor of Russia (Alexander) and the King of Prussia for their guests. The distinguished party, which included many members of both branches of the service, separated shortly before midnight. The members of Brooke's, following the example of White's, will give a grand banquet this evening (Saturday) to his Royal Highness the Duke of Cambridge. It is hoped that Lord Raglan will also be present at the entertainment.

MORE STEAMERS FOR GOVERNMENT.—The Admiralty have chartered the *Megalesian* and the *Queen of the South* for the conveyance of troops to the Mediterranean. The *Magdalena* will be able to carry from 1000 to 1200 men, and *Queen of the South* probably from 700 to 800.

GREENWICH PENSIONERS ONCE MORE AFLOAT.—It speaks well for the spirit of the British tar, that neither years nor infirmities can quench his ardour, nor extinguish that love of country, which was his guide in early life. As an example of this, about a hundred of the inmates of Greenwich Hospital, nearly all over sixty years of age, and some exceeding the limits allotted to man, "threescore years and ten," volunteered to serve in her Majesty's vessels, in the approaching war with Russia. And although the services of but few of them have been accepted, we doubt not that a ship manned by the gallant old fellows, even now, would be able to give a good account of the enemy. Several of the most active will be discharged in a few days, at their own request, to join her Majesty's ships and the coast-guard.

STATE OF THE BALTIC.—According to the latest advices, the Baltic ports are not yet free from ice; but in some cases vessels have been taken out with considerable expense across the ice, and the latter has subsequently been cut away so as to permit the ships to put to sea. The Baltic shippers are very anxious to get their corn safely on this side, under the apprehension that difficulties may hereafter arise to shipments being made.

ALL General and Staff Officers on the Expedition are to wear blue frock coats, without any decoration or distinguishing mark. The purpose of this is to render them less conspicuous objects for an enemy's rifle.

THE FIRST DIVISION OF TROOPS FOR THE EAST.

THE organising and dispatching of a force of from 24,000 to 25,000 of our best soldiers, to be engaged in repelling the aggressions of Russia upon Turkey, have naturally drawn attention to the fine condition of the troops selected for this service, which may fairly be designated the flower of the British Army. With a view of illustrating their efficiency, our Artists have represented upon the two following pages a series of Portraits from eight of the finest Regiments of Infantry, sketched from the life; to which we append a series of brief sketches of their history and services.

FIRST ILLUSTRATION.

Drummer—Royal Sco's Fusiliers
Private—Royal Scots Fusiliers. Barrack Guard Order.

THE GRENADIER, COLDSTREAM, AND SCOTS FUSILIER GUARDS.

SINCE the formation of disciplined regiments, every nation has established a Guard, whose high prerogative has been the honour of attendance on the Sovereign. In bygone days the "Garde du Corps" of the French, the "Guardas de a Cavella" of the Spaniards, and the "Heiduardy" of the Germans, assimilated in some essentials with the modern household troops of England. In Russia the Imperial Guard counts many thousands; ours is restricted to three regiments of cavalry and seven battalions of foot. The latter portion of this force during periods of peace has advisedly been concentrated in the vicinity of the Royal palaces, and exempted from colonial service. But when, as at present, the probability of war is remote, though not a certainty, the Guards of the English Guards are unfurled, and their battalions gallantly take post wherever danger threatens; and those who, a few days since, beheld these regiments with their arms piled in the streets of the metropolis *en route* for the place of embarkation, will not readily forget the heartstirring scene. The estimation in which the Guards are held by their countrymen was demonstrated on that morning.

When the Parliamentary forces were disbanded at the Restoration, the Duke of Albemarle's regiment was alone kept on the establishment. It was raised at Coldstream during the Civil Wars, and has ever since retained its appellation. The origin of the Foot Guards may be dated from 1660. The first regiment was commanded by Lord Wentworth; the Coldstream, as already shown, by Monk; and the third by the Earl of Lindithgow. When the Duke of Monmouth invaded England, the Guards highly distinguished themselves in the west under the Earl of Feversham. In the reign of William III., these regiments were frequently in the field, and reaped honour and renown in Flanders. Voltaire celebrated their heroism at the battle of Fontenoy, fought in 1745. Their presence and example were of infinite importance at the epoch of the Scotch rebellion. During the Seven Years' War, the Guards, as usual, served for themselves opportunities, whereby to enhance their reputation; and at the affair of Saint Cas, they were the last to embark, and had the honour to cover the retreat. On that occasion they suffered severely. They were employed in the American war, and their coolness and under fire was again made conspicuous. At the battle of Lincelles, the Guards obtained, and well merited, eulogistic praise. Their more recent exploits are equally recorded to their honour. "Corunna," "Talavera," "Barossa," "Peninsula," and "Waterloo" emblazoned on the silken folds of their banners, bear evidence of hard-fought fields, where the Guards struggled in friendly emulation with their brethern of the line for supremacy in daring and undaunted defiance of the foe. History has recorded the unflinching front displayed at Hougoumont. Again and again attacked by superior numbers, and at one period without ammunition, the unsurpassed intrepid ty of the British Guards triumphantly held the post. Nothing could shake their indomitable perseverance. They were commanded to keep the position, at whatever cost, and nobly they responded to the order.

At this moment three battalions of the Queen's Guards are ploughing the waves of the Mediterranean, anxious to encounter the enemy, and enthusiastic in a good cause. Should opportunity offer of adding distinction to their already established renown, those who hereafter may carry the colours may find cause to murmur at their predecessors' valour, by reason of the additional weight of recorded victories gorgeously emblazoned on their ensigns.

SECOND ILLUSTRATION.

Recruiting Sergeant, 33rd Regiment.

Private, Rifle Brigade.
Private, 93rd Highlanders.
Private, 55th Regiment.

33RD—THE DUKE OF WELLINGTON'S REGIMENT.

It would be difficult to point out a regiment of more hardy enterprise and uniform steady valour, than the 33rd. It has served with distinction in nearly every portion of the globe, and was ever ready for action when required. One of the last acts of King William III., was to issue directions for raising this battalion, together with eight others. It was formed in 1702. The first officer appointed to the command was Colonel Stanhope, and the force was speedily engaged against Cadiz and Vigo under the Duke of Ormond. At the siege of Valentia, in 1705, it was the only British regiment engaged. Colonel Duncanson bravely led the corps to the top of the breach, where he was wounded, but his followers finally made themselves masters of the place. It fought nobly at the sanguinary battle of Almanzar. In 1742 the battalion formed part of the expedition which landed near Bruges, under the direction of the Earl of Stair; and in the following year was present at the Battle of Dettingen. It was in the heat of the conflict, and lost a considerable number of men, together with five officers. At the famous but fatal encounter at Fontenoy, upwards of 600, including all grades, were thinned from its ranks. For a long time the 33rd was known as Wade's regiment; but, in 1758, it was designated Haye's, in honour of Lord Charles Haye, its then Commander. This efficient corps continued four years at Minorca, and afterwards sailed as part of the grand expedition under Marlborough against Saint Malocs. It bore a conspicuous part in the attack and destruction of Cherbourg; and, on re-embarkation, in Saint Cas Bay, nearly the whole of the Grenadiers, together with their Captain, were numbered with the slain. The regiment was afterwards actively engaged in Germany, where it served various campaigns, and largely shared the fortune and glory of the army under Prince Ferdinand and the Duke of Marlborough. In 1776 the corps sailed for America, and was in the attack of Fort Washington; and maintained its well earned reputation in the performance of the active duties devolved on the British forces in that country. It participated in the victories at Camdeben and Guildford. In Holland and the Netherlands this renowned corps gained additional honour, and displayed its accustomed daring at the attack of Fuyl, under General Dundas. Honourable mention of the gallant bearing of the 33rd constantly found a conspicuous place in the despatches of the period. The late Duke of Wellington commanded it when in India, where it was instrumental in the overthrow of Tippoo Saib and the capture of Seringapatam. Waterloo bore testimony to the crowning exploit of the battalion in 1815. After the decease of the great warrior of the age, her Majesty was graciously pleased to direct that the 33rd should henceforth be styled "The Duke of Wellington's Regiment," and carry the hero's crest and motto on its colours.

THE 3RD FOOT—EAST KENT—THE BUFFS.

General Sidney had first the honour to command this distinguished regiment. In 1665 the corps was placed on the regular establishment of the English army. At that period the 3rd was the only battalion whose sword-belts, pouches, and other appointments were made of buffalo leather, after the manner of chamois. Officers and privates wore waistcoats and breeches of that colour. Eventually other corps adopted similar facings; whereupon the regiment became known as the "Old Buffs." This splendid body of men possess the privilege of marching through the city of London with fixed bayonets, drums beating, and colours flying, without observing the customary formality of requesting the Lord Mayor's permission; a privilege which, however valuable it may be, has no: been offered many opportunities of being tested. Various services have been hazarded, assigning causes originating this exclusive honour; but, unless the archives at the Mansion-house can enlighten the army, it will prove difficult to trace the exception to its real source.

In Queen Anne's reign the "Old Buffs" served as part of the Confederate Army in the Netherlands, and did good service. It was highly commended at the battle of Ramilies in 1706, and formed part of the covering force when Prince Eugene besieged Lisle in 1708. In 1745 the regiment was at Falkirk. At Culloden, the 3rd mainly contributed to the annihilation of the Pretender's forces. The Buffs encountered considerable hard-ship, privation, and loss, at Guadaloupe, Grenada, and other West India islands from 1758. Many subsequent opportunities of demonstrating what Englishmen can achieve were seized upon by this gallant corps. On their colours the words "Douro," "Talavera," "Albuhera," "Pyrenees," "Nivelle," "Nive" "Peninsula," and "Punniar," evidence their fame. The head-quarters are at present at Malta, and it is rumoured they will proceed with the force destined for the seat of war. Should such anticipation be verified, the "Old Buffs" will, in due time, return to England laden with additional laurels, but not before the tree has become so denuded of its leaves as to render it impossible to gather fresh garlands from the stem.

THE 9TH (EAST NORFOLK) REGIMENT OF FOOT.

This corps was raised in 1685, and ranks as one of the finest in her Majesty's service. To elucidate what British soldiers can accomplish, in defiance of danger, privation, and fatigue, the reader cannot do better than refer to Mr. Cannon's "Historical Records," commemorating the deeds of this battalion, and the numerous actions wherein it was engaged. An accurate detail of its services will there be found; together with highly interesting facts, which the limits of a newspaper cannot possibly embody. Indeed, if an attempt were made to recount the innumerable acts of bravery and heroism displayed by each regiment, the result would fill a library. The 9th claim the honourable badges of "Rolieca," "Vimiera," "Corunna," "Busaco," "Salamanca," "Vittoria," "Saint Sebastian," "Nive," "Peninsula," "Caboul, 1842." "Moodkee," "Ferozeshur," and "Sobraon." In the work previously alluded to, the glorious achievements of the corps are circumstantially and graphically delineated.

S.

RIFLE BRIGADE.

The Rifle Brigade, or, as in former days it was more generally known as the "Gallant 95th," has invariably contrived to have one or other of its battalions wherever fighting was to be found; and short commons, with hard work, were more readily at hand than full rations and quietude. On their appointment to the service, the words "Copenhagen," "Monte Video," "Roliera," "Vimiera," "Corunna," "Busaco," "Barossa," "Fuentes d'Onor," "Ciudad Rodrigo," "Badajos," "Salamanca," "Vittoria," "Nivelle," "Nive," "Orthes," "Toulouse," "Peninsula," "Waterloo," striking evidences of what they have done, and ample guarantee of future exploits from such a regiment, should opportunity again offer. Always ably commanded, the dark green uniform was prominent when dangers thickened, and death urged on the combatants to the fray. The 1st battalion was but a year at home when its services were required at the Cape; and, though but just returned, numbers of these fine fellows volunteered to accompany their comrades to the East. The late Adjutant General fully understands their value; and as the gallant officer is named to the command of a division in the expeditionary force, the presence of their former Colonel will create additional stimulus in the career of glory.

93RD HIGHLANDERS.

None who visited the Camp at Chobham, whether attracted by professional zeal, or led to undertake the journey through love of novelty, can have forgotten the martial appearance and picturesque garb of the Sutherland Highlanders. The latter has elicited the highest encomiums from all who watched its precision in movement, and noted the steadiness of the men under arms; and the regiment has done the State good service at the Cape and elsewhere, and is proverbial for its regularity in quarters, as it has proved a formidable antagonist in the field. Greatly will the Turks, who delight in amplitude of nether garments, marvel on beholding such stalwart soldiers spurning the effeminacy of wearing any. Should the regiment leave the good fortune to encounter the Emperor Nicholas' Imperial Guards, the Russians will find cause to remember their introduction to "the bonnet and the plaid."

55TH REGIMENT, WESTMORELAND.

This corps has the dragon embroidered on its colours, and the word "China" commemorative of its servi.es in that empire. It returned home in 1844, and embarked for Gibraltar in 1851, at which station it is at present quartered. The 55th has green facings, and is well known in the army for gallantry in the field, and alacrity in responding to the summons when required to display its daring in the cause of our country.

1ST GRENADIERS, MARCHING ORDER. COLDSTREAMS, NIGHT SENTINEL. COLDSTREAMS, COLOUR-SERGEANT. SCOTS FUSILIERS, DRUMMER. SCOTS FUSILIERS, BARRACK GUARD.

PREPARATIONS FOR WAR.

THE COLDSTREAM GUARDS, IN "THE ORINOCO" STEAMER, LEAVING SOUTHAMPTON.

The men having formed into line, and the muster-roll having been called over, they marched in threes to the docks, preceded by the fife-and-drum band, playing "See the conquering hero comes." Upon reaching that side of the dock at which the steam-ship *Orinoco* lay moored, the men again formed themselves into line; and, being stripped of their ammunition, &c., were marched single file on board the vessel waiting to convey them. Here, again, everything seemed in perfect order; the horses which are being conveyed for the use of the various officers were comfortably provided for on deck, whilst below every convenience presented itself for the accommodation of the troops, amounting to 966.

At about eight a.m. the second detachment of the above regiment arrived, and were marched in the same order to the docks. The former portion not having got on board, the latter arrival was permitted to reconnoitre as they thought proper.

No sooner had the various arrangements with regard to the Coldstream Guards been effected, and the whole body on board, than were seen marching into the docks the first detachment of Grenadiers. This arrival directed itself to the Peninsular and Oriental Company's steamships *Ripon* and *Manilla*, which lay moored on the north east side of the docks. By a second train arrived the second detachment of this regiment, and, after the preliminaries had been gone through, the whole of the men took their positions on board.

The gates of the docks were thrown open, and several hundreds of persons, consisting of many gentlemen and their families from the neighbourhood and adjacent places, assembled in the interior.

At about two o'clock the tide had risen to a sufficient height to allow of the *Manilla* (the smallest ship of the three) leaving the dock. Under the command of Captain Mason, she let go her moorings, and in a very short space of time was to be seen steaming down the river, amid the shouts of thousands of assembled spectators. As soon as she was fairly afloat the guns from the platform tendered her a salute of eighteen guns, and in the meantime the *Manilla* made some considerable portion of her way towards the Solent.

In about half an hour afterwards the *Ripon* followed, and received the same compliment as had been previously paid the *Manilla*.

At five o'clock the *Orinoco*, the largest ship of the three (under the command of Captain Wilson), left the docks; and, being the finish of the day's business departed with hearty and continued shouts from all persons who were in view of her; whilst not only on leaving the docks, but during the time she was steaming down the river, the platform guns were not neglectful of their duties in this instance either, and rendered their compliments equally distinguishable as on the former occasions.

The *Orinoco*, *Ripon*, and *Manilla* got under way immediately after daybreak on Thursday morning, and sailed for their destination. The wind, which, on the previous night, blew in heavy gusts from the south-west, had veered round to the north-west, and these fine ships, therefore, started under the most favourable auspices, with a fair wind down

EMBARKATION OF THE 50TH REGIMENT (QUEEN'S OWN), ON BOARD "THE CAMBRIA," AT KINGSTOWN.

Ch... The *Ripon* and *Mantilla* will call at Gibraltar for coals on their way to Malta, but the *Orinoco* will proceed to that island direct; and, after landing the Coldstreams there, is under engagement to go to Gibraltar to take on board the 44th Regiment, destined to form a portion of the auxiliary army.

The Embarkation of Troops by the *Himalaya* steam ship is described and illustrated in the Supplement published with the present Number.

THE 50TH REGIMENT AT KINGSTOWN.

On Friday morning (last week) the streets of Dublin presented an animated appearance. It having been known that the first contribution from this garrison towards the expeditionary army to the East was to be despatched in the forenoon from Kingstown harbour. At eight o'clock a.m. the head-quarters of the 50th Regiment, with staff, colours, and band, were paraded and inspected in the Palatine-square of the Royal Barracks in heavy marching order, where a large crowd assembled to witness their evolutions, and repeatedly cheered during their performance. Precisely at half-past nine o'clock the troops formed four deep, the word of command was given, and they commenced their march towards the Westland-row station. The bands of the 23rd, 50th, and 91st Regiments, having obtained permission to escort their brother soldiers on the occasion, took the lead along the north side of the quays, and played several spirited airs; among which, by the bands, were "Auld Lang Syne," and "The Good Time's Coming," in playing which the bandmen took up the concluding line of each verse, after the instrumental music had died away, and sang it over again in a right joyful manner, to the great delight of the people, who raised a hearty cheer after each vocal repetition. Major Richard Waddy headed the regiment, on the colours of which we observed the words Punniar, Moodkee, Feroozshah, Aliwal, and Sobraon—indicating the principal Indian battles in which these brave men distinguished themselves between the years 1842 and 1848. As the regiment marched along the streets, the cheering was again and again repeated, and the fair occupants of the windows and balconies waved their handkerchiefs. The troops proceeded along the north side of the quay, over Essex-bridge, through Dame-street, Nassau-street, and Leinster-street, to Westland-row. Two special trains were in readiness at the railway station, to convey the regiment to Kingstown, for which three companies started at eight, and the other three at half-past ten o'clock. Throughout the whole line the liveliest demonstrations of popular feeling were made by the bystanders, and many friends of the soldiers, both male and female, accompanied them the entire distance to the railway station, where they bade them adieu with sorrowing hearts, and in not a few instances with weeping eyes. At half-past ten o'clock the first train reached its destination, and the moment the companies began to leave the terminus a hearty cheer was raised by the large crowd which had assembled to witness their embarkation. The second train arrived shortly afterwards; the business of embarkation, which was conducted under the superintendence of Captain Bevin, R.N., Admiralty agent, was at once proceeded with, and completed within a period of an hour and a half—a cheer after cheer being raised as each company passed through the gangway into the steamer, and a universal shout of applause when the colours of the 50th were displayed on the deck of the *Cambria*. The men were apparently in the highest spirits, and as the termination of one of the airs played by the band a soldier caught up the air, and, adapting it to the subject uppermost in his mind, sang, "Cheer, boys, cheer, Russia's all before us," which gave rise to great merriment. A large number of distinguished spectators was present. All the baggage of the regiment was placed on board on Thursday. The destination of the *Cambria* is Constantinople, merely touching at Malta for coal and water. The total number she conveys is 620 men.

DEPARTURE OF THE SCOTS FUSILIER GUARDS.

Tuesday morning having been finally fixed for the departure of the 1st battalion of the Scots Fusilier Guards (the grand regiment of the service) from the Wellington Barracks, *viâ* the South-Western Railway to Portsmouth, where they were to embark on board the *Simoom*; and the fact being generally known, a vast crowd of persons at a very early hour in the morning assembled in St. James's Park to witness their departure. It was said that the men would appear on parade as early as four o'clock, and leave the barracks at six o'clock, and many thousands had congregated in front of the barracks long before that hour; but it was speedily known that an order had been issued to delay their departure until seven o'clock, that her Majesty and Prince Albert might have the gratification of seeing the battalion pass in full marching order before them, her Majesty having signified her command to that effect. The delay thus occasioned caused a great increase in the crowds of persons, and long before the gates were thrown open, and the troops began to march, there could not have been less than from ten to fifteen thousand persons lining Bird-cage walk, the inclosure of the Park, and the front of Buckingham Palace. The rush as to the real movement of the troops, and the general belief that they would proceed towards the Horse Guards, caused the body of the crowd to assemble in the rear of the east gate of the barracks; the result, of necessity, was to produce the greatest possible confusion and inconvenience to the men; it being with the greatest difficulty that they could force their way through, and to such an extent that at times they were actually wedged in and unable to move in regular order

A more soul-stirring exhibition than that of Tuesday morning has seldom taken place in the metropolis since the last war. The thousands of persons who rose from their beds to welcome and cheer the departure of the battalion were amply gratified, for a finer set of men than the Fusilier Guards could not, perhaps, be seen in any service.

At six o'clock the roll was called for parade, and many stragglers were found absent; but, in a very short time, every man was fully equipped and ready on parade. Colonel Dixon, the colonel of the battalion—the men having formed in line—inspected every company, and expressed his satisfaction at their appearance

Shortly before seven, the word of command was given to fall in, and march in open column; and, precisely as the clock struck seven, the gates were thrown open, and the advanced guard approached, which was the signal for one burst of hearty and vociferous cheering from the vast crowds outside, which was continued until the whole battalion had emerged from the barracks, and had reached the enclosed esplanade of Buckingham Palace. On the entrance of the troops, her Majesty, accompanied by his Royal Highness Prince Albert, the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, appeared on the balcony in the centre of the palace, and was received with loud and repeated cheering. As soon as the battalion had entered the inclosure, they formed in line, and presented arms, the band playing "God Save the Queen," amidst loud and continued cheering, H.R.H. Prince Albert and the young Princes being uncovered. Her Majesty repeatedly bowed in acknowledgment. The command to recover bands having ran through the line, the entire battalion, at a signal from Col. Dixon, took off their bear-skin caps and gave three loud and hearty cheers, which her Majesty, evidently delighted with the novelty of the scene, frequently acknowledged. The word of command was then rode up in front and saluted her Majesty, when the order was given to march, the band striking up an enlivening tune. The battalion proceeded through the Mall, past St. James's Palace, to Pall-mall, the Queen and the Prince remaining until the whole had passed.

As the crowd in the streets increased at every point, it was evident that the men could not arrive at the terminus at the hour fixed, and a telegraph message was sent from Buckingham Palace to the station to that effect. All through Pall-mall, Charing-cross, the Strand, to Waterloo bridge, the crowd continued to increase and retard the march of the men, and many were the curious scenes on the [illegible] of women who saw husbands, lovers, and relations leaving them, perhaps, to return no more; and heart-rending and distressing it was in many instances to witness the look of sorrow and woe depicted on their [illegible] worn faces. The crowd, however, cheered on; the men were all full of [illegible] and hope. the band striking up several light and spirited airs.

From Waterloo-bridge to the station, an enormous crowd had assembled. It was here that the most painful part of the scene took place—[illegible] the parting of the women from their husbands. Notwithstanding the exertions that were made by the police, it was impossible to keep off the crowd, and after the first hearty cheering and loud [illegible] admitted in single file. As the men got into the carriages [illegible] continued playing "Cheer, Boys, Cheer;" and on the signal for [illegible] striking up "God save the Queen"—the brave fellows [illegible] was crowded with a large number of friends of officers and others in with the battalion, and the railway officials. The number of men forming the battalion amount in all to 880, and the officers in command who accompanied them are—Colonel Dixon, Lieut.-Colonels [illegible], W. J. Ridley, Hon. C. G. Scott, Fras. Seymour, C. A. Fitzroy Berkeley, J. H. Elphinstone Dalrymple; Captains H. P. Hepburn, W. F. Scarlett, G. T. F. Shoobburgh, J. D. Astley, W. G. [illegible], D. F. B. Buckley; Lieuts. Fras. Baring, Seymour Dawson [illegible], Hon. Blane, Viscount Ennismore, Hon. H. Annesley, &c. [illegible] departure of the trains did not take place, in consequence of the difficulty of the troops passing through the streets, until a quarter to nine o'clock.

EMBARKATION OF THE GUARDS AT PORTSMOUTH.

A large concourse of persons assembled at the South-Western Railway station, at Portsmouth, and along the line of the route thence to the dockyard, to witness the arrival and progress of the Scotch Fusilier Guards. A very large number of officers of both services, ladies, and civilians, were also in the dockyard and the greatest possible interest was excited by the event. The special train conveying the troops was expected to arrive at ten o'clock, and by that hour the bands of the 23rd Scotch Fusiliers, 26th Regiment, 42nd Highlanders, and 79th Highlanders, had arrived at the railway station, to escort them thence to the place of embarkation. Owing to the delay in marching through London, however, the troops did not start at the hour fixed, and, in consequence, the special train was some two hours behind its time when it reached Portsmouth. When it did arrive the Lieut.-Governor, Major-Gen. Simpson, and the officers of the staff and garrison, were in attendance; these officials, together with a number of friends of officers of the Guards, marching through the streets with them. The utmost enthusiasm was exhibited in their favour, the men themselves appearing to be in the highest spirits and efficiency. At the dockyard gates the crowd was exceedingly large, and the entrance of the troops into it was marked by loud and continuous cheering. It was with great difficulty the troops could force their way through the crowd here, the people crowding round them, and, not content with simple cheering, grasping them by the hand, and wishing them God speed in their enterprise.

In the dockyard the men became told off into messes and marched on board the screw steam troop-ship *Simoom*, 18, Captain Smith, which was lying alongside the Dockyard Jetty, having taken the baggage and horses belonging to the battalion on board on Monday afternoon. The *Simoom* is an iron vessel of 3000 tons burden, with engines of 350-horse power, and was built at Glasgow in 1849. She was intended for a steam-frigate, but iron being pronounced unsuitable for a man-of-war, she was devoted to the conveyance of troops to and from the colonies, and has performed that service most successfully.

EMBARKATION OF THE 93RD HIGHLANDERS.

The 93rd Regiment (Sutherland Highlanders) were inspected on the Hoe, Plymouth, by Major-General Sir Harry Smith, commander-in-Chief of the Western District, previous to their embarkation for the East, in the presence of a large concourse of people, who loudly cheered the soldiers. They were afterwards formed into square, and General Sir Harry Smith then addressed them as follows:—

Highlanders—On Monday you will embark for the purpose of meeting the enemies of your country. Soldiers have nothing to do with the cause of quarrels; their duty is fighting. But in this instance you have a most noble cause to fight for. I mean the protection of the weak by the strong. This is the cause that you will fight for, and nobly will you and the rest of the army do your duty. You will be led by Lord Raglan, a man who was on the right hand of the Duke of Wellington, a man who knows how to lead you to glory as well as you knew how to fight to attain it. One thing I desire to impress upon you, and that is to be good comrades to our gallant allies the French. I say "gallant" most truly, for they were once our foes; now you are to fight side by side with them, and I would rather fight along with them than with any other soldiers in the world, because they will never desert you. Your condition, Highlanders, under my command, has been like that of every British regiment, and I never saw a British regiment that would not fight. You will answer for it that you will. There is one thing that I would urge on you. We, soldiers, are well provided for by our country, but the unfortunate inhabitants of the country where wars are carried on are in a state of misery. Let no man's hand be turned against the people of the country, but protect the weak against the strong. Colonel Ainslie, I wish you and these Highlanders every success, as well as the army generally. If I am not with you, my heart is with you, and it beats to that impulse which may be felt now by every British soldier who has to fight in the good cause of the Queen and glorious England.

The soldiers then gave Sir Harry three times three cheers, after which the people vociferously applauded the military as they marched by.

The embarkation of the regiment, which took place on Monday, drew together an immense crowd. The distance from the citadel at Plymouth, to the gates of the Royal William Victualling-yard at Stonehouse, is nearly a mile and a half, and along the entire route thousands of people had assembled some hours previous to the soldiers' arrival for the regiment taking its departure; and as the gallant Highlanders passed, their features must have been cheered by the strongly-marked sympathy evinced by the cheering of the spectators, and the waving of the handkerchiefs of the ladies who gathered at the windows as the troops passed.

Walking by the side of the soldiers, however, were many women, whose tearful eyes and sorrowful countenances betokened that it was a sad day for them, especially those who were about to be—perhaps for ever—from their husbands and sons. The soldiers, however, kept steadily on, preserving the utmost order in the midst of the general excitement, and enlivened by the spirit-stirring music of their own band, as well as of the bands of the 23rd Fusiliers and 20th Regiment. The spectacle presented within the Victualling-yard was striking in the extreme. Many thousands of persons had been admitted, and lined the extensive wharves which surround the Government offices and storehouses. The weather was very fine, and numerous boats and vessels studded the water of the beautiful harbour of Hamoaze. Whilst the soldiers were embarking, the bands played "The girl I left behind me," "Oh! Susanna, don't you cry for me," and some favourite Scotch airs, including, "Auld Lang Syne." "Scots, wha hae," "Wallace bled," &c.; and as the steamers moved off and rounded the point opening into Plymouth Sound, the cheering was continuous and enthusiastic.

The *Himalaya* remained in the Sound until Tuesday morning, when she took her departure.

STAFF OF THE TURKEY EXPEDITION.

The following is a list of the staff of the army proceeding to Turkey, so far as the appointments have been made up:—

General Commanding-in-Chief, General Lord Raglan, G.C.B. Military Secretary, Lieutenant-Colonel Steele, Coldstream Guards. Aides-de-Camp: Major Lord Burghersh, Unattached, Lieutenant-Colonel Somerset, Coldstream Guards; Captain Langworth, Scots Fusilier Guards; Lieutenant Hon. Somerset J. G. Calthorpe, 8th Hussars.

Lieutenant-General Sir George Brown, K.C.B. Aides de Camp, Captain Alex. Macdonnell, Rifle Brigade; Captain E. A. Whitmore, 30th Foot: Lieutenant Pearson, 7th Foot (extra).

Major-General, H.R.H. the Duke of Cambridge, K.G. Aides de-Camp, Major the Hon. J. Ashley, Unattached; Captain Gibbon, 7th Dragoon Guards; Lieutenant-Colonel Lord W. Paulet, Unattached, (ex.). Lieutenant-Colonel Tyrwhitt, Scots Fusilier Guards.

Brigadier-General, W. Bentinck, Coldstream Guards; Aide-de-Camp, Lieutenant Hon. H. Byng, Coldstream Guards; Brigade Major, Captain F. C. A. Stephenson, Scots Fusilier Guards.

Brigadier-General, the Earl of Lucan, Unattached; Aide-de-Camp, Captain Shadwell, 19th Foot; Brigade Major, Captain Sterling, Unattached.

Brigadier-General, W. Eyre, C.B., 73rd Foot; Aide-de-Camp, Lieut. L. Graham, 43rd Foot; Brigade-Major, Brevet-Major Hon. A. Hope, 60th Rifles.

Brigadier-General Airey's Staff has not yet been completed.

THE SECOND DIVISION FOR THE EAST.

The following regiments are under orders to prepare for their departure to the Mediterranean as a second instalment of troops for Turkey:—The 1st Foot (Royal Regiment), the 7th Royal Fusiliers, the 19th Foot, the 33rd Royal Wells Fusiliers, the 88th (Connaught Rangers), the 95th Foot. The 5th Hussars and 17th Lancers are likewise under orders. In addition to the above regiments we understand that the 79th Highlanders at Portsmouth have received a letter of readiness. It is also said that the 30th, 41st, 44th, 47th, 49th, and 55th Regiments go from Gibraltar and Malta to Turkey. This will amount to about 10,000 effective men for the second division of the army.

THE SUPPLEMENTAL ARMY ESTIMATES.

A supplemental estimate of the charge which will probably be incurred for the pay, clothing, and incidental expenses of an augmentation of 15,000 of all ranks to the cavalry and medical staff required for foreign service, has been issued. The additional numbers to be voted are 15,000 men of all ranks. The additional charge will be, for the land forces, £500,000; for the staff, £70,000; making the total additional charge to be voted £570,000. Including this augmentation, the numbers and charge for army services, 1854-55, will be 4598 officers, 8988 non-commissioned officers, 114,391 rank and file, making 127,977 men of all ranks; the charge for which will be £6,257,488, being an increase on last year of £1,000,000.

ALLIANCE OF THE FOUR POWERS.

It is positively stated that the treaty of adhesion of Austria and Prussia to the policy of the Western Powers is not only concluded, but actually signed. The sense of the treaty is said to be to this effect:—Austria and Prussia will maintain strict neutrality, but a neutrality to the advantage of the Western Powers; Austria will consent to occupy the provinces that will be pointed out to her, and establish an army of observation on the frontiers against the Russians; but she will avoid coming into immediate collision with them as long as possible.

THE FINAL MESSAGE TO THE CZAR.

The Governments of England and France have resolved to address to the Emperor of Russia a formal summons, calling upon him to give, within six days from the receipt of that communication, a solemn promise and engagement that he will cause his troops to evacuate the Principalities of the Danube on or before the 30th of April. The couriers who are the bearers of this despatch from London and Paris started on their journey on Monday morning. They will pass through Berlin and Vienna, whence, it is understood, that similar demands will be forwarded at the same time by the Cabinets of Prussia and Austria. The refusal on the part of Russia to comply with this just demand, or to return a fitting answer, will be regarded by the Powers as a declaration of war. It is calculated that this communication will reach St. Petersburg in nine or ten days. Very possibly the Emperor Nicholas will not avail himself of the formal term of six days which has been extended to him, as there can be no doubt of the purport of his answer; but, at any rate, in less than three weeks that answer will be known, and the forces of the allied powers, which are, in fact, already on their way to their respective destinations, will, by that time, be in a position to commence immediate hostilities.

CABINET COUNCILS.

One of the first extraordinary circumstances attending a state of war took place on Sunday last. The business matters to have been indeed urgent, and the matter pressing and important, which could have induced the Earl of Aberdeen to summon a Cabinet Council on the Sunday. The Ministers met on that day by appointment at the Earl of Clarendon's, and remained in deliberation for some hours. A Cabinet Council was held also at the Foreign-office, Downing-street, on the afternoon of Saturday. The Ministers present were—The Earl of Aberdeen, Lord John Russell, the Marquis of Lansdowne, the Lord Chancellor, Earl Granville, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir William Molesworth. The council sat two hours. Another Cabinet Council was held at the Foreign-office on Wednesday, at three o'clock.

THE BALTIC FLEET.

That portion of the naval forces which is already completely ready for active service will shortly assemble in the Downs, under the command of Admiral Sir Charles Napier, and proceed early in March to the Kattegat, where it will await the opening of the Baltic, which is seldom accessible for maritime operations before the latter part of the month of March, so that the presence of the fleet off the shores of the Russian fleet will coincide in point of time with the period at which the definite answer of the Emperor of Russia to the ultimatum of Europe can be received. The Russian Baltic fleet consists of three divisions of about nine line-of-battle ships each, which are now lying in the three naval ports of Revel, in Esthonia, Helsinfors, in Finland, and Cronstadt—all within the Gulf of Finland. Of these three stations Revel is commonly free from ice ten days or a fortnight before the upper parts of the Gulf, and it is of course important that the divisions of the Russian fleet which are thus separated, should not be able to unite under the guns of Cronstadt. Helsinfors is protected by the fortifications of Sweaborg, built on three islands opposite the mouth of the harbour, and mounting 800 guns, with barracks and casemates for 12,000 men.

A banquet will be given to Sir Charles Napier, before his departure, by the members of the Reform Club. Commodore Michael Seymour, C.B., Superintendent at Devonport, has accepted the post of Captain of the Fleet, under Vice-Admiral Sir Charles Napier.

It is currently rumoured that the fleet about to leave Spithead for the Baltic, will, before its departure, be joined by the French squadron; and that there will be a Royal review of both fleets in the Channel.

The Court leaves London on the 14th inst. for Osborne—a fact which seems to give probability to the above rumour. It is also said that the minutiæ of the great naval arsenal of Portsmouth had a preliminary meeting at the Admiralty on Tuesday, to arrange a plan for giving a grand entertainment to the officers of the French fleet on their arrival.

ADMIRAL CORRY'S SQUADRON.

This force, consisting of her Majesty's ships *Duke of Wellington*, 131; *Prince Regent*, 90; *St. Jean d'Acre*, 101; *Imperieuse*, 51; *Arrogant*, 46; *Tribune*, 30; *Amphion*, 34; *Valorous*, 16; and *Odin*, 16, is now anchored at Spithead. The squadron has come home under easy sail, and been well exercised in gunnery, at night quarters, boarding, &c., on the way, and the crews of the several ships are in first-rate condition. The *Odin* made Spithead first about six o'clock on Wednesday morning, and Captain Scott immediately landed with despatches for the Admiral relative to the departure of the fleet, but, the wind having come home twelve, noon, and was up at Spithead by half-past one. The squadron now there comprises:—

St. Jean d'Acre (screw), 101 guns.		Amphion (screw), 34	
Princess Royal (screw), 91.		Tribune (screw), 30.	
Prince Regent, 90.		Valorous (paddle), 16.	
Hogue (screw), 60.	Hibernia (screw), 70.	Magicienne (paddle), 16.	
Edinburgh (screw), 58.		Odin (screw), 16.	
Imperieuse (screw), 50.		Frolic, 16.	
Arrogant (screw), 47.		Dragon (paddle), 6.	
		Vulcan (paddle), 6.	

These are not one-half of the number intended to form the fleet for operations in the North Sea; and by the middle of next week Spithead will contain, it is expected, upwards of fifty sail of pennants. These, if joined by the new fleet of thirty-nine sail just commissioned by the Emperor of France, will make a floating armament such as the world never before beheld.

FRENCH PREPARATIONS FOR WAR.

The *Moniteur* of Sunday publishes an Imperial decree, prohibiting the exportation of every description of arms and warlike stores, such as lead, sulphur, gunpowder, saltpetre, cannons, fulminating caps, gun stocks, military clothing, camp equipage and harness, horses, sailing and steam vessels, machinery for navigation, rigging, and all naval and military articles of war or manufactured.

A report from the Minister of Marine to the Emperor follows, apprising him that his commands—to prepare a third squadron, to be composed of ten ships of the line, fourteen frigates, and fifteen sailing or steam corvettes—have been executed. The Minister recommends that Vice-Admiral Parseval-Deschênes shall be appointed Commander-in-Chief, with Rear-Admiral Penaud second in command. Of the fifteen frigates, five are steamers of 450-horse power each. The fifteen corvettes are all steamers. The report is approved by Napoleon.

In a few days France will have three grand fleets at sea—the Black Sea fleet, under the command of Admiral Hamelin; the Brest fleet, which has recently gone round from that port to Toulon and the other Mediterranean ports, for the purpose of embarking the expeditionary army, and conveying it to its destination; and the squadron off Constantinople; and, lastly, the fleet now announced under the command of Admiral Parseval-Deschênes, of which the destination is not yet published, but which will probably be sent into the Baltic.

Another Imperial decree, in the *Moniteur*, approves a report of the Minister of War, recommending that the care and repairs of the arms belonging to the various corps in the army shall be henceforth confided to the chief armourers of the artillery. The number of those armourers is to be equal to that of the various corps of the army. They are to be divided into two classes. The chief armourers of the 2nd class are to be chosen amongst the operatives inscribed on the books of the Imperial manufactories of fire-arms, and amongst the operatives in the army who are most competent. The chief armourers of the first class are to be chosen from the second class one-half by seniority and one half by choice. No operative can be chosen chief armourer whose previous services will not entitle him at the age of fifty years to a retiring pension. The chief armourers of the first and second class are to be subordinate to the adjutants, and to take rank after them. The chief armourers are to receive their commissions from the Minister of War. The chief armourers of the first class have a right to similar rewards to the adjutants, and those of the second class to the rewards granted to sergeant-majors. The chief armourers of both classes compete in the corps to which they are attached for the decoration of the m litary medal. The military master-armourers now existing are to be suppressed.

THE FRENCH EXPEDITIONARY ARMY.

It is said that Marshal de St Arnaud is to be the Commander-in-Chief of the French expeditionary army to Turkey; and that the army is to consist of four divisions, commanded by Generals Canrobert, Bosquet, Forey, and Prince Napoleon. Prince Napoleon is to command the reserve. Colonel Bertin Duchâteau is to command the Zouaves and the infantry of the marine. A division of cavalry is to be commanded by General Morris. The division of the reserve, under the command of Prince Napoleon, will, it is said, remain

Russian General would come in person to the right or northern bank of the Oxus (in the neighbourhood of Chargorse, we presume), and await an interview with the Dost. Dost Mahomed's reply was, that he consented to the proposed negotiations; but that he would not cross the Oxus to meet his old enemy the King of Bokhara, unless the Russian General would, in the first place, cross to the Afghan side of the river, bringing with him, as temporary hostages, the son and Prime Minister of the King of Bokhara. On these terms he would not only treat with the King of Bokhara, but would forgive all his past offences, holding that the importance of the quadruple alliance should throw all private quarrels into the shade. On these terms, then, a treaty of alliance between Russia, Khiva, Bokhara, and Cabul was on the point of settlement. A marked alteration had taken place in Dost Mahomed's demeanour since the completion of these arrangements. He seems to have become unusually cheerful on the strength of the promised alliance. The intrigues of Russia in Central Asia can no longer be despised; this is daily becoming more and more evident; but what is not so evident, is the course we are to pursue under these embarrassing circumstances. Must we at once occupy Afghanistan to secure the safety of India? or would it be wiser merely to augment our military strength on the line of the Indus?—are questions on which public opinion is divided, and which the progress of events alone can solve.

A native gentleman of this town (says the *Bombay Courier*), whose word we have no reason whatever to doubt—but, on the contrary, have reason for believing—tells us that he saw, some three days ago, a letter from a Sowcar at Shikarpore to a correspondent in Bombay; and that the writer mentioned, as a piece of news, having heard from a Hindoo who had lately arrived from Candahar, that there were in the latter town three European Sahibs, who had not come from Hindostan, but from "Roose" (Russia). They belonged to a country which was at enmity with the English Sircar; and the Candahar people said that, when the cold days were ended, an army from Persia, united with an army from the country whence came these strangers, would be in their town, and onits way to the Bolan Pass and Scinde. These "Rooses," said the letter, were very rich men, and had brought a quantity of fine merchandise to Candahar. They had constant interviews with the principal men of the town, and were purchasing great quantities of grain. We have "told the tale as 'twas told to us." But as the old proverb of there "never being smoke without some fire," is generally true, we think that even the very existence of these reports shows clearly that Russian intrigues and influences are at work above the Passes, and in a much greater degree than the majority of people imagine. Not but what we believe British India is fully prepared for anything which Russia, Affghanistan, Bokhara, and Persia—all united—would effect against us. The largest army which could come out on the plains either below the Khyber or the Bolan, would hold together but long enough for our troops to defeat them most completely; and although their native allies might escape, not a Russian soldier who ever entered the plains of India, would escape, not a Russian soldier who ever entered the plains of India, would return alive again. Still, moves on the political chess board, like the two which the Czar seems inclined to make in these parts, should be watched, and intrigue met by counter-intrigue.

The intelligence from Persia, received by the Overland Mail, is no less threatening. The *Sheilan* of the 18th January states that an immense army was concentrated at Teheran, ready to march at a moment's notice: and that the British agent and the Turkish Ambassador had been compelled to lower the flags of their respective nations, and take their departure from Teheran. It was supposed by some that the army would march on Herat, where a junction could be formed with the Russian army, and that the whole would then march on Candahar and Cabool, and take up a position. Bagdad and Busserah were both threatened, and a force of 10,000 men had been thrown into the latter place for its defence. The port of Bushire was in a state of great excitement. Captain Kemball, the political agent, had been obliged to leave the town, and take refuge on board one of the ships in the harbour. The island of Karrack was occupied by Persian troops, who were fortifying it. On the other hand, private letters from Teheran, of the 12th January, state that the Governor of Kandahar and the ruler of Cabool were coming to hard blows. Sultan Ali Khan, charged with a special mission from Kohendil Khan of Kandahar, had arrived in the capital of Persia, and had demanded the armed intervention of the Shah to oppose the aggressions of Sheer Ali Khan, the son of Dost Mahomed Khan, who was marching at the head of 9000 horsemen into Kandahar. The Government of Persia had named a certain Abdullah Sistany Khan as Plenipotentiary to proceed to Kandahar, to offer the Shah's mediation to the belligerent parties.

THE FLEETS IN THE BLACK SEA.

Letters from Varna, of the 9th ult., state that two French steamers, the *Gomer* and *Sané*, and two English ones the *Samson* and the *Firebrand*, had passed a day there during the last few days in the Black Sea. Rear-Admiral Le Barbier de Tinan and his staff were received at Varna with extraordinary enthusiasm. The Pacha sent his carriages to meet them at the landing-place, and an escort of honour awaited them at the port. M. Tedeschi, the French consular agent, gave a fête on the occasion.

On the 8th ult., the *Magellan* and the *Furious* steamers arrived at Varna, escorting eight Turkish vessels laden with arms and ammunition. Next morning the two captains visited the civil and military authorities; after which the two vessels saluted the citadel with twenty-one guns, to which the citadel replied with forty-two guns, with great precision, from the only four guns there mounted. The greatest activity prevailed in the port in discharging the Turkish vessels.

General Sir John Burgoyne and Colonel Ardant had left Constantinople on the 10th ult., with M. Jourjon, Lieutenant-Colonel of engineers, attached to the French embassy, to visit the forts of the Dardanelles. It appears that it is intended to fortify the Dardanelles, so as to preserve them from an attack by land, in case the Russians should succeed in passing the Balkans. The Minister of War has already proposed to several of the principal merchants of Constantinople to contract for the supply of the necessary cannon, gunpowder, and balls; but as he requires a year's credit, the affair has not yet been concluded. Immediately after the Porte received the negative reply of the Emperor of Russia to the propositions of the conference of Vienna, Reshid Pacha had interviews with the Ambassadors of France and England, and the day after an extraordinary council was held, at which it was resolved that the Porte should adopt the opinion of the conference of Vienna on the rejection of the propositions, and that it would not on any account accept the new propositions made by Russia.

By the telegraph we learn from Marseilles that a third convoy of 16,000 men was preparing on the 15th ult. to leave Constantinople for Batoum. Another despatch from Constantinople, 18th ult., states that the whole fleet, except two ships sent to the Piræus, is in the Bosphorus.

SKIRMISHES ON THE DANUBE.

One account from Bucharest of the 13th ult., states that the Turkish troops stationed at Turtukai made attempts, on the 11th and 12th, to force a passage, so as to take up a passage near Oltenitza; that they were prevented from landing on the first day by the Russian batteries; that on the second day they forced the passage, by landing on a peninsula, but were forced to retire after a brief combat. A letter from Bucharest of the 16th speaks of the Adjutant-General Schilder having gone to Oltenitza, in order to superintend there, as he had previously done at Giurgevo, the mounting of heavy ordnance against Turtukai. The island required for this new proceeding had first to be taken; which had, of course, given rise to a series of fights between the Russians and Turks upon the island itself, and up to the 14th of February the Russians had not been able to vanquish the desperate resistance of their antagonists. A subsequent report states that, on the 18th ult., the Russians had made themselves masters of Oltenitza.

INSURRECTION AT SARAGOSSA.

An insurrectionary movement took place at Saragossa, on the 20th ult. A brigadier named Hore, much attached to General Concha had been ordered to proceed with the first battalion of his regiment to Pamplona. He refused to do so, imprisoned those officers who would not join in the revolt, and called on the civilians to join him. Captain-General Rivero marched against the insurgents at the head of three regiments, and several pieces of artillery. A desperate fight took place, in which Brigadier Hore was killed. The insurgents, who occupied the Fort of Algaferia, surrendered at discretion next morning.

INDIA AND CHINA.

The steamer *Bombay* arrived at Trieste from Alexandria, on Saturday last with advices from Bombay to Jan. 28; Calcutta, Jan. 20; Hongkong, Jan. 11; and Shanghai, Dec. 31. The most important political news from India was the rumour relating to Russian movements, which we have given elsewhere. No further news had been received from the Persian Gulf.

From China we learn that the patriots had secured Teentsin, the seaport of Pekin; and that the Emperor had ordered the Governors to send the imperial revenue to Mantchoorin, 80 miles north-east of the wall. Canton remained without disturbance.

THE Master-Generalship of the Ordnance will not be filled up during Lord Raglan's absence, but be held in commission until his Lordship's return from the East.

CHINA.

ITS PRESENT CONDITION AND PROSPECTS.

ABSORBED as the public mind is by the war in the East, yet the events hastening onward in China—to which remote portion of the globe, indeed, the momentous influence of the Russian contest reaches—are opening up a future not less important to the human race than even the imminent conflict on the Danube. Having received some interesting intelligence from a long experienced, and, we have reason to believe, a very authentic source, we place it before our readers, though it belongs to another branch of contemporaneous history, differing from that with which we are so vividly occupied.

The vestiges of the Christian religion in China, whether derived from the Syrian Nestorians above a thousand years ago, or from Xavier and his successor Ricci, three centuries since—and both extinguished, if not extirpated, by cruel persecutions—are perceptible in the doctrines and mysteries of all the secret societies which have sprung out of these circumstances. But, in all, they are blurred by horrid superstitions and perversions; the best of them leaning to the golden rules of Freemasonry and Rationalism. But, again, they are each distinct, and are, in fact, now in action as great separate conspiracies, directed to a common object, viz., the overthrow of the Tartar dynasty and re-establishment of Chinese rule, but as inimical to each other as sectarians with partial differences of opinion, or trivial disputes about rites and ceremonies, generally are. According to this view it will appear that in Europe we have hitherto formed an erroneous estimate of the business in hand throughout the principal provinces of the Empire, and of the consequences likely to result from it. We have been led to speak of "the insurrection" as a unity, subserving to one end. But this is the very opposite of the case. There are already three independent bodies of successful rebels in the field, vehemently hating each other, operating in different directions for their own ambitious objects, besides the anarchists, who are for plunder; and it is certain that ere long other powerful communities will throw themselves into the arena. Pekin is, probably, by this date, or will soon be, in the hands of the victorious Elder Brother, Tae Ping, which is assumed as a title of reverence equal to that of Emperor, and thus preferring a claim to the whole vast Empire. But, while he has been marching northwards from Nankin, revolutions have taken place at Amoy and Shanghai; the leaders of which, if conquerors, will not be contented with rank inferior to Whang-Te, or equal sovereigns. It is also understood and believed at Canton that the fall of Pekin will be the signal for a rising of that rich and populous section of the country; and that there, too, an independent Government will be established. Thus we may perceive the types of coming dynasties, instead of a reconstructed united empire. And China is vast and populous enough to cut up into several powerful states or kingdoms—the obvious issue of the existing state of things. The Pekin Lords are not likely to yield their predominancy. The Amoy force, consisting of the Fo-Kien natives, the bravest soldiers in China, will, if possible, hold their grip of what they can subdue. The Shanghai revolt is also strong, and advantageously situated, and if Canton asserts its right to a share in the spoil, we know not who could say it nay. Wars might probably ensue among these, and other up-springing, rival factions; but the whole must tend to an extraordinary change in the relations of mankind. The character and genius of the entire Chinese people are pre-eminently industrious and commercial. Nothing now—war or peace, anarchy or quiet, destruction or construction—can retard their progress, for any length of time, to form a prominent part of the great human family. At home and abroad their entrance into that family—bringing after them Japan, and other hitherto exclusive nations—must produce incalculable, inconceivable consequences; and all this is on the crisis at this very moment. The Ee, or Manes (Barbarians), or even the mercantile Ying-le-Gin (men of the English nation), may not think of it, whilst the Czar, and Omer Pacha, and the departure of expeditions, are daily on the *tapis*; but so early as ten years hence it will be seen that there were movements on the face of the earth in the years 1853-4 (and it may be, 5), in comparison with which, the war to which we have been so infamously provoked was a trifling concern.

What we wish, from our information, to impress upon the public is, the expectation of the breaking up of the Chinese empire into several governments, probably antagonistic; and the expediency of taking measures accordingly, both for the wisest adjustment of political relations and the most advantageous pursuit of commercial intercourse. Distracted as the country is now, there are many opportunities offered for the acquisition of desirable knowledge; and it is to be hoped that even the immediate pressure of other important national affairs will not prevent us from pursuing a systematic course to attain this most important end.

A HURRICANE AT GIBRALTAR.—A dreadful hurricane at Gibraltar on the 15th ult. is said to have caused great damage to the town and to the shipping in the roads. Part of the roof of the Commissary-General's quarters was blown in. The Presbyterian church and a great number of houses were materially injured. A keeper and two convicts were washed from the breakwater, and other lives were lost. Several vessels and small craft drifted ashore in Gibraltar Bay and Algeciras Roads.

APPREHENDED RETURN OF CHOLERA.—A deputation, consisting of Lords Harrowby, Ebrington, and Goderich, Mr. T. S. Cocks, M.P., Mr. Granville Harcourt, M.P., Sir J. Clark, Admiral Smyth, Mr. R. Cocks, Mr. Helps, and many other influential persons, waited on Lord Palmerston on Monday, to inquire what measures the Government were about to adopt with respect to the apprehended return of cholera. Lord Harrowby having explained the object of the deputation, and stated what he considered desirable to be done, Lord Palmerston said Sir William Molesworth, as President of the Board of Health, intended to bring in an amended act to enlarge the powers which the present law gave to the board. For himself, he should feel greatly obliged if any member of the deputation would furnish him, in writing, with the heads of the improvements which any measure of the sort ought to contain, and that he would be happy to communicate with Sir W. Molesworth on the subject. Lord Ebrington stated the difficulty experienced by the Board of Health in consequence of the little power they possessed in carrying out the provisions of the Public Health Act; he had resigned in consequence of that want of power. Mr. Helps having made some observation, Lord Palmerston again invited the deputation to make any suggestion they considered important. Mr. Ward went at some length into the proposed remedies for the present evils of defective drainage and supply of water; and, after discussion on the points submitted, Lord Palmerston again expressed his willingness to receive any communication in writing from the deputation. Mr. Ward, Mr. Simon, and Mr. Bulmer have been appointed to draw up a draft report.

OBITUARY OF EMINENT PERSONS.

SIR JOHN GERARD, BART., OF BRYN.

THE death of this Baronet occurred on the 21st ult. Sir John Gerard was born Dec. 8, 1804; and, on the 2nd August, 1826, at the decease of his uncle Sir William, the 11th Baronet, succeeded to the family title, which was conferred on his ancestor Sir Thomas Gerard, of Bryn, on the first day of the institution of the order of Baronets, May 22, 1611. The Gerards of Bryn are one of the oldest houses in Lancashire, and possess considerable estates in that county. The gentleman whose decease we are recording, was son of the late John Gerard Esq., of Windle Hall, Lancashire, by Elizabeth his wife, daughter of Edward Ferrers, Esq., of Baddesley Clinton, county Warwick; and grandson of Sir Robert Cansfield Gerard, 9th Baronet, by Catherine his wife, daughter of William Anderton, Esq., of Euxton. He married Dec. 3, 1827, Monica, daughter of Thomas Strickland Standish, Esq., of Standish and Sizergh, but had no issue. The title devolves accordingly on his next surviving brother, now Sir Robert Gerard, 13th Baronet, who is married to Harriet, daughter of Edward Clifton, Esq.

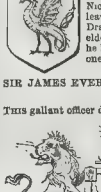
CHRISTOPHER DRAKE, ESQ., OF RORISTON, CO. MEATH.

THIS much-esteemed gentleman—the representative of one of the oldest families in Meath, the Drakes, of Drakerath—died on the 22nd ult., at his seat, Roriston, near Trim, aged sixty-three. He was the last surviving son of the late Columbus Drake, Esq., of Roriston, by Anne, his wife, only daughter of Christopher Barnewall, Esq., of Fyanstown Castle, co. Meath; and grandson of Patrick Drake, Esq., of Drakerath, by Frances, his wife, third daughter of James O'Reilly, Esq., of Roriston.

Mr. Drake married, first, Mary Anne, daughter of Nicholas Tandy, Esq., of Ballyboy, by whom he leaves one surviving son, the present Columbus P. Drake, Esq., of Roriston, J.P.; and, secondly, Mary, eldest daughter of Alexander Somers, Esq., by whom he had several children, of whom survive two sons and one daughter.

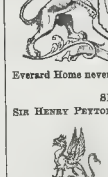
SIR JAMES EVERARD HOME, BART., C.B., OF WELL MANOR FARM, HANTS.

THIS gallant officer died recently, on service, aged 65. He was the elder son of the late Sir Everard Home, Sergeant Surgeon to George III., on whom a baronetcy was conferred Jan. 2, 1813. At an early age he entered the Royal navy, and eventually, in 1837, attained the rank of Captain. For his distinguished services in the Chinese War he was nominated a Companion of the Bath in 1842. As Sir James Everard Home never married, the Baronetcy becomes extinct.



SIR HENRY PEYTON, BART.

SIR HENRY PEYTON, second Baronet of Doddington, in the county of Cambridge, was the elder son of Sir Henry Peyton (formerly Dashwood), the first Baronet, by his wife, Frances, eldest daughter of Sir John Rous, Bart. He was born the 1st July, 1778; succeeded his father in the Baronetcy in May, 1789; and married, in 1803, Harriet, relict of James Bradshaw, Esq., and daughter of Thomas Fitzhugh, Esq., by whom he leaves an only son, the present Baronet. Sir Henry Peyton, who was elected M.P. for Cambridge in 1802 died on the 24th ultimo, at Swift's House, near Bicester, Oxfordshire.



This family of Peyton, in the male line, is a branch of the Oxford-shire family of Dashwood: the first Baronet, the father of the subject of this notice, assumed the name and arms of Peyton, on inheriting, by devise, the estates of his maternal uncle, Sir Thomas Peyton, of Doddington, a Baronet of an earlier creation.

THE ABBÉ LAMENNAIS.

M. DE LAMENNAIS was originally a priest in holy orders of the Church of Rome, and a bold and energetic supporter of its doctrines; so much so, indeed, that, at one time, he was thought likely to advance very high in the Church, and even to obtain a Cardinal's hat. Suddenly he altered the tone of his writings and the tenor of his conduct: he became the advocate of extreme Liberal opinions in politics and religion. He seceded from Rome, but joined no sect, having adopted and promulgated a kind of theological code of his own. His "Paroles d'un Croyant" made a great sensation. Its author subsequently acquired and sustained the character of a demagogue, both latitudinarian and fanatic. After the revolution of February, 1848, M. de Lamennais was successively member of the Constituent and of the Legislative Assembly, being elected each time for the department of the Seine. He was also nominated in the first of these assemblies to the committee appointed to draw up the Constitution of 1848; but he refused to take any part in the labours of that body. He almost merited the title of "silent member," as he never spoke but once during the whole of the time he was a representative of the people, and that was to earnestly en reat the House to let him be included in the prosecution instituted against the responsible editor of the journal, the *Peuple Constituant*, of which he was the chief editor, on the occasion of the re-establishment of the caution-money on journals. On the same occasion he spoke strongly against the dictatorship of General Cavaignac, and against any fresh regulations whatever on the press. Latterly M. Lamennais's infidelity became more marked. In his last illness, every attempt made to induce him to conform to the rites of religion proved ineffectual: he refused positively to the end to receive the ministers of any religious persuasion. A final but vain endeavour was made just before his demise, by one of his nieces, who was sent for expressly for the purpose from Brittany.

M de Lamennais expired on the 23rd ult., at his residence in the Rue du Grand Chantier, aged seventy. According to his will, his body is not to be carried into any place of religious worship, but is to be taken directly from the house in which he died to the burial-place of Père la Chaise. It is said that M. de Lamennais, in his will, disinherits all his relations who took any part in suppressing the insurrection of June, 1848. Although M. de Lamennais was so perverse in his religious opinions as to actually say he regretted revelation, he leaves a father in Brittany, who is the head of a Christian community, resembling that of the *Frères Cheridens*.

A portrait of M. Lamennais appeared in No. 316 of the ILLUSTRATED LONDON NEWS.

WILLS AND CHARITABLE BEQUESTS.

THE will of Sir Richard Godin Simeon, Bart., of Swainston, Isle of Wight, has been proved under £35,000, and probate granted to his son, Sir John Simeon, Bart., the surviving executor. The estate of the late Thomas Dowbiggin, Esq., of Abercrombie Lodge, St. John's wood, has been valued at £100,000 personalty.

By the will of James Ewing, Esq., merchant, of Lavenside, Glasgow, the charitable bequests to public institutions in Scotland amount to a sum exceeding £50,000. To the Royal Infirmary, Glasgow, £10,000; Lunatic Asylum, £2000; Deaf and Dumb, £1000; Blind, £1,000; Eye Infirmary, £200; Lying in Hospital, £300; Old Men's Society, £200; Old Women's Society, £200; House of Refuge, £2000, Night Asylum, £200; Trades House, at Glasgow, £500; the Bible Society, £500, and Society for the Relief of Destitute Sick, £500; Glasgow City Missions, £500, and Missions to Seamen, £500; Free Church College, Glasgow, £5000; Free Church College, Edinburgh, £2000; and £100 per annum to the Sustentation Fund of the Free Church of Scotland, and many other charitable bequests to the Church, and annuities and legacies to the widows of merchants and others.

PREPARATIONS FOR WAR.

THE RIFLE BRIGADE EMBARKING IN "THE VULCAN" WAR STEAMER, AT PORTSMOUTH.

EMBARKATION OF TROOPS.

WE continue our Illustrations of the stirring scenes presented at our ports by the embarkation of troops for the seat of war in the East.

THE RIFLES, AT PORTSMOUTH.

On Thursday morning (last week) the 2nd battalion of the Rifle Brigade were inspected in the garrison at Portsmouth, by Major-General Simpson, in the Governor's field, prior to their embarkation. The gallant General addressed the men, briefly telling them they were going out to defend the interests of their Sovereign and country, and succour the oppressed; and he hoped they would not flinch in the performance of their duty, or allow the honour and renown of their corps to suffer any diminution. On the same afternoon the baggage of the battalion was placed on board the *Vulcan* screw troop-ship, Commander Yon Donop, lying alongside the dockyard. On Friday the battalion mustered early in the barrack-yard, prior to departure. Every preparation had been previously made; and there was little to be done but the marching of the men to the dockyard. The battalion consisted of 850 men, exclusive of 30 non-commissioned officers, and 20 officers. Two companies then marched to the railway station, for conveyance to Southampton; and shortly before nine o'clock the remaining companies left their barracks for the dockyard, being accompanied by their own band, and the bands of other regiments in garrison. A large number of persons had assembled, and gave the troops hearty cheers. Every arrangement being completed, they marched on board the *Vulcan*, which was lying alongside the dockyard jetty. Everything was done in the most orderly and quiet manner and by eleven o'clock the whole of the corps were on board. The *Vulcan* got up steam early on Saturday morning, and went out of harbour at eight o'clock. She anchored at Spithead, being a war-steamer, to take powder and shell on board; and, at half-past twelve, again got under way, and proceeded to her destination with a fair wind down Channel.

A circumstance of a romantic character occurred on the corps embarking. The wife of a private being prevented going out by the regulations of the service, she dressed herself in Rifle costume, and, gun in hand, actually marched into the Dockyard. She was, however, detected on getting on board; but we hear that permission to go out with her husband was granted to her.

A number of distinguished individuals came down to Portsmouth to witness the embarkation, among whom were the following who had relatives on board:—The Duchess of Sutherland, the Marquis and Marchioness of Stafford, Marquess and Marchioness of Kildare, Earl and Countess of Grosvenor, Rear-Admiral Lord Adolphus Fitzclarence, Lord Leveson Gower, &c.

THE GUARDS AT SOUTHAMPTON.

On Wednesday morning (last week) a portion of the troops reached Southampton, by railway from London. Upon the arrival of the train which consisted of about twenty carriages and 500 men, a portion of the battalion of the Coldstream Guards alighted. They were under the command of Colonel Eyre and Colonel Codrington—the Brigadier-General of the two regiment (Colonel Beatinck) not having arrived

THE GRENADIER GUARDS EMBARKING IN "THE RIPON" STEAMER AT SOUTHAMPTON.

PARLIAMENTARY PORTRAITS.

MR. SAMUEL LAING, M.P. FOR WICK BURGHS.

The "railway members" have so increased of late years in numbers and importance as to form a distinct class or section of the House of Commons, with a considerable and advancing influence. Among these Mr Laing, the subject of this memoir, holds a distinguished position, as well from the prestige attending his name among those more immediately acquainted with his services in connection with railways, as from his past official standing and frequent manifestations of Parliamentary ability.

Mr. Laing is the son of Samuel Laing, Esq., of Pardale, in the county of Orkney, the author of "Travels in Norway" and "Notes of a Traveller;" and he is nephew of Malcolm Laing, the author of the "History of Scotland." After having undergone the usual scholastic preparations, he entered at St. John's College, Cambridge, in 1819 where he took his degree in 1823, being second wrangler and second Smith's prizeman. He was subsequently elected a Fellow of St. John's College, and he resided for some years in the University as a mathematical tutor. He was designed for the profession of an advocate; and, with this view, he entered at Lincoln's Inn, and studied for the Bar, to which he was called in 1840. One of those accidents, however, which so often influence the lives and determine the destinies of men, effected a change in his career. He accepted the post of private secretary to Mr. Labouchere, who was at that time President of the Board of Trade, and out of this connection grew his subsequent almost exclusive connection with railways. So much was this the case, that when the Railway Department of the Board of Trade was formed Mr. Laing was appointed secretary; and from that time he took an active part in all questions connected with railway legislation under successive Presidents of the Board of Trade—under Mr. Labouchere, the Earl of Ripon, Mr. Gladstone, and the Earl of Dalhousie. Some of the fruits of the experience he had thus acquired, he embodied in a "Report on British and Foreign Railways," which he published in 1844, and in the same year he gave evidence before a Committee of the House of Commons on the general subject of railways. It is honourable to Mr. Laing that to his suggestions and

MR. SAMUEL LAING, M.P. FOR WICK BURGHS.—FROM A DAGUERRÉOTYPE BY BEARD.

evidence was mainly due the establishment of the Parliamentary trains, which for the first time secured to the poorer classes a comparatively comfortable conveyance at a minimum rate of payment.

In 1845 Mr. Laing was nominated a member of the Railway Commission, presided over by Lord Dalhousie; and it is understood that he had a chief share in preparing the reports of the Commission on the railway schemes of that period of excessive speculation. Those reports were discountenanced at the time; but subsequent experience has proved that, had most of their recommendations been adopted, the country would have been spared much of the mischief that ensued from the over speculation of the year 1845, and the subsequent collapse. Nor is this all. A more judicious and systematic scheme of railway legislation would have saved a waste of capital, which Mr. Laing, in his evidence before Mr. Cardwell's committee of last year, estimated at little less than £70,000,000 sterling.

SCENE FROM "KING RICHARD THE THIRD," AT THE PRINCESS' THEATRE.—(SEE NEXT PAGE.)

Parliament, however, rejected the reports of Lord Dalhousie's Commission, which was consequently dissolved. Mr. Laing then resigned his post at the Board of Trade, and once more turned to the Bar as a profession. As a Parliamentary counsel he at once obtained considerable practice. But the prominency of his services in connection with railways, led to fresh relations with them. In the year 1848 he accepted the post of Chairman and Managing Director of the Brighton Railway Company, and since that date he has mainly devoted his attention to the management of that concern. By judicious arrangements he has so developed the traffic as to have materially improved the value of this line as a property. It is worth 40 per cent more than when Mr. Laing commenced his labours; and the dividend has advanced from 3¾ to 5 per cent per annum. Owing to the facilities afforded, the number of passengers has in five years increased from two millions to four and a half millions.

This success, and his general position, warranted Mr. Laing in thinking of entering Parliament. A requisition having been sent from Kirkwall, his native borough, Mr. Laing became a candidate for the representation; and, after a severe contest with Mr. Lock, who was supported by the Duke of Sutherland's interest, he succeeded in beating his opponent by a large majority. Mr. Laing now resigned the managing directorship of the Brighton Railway Company; but he is still Chairman of the company. His railway operations have not been confined to England, but have extended to the Continent and our colonies. He was mainly instrumental in forming the Great Western Railway of Canada. He is also a Director of the Submarine Telegraph Company, and of the Grand Central and Grand Junction Railway Companies in France, and of the Antwerp and Rotterdam, and the Sumhart Railways in Holland and Belgium. His name has been still more recently before the public as the Chairman and chief promoter of the Crystal Palace Company.

In politics, Mr Laing is a Liberal, but he seldom displays any strong bias for party. He is, however, a steady supporter of the present Government, more especially of Mr. Gladstone's financial measures. It is mainly to Mr. Laing's exertions that the public are indebted for the total repeal of the Advertisement-duty. As a speaker, Mr. Laing is logical, lucid, and fluent, and he possesses the art of rendering even dry financial subjects interesting by his mode of treatment. He has also displayed considerable general Parliamentary ability.

HAYMARKET THEATRE.

Mr. Palgrave Simpson's amusing comedy of "Ranelagh" proves to be entirely successful; and certain abridgments which have been made in the earlier scenes are calculated to ensure a continuance of its well-deserved prosperity. This week we present an illustration of the concluding situation of the first act. *Sir Robert Bovely*, tired of his concession to his amiable wife, and having received, through *Dr Caddielove*, those mysterious intimations from his *Florentina*, of the import of which the worthy physician is innocently unconscious—now totally indisposed to remain any longer at home—makes up his mind to a desperate determination, and, after a brief apology, hastens from the evening party in his wife's apartment. While the lady faints *Lord Pryington* exults—he is on the eve

SCENE FROM THE NEW COMEDY OF "RANELAGH," AT THE HAYMARKET THEATRE.

of his grand discovery—and, as the husband departs, turns round in his chair to pursue his victim with his taunting adieus.

The scene comprises Portraits of Miss Reynolds and Mrs Fitzwilliam, Mr. Bunkstone, Mr. George Vandenhoff, and Mr. W. Farren. The tableau has much novelty, and also much nature, as well as stage effect.

PRINCESS' THEATRE.

We this week engrave an illustration of the manner in which Mr. C. Kean has produced "Richard III.," presenting an excellent Portrait of the Actor in the part, when in the act of tempting Buckingham to the murder of the children in the Tower. The text has been somewhat here enlarged by Cibber, for the sake of affording the performer a wider scope for gesture, but most unnecessarily, if not injuriously. These exaggerations go far to damage the harmony of effect, and increase the differences between the Shakspeare and the Cibber portrait. The latter is an insane "butcher of silk buttons;" the former is an intellectual fiend. *Richard*, in the phase of his character intended by Shakspeare to be represented in this play, has passed beyond the necessity of being the homicide in his own person. He has the power to command others, and may rightfully, because Royalty holds the keys of death and life.

DRURY-LANE.

Under the title of "The Vendetta," an extended version, in eight tableaux, of Dumas's work, has been placed on this stage, but not with much hope of success

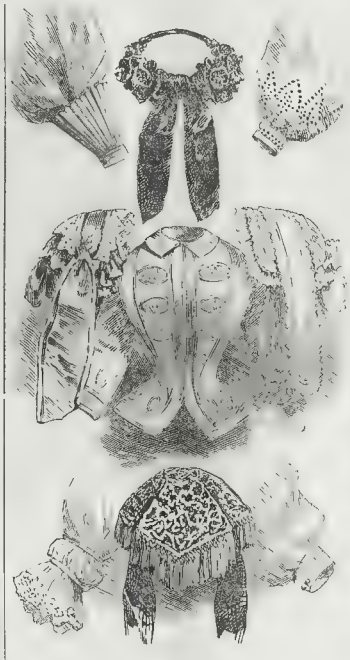
The twin Corsican Brothers were performed by Mr. Brooke, and the *Chateau Renaud* was ably supported by Mr. Mead; but the audience were dissatisfied, and disapprobation was indeed frequently expressed. Some expense has been incurred in the production, which, however successful in America, is of too heavy a calibre for English tastes.

PARIS FASHIONS FOR MARCH.

The present all-absorbing topic of dress is such articles as constitute the Costume for the Ball-room—as head dresses of flowers of gold diamonds, &c., doubtless suggested by the balls at the Tuileries and the Palais Royal, and these given by the high official dignitaries. Hence, visiting dress is comparatively little thought of, but fine weather will soon set our *modistes* thinking of Longchamps. However, we must not anticipate; but shall proceed to describe the Ball Costume most worn.

The dresses are mostly composed of taffetas, which assort well with the different kinds of ornamental trimmings which are put upon it; it forms the ground, slightly coloured, upon which are displayed rich patterns of lace, and gold and silver arabesques of volants of muslin or silk gauze. At the last ball at the Tuileries the Empress wore a dress of light blue colour, the trimmings of which were ornamented with pale pink flowers; moss-roses were distributed upon puffings (bouillons) of tulle reaching half way up the petticoat, and in the middle of each flower was a large diamond. The head-dress matched the skirt; between the bands were rows of diamonds, which were joined on at the back with bunches of roses. We should mention the novelty of ornamenting the upper part of the bodies of dresses with wreaths of flowers, and placing them round the sleeves, to match those of the petticoat. Bouquets of flowers are no longer worn upon the middle of the front of the body of the dress; neither are bouquets any longer carried in the hand. We regret the abandonment of the latter fashion; flowers and odoriferous flowers being preferable to smelling-bottles filled with essences extracted from flowers, and more or less adulterated—the

PARIS FASHIONS FOR MARCH.



PARIS FASHIONS FOR MARCH.

bouquets having the additional advantage of charming the eye with their beautiful colours.

Velvet has been replaced by handsome new materials, particularly watered silk of the old style. Taffetas, muslins embroidered in gold and silver, and in colours, and laces, are more especially suited for young ladies. Young unmarried ladies wear white gauzes and tulles, or pink, blue, and plain, made with three volants, or two forming a tunic; with which are worn in the hair and on the arms large Venetian pearls. The hair is worn in bands, puffed or raised, and turned back; and through it is passed a string of diamonds, or a ribbon across the forehead; and a few others—English ladies only—among the frequenters of the Parisian balls, continue to wear long curls.

THE ENGRAVINGS.

Costume for the Theatre—Dress of taffetas, with three volants trimmed with feather edging. Body open in front down to the waist, which allows to be seen the guimpe embroidery and feather trimming, being Valenciennes lace, to match that of the under sleeves. Feather edging also ornaments the border of the sleeves, and the two seams up to the shoulder, inside and outside.

In-door Dress—Dress of reps green or pearl-grey colour; the basques (or prolongation of the body, which overhangs the top of the petticoat), the seams of the sleeves, and the front of the body, also the back seams on the small side, are ornamented with ribbon put on flat, and are finished in the back by two bows of similar ribbon. Articles of fine linen are becoming every day of increasing importance in the *ensemble* of the costume. Sleeves are worn in great variety; as turned back with wrist-pieces, scolloped wrist-pieces, scolloped or having slits to correspond with the trimming of the body of the same pattern, and trimmed with the same lace. This luxury in articles of fine linen is even carried so far as to require that the pocket-handkerchief should be ornamented in a similar manner, and should thus complete the *ensemble* of the costume. Sleeve in jaconet, having closed wrist-piece with piping turned up or back. The sleeve also is worn in jaconet, with English embroidery; and the wrist piece closed by inserted embroidery.

Head-dress of velvet, with flowers in velvet; the front of the head-dress is velvet ribbon rolled, and sometimes passed underneath the band.

Cap for In-door Dress, of lace with ends of taffetas ribbon. Morning cap of fine linen, with bands or lappets ornamented with an embroidered festoon.

Body, with embroidery of cameos for in-door dress, reaching high up to the neck; and, instead of a small plain or straight collar, a deeper collar, either plain or cut into teeth on the edge.

Sleeve with volant of lace, mounted upon muslin, and having an upper puffing.

Jaconet Sleeve, with pattern bands woven in the material; closed by buttons of jasper with red spots, or blood stone and gold.

Head-dress in silk, embroidered with gold or silver fringe, fixed on the head by two pins with diamond heads, &c.

PARIS FASHIONS FOR MARCH.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

We have to record a loss of a well-known landscape feature on the river Thames. One of the two cedars in the Botanic Gardens at Chelsea has, like the maiden in the ballad, "bowed its head and died." Who has not heard of the two cedars at Chelsea? They were the best-known cedars in England, nay, the best-known cedars remote from Lebanon. They were planted in 1683, and their growth was watched by Sir Hans Sloane, by Miller (author of the famous Dictionary which bears his name), and by Sir Joseph Banks. There was no better marked feature on the Thames, from Cirencester to Yantlet Creek, than the two cedars at Chelsea. By how many great men have they been beheld? The two could have lived together their two centuries; but a separation has taken place, and, if we are not mistaken, the smaller tree of the two is the one that is left—

Single, unpropp'd, and nodding to its fall.

The soot and vile air of our overgrown metropolis was too much for these graceful introductions from the East. How we miss the tree that has gone! What can now only be said of one, was once applicable to two—

'Tis said he's older than he's reckon'd,
And well remembers Charles the Second;

for the cedars at Chelsea were planted in the reign of the great Pen of English Sovereigns. Let every care be taken of the widow tree. Surely man do something to prolong its existence—Dr. Lindley might see the widow into her two-hundredth year. Let him try.

We have been pleased with a characteristic anecdote of Wilkie, told by Mr. Burnet in a very readeable little volume, just published, called "The Progress of a Painter." Wilkie very properly abstained from using his pencil on a Sunday. Once, and once only, was he found with a pallet on his thumb on that day. He was busy with his admirable picture, the "Parish Beadle," now in Lord Colborne's possession, and known far and wide by Raimbach's engraving. There is a monkey in the picture, and Wilkie's sitter was a monkey. "You see," Wilkie observed to Burnet, "this gentleman is a public character, and can only be spared from his duties upon a Sunday." The monkey in question was the pet specimen of the Exhibition at Exeter 'Change. We could wish that every artist who works on a Sunday had as good an excuse as that urged by Wilkie for receiving a monkey as a sitter on the Sabbath.

The public has heard so much, of late, connected with the name of Haydon, and the journals of that painter (he was a better author than painter) have invested his name with so much unwelcome, though exciting interest, that, now poor John Martin is no more, we may be excused for telling a story—hitherto not in print, but one in every respect characteristic both of Haydon and John Martin. The two men had little in common, except a love for art and a hatred of the Royal Academy. The world never was with Haydon, and the world for many years was with John Martin. Who, then, more likely to call on Martin for pecuniary assistance than Mr. B. R. Haydon? He called, of course. Martin lent at once—not much, but as much as was asked. Haydon called a second, nay, a third time, and the same pecuniary assistance was rendered by the one painter to the other. Then came lighter loans—small sums borrowed in the street and elsewhere—but still no sign of repayment. Here we must observe that the two thirsters after high art had but a very slight acquaintance with one another at any time; and now it was that Haydon pressed to become acquainted with John Martin. "Do, do call on me," was the often-repeated request of the painter of "Solomon," to the painter of "Belshazzar's Feast"—of the man who loved his bottle, and did not pay his bills, to the man whose drink was water, and who did pay his bills. Well (to make a long story short) Martin did call—on a Sunday, about five o'clock. Haydon was at home, and Martin was shown in. What did he see? Not a man with a frugal meal before him, but one with three kinds of wine on his table, and what Mr. Ellis, of the Star and Garter, would call a very fair dessert. The reception was most warm. "Sit down, my boy—my noble friend—this is kind. Vasari would have loved you? Can you read him in the original? There are clean glasses near you, what wine will you take? I can recommend this port, and can say more in favour of the claret than perhaps you will credit. Now we shall have a talk," &c. "Thank you, my dear Haydon, I have dined. I dined with my children, at two; and I never drink wine—for two reasons—first, I do not care about it; and secondly, I cannot afford it." He, however, did take one glass, and soon left. They were never intimate.

The March number of the "Newcomes" contains an admirable description of too large a class of English artists. Any one who has mixed in artistic circles will at once perceive the truth of Mr. Thackeray's delineation. What he has done he has done so delicately that we are afraid to follow him. The man who dedicates years to a picture of "Boadicia," is the representative of many men both within and without the Academy.

That great master of architectural perspective and detail—our English Canaletti—Mr. David Roberts—is busy with a large picture, for the approaching Exhibition, of "The Interior of St. Peter's, at Rome." He is said to have experienced great difficulty in obtaining permission to make the necessary exact studies for his great work; but he succeeded at last, and has been working—so our *advices* from Rome assure us—with all his wonted vigour, and all his unsurpassed dexterity, in representing space, and portraying architectural colour and detail.

We promised to say something about the high prices obtained for books by auction in spite of the Autocrat of Russia and the fear of war. Let us give two instances: a copy of Milton's Minor Poems, an edition of 1646, though by no means a good copy, sold at Sotheby and Wilkinson's last week for six guineas; and an indifferent copy of the *first*, of Peter Parker edition of "Paradise Lost," was considered a bargain at £12 17s. 6d. A few years back and three guineas was thought a liberal price for a first "Paradise Lost." No copy that we can call to mind has brought so much before.

We are glad to find, by a recent auction of very fine prints, that the same healthy prices are maintained for the works of the best engravers. A subscriber's copy of the *first* "Bolton Abbey"—a proof before letters, with perfect margin—sold last week for £26 5s.; one of six artist's proofs, on large paper, of Doo's exquisite line engraving of "Nature," after Sir Thomas Lawrence, sold at the same sale for £9; and a proof "with etched letters," of Wilkie's "Rent Day," was thought to go cheap at £16 10s. But for an unfortunate accident to Mr. Ryman, the great printseller of Oxford, Mr. Grundy, of Liverpool, Mr. Agnew, of Manchester, and the great houses of Graves and Colnaghi, of London, must have paid still higher sums for some of the choicer impressions.

The British Museum has just secured an exquisite Oriental missal—one of the treasures of Tippoo Sulo; and one of the prizes at the taking of Seringapatam. The price was £112.

The title of Mr. Dickens's new work is "Hard Times." His recent inquiry into the Preston strike is said to have originated the title, and, in some respects, suggested the turn of the story.

military, on a very great scale, unmistakably with the view of overcoming Turkey's independence, or making war on her.

Recent from Lord John Hay that Admiral Dundas proposed to leave Malta on the 20th inst., on a cruise to Otranto, Athens, and Smyrna. By making him to bring his squadron to Vourla immediately, I felt that I only asked him to leave Malta a week earlier than he had intended to do, going first to Vourla instead of Syra.

Under these circumstances I have submitted the Grand Vizier that I would request the Admiral commanding at Malta to bring up his squadron to Vourla Bay.

Unfortunately, the British Government did not approve of the vigorous policy recommended by their able servant, neither did Admiral Dundas feel himself justified in taking so important a step without special instructions from the Foreign Office. Lord Clarendon, in acknowledging, on 22rd March, the receipt of the despatch from which we have just quoted, informs the Colonel, "that the circumstances did not, in the opinion of her Majesty's Government, render it necessary for you to request that the British fleet should come to Vourla, and they have entirely approved of the conduct of Admiral Dundas, in not complying with your request. His Lordship added that Admiral Dundas had been ordered to remain at Malta.

The next despatch which we shall quote, is a highly suggestive one It expresses, as it well might, the Czar's satisfaction, that the British fleet had not been ordered up to Constantinople: a step which we cannot help thinking would, if it had been taken, have materially altered the state of affairs, and prevented the occupation of the Danubian Principalities. It will be remarked that Count Nesselrode treats the question of the approaching passage of the Pruth by the Russian armies, as an "idle rumour, destitute of any sort of foundation," though he must have well known that the aggression was at that moment determined upon by his Imperial master, if it had not been actually ordered. Diplomatic perfidy offers no parallel to the conduct of the Russian Chancellor, in this, as well as in other stages of these transactions.

COUNT NESSELRODE TO BARON BRUNNOW.

Communicated to the Earl of Clarendon by Baron Brunnow, April 15.

(Translation.)

St. Petersburg, March 26 (April 7), 1853.

M. le Baron,—I hasten to acquaint your Excellency with the sincere satisfaction with which the Emperor has read your despatches of the 11th (23rd) instant. They inform us that the British Government has not only approved of the refusal of Admiral Dundas to comply, without express orders from London, with the summons which the English Chargé d'Affaires at Constantinople had sent him to repair with the British fleet to Vourla, but has come to the determination of leaving this fleet at Malta, and of waiting with confidence the development of the negotiations commenced by Prince Menschikoff with the Ottoman Porte, and not complicating them by joining in the hasty demonstrations which the French Government has thought fit to prescribe to its squadron.

Sir H. Seymour, on his part, has lately communicated to me the despatch which Lord Clarendon, the new Secretary of State for Foreign Affairs, had addressed to him on the same subject. It confirms, in all points, the intelligence which you send us.

It has given us much satisfaction, M. le Baron, to perceive, as well by the declaration by the summary of your communications with the British Ministers, that all the false reports spread at Constantinople in regard to our intents and had caused no alarm or apprehension to the Cabinet of London, misled by the persons assuming to be the friends of Greek Church, to endeavour to impose nothing upon the Latins which might too directly wound the honour and the interests of that Power, you may equally assure the English Ministers that, in the last negotiations to be negotiated, it is not a question of withdrawing or of taking from the Latins the last concessions which they have obtained by the Ottoman note of the 9th of February last year, but merely of obtaining for the concessions to the stipulations of the Hatti Scherif, by removing from them any position that they may contain of an exclusive character, of obtaining for the Greeks some recompense for the many sacrifices which has been done them; and, above all, of securing them from further injury

In general, we ask nothing better than to come to a friendly understanding with the French Government, and we least manage with the position in which it has placed itself, although all the concessions that can be made to its susceptibility have almost invariably the effect of rendering it more exacting and—we must say it—less grateful for them. The course which pushes it in seeking to obtain more. But it must itself contribute to facilitate for us the means of doing so instead of acting in a contrary sense, as it has just now done with so much precipitation by a demonstration the consequences of which may place in antagonism our desire for conciliation and the protection of our own dignity. The English Government must themselves see that France is not always accessible to counsels of moderation, since the wise representations which they made to her through Lord Cowley have not availed to prevent the departure of the French squadron.

The Emperor desires you, M. le Baron, to thank Lord Aberdeen and Lord Clarendo very particularly in his name, for the salutary impulse which they have recently given to the decree of the British Cabinet. The former has on this occasion shown us a new proof of confidence, of which our august master is both sensible. The latter, with whom our relations have hardly yet commenced, thus evinces upon important occasions which justify us in hoping that they will be of the most satisfactory nature. In relying upon our assurances, in refusing to follow France in the hostile attitude she has assumed with regard towards us, England, under present circumstances, has performed an act of wise policy. Nothing would have been more to be regretted than to see the two great maritime powers coming together, were it but for the moment, and in appearance rather than in fact, on the question at issue. Although their views in this respect differ in reality *toto cœlo*, nevertheless, a hostile meeting is by no means competent to draw the distinction, their ostensible object would not have failed to represent them under the aspect of an intimate alliance. The secret anger of Prussia would have been exasperated, for the advancement of her own interest, these fresh evidences of Anglo-French understanding and over, thing in Europe might at once have been placed in a false position. The simultaneous appearance of the two fleets would have prevented the possibility of the question being solved at Constantinople. It would have placed us in a position in which we could not have accepted, and which would no longer have allowed the Emperor, thus exposed to a demonstration of a threatening nature, freely to follow his own pacific and conservative impulses.

France acting alone, the danger is attended with less inconvenience, although it is still far from being free from it. The Emperor accordingly attaches but little importance to it; and his Majesty sees in it no reason for changing, at the present time his previous views and intentions. The attitude of England will suffice to neutralize what, on the part of the French or the Turks, if the last or second feel encouraged by the presence of the British fleet, might embarrass or retard too long the favourable solution of the question in dispute. In this point of view Lord Aberdeen appears to us to have fully understood the important part which England has to play, and we are happy to congratulate ourselves upon it personal beforehand of the impartiality with which he will display in carrying it out.

As regards yourself, M. le Baron, you have on this occasion left no thing undone to prove to the vast interests which our august master has confided to you. His entire approbation has been the reward of the efforts which you have made and the zeal and ability which you have displayed to strengthen and confirm the English Ministers in the just opinion which they have formed of our political intentions. I have, &c.,

(Signed) NESSELRODE.

THE LATE BREAD RIOTS AT EXETER.—Actions will be brought at the ensuing assizes, on behalf of Exeter, for the recovery of the damage sustained by some of the bakers during the late bread riots in that city. In one case the damages have been laid at £500, the plaintiff having demanded that amount from the hundred of Wonford, in which he resides. The claim is resisted by the hundred, and two eminent counsel are already engaged for the defence. The damage sustained by the various sufferers in the county is estimated at between £1,000 to £1,500. The bakers in the city do not claim more than £200, for which they will shortly apply to the magistrates for an order for payment. At the same assizes about forty prisoners, from various parts of the county, will be tried for taking part in the riots.

CHESS.

TO CORRESPONDENTS.

S. A. M., St. Bees.—The White pieces, as you have arranged them, certainly command every square on the board; but we doubt if title could be effected without the assistance of the Knight. The first move is very obscure. The best way to mate that variation would be to play it, so bring a Queen's Bishop's pawn at once 1 awns with some of the crack players in London every evening, and you may enjoy your game with some of the best players in London every evening, and you may enjoy your game with some of the best players in London every evening.

BRATH.—We are glad to see that the chess correspondence between the seconds relative to the proposed Match between Mr. Staunton and Mr. Horwitz, is given in the March Number of the *Chess-Player's Chronicle*, and trust it will be disseminated widely. To prevent confusion in the minds of those who read it for the first time, it may be well to remark that the paragraph—"As Mr. Harrwitz, immediately upon receiving the letter forwarded by his second, instead of replying *de novo* to it all good to the Castle or Mr. Staunton, and likewise the following note to the person with whom it was pretended Mr. Staunton had made a match, and the match, has been misplaced by the printer, it should stand thus:

STAG HUNTING.

MEET AT GERARD'S CROSS

Buck-hounds is an officer of State changed with each change of Ministry. The salary is £1600 a year; and that it is not considered an unimportant office may be judged from the fact that it was the first held by Earl Granville. The Queen's hounds hunt Middlesex, Bucks, and Berks. The principal meets are to be reached by the Great Western Railway. Faster hounds, or a more complete establishment, are seldom seen. Mr. Charles Davis, the huntsman, is still, after nearly fifty years in the Royal service, a horseman whom it is worth a long journey to see going. The greatest drawbacks with the Royal hounds are the large miscellaneous fields, which include every one from the Duke of Cambridge to the horse-dealing cad, and the number of roads by which the greater part of their county is intersected; along which the mere crowd pound away, and fancy they are hunting.

George III., who was an enthusiastic sportsman, kept a pack of slow fox-hounds. The memoirs of Madame D'Arblay are filled with the lamentations of those of his suite who were compelled to follow, without sharing the Royal taste for hunting. The Surrey stag-hounds are a pack which partly occupies the country hunted over by the Earl of Derby, the grandfather of the present Earl, when he lived at the "Oaks," which gave name to the Epsom race for fillies. The Surrey stag-hounds are strictly a subscription pack, the greater number of subscribers being gentlemen connected with commerce in the city of London. The meets are not advertised, and the presence of unknown strangers is not desired, for the very sufficient reason, that such unlimited miscellaneous fields as usually assemble near a great city, would soon consume any subscription fund in compensation to the farmers.

The country, with the exception of the first district, is very favourable for sport, consisting partly of a light hilly sand, thinly inhabited, with few roads and light fencings, interspersed with small plantations, and a succession of heaths or commons; and of a vale country divided into moderate-sized enclosures by fences as wide and deep as any in Leicestershire.

The "field," to those who are introduced, is particularly pleasant, as it partakes of the character of a social club, where every one knows every one. Those who are silly enough to share the old prejudices about Cockney sportsmen, will find that, wherever bred, they will find plenty of work, if they wish to hold their place with a good deer before the Surrey stag-hounds, near Red-hill, or the meadows round Ewell. Mr. Heathcote, youngest son of the late Sir Gilbert, is the master of these hounds, and defrays a large share of the expenses of the establishment, which is in every respect well done. Croydon is the centre of this hunt, as well as of the Surrey foxhounds; and in Bignell's stables there are more than a hundred hunters, many of them of the first class, kept by gentlemen—of whom nine-tenths come down to hunt from London or its suburbs.

The second Illustration is taken from a deer-paddock, at Mr. Heathcote's seat, Durdans, near Epsom—a place which figures in the gossipping annals of the time of Charles II.

Baron Rothschild hunts the country round Tring entirely at his own expense. We shall describe the country when we come to give an account of the fox-hounds of that district. It is sufficient to say that Tring is the station to which horses should be sent on, and that the London and North-Western grants every season passes, "for hunting purposes only," to Tring, at £10 each.

DEER PADDOCK, AT DURDANS, NEAR EPSOM.

TROOPS FOR THE WAR.—BRITISH INFANTRY.—(SEE PAGE 187.)

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

WAR WITH RUSSIA.

The Earl of ELLENBOROUGH asked whether it was the intention of Government to take any measures to prevent the Russian fleet from leaving the Baltic, and perhaps materially interfering with our foreign commerce across the Atlantic.

The Earl of ABERDEEN could not suppose the noble Earl expected an answer to his question, for such an answer could be only serviceable to the enemy. He should consider it his duty not to answer any question respecting contemplated naval or military operations. As for the Russian naval force, it was a grievous mistake to suppose that it was unwatched.

Lord ELLENBOROUGH could not give Ministers credit for activity and watchfulness, till he had seen more satisfactory evidence of those qualities than they had yet exhibited. He thought it was discreditable for a country like England to enter upon a war with little more than a peace establishment. Ministers tried to persuade the country that it would be a little war, when it would be one of the greatest in which this country ever was engaged.

The Marquis of LANSDOWNE denied that the Government had ever looked at the impending war as a little war; and if the noble Earl knew a little more than he appeared to know of the preparations which had been made for that great war, and the manner in which those preparations had been conducted, he would not entertain such an opinion.

AMENDMENT OF THE COMMON LAW.

The LORD CHANCELLOR called attention to the second report of the Common Law Commissioners, and laid upon the table a bill founded upon the report, after having explained to their Lordships the nature of its provisions.

After some commentaries upon the subject by Lords Brougham and Campbell, the bill was read a first time, and was ordered for second reading, with an understanding that it should be referred to a select committee.

HOUSE OF COMMONS.—MONDAY.

ARMY ESTIMATES AND THE BUDGET.

Lord J. RUSSELL announced that,the supplementary Army Estimates would be laid upon the table on Tuesday, and taken into consideration on Friday; and on the Monday following the Chancellor of the Exchequer would place before the House the state of the national finances.

RUSSIAN SHIPS CHARTERED BY BRITISH MERCHANTS.

In reply to questions from Sir W. Clay and Mr. M. Gibson, Lord J. RUSSELL said, the Sultan had permitted Russian vessels chartered by British merchants with corn from the Black Sea to pass the Bosphorus and Dardanelles. The British Government had been applied to for a similar protection from British cruisers, and had required a list of the vessels upon which they had received the names of four. As to all other vessels, and as to rights of neutral vessels to convey goods, not being military stores, free, the subject was one of delicacy, and was under consideration; but the decision of the Government would be announced before any declaration of war.

THE DISASTER AT SINOPE.

Sir H. WILLOUGHBY called attention to the destruction of the Turkish flotilla at Sinope, on the 30th day of November, 1853. The hon. baronet contended that, as Turkey had been prevented from sending her fleet into the Black Sea, the French and English authorities became morally responsible for the safety of the Turkish ships already there, and yet it appeared that this measure was suffered to take place. As early as the 5th October, 1853, Lord Stratford de Redcliffe declared that unless the naval aid of the country was cordially and frankly given to the Turks the Russians would succeed. Lord Clarendon anticipated that on th. 7th October, when he informed Lord Cowley at Paris, and, on the 8th, Lord Stratford at Constantinople, that the British squadron was to come up to Constantinople, adding, of course, if the Russian fleet came out of Sebastopol, then the British fleet was to pass into the Black Sea. He asked the right hon gentleman to explain how it was that the Russian fleet having come out of Sebastopol the British squadron remained at the mouth of the Bosphorus? On the 8th of October, Lord Clarendon wrote to Lord Stratford to instruct Admiral Dundas to inform the Russian Admiral Lord Cowley at Paris, and, on the 8th, Lord Stratford at Constantinople, that the British squadron was to come up to Constantinople, adding, of course, if the Russian fleet came out of Sebastopol, then the British fleet was to pass into the Black Sea. He asked the right hon gentleman to explain how it was that the Russian fleet having come out of Sebastopol the British squadron remained at the mouth of the Bosphorus? On the 8th of October, Lord Clarendon wrote to Lord Stratford to instruct Admiral Dundas to inform the Russian Admiral that, if the Russian fleet came out of that port his orders were to protect the Turks and their territories from all overt acts of hostility. That was fifty-three days before the destruction of the fleet. Was that instruction ever carried out at all? The important instruction was very great, because if the Russians had been informed of that arrangement their coming out to attack the Turkish fleet would have been a direct act of defiance. He had on a former occasion asked the noble Lord the member for the City of London whether there was any despatch showing that that instruction had been carried out, and the noble Lord, who generally answered with much skill and tact, said that the instructions had been triumphantly carried out by Capt. Drummond in the *Retribution*. The noble Lord's memory on that occasion must certainly have forgotten all the dates. It was long after, and in consequence of the destruction of the fleet of Sinope, that the *Retribution* was sent. Three months nearly had elapsed from the time the instructions had been sent out before that vessel, which, if it had been done in time, might have prevented the whole mischief. He wished the right hon. gentleman to state why that important instruction had not been carried into effect before? If it had, not only would 4000 men have saved their lives (a greater number than were put to death in any of their great naval engagements), but it would probably have prevented them being involved in war. In the middle of November, two Turkish steamers were taken by the Russians in the Black Sea. They had a powerful fleet moving about; and he wanted to know what the British fleet were about all that time at the mouth of the Bosphorus? They would not allow the Turkish fleet to go out; and perhaps they exercised a wise discretion. The Turkish fleet was destroyed owing to that policy, and the Blue-Books left it wholly and entirely unexplained. After the disaster, two frigates were sent to ascertain what had occurred; and suppose they had found the Russian fleet there, would they not have had to turn tail, and return to Constantinople?

Sir J. GRAHAM contended that the blame of the unfortunate affair at Sinope was attributable to the Turkish squadron itself, which had remained five weeks at Sinope, doing nothing but tempting, by its defenceless position, the Russians to attack it. The gentleman complained of the delay in sending the combined fleet into the Black Sea, and he had endeavoured to explain that before, when he had the honour of addressing the House. Power was given to the English Ambassador to communicate these instructions to the Russian naval commander at Sebastopol. He had stated that Lord Stratford exercising a discretion on the spot, and before the affair at Sinope had taken place, the message had not been communicated by the British Ambassador at Constantinople. The hon. gentleman said the Blue-Books offered no explanation as to the result. With reference to that very point, he would refer him to the despatch of Lord Stratford of the 5th of December, in which he stated that the unfortunate catastrophe was owing altogether to the neglect, the culpable neglect, of the Turkish commander. It was evident that three weeks before it occurred the British Admiral had warned the Turkish authorities of the danger to which the squadron was exposed. The order was revoked subsequently which would have saved the ships, and he must be excused for saying, that although the disaster was lamentable in the extreme, yet all the blame in respect of it must be wiped away from the British authorities. In consequence of that disaster, an order as unequivocal and distinct as could be given was issued to prevent any aggression by the Russian fleet, even before any declaration of war, and no Russian ship of war would be permitted to navigate the Black Sea without being opposed by the British and French fleets; and he again repeated his confident expectation that when vigour and decision were required they would not be wanting on the part of the British and French fleets.

Sir De L. EVANS thought the statement of the right honourable Baronet entirely exonerated the British Government. He begged to ask the right hon. Baronet whether he had received a despatch done a few or four days before this affair, in a despatch from the Consul at Trebizond, that two Russian war-steamers had appeared off that port?

Sir J. GRAHAM said our screw-ships and steamers had visited every port of the Black Sea—Varna, more than once; Sebastopol; the coast of Circassia—but, with the exception of three small Russian ships at Sebastopol, they had seen nothing of Russian ships of war.

Admiral WALCOT had always been of opinion that a vigorous policy would best calculated to avert war, and, when it was begun to bring it to a speedy and glorious termination (Hear, hear); while a timid policy was certain to be disastrous (Hear, hear). With reference to the affair of Sinope, it appeared that the Turkish Government had applied for the protection of the allied fleets, but that the French Admiral had declined to sail to their assistance, though Admiral Dundas was of a different opinion. It was to be regretted that the fleets had not gone, as they could have prevented the catastrophe of Sinope.

Mr. H. DRUMMOND said, that unprofessional members should be cautious of giving opinions upon naval or military matters. He had himself been sailing, some thirty years ago, with Admiral Dundas in the Mediterranean, on which occasion he said to him (Mr. Drummond), "I shall one day be an admiral, and shall be sailing over the very sea we are now on. I shall have more arrogance to endure when that time shall arrive from ignorant parties as home than from the enemy; and you will be called upon to defend me." This prophesy occasioned great laughter.

Lord D. STUART said he believed the order to return into port had been disregarded by the Russian vessels of war, and had not been enforced by the allied fleets. Such was the nature of the information which had reached him from the seat of war. Russian ships had not only been at sea, but had actually bombarded St. Nicholas, and other places.

Captain SCOBELL defended the course pursued by Admiral Dundas.

THE NAVY ESTIMATES.

After a brief discussion, the whole of the Navy Estimates were passed without a division.

THE ORDNANCE ESTIMATES.

Mr MONSELL moved the Ordnance Estimates, which, in the aggregate, amounted to £3,845,878, being no less than £792,311 over the Estimates of last year. Looking at the recent display of activity in the Ordnance department, as contrasted with what it had been enabled to effect on former occasions, the hon. gentleman congratulated the country upon the efficiency of the department, which, though calling for an increased estimate at present, would lead ultimately to a great saving. The factories at Enfield and Birmingham were to be abolished, and a large factory was to be erected near Woolwich to supply their place, which would release the Ordnance from the difficulties it experienced in dealing with private gunmakers. With such a factory it would be unnecessary to keep up such large stores of guns and bayonets as had heretofore been considered necessary. It was anticipated that the Minié rifle, which was at present £3, would be diminished to £1 8s. The total saving upon muskets of every kind for all branches of the service would be about £300,000.

Mr. MUNTZ undertook to prove, if the factory proposal were suspended for two months, that the Minié rifle could not be manufactured at the price stated by the hon. gentleman.

A discussion ensued as to the expediency of the Government becoming manufacturers at all, beyond the point of establishing a check against contractors, and ultimately the vote for the establishment of a gun manufactory was postponed for a month at the suggestion of the Chancellor of the Exchequer.

The Chairman soon after reported progress, and obtained leave to sit again.

HOUSE OF LORDS.—TUESDAY.

THE MILITIA.

The Earl of ABERDEEN said that the Government intended this session to introduce a bill to modify the existing law respecting the militia in England, so as to extend it to Ireland and to Scotland, and to give power to raise in Ireland 30,000 men, and in Scotland 10,000. But it was not intended to embody the Irish militia in the present year.

LANDLORD AND TENANT BILL.

The Earl of DONOUGHMORE moved the second reading of the Leasing Powers (Ireland) Bill, and the Landlord and Tenant (Ireland) Bill, which he said were almost identical with the measures that had passed through a second reading last session.

There were five other bills on the paper relating to the improvement of the law of landlord and tenant in Ireland; and, after considerable discussion, it was arranged that they should all of them be read a second time, and referred to a select committee.

HOUSE OF COMMONS.—TUESDAY.

MONASTIC INSTITUTIONS.

Mr. T. CHAMBERS moved for a select committee to inquire into the number and rate of increase of conventual and monastic institutions in the United Kingdom, and the relation in which they stand to existing law; and to consider whether any, and, if any, what further legislation is required on the subject. He deprecated the idea of treating this as a religious question; he wished it to be considered entirely as a political and a social one. The great increase in the number of these establishments demanded that they should be some more placed under the supervision of the law. In 1843 the number of conventual establishments in the kingdom was 56, and ten years later, in 1853, they had increased 400 per cent, being now less in number than 208. It was also to be remarked that this increase was not to be spread equally over the ten years—on the contrary, every year accelerated that increase; and, as to monasteries, they had increased in Ireland during the same ten years from 60 to 73, or 20 per cent. The establishment of these monasteries was in open violation of the act of 1829, which prohibited all dealings with; but there was no relation between convents and the law a state of things which should no longer be allowed to exist. They should at once be brought within the pale of the law, with a view to put a stop to the restraint placed upon bodies in these institutions. The hon. and learned gentleman quoted a great many cases of restraint as well in Roman Catholic convents as in the establishment of Miss Sellon, in Plymouth. Those Roman Catholic convents were affiliated with others abroad, and by this means they were enabled to add the punishments of transportation to the imprisonment and tortures which they could inflict at home.

Mr. NAPIER seconded the motion. He thought that an inquiry should be instituted to ascertain what course was proper to be pursued under existing circumstances.

Mr. J. BALL could see no occasion for a select committee. The information on the subject was patent to everybody.

Mr. E. POTTER quoted the authority of Sir John Forbes, physician to her Majesty, as to the utility of conventual establishments in educating the Catholic children of Ireland. If the Government did not discourage such a motion, they would do a greater amount of mischief in Ireland than could be easily conceived.

Mr E. FITZGERALD thought an inquiry might be useful, but not if the ladies in convents were to be brought before a committee of that House. He believed in his conscience that it would be greatly for the benefit of the Roman Catholics not to oppose this motion, for he was confident that these conventual establishments had nothing whatever to fear from the strictest inquiry.

Mr. FAGAN said it was impossible the House could grant this committee without hearing one single fact or argument on which to ground it.

Mr. E. B. ROCHE, as an Irishman and a Protestant, would oppose the motion, which in the present state of the country was ill-timed and in bad taste, at a moment when Dr. Wiseman had issued a pastoral letter to the Roman Catholics of this country, filled with loyalty to her Majesty.

Lord C. HAMILTON supported inquiry. The shrinking sensitiveness betrayed by those who were opposed to inquiry was calculated to make one imagine that there was something to be concealed.

Mr. J. PHILLIMORE hoped the House would not assent to the motion of Mr. Chambers, which was insulting to every one who professed the Roman Catholic religion.

Mr. MAGUIRE said that the bill of the hon. and learned gentleman was felt to be so insulting to the Roman Catholics of Ireland, that it would not be very safe for him to make a tour of that country as its author.

Mr. W. RUSSELL bore his testimony to the utility of these convents in rearing the children in their neighbourhood to habits of industry, and giving them a good education. He hoped the House would reject the motion by a large majority.

Mr. MIALL denied that there were facts to justify inquiry, or that legislation could provide a remedy.

Mr. COWAN supported the motion. He was surprised at the silence observed by the Government, which he hoped would be broken.

Lord J. RUSSELL had but little to say upon the subject. If he believed that personal liberty was denied to those who wished to use it, he would then say there was an undoubted case for inquiry. But this he did not believe. For neither English, Irish, nor Scottish Roman Catholic gentlemen would suffer their daughters and sisters to be illused in such institutions. Was it to be supposed that none but Protestant gentlemen could be found to interfere on behalf of those Roman Catholic ladies; and, was it not an imputation upon the Roman Catholics to hold out that it became necessary for Protestants to protect those whom they left exposed to such privations and persecutions. He would give his hearty and decided negative to the motion.

Mr. WALPOLE thought it was a mistake not to have established a committee of inquiry long ago, having for its object to ascertain the exact position of the Roman Catholic religion, both as regarded its relation to the law and its relation to foreign countries. He was prepared to vote for the motion, deeming it of great importance that monastic institutions should be examined into. It was intended by the Catholic Relief Act that these institutions should be extinguished, but that act had never been attempted to be carried out by any succeeding Government; and he believed that some inquiry was now necessary to ascertain whether they should not be at all events subjected to control, if not extinguished.

Mr. J. FITZGERALD contended that the law as it at present exists was amply powerful to meet and redress the evil.

Lord M. HOWARD opposed the motion, quoting passages from letters to show that the inspection of nunneries in Papal countries scarcely existed.

On a division, the numbers stood—For the motion, 186; Against it, 119: majority for the motion, 67.

NEWSPAPER STAMP RETURNS.

Mr. CRAWFORD moved for returns of the number of stamps issued to each newspaper in England, Ireland, Scotland, and Wales during the years 1851, 1852, and 1853.

The motion—which was supported by Mr. DISRAELI and Mr GIBSON, and opposed by Mr. WILSON and the CHANCELLOR of the EXCHEQUER—was ultimately agreed to.

HOUSE OF COMMONS.—WEDNESDAY.

LEGAL EDUCATION.

Mr NAPIER moved for an address for a commission to inquire into the arrangements in the inns of court for promoting the study of law and jurisprudence, the revenues properly applicable, and the means most likely to secure a systematic and sound education for students of law, and provide satisfactory tests of their fitness for admission to the bar. The hon. and learned gentleman dwelt on the importance of securing for the public a liberal and enlightened education for persons allowed to practise as barristers. This became the more important when it was remembered that they were called upon to fill situations of the highest responsibility. When he came over to London to eat his dinners for the Irish bar he consulted a very learned member of that bar what course of reading he would advise him to pursue. He replied that the Irish bar were his object, he should read himself up in "Joe Miller," for he would get more business by cracking jokes than by the most profound knowledge of his position. The system of education was not calculated to raise the profession in public estimation; and some alteration should be made in the proceedings of the inns of court, which were in fact trustees for the public, that barristers should be well educated. They were somewhat in the light of universities for the study of the law, and it would be for the benefit of the public that they should act up to the spirit of that trust. The universities had recently adopted very considerable reforms, and the inns of court ought not to be behind the spirit of the age. Voluntary lectures would be by no means sufficient, unless accompanied by periodical examinations. He thought the appointment of a commission of enlightened and learned men would be likely to adopt a sound system of legal education.

The ATTORNEY-GENERAL, the SOLICITOR-GENERAL, and several other members spoke in favour of the motion, which was agreed to.

(*Continued on page 197.*)

THE BLUE-BOOKS ON THE TURKISH QUESTION.

(*Continued from page 151.*)

The views entertained by the French Government on the mission and demands of Prince Menschikoff, appear clearly enough in the following documents, which we extract from those published in the *Moniteur*, subsequently to the issue of the English Blue-Books:—

TO COUNT WALEWSKI, AMBASSADOR AT LONDON.

Paris, Feb. 21, 1853.

Monsieur le Comte,—The question of the Holy Places tends, in spite of our efforts, to issue from the limits in which we could have wished to confine it, and is of a nature to interest all the Cabinets of London should not further mistake the character and object of our negotiations. I therefore invite you to communicate to Lord Clarendon the despatch which I addressed on the 25th of January last to the Comte de Lesbuiges, and it will be easy for him to see that we have never pretended to demand for the Latin Fathers of the Holy Land advantages at which Russia can seriously be alarmed. I hope also that the new Principal Secretary of State of her Britannic Majesty will appreciate the conciliatory nature of the proceeding which I have ordered the Minister of the Emperor at St. Petersburg to bring, on the 25th of January, before the Cabinet of that court. In saying, and will adhere, whatever may be his opinion on the origin of the discussion, that we have honestly endeavoured to appease it. I regret to tell you, Monsieur le Comte, that our overtures has not produced the results which I expected. It is not a basis of conciliation which the Cabinet of St. Petersburg offers to us. At the moment at which, in spite of our exhortations, it sends Prince Menschikoff to constantinople, what it proposes to us is to subscribe to conditions which would replace the Catholic Church at Jerusalem in an inferior and humiliating situation, and would do the greatest injury to our consideration in the Levant. We had disposed of the Greeks—if we had demanded and obtained the complete execution of the capitulations of 1740—if the concessions which have been made to us exclusively in any degree whatever—the reserving of which the Emperor, we might, no doubt, have alleged our rights; but we should have understood that Russia, if necessary, would have carried things to an extreme to defend the religious interests, intimately bound up with her political interests. Thanks to our moderation, Monsieur Le Comte, the question is not laid down in such terms; and that is what you must endeavour to make Lord Clarendon understand. In presence of the complications which may arise in the East in consequence of the mission of Prince Menschikoff, we should not understand, I know, that, in a cause so just, so moderate as that which we support, we could not count on the impartiality of the other Cabinets, and that false prejudices (*fausses preventions*) should prevent them from recognising on which side is right. I will add, Monsieur le Comte, that this right is at present identified with the dignity and independence of the Porte itself, and that, if the Government of the sultan were constrained to submit to the exigencies which are put forward, France would not alone have to regret such a result.

Accept, &c.

DROUYN DE LHUYS.

TO COUNT WALEWSKI

Paris, March 19, 1853.

Monsieur le Comte—I hasten to send you, for your information, a copy of the despatch which I received this morning from M. Benedetti, on the events which are taking place at Constantinople, and of the circumstances which have caused Colonel Rose to summon the English fleet. Although I am not aware that the Government of her Britannic Majesty approves the determination of its agent, and if Admiral Dundas has thought right, or considered himself at liberty, to obey the invitation without referring to London, the conduct of her Britannic Majesty has desired to testify the interest which it takes in the present crisis in the destinies of Turkey, by a demonstration which does not engage its ulterior resolutions, and which will have for the moment only the character of a measure of surveillance and precaution. In consequence, the fleet of the Mediterranean will receive orders to leave for the seas of Greece.

Accept, &c.

DROUYN DE LHUYS.

It will be seen from this letter to Count Walewski that Colonel Rose had thought it his duty, in the absence of Lord Stratford de Redcliffe, to summon the British fleet under the command of Admiral Dundas, to leave Malta for the Turkish waters. Colonel Rose announced this determination to Lord John Russell, in a letter dated the 19th March. The following is an extract from this important communication:—

The treatment of Fuad Effendi; the unfavourable—I may say the disaffected—feeling which Prince Menschikoff's mission had caused amongst the Greek population, who had hitherto shown no feeling of that nature in the conversation and advance of Russian troops to the Turkish frontier, had greatly discouraged the Grand Vizier, his Ministry, and the Turkish party in general.

The Grand Vizier said that the Russian Government evidently intended to win some important right from Turkey which would destroy her independence, and asked me to request the British Admiral to bring up his squadron from Vourla Bay from Malta.

Feeling the intimate conviction that if the Sultan were not supported on this occasion, he would call to his councils a Ministry selected under Russian influence, I informed Omer Pasha that I would tell your Lordship that I felt convinced that the safety of Turkey required the presence of the French squadron in those waters. M. Benedetti said the same as regards the French squadron.

But these assurances did not tranquillise the Grand Vizier's mind. He thought that Turkey would be lost before an answer could arrive from England and France.

The Russian Government had not kept faith with her Majesty's Government. Instead of withdrawing, or allowing her troops to be stationary, she had advanced them up to the Turkish provinces, without having ever declared or stated her cause of complaint against the Porte to the Porte—a thing unheard of amongst, and contrary to the rights of, civilised nations, she was taking other warlike measures, maritime as well a

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The commissariat estimate for the year ending March, 1855, is printed. The sum required for the effective service is £650,671, for non effective £14,209; being an excess on the whole of £87,467 over the estimate of 1853-4.

At the Liverpool police court, last week, Mr. John Price, of the firm of Benson, Price, and Co., druggists, was fined in the mitigated penalty of £10, for having in his possession a quantity of spirits without a permit.

A correspondent of the *Durham Advertiser* says, it is reported that the clergyman at Cockfield has given so much offence to several of his parishioners by wearing his beard, that they have discontinued their attendance at church.

In Natal, South Africa, the search for precious metals has been hitherto unsuccessful. The long promised steamer *Natal* had not yet arrived from England.

Sir John Key, Bart., the Chamberlain of London, has been for some time indisposed, and within the last few days he has undergone an operation of a very severe character.

During the last year no fewer than 1,133,609 cwt. of potatoes were imported, against 773,619 of the preceding year.

Mr. Stephenson, M.P., took his departure from Alexandria, on return to England, in his yacht the *Titania* on the 16th ult. It is reported that his last interview with the Pacha was other than agreeable, his Highness being annoyed at the non-completion of the railway.

The Emigration Commissioners have advertised for two vessels to carry emigrants to South Australia and New South Wales. One is to be ready for Adelaide, the other for Sydney, on the 14th of April.

A chest containing three cwt of steel pens has been stolen from the luggage cart belonging to the Railway Company, in Williamson's-square, Liverpool. Some of the pens (directed to Mr Stewart, of Parade-street) have since been found in several parts of the town.

Late advices from Port-au-Prince, West Indies, state that yellow fever is raging fatally, especially among the shipping.

The committee appointed to carry out the design for a monument to be erected to the memory of the late Duke of Wellington in the City Guildhall have appointed to receive the models of the competing artists in March; those sent in last year having been all rejected.

The Committee of Management of Middlesex Hospital have given notice that Mendelssohn's oratorio "Elijah" will be performed at Exeter-hall, on Monday, March the 27th, in aid of the funds of that charity.

The Brussels Art-Exhibition, open to all nations, will begin on the 1st of August next, and close on the 30th of September following. At the Exhibition of 1851, 317 foreign (not Belgian) artists exhibited at Brussels.

Upwards of 300 labourers were taken on last week at the Royal Arsenal at Woolwich, also 260 boys in the Royal Laboratory. The carpenters, smiths, percussion-cap makers, and the lads in the cartridge department are also working night and day.

On Friday night week, the village of Clare and the surrounding country was illuminated by bonfires and tar-barrels, in honour of the pardon of Smith O'Brien. In Ennis the demonstration was limited.

The Duke of Sutherland has forwarded £200 to Lieutenant-Colonel Ainslie to be applied to the relief of the wives of the soldiers of the 93rd Regiment who have been left at home. These poor women are mostly strangers in this country, and much sympathy is excited in their behalf.

The steam-ship *Golden Age*, which left Liverpool on the 5th December, arrived at the Cape of Good Hope *en route* for Australia, on the 6th January; which, including her stay for coaling, is considered one of the fastest passages on record.

By a Royal decree, at Turin, on the 16th ult., all the import, export, export in bond, and differential duties, on corn, pulse, and meal, were entirely suspended.

The payments out of the Encumbered Estates Court in Ireland last week were about £60,000.

The *Fortune*, 571 tons, Captain M'Carthy, left Plymouth Sound last Saturday, for Adelaide, having on board 366 Government emigrants. The *Nimrond*, 1022 tons, Captain Gatenby, private passenger ship, left the same day for Sydney, with twenty first-class cabin and sixty steerage passengers.

A letter from Calais, of the 21st ult., says.—The Baroness de Brunnow, wife of the Russian Ambassador at London, landed here to-day. She was accompanied by her daughter, Count de Wolowski, and a numerous suite. The whole party proceeded by railway to Cologne.

The town and county spring calendar of Galway exhibits a very gratifying decrease in crime: in the town, there is but a single case, for an alleged charge of murder; and, in the county, 21 cases, 15 of which are petty larcenies.

Last week a convict named Eglin, a notorious associate of burglars and smashers, succeeded in escaping from the Middlesex House of Correction where he was under sentence of twelve months' imprisonment, for uttering base coin.

The excitement in Paris respecting the Eastern question has proved a source of great profit to some of the journals, their sale having enormously increased, that of the *Patrie* and *Presse* especially.

A bill has been laid before the House of Lords by Lord Lyttelton, to enable boards of guardians to appoint inspectors of nuisances.

The Customs duties received at the port of Dublin during the past week amounted to £13,764, against £20,220, in the corresponding week of last year.

Last Saturday morning the cotton factory of Mr. W. Warburton, Giggs, near Bury, was destroyed by fire. The property was insured.

"Penny lectures" are at present attempted by several Essex clergymen and gentlemen. So far as the experiment has at present gone, it has been rewarded with success.

It is stated that an instantaneous communication between England and America can be established for a smaller sum than it costs to construct a bridge across the Thames.

Numerous arrests of political emissaries have been made in Hungary and Transylvania. The prisoners have been taken to Vienna.

There is much distress in Newfoundland, from the failure of the cod-fishing, the potato blight, and the cessation of employment on the telegraph works.

The Minister of War at the Hague has presented to the Chamber a bill for an addition to the war budget of a million of florins, for repairs of fortifications and other objects of defence.

A "Board Union" is in course of formation at Edinburgh, its object being "to promote by all legitimate means the cause of the beard, and by union to overcome the foolish prejudice against the manly ornament."

The United States squadron, under Commodore Perry, was at Hong-Kong, when the late mail left, but was expected to leave shortly, for its second trip to Japan.

The York and North-Midland Railway Company have agreed to accept from Mr. Hudson £51,000 in satisfaction of the judgment for £71,462. £21,000 to be paid next month, and the balance in three annual instalments.

Mrs. Mowat, the American actress, has quitted the stage, as she is about to wed a gentleman of fortune.

A statue of Jefferson, third President of the United States, has been cast in the Royal Foundry at Munich, under the direction of Hiram Powers, who formed the model for it.

The Town-council of Birmingham has just appointed a new local official, viz., a public analyser, charged with the examination and suppression of adulterations in all articles of consumption.

The whole of the materials lying between Great and Little-Carter-lane and Old Change having been sold by auction, the line of thoroughfare of the new street, Cannon-street West, throughout to London-bridge, will be opened in the course of a few days.

The conduct of Austria towards Switzerland has become more reasonable, and there are symptoms that she is not indisposed to relax the rigour of the system she has pursued with reference to the Tessin.

Messrs. Fox, Henderson, and Co. have contracted for the building of the Paris Docks. A company has been organised, under their auspices, to carry out the project.

Dr. Edwards, Mr. J. Forrest, and Mr. Hartnup, are engaged in an effort to take photographs of the moon, at the Royal Observatory of Liverpool.

The trustees of the Madiai Fund are about to complete the purchase of a Government annuity on the joint lives of Francesco and Rosa Madiai, and on that of the survivor.

The *Standard* has made the singular discovery that the Turks are the descendants of the lost ten tribes, and predicts their conversion to Christianity.

The Exhibition of Fine Arts at Turin was opened on the 22nd ult., their Majesties honouring it with a visit the same day.

It is said that it is the intention of the Liverpool Marine Board to institute an inquiry into the conduct of Captain Noble in connexion with the loss of the unfortunate ship *Tayleur*.

The Earl of Carlisle is not expected in England before Apr. 1. He was staying at Corfu by the last accounts.

OPENING OF THE NEW PUBLIC HALL, LEAMINGTON.

OPENING OF THE NEW PUBLIC HALL, LEAMINGTON.

About fifteen months ago, the attention of the towns-people of Leamington was prominently directed towards the attainment of a most important object, namely, that of erecting a building, which, whilst providing a public establishment, adequate in its extent of accommodation to the growing wants of an inquiring and increasing population, was intended by its originators, to be "specially identified with the social and intellectual elevation of the industrial classes the rational amusements of the people—and the ennobling and progressive cause of popular education." It was announced by the projectors of so desirable a measure, that the funds adequate to its accomplishment would be derived from two sources—first, the allotment of one pound shares to such persons as might be disposed to further the undertaking, by becoming shareholders; and secondly, by donations from the resident nobility and gentry of Leamington and its neighbourhood. A local company was formed, and such was the support given to the undertaking, that the foundation-stone of the New Hall was laid, with Masonic honours, in May last. The architectural plans approved of were furnished by Mr. D. G. Squirhill.

The Hall is, in length, 80 feet by 33 feet; and, in height, 28 feet. It is considered by all who have seen it to be an elegant and well-proportioned room. The junction of the ceiling and the wall, at the two angles, being completed in a circular form, adds much to the beauty of the apartment; and, together with the wainscoting introduced throughout it, has admirably secured all that is desirable as to sound in the construction of public buildings.

The Hall is lighted from the south side, by six handsome windows; there being, on the opposite side, six ornamental panels, between pilasters of dark veri marble. A great novelty has been effected in the introduction of two sun-burners in the ceiling, for the purpose of evening assemblies. These burners have elicited much admiration and approval; and, being placed at a great height, bring out in an extraordinary manner, the beautiful ceiling and cornices, resting on the enriched carved capitals of pilasters; whilst the gilded panelling introduced into the intervening spaces has been completed in a superior style of colouring. At the east end are three panels; and, in the angles are two niches, occupied by appropriate figures. The Hall has been wainscoted and panelled throughout; plastering has been studiously avoided; every attention has been paid to the heating of the room, by the introduction of hot-air apparatus; and ventilation has been thoroughly secured. Below the Hall are two smaller, but suitable apartments, communicating with each other, but easily divisible as lecture or class-rooms, or for meetings, of a character for which the Hall itself may neither be suited nor required. One of these apartments will, doubtless, be appropriated, at some future period, as a public museum, toward the formation of which, upon a creditable scale, several contributions have been received.

The public opening of the Hall was fixed for the 20th ult., and, such was the attractive programme which the committee had prepared in commemoration of the event, that, early in the afternoon, nearly every ticket was sold; and, after the doors were opened, several applications for seats were refused, owing to the impossibility of finding comfortable accommodation for a larger number than tickets had already been issued for. There were about 800 persons present. The company began to arrive between seven and eight o'clock; and soon after the latter hour, the Rev. J. H. Smith (President of the Literary and Scientific Institution), Samuel Warren, Esq., Q.C. (Recorder of Hull), the Rev. Br. Burbidge (Head-master of the Leamington College), and several members of the Soirée Committee, took their places on the platform; when the author of "Ten Thousand a-Year" was greeted with the flattering and enthusiastic plaudits of the audience. The Rev. Mr. Smith took the chair, and several appropriate addresses were delivered. The refreshment rooms were then thrown open; after which a concert, in which Miss Lascelles took part, formed an agreeable and successful change in the proceedings of the evening.

FALL OF PART OF THE EDINBURGH CITY WALL.

On Wednesday afternoon (last week), about three o'clock, a large portion of the Wall of Edinburgh, supposed to be from 300 to 400 years old, gave way, and overwhelmed several persons in an immense mound of earth and stones. The Wall here bounded the ancient city on the side of Canongate, and faced Leith Wynd—a very steep and narrow street, inhabited by a dense population. It was from twenty-five to twenty-seven feet in height, on the side of the street, but on the other side there was a high bank, reaching to within five feet of the cope. The weight of the embankment, to which a considerable addition had been made some years ago, had evidently had the effect of pressing the wall outwards. Operations had been going on for the drainage of Leith Wynd for some time, for the safety of which beams of wood were placed against the wall as buttresses. The drain having been carried past, a new stone pillar was inserted in the wall, with the expectation of giving it solidity; and the supports were removed on Wednesday forenoon, just three hours before the accident. The Wall fell across the entire street, the copestones breaking into the windows of the shops opposite. The Wall carried with it a great part of the embankment, falling upon a number of children: two were extricated alive, but one of them was much mutilated, and two were in the course of the night, taken out dead. The width of the gap in the wall at the top is fully twenty yards. The Sketch here Engraved, was taken by Mr. George Aikman, jun., immediately after the fall of the Wall.

FALL OF A PORTION OF THE ANCIENT WALL, AT EDINBURGH.

Smith O'Brien.—The only condition annexed to the free pardon granted by the Queen to Mr. Smith O'Brien, is the usual one of not returning within her Majesty's dominions. It is stated by his friends that he will probably join his family in France, where they have been residing for some time past. A free pardon will also be probably extended to Messrs. Martin and O'Doherty, who were convicted some time before Messrs. O'Brien, Meagher, and O'Donohoe, for the same offence of seditious publications, and who were sentenced to a limited period of transportation, the greater part of which has already expired.

The Interoceanic Ship Canal.—The New York papers publish an interesting letter from Robert Nelson, of the British surveying Expedition, detailed from the ship-of-war *Virago*, on the Pacific side, to make an exploration across the Isthmus of Darien, with the view of ascertaining the advantages or disadvantages of that Isthmus for the excavation of a ship-canal between the two oceans. From the reports of the British surveying party, it appears that the party crossed the country until they got within about eight miles of the Atlantic, of which ocean they had an excellent view. They encountered a plain of some twenty-two miles in length, and in no part of it did they find the elevations greater than forty feet above the level of the sea. The *New York Herald* remarks, "If this report be confirmed by Lieutenant Strain, of the Ozone surveying corps, and by the French expedition detailed for the same purpose to the same quarter, then is the question of the route for the great interoceanic canal between the Atlantic and Pacific a 'fixed fact.'"

Wreck of an Emigrant Ship.—The *Staffordshire*, a fine Liverpool and Boston packet ship, of nearly 2000 tons burden—which sailed from Liverpool in the early part of November, with a cargo valued at £20,000, and 196 passengers, mostly emigrants, including several ladies struck on what are known as the Bloody Rocks off Seal Islands, on the coast of North America, on the 29th December. Two boats broke adrift, and the remaining two could only hold a few persons, and those in charge of them could scarcely get clear of the ship, when she went down with 175 human beings, including the captain. The four mates, and twenty one seamen, with twenty-five passengers, were saved, including only one female. They succeeded on the following day in reaching Seal Islands, but suffered severely from cold and want of provisions.

TURKISH SENTINELS.

SKETCHED AT CONSTANTINOPLE.

THE Sentinels in the Turkish capital have not the spruce appearance of European soldiers; but they are steady, soldier-like men. They are always stationed in pairs; and during wet weather they have a wooden platform opposite their box to stand upon. They have an hour-glass fixed in the wall beside them, to measure the time—probably on account of the divisions of the day in Turkey constantly changing.

The accompanying characteristic Sketch was recently taken at Constantinople, by a Correspondent. On the right hand corner of the foreground we have two dogs, the usual street concomitants.

Foreign invasion has rapidly and wonderfully altered the discipline of the Turkish army. To show what it was only three or four years ago, another Correspondent has sent us a Sketch of a sentry at a fort in Syria. "He was quietly spinning thread with a distaff," writes our Correspondent. "His musket was placed against the wall near him, and was entirely enveloped in a thick canvas case, which would render it useless on a sudden alarm. Sentries even on important posts were often to be seen knitting stockings, or otherwise uniting domestic pursuits with their military duties."

We may here state that a private letter from Constantinople of the 3rd ult., states that the fortification works of the town had been already begun. A supply of implements was expected from Europe. The enthusiasm of the population was so great, that a vast number of workmen were offering to work at the fortifications, declaring that they required no wages, but only asked to be fed. The greatest activity prevailed in the arsenal: the Government had entered into contracts with several foreign firms for the purchase of the necessary raw materials for bulwark cannons.

TURKISH SENTINELS, SKETCHED AT CONSTANTINOPLE.

SCHUMLA.—INTERVIEW WITH OMER PACHA.—THE FORTIFICATIONS.

IN our Journal of last week, our Special Correspondent at Schumla detailed his interview with Omer Pacha, and his visit to the Fortifications. We now engrave these interesting scenes: the Illustration upon the front page represents our Correspondent and his fellow travellers' interview with the Marshal. The apartment is a plain square room, covered with a red carpet, and a dark-coloured divan placed upon two sides. The room is lighted by three windows. The chimney is of the usual Turkish construction, with a conical canopy, beneath which there is blazing fire. On the right, facing the reader, is seated Omer Pacha, his high forehead does not admit of his fez, or cap, being even partially seen, he rests his right hand upon a cushion, and his left upon a heap of papers and maps on the corner of the divan. On his left also is a Pacha, seated in the Turkish manner, smoking. Next him are seated, first, Major Tombs, Captain Austin, and our Artistic Correspondent; each wearing the indispensable fez, and wearing jack-boots, just as they had come off their journey: they hold in their hands pipes, which are superbly set with diamonds, and rest upon small flat silver saucers: they smoke occasionally, but merely as a compliment. On the left of the chimney are seated in arm chairs of rude make, three Turks, in dark frock-coats. The black attendant near the fireplace bears a cup of coffee, and is followed by other attendants, who take coffee from a servant. Behind, in the wall, is a niche, containing a table with a mirror, and two vases of flowers, the only attempt at ornament in the room.

The officer standing for orders, in front of the group of attendants, &c., is the Aide-de-Camp sent for by Omer Pacha to accompany the visitors to the military establishments of Schumla. He wears a frock-coat, trimmed with dark fur; a sabre, cartridge box, &c. In the middle of the room is a brasier, placed upon two white stone steps; and a small picture on the wall, without a frame, contains some precepts of the Koran.

The View below commands the plains and town of Schumla, and is taken from the inside of the Fort of Fidieh-Tabiassi, situated a mile and a half from the town. The visitors have arrived, with two orderlies (artillerymen) as their escort, a *valet-de-place* and interpreter, and the Aide-de-Camp. In the foreground are piles of shot; and upon the walls are the travellers, sketching and viewing the distant country—Schumla lying between the two mountains on the right.

The environs of Schumla are thus described by a contemporary:—"On leaving Schumla we passed through one of the two roads by which the chain of hills which all but encircle it can be penetrated. They are in no part of very great height, but rise almost perpendicularly above the town, and contain some charming glens. At first sight one would imagine that, when thus overlooked, Schumla must be all but untenable as a military post, for any line of defence which embraced the hills would require an enormous army to man it, vastly larger, in fact, than the importance of the place, in any point of view, would warrant. In reality, however, they form the great source of its strength, and have rendered it famous by the various checks which the Russians have sustained before it. They are covered throughout the whole extent by thick brushwood, the remains of old forests, the height in most places of a man's shoulders, and so stiff and close that it is almost impossible for one to make his way through it, even along the path, without a guide. In the same manner it forms an excellent barrier against any attack on every side but the east, as it would be impossible for troops to deploy in the thickets; and, if the two narrow roads were well defended, it would be equally impossible even for scattered detachments to penetrate, without being separated and cut off by any foe who knew the ground. These natural advantages have rendered Schumla the great stumbling block of the Russians in all their wars with the Turks, and as long as it remained untaken, an advance upon Constantinople was attended with no small danger. The approaches on the side next Varna are defended by several batteries as well as by the enceinte which surrounds the whole place. Alto-

FORT OF FIDIEH-TABIASSI,—VIEW OF THE TOWN AND PLAIN OF SCHUMLA.

gether a large army might safely retire here in case of a reverse farther northward, and bid defiance to a force vastly superior. Its position with regard to the other fortified posts on the Danube, renders it admirably adapted for the Turkish head-quarters."

Schumla looks: just like a town built within the crater of a volcano: and, consequently, in general is very hot and stifling; but abundant streams of excellent water gush from the encircling hills into its numerous fountains; it therefore has one of the first requisites of a head-quarter; and, altogether, it is rather a vast mountain camp, fortified by nature and by art, than a regular fortress. The Grand Place, or public square, is daily so thronged with Bashi-bozouks, and other strange but stalwart Asiatic figures, in the garb of old Turkey, that one can scarcely press through; for here all sorts of cooking and refreshment establishments are congregated together; and Irregulars—Delis, Negroes, Arnauots, Kurds, and Syrians, are seen hourly regaling themselves with the *kabab*, the *beurek*, or the *pilaf* of Turkish street gastronomy.

IMPERIAL PARLIAMENT.

(*Continued from page* 190.)

HOUSE OF LORDS.—THURSDAY.

On the motion of Lord BROUGHAM, the County Courts Act Extension Explanation Bill was read a third time and passed.

THE WAR.

The Earl of ELLENBOROUGH asked what were the intentions of the Government with respect to the calling out of the Militia this year, and with respect to the corps either not formed, or which were below their complement? The noble Earl took occasion to express his opinion that the Government were premature in sending out to Constantinople so large a disposable force until they had first secured a predominant position in the Baltic. The fleet intended for the Baltic he thought was insufficient. As a step necessary to the national security he suggested the propriety of permanently embodying the Militia.

The Duke of NEWCASTLE deprecated any such discussion upon the subject referred to, at the present moment; he could not consent to give all the information asked for. It was the intention of the Government to call out the Militia for training this year for a period of twenty-eight days; but the Government did not intend to have recourse to any penal steps for increasing that body; nor did they think that the time had arrived for saddling the nation with the expense of maintaining an enormous permanent Militia.

Lord BEAUMONT bore testimony to the fact of the volunteers for the Militia in the West of England, at all events, being amply sufficient.

Lord HARDWICKE said that the Emperor of Russia had brought his fleets to a state of very great efficiency, while it was well known that there was on our part a great difficulty in enrolling sailors. It was his opinion that the Coastguard would be found quite unfit for anything beyond mere dock duty.

After a few words from the Earl of WINCHILSEA and Lord CHELSEA, the subject dropped.

In reply to the Earl of DONOUGHMORE, the Earl of ABERDEEN said that the subject of the removal of Irish paupers from England was under consideration.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. CORBETT gave notice of his intention, on the 16th inst., to move for leave to bring in a bill to limit the hours of labour for women and young children to ten hours in the day in the factories of the United Kingdom.

In reply to Mr. Rich, the CHANCELLOR OF THE EXCHEQUER said that a plan of survey of the United Kingdom was in contemplation, which might involve an expenditure of several millions, but which would not be proceeded with until Parliament had sanctioned its details.

In answer to Mr. Lovedon, Mr. SIDNEY HERBERT said that the army of the East would be accompanied by seven chaplains, viz., four Church of England, one Presbyterian, and two of the Roman Catholic Church.

THE REFORM BILL.

Lord J. RUSSELL gave notice that he would, on the following day, state the course which the Government intended to pursue with regard to the second reading of the Reform Bill for Amending the Parliamentary Representation of the People of England and Wales.

Mr. J. O'CONNELL moved for a select committee to inquire into the yearly causes of excessive loss of life on board emigrant vessels. Having referred to several cases in which an immense sacrifice of life had been the result, he urged the necessity of further legislation upon the subject.

Mr. F. PEEL objected to the motion, as the whole subject of passenger vessels had been recently investigated by committees of the House. He would not, however, oppose an inquiry into such parts of the subject as were found to be beyond the operation of the Passengers Act.

After a short discussion, the motion, in a modified form, was agreed to.

Mr. HUME called the attention of the House to the report of the Royal Commissioners "for inquiring into the practicability and expediency of consolidating the different departments connected with the civil administration of the army," dated the 21st day of February, 1837, signed by Lord Howick, Viscount Palmerston, Lord J. Russell, Sir J. Hobhouse, and other commissioners, presented to Parliament in 1837, and moved the following resolution:—"That it is the opinion of this House in accordance with the Report of the said Commission confirmed by evidence taken before the Committee in the Naval, Military, and Ordnance Expenditure, in the years 1848–50, that measures should forthwith be taken to consolidate the different branches of the military service and expenditure, and to place the whole under the superintendence and control of one efficient and responsible department."

Mr. S. HERBERT said that, however desirable the proposed change might be, there were a great many obstacles in the way of effecting this arrangement. Since the commission had sat upon this subject, Lord Grey's plans had been, in a great measure, carried out; and that want of harmony between the military and civil authorities which was then complained of had no longer existence, inasmuch as the effect of those plans had been to produce the most perfect harmony between them.

Lord SEYMOUR quoted the opinion of Earl Grey as to the impossibility of the efficient working of a system so complicated.

Sir J. PAKINGTON said that the present system could not be otherwise than detrimental to the service.

After a few words from Mr. E. ELLICE and Colonel KNOX,

Lord J. RUSSELL said he thought it would be well to have a more efficient and more direct authority in those cases where the health of the troops was concerned. Such a new organisation as was proposed would, however, at the present moment, lead to great confusion and inconvenience.

Mr. HUME subsequently withdrew his motion.

On the motion of Mr. HUME, leave was given to bring in a bill to charge the expense of hustings at elections on boroughs and counties.

The Coasting Trade Bill was read a second time.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

In reply to the Earl of Derby, the Earl of ABERDEEN said, believing that the New Reform Bill had found favour with the country, and that it was a just, liberal, honest, and safe measure, the Government intended to persevere with the second reading on the 27th April, the day to which Lord J. RUSSELL intended to postpone the further progress of the bill.

The Earl of CLANCARTY moved to add the names of five Irish Peers to the Select Committee appointed to consider the Irish Land Bills.

After some discussion, the proposition was negatived without a division.—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Lord J. RUSSELL gave notice of his intention on Friday next to move for leave to bring in a bill to regulate and amend the government of the University of Oxford.

THE PROPOSED REFORM BILL.

Lord J. RUSSELL, in moving the postponement of the second reading of the Reform Bill from the 13th March to the 27th of April, explained his reasons for adopting such a course. Having referred to the passage in the Queen's Speech, upon which the bill was introduced, the noble Lord alluded to the amendment of which Sir Edward Dering had given notice, in regard to the second reading of this bill on the 13th March. It seemed to him (Lord J. Russell) that the object of the hon. Baronet was one evincing greater hostility to the Government than to the bill, towards which his notice expressed no disapprobation. Under all the circumstances of the case, he (Lord J. Russell) did not think that the state of public business would be such on the 13th inst. as to render it expedient to proceed with the second reading of the bill. He would remind the House that it would require twenty-five days from the date of the last proposal sent to Russia, before an answer could be received, and if the Emperor of Russia still refused to listen to terms, her Majesty's Government, at the end of the month, would have to announce to the House the fact, that peaceful relations with that country were at an end. He therefore thought it better that the second reading of the bill should be fixed until the 27th April—a postponement which, in conclusion, he formally moved, although he said he would not pledge himself then to proceed with the measure, since circumstances might still exist to render such a course inexpedient.

Sir J. SHELLEY expressed his surprise at the course taken by the Government. The Reformers of this country had generally approved of the bill, although some of them wished it to go a little further. They had all supposed that the bill had been brought forward in perfect good faith. He could see no sound reason for the postponement of the measure, and unless some better reasons were given for that postponement, than he had yet heard, he could only come to the conclusion that the bill had only been introduced to deceive and humbug the country. (Cheers). In conclusion, he wished to ask whether it was really the intention of the Government to press forward the bill on the 27th April, or to get rid of it altogether? (Cheers).

Sir E. DERING said that, so far from wishing to impede the progress of Reform, no man in the House was more anxious than himself to forward, at a proper time, a large and comprehensive measure of Reform. He believed the present time to be inopportune for the discussion of such a question; and he should certainly persevere in the amendment of which he had given notice when the noble Lord moved the second reading of the bill.

The Earl of MARCH had heard the explanation of the noble Lord with both pleasure and regret—with the former, because he was glad the country was to be spared the consequences of division and agitation at a time of war; with the latter, because he regretted that any Government should dare to trifle with public opinion in such a manner as had now been done (Cheers).

Mr. LABOUCHERE defended the course taken by the Government.

Colonel SIBTHORP had never expected anything but insincerity from such a vacillating Government as the present.

Mr. PULSE regretted the necessity for the postponement, but thought the Government justified by circumstances in the step they had taken.

Sir J. PAKINGTON said, that though he thought it would be dangerous to the country to proceed at the present time with the bill, he at the same time considered that the explanations which they had heard were humiliating and discreditable to the Government, because the bill, if it ought not to be proceeded with, ought never to have been introduced.

Mr. HUME had still full confidence in the Government, and hoped to find them prepared to stand by the bill at a proper time.

Sir G. GREY taunted the opposition with seeking to weaken the hands of the Government by repeated and groundless charges of incompetency at a time when they ought to be left with perfect freedom from internal hostility, in order to enable them efficiently to prepare for the consequences of an inevitable war.

Mr. DISRAELI thought the reasons urged for the postponement of the bill insufficient, or that they ought to have operated against its introduction. The noble Lord had placed himself in a singular position by the course which he had taken, as he stood before them a Minister of the Crown still retaining office, although he could not carry his measures. It could not be expected that the war on which we were entering would always be regarded with enthusiasm by the country; and if it became necessary to double the Income-tax or to re-impose the Soap-duty, the people might grumble at being saddled with enormous taxation by narrow majorities made up by members whose boroughs stood in Schedule A or B, and who, according to the noble Lord's own showing, ought not to be in the House at all. The Government had postponed the bill because war was probable; but at a time when war and even invasion were thought to be imminent, Ministers had gone to the hustings, debating at one and the same time upon the danger of invasion and the blessings of Reform. (Cheers).

Lord J. RUSSELL vindicated the conduct of himself and his colleagues against the attacks made upon him from the Opposition benches: and said, in reply to the question of Sir J. Shelley, that he had no statement to make beyond that contained in his first speech. At a future time he would approach the subject with an earnest desire to benefit the country at large—a result which could not fail to follow from the addition of large masses of intelligent voters to the constituency of the country.

Sir J. SHELLEY briefly explained, the motion was agreed to.

On the order of the day for going into a committee of supply,

Mr P. O'BRIEN moved the following resolution: "That it is the opinion of this House that, prior to any future contract for the supply of spirits for the use of her Majesty's navy being made, tenders for the supply of home-made spirits be admitted."

Sir J. GRAHAM oppos.d the motion; and, after a short discussion, the House divided, and the motion was negatived by a majority of 170 to 35.

Mr. LUCAS then called attention to certain grievances to which Catholic soldiers and sailors were subjected.

Mr. S HERBERT and Sir J. GRAHAM entered into explanations as to what had been done to remove the grounds of complaint on the part of the Roman Catholics; and the right hon. Baronet said that it was in vain to disguise the fact that, as long as the Legislature recognised the Protestant as the established religion of the country, the views of Mr. Lucas could not be carried out.

The House then went into Committee of Supply, and a supplemental vote of £500 000 and 15,000 men for the army was agreed to.

The Commissariat Estimates were also agreed to, soon after which the House adjourned.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, MARCH 2.

Month and Day.	Corrected Reading of Barometer at 8 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Feb. 24	30.493	48·8	31·2	40·5	+ 0·9	84	..	0.00
" 25	30.401	51·3	40·8	45·6	+ 6·0	86	..	0.00
" 26	30.544	50·1	31·0	40·2	+ 0·6	86	..	0.00
" 27	30.408	51·1	33·0	42·0	+ 2·1	78	..	0.00
" 28	30.396	49·3	36·6	42·6	+ 2·7	74	..	0.00
Mar. 1	30·717	55·2	35·7	40·2	+ 0·2	65	..	0.00
" 2	30.679	58·0	26·6	41·8	+ 1·8	62	..	0.00

Note.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 30.53 inches at the beginning of the week to 30.40 inches by the afternoon of Feb. 24; increased to 30.58 inches by the morning of the 26th; decreased to 30.39 inches by the morning of the 28th; increased to the highest reading during the week (30.78 inches) by noon on March 1; and decreased to 30.68 inches by the end of the week. The mean for the week, at the height of 83 feet above the level of the sea, was 30.543 inches. The readings of the barometer this week have been very remarkable. That on March 1 was higher than on any day, with the exception of March 6, 1853, since January 1, 1850.

The mean daily temperatures have varied from 5·8° to 0·2° above their average value. During the time they were above their averages—viz., on every day from February 26th to March, the average daily excess was 2·3°.

The mean temperature of the week was 42·3°, being 2·4° above the average of the corresponding week during 38 years.

The range of temperature during the week was 32·3°.

The mean daily range of temperature during the week was 20·4°.

The weather during the week was very fine, the air was dry, and the sky almost cloudless, with the exception of the 24th.

For the month of February, the mean reading of the barometer, at the level of the sea was 30·237 inches. The highest temperature during the month was 55·5° on the 6th, and the lowest was 22·5° on the 14th. The range of temperature during the month was, therefore, 33°. The mean of all the highest temperatures by day was 47·3°, and of all the lowest by night was 33·7°. The mean daily range of temperature during the month was, therefore, 14·7°. The mean temperature of the month was 40·1°, being 1·3° above the average of thirty-eight Februaries. The mean temperature of evaporation was 37·8°. The mean temperature of the dew point was 33·3°. The mean degree of humidity of the air was 80, complete saturation being represented by 100. The fall of rain during the month was 1·1 inch.

Lewisham, March 3rd, 1854. JAMES GLAISHER.

THE TAXES ON KNOWLEDGE.

The fifth annual meeting of the Association for the Repeal of the Taxes on Knowledge was held at Exeter-hall, on Wednesday evening; Mr. J. L. Ricardo, M.P., in the chair; supported by Mr. Cobden, M.P., Sir Joshua Walmsley, M.P.; Mr. Heyworth, M.P.; Mr. Crawfurd, M.P.; Mr. Herbert Ingram, Mr. John Cassel, Mr. Alfred Novello, Mr. Hodgskin, Mr. Nicholay, and other active members of the association.

Mr. John Cassell moved the first resolution:—That paper, the raw material of knowledge, and an important element in our manufacturing and commercial prosperity, is not a fit subject for taxation, and that any increase of expenditure ought to be met by taxes less injurious to the general interests of the country" (Hear). If the manufacture of paper were merely subject to the fiscal restrictions which at present oppressed it, they could show abundant reasons for asking for its immediate and total repeal of the tax. But, with the exception of those trades connected with the manufacture of intoxicating liquors and tobacco, the manufacture of paper was the only branch of industry which continued to be subject to excise interference. The taxes upon soap, upon glass, upon leather, and upon bricks, had all been removed. Paper, in fact, was the only article the duty on which was recommended to be abolished by Sir Henry Parnell's Committee that was still retained, and of all commodities it was the one which ought naturally to be untaxed. It was impossible to remove the restrictions from paper without sensibly augmenting the employment of the people. Therefore, merely as a question involving the industry of this country, every friend of commercial freedom ought to exert himself to secure its immediate and total abolition.

Mr. Herbert Ingram, who seconded the resolution, said he was glad to have an opportunity of publicly expressing such a opinion and the result of his experience regarding the operation of the Excise duty on paper. This tax was condemned alike by all parties, whether in Parliament or out of Parliament. Political economists and practical men both condemned it. Previous to his acceptance of office, Mr. Disraeli voted for the repeal of the Paper-duty; but when he became Chancellor of the Exchequer, he, unfortunately, followed the example too frequently set by official members who had been very economical so long as they remained on the Opposition benches. As for the present Chancellor of the Exchequer, he had stated both publicly and privately that the paper-duty was a bad tax, and ought to be abolished. They were told that Government could not afford to repeal a tax which yielded so much money, because they needed all the funds they could raise to carry on the war. This was no argument at all. The people of England were wealthy enough to raise whatever money might be required for that purpose. They did not need to levy a tax on the home manufactures to the great injury of all employed in that large branch of trade. Why not rather increase the Income tax? (Cheers.) Government ought to remember that paper was sometimes of great use in carrying on war. Paper bullets frequently set city officials harder than cannon shot. They ought not to uphold such a tax upon knowledge any longer. There was no country in the world but England where a duty was levied upon paper. Even Louis Napoleon, in spite of all his power, was unable to impose a tax on paper. The raw material—the rags—out of which the paper is manufactured, were collected from all corners of the globe—from Italy, Hungary, Germany, and the shores of the Baltic. It might, perhaps, be some satisfaction to the serfs of Russia to learn that, although they dare not say a word against the Emperor, their rags serve to make paper, on which we make known to the whole world the fraudulent, selfish, and aggressive conduct of their sovereign. Mr. Ingram explained at some length the vexatious interference of the persons Excise-men with the business of the paper manufacturer, which was even worse than the tax itself:—Thus, they dried the paper so thoroughly as almost to destroy the fabric of the paper, because the duty was charged on the weight. But when the paper went into the print-office, the first process was to damp it before it could be worked properly; and this, of course, added considerably to the cost. Here were two ridiculous processes to go through first the drying of the paper, and then the wetting of it, both of which might be dispensed with if the duty were abolished; while at the same time the impressions produced, especially in illustrated works, would be greatly superior to what they are at present. Another vexatious regulation was that which required all paper to be made up in parcels of 24 sheets each, to be counted and set aside at the house of the manufacturer; so that altogether the increase of cost was very much greater than the duty represented. As an illustration of this he referred to the "Illustrated London Reading-book," of which a large number was sold at 1s. each, but which could have supplied at 6d. had the duty been abolished, with all the vexatious regulations connected with it. Surely that was a tax on knowledge, and one which ought to be repealed as speedily as possible. We were spending millions every year on police and prisons, for the punishment and prevention of crime, and at the same time we persisted in maintaining laws which keep the people in ignorance—one of the most fertile sources of crime. In seconding the resolution, he would call upon them to pass it by acclamation, and thereby express their detestation of this tax upon the industry, the morality, and the intelligence of the community.

Mr. Hodgskin supported the resolution, and read an extract from the *Mic-Macs Gazette*, of Jan. 16 (published in San Francisco, a city which had not an existence six years ago, but had now eleven daily papers), stating that many people in England took second-hand papers, and asking "Who is going to establish a second-hand newspaper?" Nothing could be thought a greater meanness than to wear second-hand clothes; but the people of this country were obliged to be content with information that was secondhand; and the great bulk of the people did not know of the most important events, in which they were deeply interested, until the day after they were published in the papers.

The resolution was carried unanimously.

Mr. Collett gave a summary of the proceedings in Parliament during last session, with a view to effect the repeal of these taxes on knowledge, and moved the following resolution:—

"That, while a system of cheap newspaper postage is a matter at once of high importance and of easy attainment, no postal privileges granted merely to the public can compensate for the evils of the stamp tax on news and of the security system, which were originally imposed, and are still retained, for the purpose of preventing the cheap circulation of intelligence among the great mass of the people."

Mr. Cobden, M.P., seconded the resolution. He advocated the repeal of the newspaper stamp-duty, because he believed that cheap newspapers would do more to educate the people—to create in them a taste for discussing questions which relate to their every-day interest and welfare—than could be effected by any amount of legislative aid. Those papers, which were most prosperous, with the greatest circulation of all at their head, had been the most favourable to this movement; but the resolutions passed at meetings of proprietors of provincial journals proved that among that body there was a decided opposition to the repeal of the stamp; and he believed that this movement would never be completely successful until they could prove to these journalists—as they proved to the agricultural in regard to the repeal of the Corn-law—that the proposed measure would promote their interests as well as those of the public, and that the existence of the Stamp-law had inflicted injury upon the newspaper press. This could be proved by a comparison of the daily press of London with that of New York. New York, with its suburbs, contained a population of but 700,000 inhabitants; while the population of London, with its suburbs, was nearly 2,500,000. London was the metropolis of the commercial world—the factor, banker, and broker of the whole world—the sole capital of England. New York was merely the principal port of the state of the American Union, having large cities in twenty or thirty other states. Notwithstanding this, there were in New York three times as many daily papers and three times as many in London; and he had no hesitation in saying that there was far more money made by the papers in New York, where there was perfect freedom, than was made by the daily papers in London. As regarded the paper duty, he was afraid that they must lay their account with bearing it a little longer, owing to the impending war. Had we remained at peace it was understood that this tax would have been given up; but the sum was too large for any Chancellor of the Exchequer to surrender unless he had something of a surplus. He endeavoured to convince the newspaper world generally, that it was their interest to agitate for a repeal of this tax. He said deliberately, and from the best information both in London and New York, that twice as much money was made every year in New York by daily papers, where there was no restriction, as was made in rich and flourishing London (Hear, hear). Was this a natural or an exceptional state of things? Was it true of any other trade, the book trade for instance? Would anybody be so mad as to say that the grocers, linendrapers, bootmakers, hatters, or tailors of London, supplying 2,500,000 people, did not make more money every year than the same trades in New York, with a population of only 700,000? Those engaged in this pursuit might argue that it free-trade in newspapers produced so much prosperity in New York, it could not do harm in London; and such an argument might well occur to those who for years had been carrying on such papers at a loss. But it was not merely the proprietors who were injured. The capitalist who had embarked his money in a newspaper was but an atom, a fraction, of the great interest described by the name of the press. What became of printers, reporters, editors, and agents for transmitting information? Would they not benefit far more if London had a daily press of proportionate prosperity to that of New York? Would there not be a greatly increased demand for compositors, printers, type-founders, paper-makers, reporters, editors, writers, and all that class of accomplished, educated men, whom it ought to be an especial object to try to increase and multiply in this country.

After a few words from Mr. Charles Murray, the resolution was put and carried unanimously.

Mr. Crawfurd, M.P., proposed the next resolution, which was also carried without a dissentient voice—"That the last attempt to define what is a newspaper has been signally unsuccessful, and that the increased inability of the Board of Inland Revenue to enforce the law with impartiality, shows that no remedy will be effectual that does not arm the press from all taxation, and liberate it from all control except that of a court of law."

CALENDAR FOR THE WEEK.

SUNDAY, March 5.—1st Sunday in Lent. Battle of Barossa, 1811.
MONDAY, 6.—Michael Angelo born, 1475.
TUESDAY, 7.—St. Perpetua.
WEDNESDAY, 8. Ember Week. Raffaelle born, 1483.
THURSDAY, 9.—David Rizzio assassinated, 1566.
FRIDAY, 10.—Sir Hugh Myddleton died, 1589.
SATURDAY, 11.—Benjamin West died, 1820.

TIMES OF HIGH WATER AT LONDON-BRIDGE.

TO CORRESPONDENTS.

J. E. G. and J. S. G.—Received, on behalf of — Defoe, the great-grandson of the author of "Robinson Crusoe," the sum of 2s., in postage-stamps, which has been forwarded to Mr. Charles Knight, 90, Fleet-street, who has kindly consented to receive the subscriptions.
R. P., Newton.—There were four folio editions of Shakspeare's plays published in the seventeenth century viz., in 1623, 1632, 1664, and 1685. Of these, the folio 1623 is the only one of any great value, either in a literary or monetary point of view; but this is so rare, that a fine copy would probably fetch a *hundred and thirty guineas* at the present time.
Z will please to accept our best thanks for the "Kentish Post, or Canterbury News Letter," March, 16–20, 1744-5."

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 4, 1854.

It is not surprising that Russia should endeavour to excite rebellion among the Greek subjects of the Sultan. Without a friend or an ally among the nations of Europe, the Czar must find support among the internal malcontents of the Turkish Empire, or stand entirely isolated from aid and sympathy. We do not expect, however, that his attempts in this respect will be very successful. It will be well for the King of Greece if he, on his part, keep studiously aloof from such intrigues. The establishment of the kingdom of Greece is now pretty generally admitted to have been the result of misplaced sympathy. The Greeks as a nation have proved themselves utterly unworthy of the interest which they excited, and of the efforts which were made in their behalf. The name of Greece aroused a vast quantity of schoolboy enthusiasm, upwards of thirty years ago—an enthusiasm, unsupported by any facts of more recent occurrence than those which illustrated the ancient names of Athens and Sparta. The world has now discovered its error, and found that the Greek of the nineteenth century bears as little resemblance to the Greek of the classical days of antiquity, as a wooden figure at a snuff-shop does to the divine figure of Apollo Belvidere. The kingdom of Greece must stand upon its merits and its good behaviour, for it no longer possesses that factitious interest, by the support of which it was wrested from the Turkish Empire. The present war is not one of sympathy, but of principle. If King Otho be wise he will do his utmost to keep clear of the dispute. Russian intriguers are no real friends of his kingdom. The encouragement which the Greek Sovereign and people may give to the insurgents in those portions of ancient Greece which still belong to the Turkish empire, will assuredly be visited upon their heads by the indignation of Europe. If King Otho hold his own during the approaching struggle he will do well; but to take part with Russia, either covertly or openly, will be to dig a pit for his own destruction. Although the course of Russia, in stirring up discontent in Albania, may be considered a politic one, as far as Russian interests are concerned, the Czar will, doubtless, discover, ere long, that a similar line of policy with regard to a portion of his dominions may be both necessary and expedient to the allies. The insurrection which he may attempt to foster among the Grecian subjects of the Porte may prove unsuccessful; but the insurrection which the allies might stir up in the ancient kingdom of Poland would meet with sympathy in every part of Europe. Indeed, the opinion has gained ground, not only in France and England, but in Austria and Prussia, that the restoration of Poland would be conducive to the highest interests of European safety and independence.

THE Lord Chancellor, on Monday night, submitted to the House of Lords a Bill for the Amendment of the Law, which was mainly founded on the Report of the Law Commissioners, sent in last year; but which, in some respects, differed from that Report. His Lordship has, with certain parties, incurred no small amount of obloquy for not having adopted all the Commissioners' recommendations; but, so far as his statement in the House goes, he appears to have reason and justice on his side.

First of all, as to Juries. The Commissioners seem to desire to make the presence of a jury an exception. The Lord Chancellor would still continue it as the rule; although he is willing that, in certain cases, where the parties agree, and the Judge confirms their agreement, that the presence of a jury shall not be required. This is taking the true course; for, though it is objected that the Judge will never dispense with a jury, if he can help it, but will always have a jury to divide with him the labour and the responsibility of a decision, we do not believe that that objection is well founded; and, if it is—if there is a Judge who will, from motives of selfishness, thus abandon his duty, he must be one whose strength of moral rectitude is so small, that he ought not to be trusted alone to decide on anything. The argument founded by Lord Brougham on the practice in the County Courts is worth nothing. It is true that, in those courts the great majority of cases is decided without a jury; but, then, it is equally true that, in order to have a jury, the party requiring one must give a notice, which he is very likely to omit giving in time; and must pay additional costs, which he is quite sure to desire to escape. To make the proceedings in these courts an argument one way or the other, there should be a jury summoned for every sitting of the court; and the parties who desired to try with, and those who desired to try without a jury, should simply declare their wishes in court; and no greater or less costs should follow the choice either way. If, under such circumstances, the parties preferred a trial before a Judge alone, to a trial before a Judge and jury, there would be a strong reason for adopting a system which, if adopted, would make this ancient and deservedly popular institution of the country fall into desuetude.

Oddly enough, there comes accompanying this proposition, which has for its object the gradual abolition of juries, a scheme for improving them. The Commissioners rightly enough consider that the distinction now existing between special and common juries is one of very modern origin, and, in all probability, sprang from an abuse or a misunderstanding of the law, and they, therefore, propose that the two classes of men now divided should be mixed together, and that one jury panel alone should suffice for the courts. To this suggestion the Lord Chancellor, and every one else who understands the subject, gives in his hearty adhesion. Juries will be altogether improved. At present the gentleman, plaintiff or defendant, suspects a feeling of class to exist against him among common jurymen; while, on the other hand, if a person in humble circumstances is a plaintiff or defendant in a suit against a gentleman, or against a company, it is almost a rule of professional practice to make the cause a special jury cause, when, of course, the poorer man suspects the purpose for which it is done to be a bad one, and anticipates that, as a matter of course, that purpose will be attained. The return to the ancient common law of England will be a great advantage. It will secure the greatest intelligence, by mixing, on an equal footing, and in one joint employment—such as does not now exist between special and common jurymen—persons of different classes and different habits of life.

But the alteration which will most attract the general attention is the alteration proposed with regard to Oaths. At present Quakers, Moravians, and Separatists, are exempted from taking oaths, and are allowed to make affirmations, which they declare, as religious men, to be binding on their consciences. The penalty of perjury in the next world, should the witness speak falsely, is of course assumed to be incurred by him, whatever may be the form of asseveration he adopts; and in this world, should his falsehood be detected, the law would visit on false evidence given under a declaration the same penalty as if it was given under an oath. Of late years, many men, without avowing, nay, while contradicting, their adherence to any known sect, have declared that they could not conscientiously take an oath. The Lord Chancellor himself relates a case of this kind which occurred before him when travelling circuit as a Judge, and in which, on the following morning, the scruples of the individual—whom the Lord Chancellor believes to have been a thoroughly conscientious man—were removed, and the oath was taken. On objections of the kind thus stated, the Commissioners and the Lord Chancellor propose to legislate; and by legislation to allow any one who declares that he has conscientious scruples as to taking an oath, to be exempted from doing so, and to give his evidence without an oath. The bare proposition is enough to startle any one, and therefore to it is added this plan, that the Judge is first to examine the party, and, on being satisfied that the scruples are really conscientious, he is to admit such party to give his evidence not on oath. A more mistaken notion and a more weak defence against abuse have never been presented to the notice of the Legislature. The greatest dissemblers will always the most readily satisfy the Judge; their unscrupulous declarations will mislead him; and the time which ought to be devoted to trying the merits of the cause, will be wasted (we use the term advisedly) in helpless criticism upon the sincerity of the witness. The Judge will be in a really hopeless situation. When a counsel cross-examines a perjured witness he has something on which to found his cross-examination—facts, dates, times, circumstances, may one or all afford the means of detection; but where are the means of detection when the assertion relates not to external things which may be tested by other things, but to internal convictions which are subject to no test. It is true that the witness who has deceived the Judge and falsified the evidence may be prosecuted for perjury, but prosecution for perjury has long been found to be one of the weakest of all means to prevent the crime it is intended to punish. In fact, it is so troublesome and so expensive that it is seldom resorted to; and, as those who resort to it are generally persons in whom revenge, rather than a love of justice, appears to be predominant, the proceeding has fallen into a kind of disrepute. But the sanctity of an oath is still (thank God) a popular belief; and, while he who betrays his word is, among enlightened and good men, but among them alone, looked upon as a reprobate, he who betrays his oath is universally deemed to be a villain. If the oath is not required, the fear of this universal execration will be gone. It may be said that the oath is not now required from a Quaker, a Moravian, and a Separatist. True; but each of these professes to declare in a Court of Justice, under a solemn, if not a divine, sanction, though without a divine invocation, that which he speaks is true; and each binds himself to that declaration by showing that he belongs to a recognised sect, among whose members the form of an oath is forbidden, while the sanctity of a formal declaration is religiously enforced. But the man who belongs to no sect gives no such warranty of his religious sincerity. He may, by possibility, be a most conscientious man, but he offers no intelligible and unmistakeable proof that he is so. The law is required to take him on trust, and to accept, so to speak, his own bail at his own valuation. The case related by the Lord Chancellor (where, by-the-by, the oath was submitted to) is an instance of a conscientious man, who belonged to no sect; but a person who appeared before one of our police magistrates the other day, and took the same objection to an oath, did not in the estimation of the magistrate, who rejected his evidence, furnish by his speech or his conduct any reason to put him in the same category. Is the Judge to try this interlocutory question of the conscientiousness of the witness? And, if so, is he to do so without any assistance of extraneous evidence? or is there to be evidence produced on both sides? This last supposition is impossible, for no notice of the interlocutory trial will be given, and the Judge must therefore determine the question of the witness's fitness as best he may. The consequences of deciding under such circumstances may be mischievous to the parties; the proposed system must be disastrous to the country. It would be better to abolish oaths altogether; and, putting all witnesses on the same footing, to declare that nothing but the common law penalties of perjury shall attach on false evidence; leaving out, as might then be done with religious grace, all pretence of imposing by mere human authority a divine sanction on a human act.

We have not space at this moment to proceed further with the examination of the bill introduced by the Lord Chancellor. As to the change in the mode of proceeding in the addresses by counsel—as to the matter relating to the stamping of documents—as to the power of any one court to render complete justice in a particular case, without the necessity of the party going before another tribunal—and as to the right of a creditor to take in execution debts owing to his debtor—we agree both with the Lord Chancellor and the Commissioners, that the alterations are required. As to some others, which we may notice, on a future occasion, we entertain serious doubts. His Lordship is entitled to the thanks of the country, for the manner in which he has introduced the bill; and, we must add, for the discrimination, which, while anxious to improve the law, has induced him to pause before giving his high sanction to hasty attempts at improvement that could not have proved anything but serious deteriorations.

THE COURT.

The Queen has distinguished the past week by a series of hospitalities at Buckingham Palace, commencing with a grand dinner, on Saturday last, at which the company included her Royal Highness the Duchess of Kent, the Duke of Newcastle, the Sardinian Minister the Portuguese Minister, and the Countess Lavradio, the Marquis and Marchioness of Kildare, the Earl Spencer, Viscount and Viscountess Evelyn, Sir William and Lady Molesworth, the Chancellor of the Duchy of Lancaster, Rear-Admiral M. F. Berkeley, and Colonel Airey. The Earl of Aberdeen had an audience of her Majesty on Saturday. The Prince Consort paid a visit to the Royal Panopticon of Science and Art, in Leicester-square, and the Prince of Wales and Prince Alfred visited the Zoological Gardens in the Regent's Park.

On Sunday her Majesty, his Royal Highness Prince Albert, the Duchess of Kent, the Prince of Wales, the Princess Royal, and the Princess Alice, attended divine service in the private Chapel of Buckingham Palace. The Hon. and Rev. G. Wellesley officiated.

On Monday the Earl of Clarendon had an audience of her Majesty. The Prince Consort and the Prince of Wales rode out on horseback in the course of the morning. In the afternoon the Queen and the Prince Consort took a drive in an open landau and four. In the evening her Majesty had a dinner party, the company at which included her Royal Highness the Duchess of Kent, the Earl and Countess Grenville, the Spanish Minister, the Brazilian Minister, Lord and Lady Colville of Culross, Lord and Lady Lyttelton, Lord and Lady Overstone, the Right Hon. B. Disraeli and Mrs. Disraeli, Sir John and Lady Young, Sir George Brown, Colonel Eyre, and Mr. Philip Pusey.

On Tuesday morning at seven o'clock the 1st battalion of the Scots Fusilier Guards paraded in front of Buckingham Palace, immediately after leaving the Wellington-barracks *en route* to Portsmouth, for embarkation on foreign service. Her Majesty, his Royal Highness Prince Albert, the Prince of Wales, Prince Alfred, and the Princesses appeared on the balcony of the centre window. The battalion under the command of Col. Dixon being formed in line, presented arms, and gave three cheers, after which they marched to the Waterloo station of the South-Western Railway. The Prince of Wales, the Princess Royal, the Princess Alice, Prince Alfred, and the Princess Helena and Louisa, visited Astley's Theatre during the afternoon. In the evening her Majesty and the Prince Consort honoured the Haymarket Theatre with their presence.

On Wednesday the Queen and the Prince Consort, accompanied by the Princess Royal and the Princess Alice, and attended by the Ladies and Gentlemen of the Royal Household, visited the Tower of London. In the evening her Majesty had a dinner party, the company at which included her Royal Highness the Duchess of Kent, the Duchess of Sutherland, the Earl and Countess of Clarendon, Viscount and Viscountess Hardinge, Lord Raglan, and Admiral Sir William Parker.

On Thursday the Earl of Aberdeen had an audience of the Queen. In the evening her Majesty had a dinner party, the company at which included her Royal Highness the Duchess of Kent, their Royal Highnesses the Duchess of Cambridge and the Princess Mary, his Royal Highness the Duke of Cambridge, the Hanoverian Minister, the Marquis of Breadalbane, the Earl and Lady Constance Grosvenor, and Sir Alexander Woodford.

Viscountess Jocelyn has succeeded the Marchioness of Ely as Lady in Waiting. Colonel the Hon. C. Grey and the Hon. Mortimer S. West have relieved Major-General Buckley and Lieut.-Colonel the Hon. A. N. Hood, as Equerry and Groom in Waiting. Lord Waterpark has succeeded the Marquis of Ormonde as Lord in Waiting to the Queen, and Captain the Hon. Dudley De Ros has relieved Colonel Wylde in the duties of Equerry in Waiting to Prince Albert.

THE DUCHESS OF GLOUCESTER.

We are sorry to announce the severe indisposition of this estimable Princess. Her Royal Highness has suffered considerably during the past week from symptoms which have given her medical attendants some cause for anxiety. Her Majesty the Queen has called almost daily upon her august relative, and all the members of the Royal family have been constant in their inquiries after the condition of her Royal Highness. The latest accounts describe the venerable Princess as having passed a tolerable night.

Her Royal Highness the Duchess D'Aumale and the Princess de Salerno visited her Royal Highness the Duchess of Kent, on Saturday, at Clarence House, St. James's. Their Royal Highnesses the Duke and Duchess de Nemours visited her Royal Highness on Tuesday

The Earl of Mansfield's only son, the youthful Lord Stormont, has just entered the army as cornet in the 8th Royal Irish Hussars.

Viscountess Palmerston held a reception on Saturday evening, at the family residence, in Carlton-gardens. A brilliant circle of the *corps diplomatique* and aristocracy honored her Ladyship with their presence.

CHURCH, UNIVERSITIES, &c.

TESTIMONIAL.—A large silver salver and jug, both richly chased, have been "presented to the Rev. Robert Payne Smith, M.A., by his friends, of the congregation and vestry of Trinity Episcopal Chapel, Edinburgh; and by the grateful scholars of Trinity Episcopal School, which owes to him its origin and foundation; in affectionate remembrance of his pastoral labours among them.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. J. Anderson to Norton-in-the-Moors, near Newcastle-under-Lyne; Rev. F. Boyd to Wouldham, Kent; Rev. B. G. Bridges to Blankney, Lincolnshire; Rev. J. Hart to Somerby, Lincolnshire, Rev. J. Hampstead to Gratwich, St. Mary, Staffordshire; Rev. Rev. F. Bennett to Shrewton; Rev. D. D. Stewart to Maidstone; Rev. J. G. Edwards to Pitting n. *Incumbencies:* The Rev. W. Barber to St. John's Church, Greatbridge; Rev. J. Cargill, to Shirebrook, Derbyshire; Rev. J. F. English to Brentwood; Rev. R. Glover to Trinity Church, Maidstone: Rev. N. Greer well to the parish of St. Mark's, Holbeck, Leeds; Rev. E. R. Hamsden to Breinton, Herefordshire; Rev. W. Poole, to Henland and Little Dewchurch, near Hereford; Rev. J. Wilson to St James's Church, near Alnwick; Rev. H. Woodward to St. John's Church, Doddington, Salop. *Perpetual Curacy:* Rev. R. Glover to Trinity Church, Maidstone.

WHITTINGTON CLUB.—On Thursday the sixth anniversary was celebrated by a promenade concert, followed by a full-dress ball. The soirée was well attended, and the arrangements were admirable. The affairs of the club, we are happy to learn, are in a prosperous condition; the system of management has been greatly improved; and the constant accession of new members proves the social advantages of the institution to be more extensively appreciated than at any former period.

TRINIDAD INTELLIGENCE.—The West India Mail Packet Company, on Wednesday week, had prepared, on board the *Orinoco* at Southampton, on the arrival of the Coldstream Guards from Chichester, no less than 1000 dishes of "Irish Stew" for their breakfast. This generous supply was presented to the men and women of the battalion, independently of their regular rations. Nor were the officers forgotten: they were informed that the whole of the stock of wines on board was placed at their disposal.

THE NEW ULSTER KING OF ARMS.—His Excellency the Lord-Lieutenant has been pleased to confer the honour of knighthood on John Bernard Burke, Esq., Ulster King of Arms.—*Dublin Gazette.*

THE CRYSTAL PALACE COMPANY.—An extraordinary general meeting of this company was held at the Bridge-house Hotel, on Tuesday. From the speech of the chairman it appeared that applications for space for the exhibition of manufactures are far beyond what there is to give. A resolution authorising the directors to raise a sum of £250,000, making altogether £1,000,000, for the completion of the building, was carried.

EMBARKATION OF TROOPS IN THE "HIMALAYA" STEAM-SHIP.

(From our own Correspondent.)

THE great interest excited by this noble ship, with 1500 souls on board, induces me to send you the accompanying Sketch.

Owing to a want of water we were obliged to postpone our sailing from Southampton till Saturday morning last. Our voyage thence to Plymouth occupied only nine hours and a half, being a distance of one hundred and forty miles. The day was delightful, and as we had light head winds and smooth water, nothing occurred to check the enthusiasm of our gallant band of 111 Engineers and 210 Riflemen. Indeed, the cheers of so many of our countrymen at Southampton had scarcely died away before the military and artificers employed in fortifying Hurst Castle cheered us onward; and, as we steamed up to our anchorage in Plymouth Sound, a number of boats put off to welcome the *Himalaya* and her warrior freight to this western port.

On Sunday forenoon we were visited by Sir Harry Smith, Commander-in-Chief of the district, and Colonel of the Rifle Brigade, who attended morning service on board, and an impressive sermon delivered by the chaplain of the port; after which the gallant General addressed the soldiers in an energetic strain. He was warmly cheered by the soldiers, some of whom had been with him in Kaffirland.

After midday, the public were admitted to see, as an advertisement here announced, the largest steamer in the world, and between a flotilla of row-boats and repeated voyages, to and from the shore, of steam-boats, several thousand persons were admitted to see this splendid ship, through the courtesy of Captain Kellock. Admiral Parker, Admiral Ommaney, Lady Mount Edgecumbe, Lady Smith, Captains Kingcombe, Eyres, and Low, of the Royal Navy, and the military officers in garrison, with many of the gentry of Plymouth and surrounding country, were amongst our visitors on Monday. The embarkation of the 93rd Regiment was effected in a most satisfactory manner, in steamers from the Victualling Yard, without the slightest accident; and before sunset, on the 27th, a considerable amount of regularity and comfort was established amongst our fifteen hundred souls.

At about half-past four in the afternoon, the *Royal George*, 120-gun ship, steamed past the *Himalaya*, to anchor for the night in the Sound, previous to joining the Baltic fleet at Spithead. She manned her rigging, and gave three hearty cheers for the outward-bound troops, who returned her compliment with interest; and many remarked the destinations of the respective ships as likely to be at opposite extremities of the Russian empire.

On Tuesday morning the *Himalaya* left the Sound direct for Malta, at the rate of fifteen miles an hour. She is expected to be in Valetta harbour by Tuesday next.

HIMALAYA." "ROYAL GEORGE," 120 GUNS.

THE "HIMALAYA" STEAM-SHIP IN PLYMOUTH SOUND, WITH TROOPS FOR THE WAR.

LATEST INTELLIGENCE.

THE EMPEROR NAPOLEON'S SPEECH.

The following is an outline of the important Speech delivered by the Emperor, on Thursday, on the Opening of the Legislative Session of France, for 1854:—

The Emperor spoke first of the measures adopted by his Government to remedy the insufficiency of the harvest, which was estimated at 10,000,000 hectolitres. The Government could not undertake the purchase; commerce alone could do it. The Government accordingly did the only thing possible, in encouraging purchases and in setting the import of grain free from all duties. Seven million hectolitres of foreign corn had been already imported for home consumption, and the rest was either in bond or on its way. "But," added the Emperor, "famine but just averted, war is beginning."

His Majesty said that, to avoid a collision, he had gone as far as honour permitted, and, if France now draws the sword it is only that she has been compelled to do it. France has no idea of aggrandisement, she wishes to resist dangerous encroachments; the days of conquest have passed, never to return.

"These, then, are the results of an unselfish and frank policy:—We have England, our former rival, forming with us the bonds of an alliance, which becomes from day to day more intimate, because the opinions which we defend are also those of the English people. Germany, which the remembrance of former wars rendered still distrustful, and which on that account has given for the last 40 years perhaps too many proofs of her difference for the policy of the Cabinet of St. Petersburg, has already recovered her independence of action, and considers freely on what side her interests lie.

"Austria, above all, which could not see with indifference the events which were in progress, will enter into an alliance, and will thus attest the just and moral character of the war which we are undertaking.

"This, then, is the question as it stands—Europe, engaged in domestic struggles for the last forty years, reassured, moreover, by the moderation of the Emperor Alexander in the year 1815, as well as by that of his successor up to this time, seemed to doubt the danger which menaced it from the colossal Power which, by its successive encroachments, embraces the north and the centre of Europe, and which possesses almost exclusively two internal seas, whence it is easy for its armies and its fleets to launch forth against our civilization.

"An unfounded demand at Constantinople has been sufficient to arouse Europe from her sleep.

"We have seen in the East a Sovereign demand, in the midst of the most profound peace, from his less powerful neighbour, new concessions; and, because he did not obtain them, invade two of his provinces. Such a fact as this ought to put arms in the hands of those who revolt from injustice. But we have other reasons for supporting Turkey. France has as much, and perhaps more, interest than England in preventing the influence of Russia from extending itself indefinitely over Constantinople; for, to be supreme in Constantinople is to be supreme in the Mediterranean; and no one of you, gentlemen, I think, will say that England alone is largely interested in that sea, which washes 300 leagues of our coast.

"Moreover, this policy does not date from yesterday; for ages every national Government in France has maintained it, and I will not desert it. Let them not, then, come and ask us 'What are you going to do at Constantinople?' We are going there with England to defend the cause of the Sultan, and none the less to protect the rights of the Christians. We are going there to defend the freedom of the Seas and our just influence in the Mediterranean. We are going there with Germany, to aid her in preserving the rank from which it seems they wish to degrade her, to secure her frontiers against the preponderance of a too-powerful neighbour. We are going there, in fact, with all those who desire the triumph of right, of justice, and of civilization.

"In this solemn conjuncture, gentlemen, as in all those in which I shall be obliged to appeal to the country, I rely firmly upon you, for I have always found in you the generous sentiments which animate the nation. Strong, then, in this security, in the nobleness of our cause, in the firmness of our alliances, and confiding, above all, in the protection of God, I hope soon to arrive at a peace which shall no longer depend on the power of any one to disturb it with impunity."

At the Bourse on Thursday the Three per Cent Rentes opened at 67.35, and closed at 67, being ⅛ per cent below the closing price of Wednesday.

REPLY OF THE EMPEROR NICHOLAS.

The *St. Petersburg Journal* of the 24th contains the following, as the substance of the answer sent by the Czar to the Emperor Napoleon:—

If his Imperial Majesty extends his hand to me, as I extend mine, I am ready to forget the mortification I have experienced, harsh though it be.

Then, but then only, can I discuss the subject treated of in his letter, and may perhaps arrive at an understanding. Let the French fleet prevent the Turks from transporting reinforcements to the theatre of war, and let the Turks send me a Plenipotentiary to negotiate, whom I will receive as befits his character.

The conditions already made known to the Conference at Vienna are the sole base on which I will consent to treat.

THE COMMERCE OF RUSSIA.

The *Wanderer* has the following from Brody, of the 23rd:—

Since Russia's commercial intercourse with foreign States has been continually more and more crippled by the growing complication of the war, and the exportation of Russian products abroad has become less and less, the want of remittances from St. Petersburg has rendered it necessary to send considerable quantities of gold to the foreign houses in reimbursement of the purchases made. In order, therefore, to check this diversion of the sterling coin, and to oppose its partial disappearance, the Russian Government has been pleased to lay the same embargo on the export of gold which they some time since imposed on that of silver.

If this statement prove correct, the commerce of Russia, which is already in a very depressed state, will labour under still greater difficulties.

It was understood on Thursday afternoon in the City that a Greek firm had received a telegraphic despatch, stating that the Czar has laid an embargo on all British shipping in Russian ports. This report, though not improbable, requires confirmation. It is understood that there are very few British vessels lying in the Baltic ports of Russia, but in the Black Sea ports the number is larger.

BRUSSELS, Thursday.—The Russian fleet is preparing to leave Cronstadt. Much apprehension is felt at Stockholm.

The British war-steamer *Hecla* has arrived at Copenhagen with the masters and pilots appointed to make surveys.

England and France and Denmark to allow the combined fleets to take up their station at Kiel.

WHAT AUSTRIA WILL DO?

A despatch from Vienna, dated Thursday evening, says:—

It is credibly related that an Imperial manifesto is about to appear, in which, though mention will be made of the neutrality of this Empire, his Majesty will announce that, true to the policy of his House, he will not permit insurrectionary movements near his frontiers, and, therefore, his troops will enter Bosnia and Servia.

There was a regular panic on the Exchange, where the foregoing news was not known. The Five per Cents were as low as 84, and exchange on London as high as 13 florins 8 kreutzers.

THE SEAT OF WAR.

The Constantinople mail of the 15th ult. has arrived, but its contents are not important. Skirmishing continued to take place along the whole line of the Danube, but without any striking results. Nothing of any consequence is expected to take place before the spring. The invasion of the Epirus by a band of Greek militia had not caused much alarm at Constantinople. English or French steamers had made frequent excursions in the Black Sea, but had not been able to learn anything respecting the Russian fleet. It was believed that it was shut up at Sebastopol, but nothing positive was known. The bad weather which continued to prevail detained the combined fleets at Beicos.

Accounts from the theatre of war in the Danubian provinces to the 19th ult., state that the snow rendered the roads impassable. Neither of the armies had changed their positions, although there had been several skirmishes at the advanced posts. The Redifs of Albania were quitting their cantonments at Widdin to return home.

THE RUSSO-GREEK DISTURBANCES.

The *Observateur d'Athènes* of the 17th February, contains an article on the subject of the disturbances on the Turkish frontiers, and the consequent excitement in the kingdom of Greece. The Greek Government sees with sorrow the great agitation which prevails in the capital; but is of opinion that the police authorities ought to have been better acquainted with the state of public feeling. If they had displayed proper vigilance everything reprehensible might have been avoided.

CORFU, Feb. 23.—The Christian population of the country round Arta refuse to have anything to do with the insurgents. The citadel of Arta is well provisioned, and all the attempts made to take it have proved unsuccessful.

FOREIGN FUNDS.—At Amsterdam, on Wednesday, the Dutch Four per Cents fell 4 per cent; and the Russian Four-and-a-Half per Cents declined 1½ per cent. At Vienna, the Austrian Five per Cent Metallics fell to 86; exchange on London advancing at the same time to 12.58. Gold is at a premium of 37½, and silver of 30 per cent. At Berlin, Russian stocks have fallen 4 per cent in two days.

AMERICA.

By the *Pacific* steamer, which arrived at Liverpool on Thursday, we have news from New York to the 18th ult. The political intelligence is not of much importance. The Senate was mainly occupied with the Nebraska Bill. The trade of the country was in a good condition. Money was plentiful, and could be obtained at very moderate rates.

BREAK-UP OF THE SEWERS COMMISSION.—At a meeting of the Metropolitan Commissioners of Sewers, held at the chief office, Greek-street, Soho, on Monday, the following communication from the Home-office was read:—

Whitehall, Feb. 18, 1854.

Gentlemen,—I am directed by Viscount Palmerston to transmit to you the enclosed copy of a letter from Mr. E. G. Ward, relative to the comparative advantages of the systems of drainage advocated by the Commissioners of Sewers and the Board of Health respectively: and I am to state that, in his Lordship's opinion, the system of drainage recommended by the Board of Health, is that which ought to be adopted, as combining the greatest degree of efficiency with the greatest degree of economy.

I am, Gentlemen, your obedient servant, (Signed) HENRY FITZROY.

After the reading of this letter, Colonel Dawson said: "After this expression of deliberate judgment by the Secretary of State for the Home Department, in opposition to the principles and practice of this Commission, sanctioned by the highest engineering authorities of the day, it is not consistent with our reputation, or with the best interests of the public, that we should continue longer in office than until this board can be re-constructed, and our successors are appointed (Hear). I move, therefore, that this Court be adjourned *sine die*." Mr. Hawkshaw seconded the proposition. A pause of about half a minute took place, but no one else spoke. The Chairman put the question, which passed unanimously, the City representatives not voting. The Commissioners then retired.

SCHOOLMASTERS' TESTIMONIAL.—A large number of schoolmasters who had been educated in Battersea Training College, have just presented to Mr. G. W. Martin a very handsome silver tea and coffee service, in testimony of their appreciation of his eminent services, during eight years, as professor of music at Battersea College. The gift was accompanied by an expression of deep regret at Mr. Martin's retirement from the College.

SEAMEN'S HOSPITAL SOCIETY.—The anniversary of this corporation will be celebrated, on Wednesday next, by a public dinner at the London Tavern, at which the Right Hon. E. Cardwell, M.P., will preside. It will be recollected that the hospital of this excellent society is the *Dreadnought* three-decker, moored off Greenwich, and open for public inspection daily, except Sunday, without tickets. In this hospital sick and diseased seamen of all nations are received. The number of patients during the last year was 2563.

MUSIC.

The law-suit between Lumley and Gye, in the Court of Queen's Bench, and its decision, have created a more than ordinary sensation. And no wonder; for the fate of two great theatres was involved in its result. Had Lumley made good his claim to any considerable portion of the immense amount of damages for which he sued his rival, it was deemed very probable that Mr. Gye would be so crippled in his resources as to be unable to open his theatre; while, on the other hand, it was understood that Lumley depended on the recovery of those damages for the means of opening his doors in the Haymarket. Mr. Gye has got off scot-free, and the Royal Italian Opera will open in two or three weeks, with (it is said) undiminished éclat; and Her Majesty's Theatre so long the most superb and renowned Opera-House in Europe, will remain closed, desolate, and forlorn.

The "judicial combat" between the rival managers has been a hard one, and victory hung in suspense till the last moment. The result was of a singular nature, and illustrated on the "glorious uncertainty of the law." Lumley carried every point except one, but his failure on that one was fatal to him. He made out that Miss Wagner, while bound to him by a subsisting contract, entered into another bargain with Gye: he made out that Miss Wagner was induced by Gye to commit this breach of bargain; and he made out that he thereby sustained an enormous and ruinous loss. All this would seem decisive of the question; but Lumley (so the jury thought) failed to prove that Gye, in inducing the lady to break her bargain with Lumley, knew that this bargain was at that time still subsisting. On this one point the verdict was for the defendant; on the others it was for the plaintiff: but the last point decided the question in Gye's favour. We have no purpose in criticising the judgment; but we may observe that, on the point on which the result depended, the opinion of the presiding Judge evidently leant the other way; and thus, therefore, this famous trial is a further instance (as we have said) of the glorious uncertainty of the law.

Had Miss Wagner been *the* defendant in this cause instead of Mr. Gye, or *a* defendant along with him, she would necessarily have been made responsible for the damage sustained by Lumley through her wrongful act. But she wisely kept herself out of Lumley's reach. Though, however, she may escape the legal consequences, she cannot escape the moral consequences of her conduct. She stands convicted of dishonest conduct, through sordid thirst of gain. Gye tempted her with treble the amount for which she had bargained with Lumley; and she had not sufficient honour to resist the temptation. Nor can she be excalpated by throwing the blame on her father. She was by no means the simple, innocent girl, devoted to her art, who left her affairs to the direction of her parents. She, herself, is shown to have taken an active part in the whole transaction, and must bear her full share of the discredit justly attached to them. She will scarcely venture to show herself in England till the Gye and Lumley affair is forgotten.

This "Wagner affair" is a fresh illustration of the mischief which has accrued to our dramatic world from the practice of relying, not on general excellence, but on individual attraction. It prevails, more or less, in all our theatres; but it has been in our opera-houses that it has risen to its greatest height. When the Royal Italian Opera was established, seven years ago, the remedy of the evils arising from what is called the "star system," was one of its professed objects; but this theatre soon showed itself as much addicted to the star system as the other ever had been. Enormous salaries have been given only a few individuals while the completeness and quality of the company, and of the establishment generally, have suffered in proportion. As specimen of this folly we may mention that Alboni, for one season, received £6000! It was supposed that the formation of a second Italian Opera would do good by creating competition; and so it would, had the competition been of a legitimate kind. But it degenerated into a competition of rival stars, involving an insane extravagance of expenditure, which soon destroyed the one house, and would have destroyed the other had bad fresh capital not been got from various quarters to replace the enormous sums which were lost.

We hope that managers, as well as the public, may extract something like a moral out of the operatical history of the last few years. We hope that the one will give, and the other welcome, great and classical works of genius, performed with talent and completeness, even though their representations are not illumined by stars, who shine at the expense of three or four thousand pounds a season.

In consequence of the immense success of Meyerbeer's new opera "L'Etoile du Nord," Mr. Gye, we understand, has gone to Paris with the view of producing it at the Royal Italian Opera in the course of the season. In that case the dialogue, which is simply spoken at the Opéra Comique, will, we presume, be converted into recitative by the composer.

MR. STERNDALE BENNETT'S second concert, at the Hanover-square Rooms, on Tuesday evening, was again attended by a great assemblage of fashionable company. The principal pieces performed were Mozart's quintette in E flat, for pianoforte and wind instruments; Beethoven's sonata in E flat, dedicated to Madame Bartolozzi; Beethoven's sonata in A minor, for piano and violin, in which Mr. Bennett was accompanied by M. Sainton; and Mr. Bennett's own sonata-due for piano and violoncello, in which he was by Signor Piatti. Besides these, a MS. duet for two pianos (which was worthy of Beethoven or Mendelssohn, was exquisitely played, and received with the warmest applause. Mr. Bennett also played several of Mendelssohn's beautiful "Lieder ohne Worte" (songs without words), and some pleasing vocal music was sung by Miss Dolby and Mr. Berbeite, a very promising young performer.

MR. ALLCROFT, according to his annual custom, gave a concert at the Egyptian, on Ash-Wednesday. This was the only theatrical entertainment on that evening; and Mr. Allcroft, as usual, made it of monster dimensions. Almost every singer and player of any note in London, was put in requisition; and the programme was an enormous bill of fare, consisting of the dishes most adapted to the popular taste. There was nothing *recherché*; everything was common and familiar, and on that account all the more delicious. Pit and gallery were crammed every corner of the theatre, and who, to judge from their boisterous but hearty applause, seemed to enjoy the ample repast provided for them.

OUR countrywoman Clara Novello has had immense success at La Scala, in Verdi's "Rigoletto." On the termination of her engagement at Milan she returns to England, about the beginning of April.

NORTHERN NATIONAL SCHOOLS.—On Monday afternoon an inaugural breakfast was celebrated in a School of Art and Design erected in Castle-street, Long-acre, by the parochial authorities of St. Mar in-the-fields, and with the active concurrence of the Vicar, the Rev Mr. Mackenzie, who has zealously engaged in the promotion of industrial education. To the buildings required for the purpose, and which have been erected over the Day-schools in Castle-street, the Education Committee of the Privy Council had granted £230, the whole expense, however, being £600. The meeting was presided over by the Duke of Argyll, assisted by Lord Lyttelton, Lord Goderich, Lord Stuart, Sir James Stuart, Mr. Cardwell, M.P., Admiral Harcourt, and others; several of whom accressed the company on the occasion. The 100th Psalm was sung by the children, and appropriate prayers were read, one of which was offered up by the Duke in his address. The words which had thus come and attention were as follows: "Give to them that grace which shall enable them to discern Thee in all Thy works, that they may know there is none nor shape in the universe without Thee, the Creator." The Duke of Argyll commenced by observing that, though no member of the Church of England, he was a parishioner of St. Martin's, and felt great interest in the general cause of education. Owing to religious divisions, he regretted that no great national scheme was possible; but rejoiced that the clergy of the Church of England, as well as of other denominations, were possessing themselves of the field; it being his opinion that secular education should be connected with religious culture and organisation, and that the clergy should extend their duties beyond that of imparting the mere articles of belief. The Christian churches of the country should promote artistic education as a branch of industrial instruction. Large capitals were expended by manufacturers in the French designs, which might just as well be spent for English ones. There was no want of refinement in the national taste, but it needed education. His Grace then adverted to the subjects taught in the schools, and in last week's ILLUSTRATED LONDON NEWS, as proofs of what may be effected by true genius properly fostered. Mr. Redgrave followed, with some appropriate remarks relative both to the schemes and their applications. Both of which would be equal y produced by Schoo s of Design. Some photographic crystals of common snow were exhibited to the company by the Duke of Argyll, in support of his statement that the author of nature regarded ornamentation in the most minute as well as in the grandest of his works, and of the religious duty of Christians to promote a taste for beauty amongst the humblest of their brethren. The children having sung, at the bidding of the Vicar, a "St. Martin's cheer," were left to regale themselves with buns, while the visitors repaired, in another apartment, to breakfast. Other speeches were then made by Mr. Cardwell, Lord Goderich, Lord Hadde, and other gentlemen: the first of whom, on the part of the Board of Trade, congratulated the parish on the example which it had set, and undertook that the department over which he presided should cordially render assistance to such enterprises.

NATIONAL SPORTS.

LIVERPOOL SPRING MEETING.—WEDNESDAY.

Trial Stakes.—Alonzo, 1. Phœbe, 2.
Aintree Plate.—Songster, 1. Andromache, 2.
Tyro Stakes.—Iago filly, 1. Yewtick, 2.
Grand National Steeple Chase.—Emerton, 1. Spring, 2.
Betting: 4 to 1 agst Bourton, 5 to 1 agst Maurice Daly, 8 to 1 agst Half-and-Half, 9 to 1 agst Crabbs, 12 to 1 agst Peter Simple, 13 to 1 agst Ocean, 20 to 1 each agst La Gazza Ladra and Spring, and 25 to 1 agst Burnt Sienna.
Liverpool Spring Cup.—St. Clair, 1. Kilquade, 2.
Bermuda Handicap.—Hepsiria, 1. Songster, 2.
Optional Selling Stakes.—Jullien, 1. Escape, 2.

TATTERSALL'S.—THURSDAY EVENING.

TWO THOUSAND GUINEAS.—3 to 1 agst Newby (t)
CHESTER CUP.—30 to 1 agst Newminster (t)
DERBY
3 to 1 agst Autocrat and King Tom (t)
26 to 1 agst Acrobat (t)
33 to 1 ——— Nevile (t)
Very few members present, and but little business doing.

THE GOODWOOD STUD.—The Duke of Richmond's determination to break up his racing establishment is finally made: the horses are advertised to be sold at Tattersall's on Monday, March 13.

ST. DAVID'S DAY.—St. David's Day falling on Ash-Wednesday this year, it was celebrated on Tuesday. The children in the Welsh School were regaled with a sub-tantial dinner at one o'clock, in the school-house, and afterwards attended divine service in the church of St. Martin-in-the-Fields, when an appropriate sermon was preached by the Bishop of Llandaff—the Vicar, the Rev Mackenzie, having granted his church for the purpose. In the evening about 150 friends of the Royal Society of Ancient Britons celebrated their 139th anniversary by dining together at the Freemasons' Tavern, under the presidency of the Earl Grosvenor, M.P., when between £800 and £900 was collected towards its support.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Owing to the near approach of war with Russia, and the conflicting rumours afloat in reference to the nature of the forthcoming Budget—the Chancellor of the Exchequer, the Consol Market has been dull and inactive during the whole of the week; nevertheless, prices have kept up remarkably well, seeing that there is a possibility of a new Loan being issued to meet the expenses of the war.

Money in the Stock Exchange, as well as in Lombard-street has continued tolerably abundant, and there have been no further changes in the value of discounts. First class bills, short dated, have been taken at 4½ to 4¾ per cent per annum. The want of further imports of gold from Australia continues to be felt, owing to the great drain upon the supplies of that country for the continental account. Since our last, the shipments to France, Holland, and Belgium have been little short of £200,000, a portion of which, as the late supplies were speedily disposed of after arrival, has been withdrawn from the Bank. A few parcels have come to hand from the United States; but, as the exchange at New York is considerably against that country, no further gold than fitting importations will be comparatively small. The Continental exchanges are, too, in a most unsatisfactory state.

The Consol Market, on Monday, was subject to several fluctuations, and prices were decidedly drooping. The Three per Cents Reduced fluctuated between 92¾ to 93⅛; the Three per Cent Consols, 93⅛ to 93½; and the New Three-and-a-Quarter per Cents, 99½ to 99⅝. Bank Stock was 213; India Stock, 240. India Bonds sold at 98. to 12s.; and Exchequer Bills, 18s. to 21s. premium. Long Annuities marked 19. On Tuesday the Three per Cents Reduced sold at 93⅛ to 93½; the Three per Cent Consols, 93⅛ to 93¼, and the New Three-and-a-Quarter per Cents, 99 to 99⅜. Bank Stock, 213 to 217; for Money. Long Annuities are nominal. Exchequer Bills marked 17 to 20s.—The latter quotation for Small; and India Bonds, 98 to 12s. premium. There was rather more doing in the Market on Wednesday. The Three per Cents Reduced were 93⅛ to 93⅜; the Three per Cents, 93⅛ to 93⅜; and the New Three-and-a-Quarter per Cents, 93 to 93⅜. Long Annuities, 1860, sold at 18 to 18⅛; Ditto, 1885, 18½; South Sea Annuities, 101¾; Exchequer Bills, 17s. to 20s. Advertised, 16s. premium. On Thursday Consols were firmer. The Three per Cents opened at 93⅛ to 93¼ for Money; and closed at 93⅛. For the Account, the quotations were 93¼ to 93⅜; the New Three-and-a-Quarter per Cents, 93⅛ to 93½; and the New Three-and-a-Quarter per Cents 99⅜ to 99½. Exchequer Bills were 17s. to 20s. prem.

There has been a decline in the value of most Foreign Bonds, especially in Russian securities, although the interest on the Five per Cents is now in course of payment. The Guatemala bondholders have agreed to hand over the property in their debt to the Spanish-American bondholders, upon condition of receiving one per cent for any money obtained, and five per cent on any arrears of interest paid over and above £5000 per annum. Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 64¾ ex div.; Active, 19½; Deferred, 3½; Portuguese Four-and-a-Half per Cents, 32; Sardinian Five per Cents, 81¼; Spanish Three per Cents, 20; Spanish New Deferred, 18½; Ditto, Passive, 5¼; Dutch Two-and-a-Half per Cents, Not Subscribed, 59; Four per Certificates, 97.

Miscellaneous Shares have been in very moderate request. Australasia Bank Shares have marked 78 to 77½; Commercial of London, 33; English, Scottish, and Australian Chartered, 28½; Imperial Ottoman, 19½; Union of Australia, 68; British American Land Shares have been dealt in at 7¼; Crystal Palace 6½; Electric Telegraph, 17¼; East India Dock, 108; London Dock, 104; Royal General Steam Navigation, 27; Peel River Land and Mineral, 4¾; Berlin Water-works have sold at 3 to 1; and Peninsular and Oriental Steam (£20 paid), 8½. Railway shares have been heavy. County, 121½; Crown, 2¾; Guardian, 3¾; Globe, 13⅜; Imperial Fire, 37½; Ditto, Life, 19½; Pelican, 45; Phœnix, 18⅜; Royal Exchange, 234; Sun Life, 65; Hungerford Bridge shares have marked 2; Waterloo, 2¾; Vauxhall, 2½.

Railway Shares have met a dull market, at drooping prices. The "calls" for the present month amount to £446,047, against £699,647 in the corresponding period in 1853, and £500,342 in 1852. The total for the first quarter of each year is respectively £3,358,473, £2,890,653, and £1,682,140. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 21; Caledonian, 56; Dublin and Belfast Junction, 44¾ ex div.; Eastern Counties, 13 ex div.; Edinburgh and Glasgow, 64; Great Northern, 91¾ ex div.; Ditto, A Stock, 81 ex div.; Ditto, B Stock, 91 ex div.; Great Southern and Western, 96 ex div.; Great Western, 80¾ ex div., Lancaster and Carlisle, 80¾; Lancashire and Yorkshire, 68; Leeds Northern, 18¾; London and Blackwall, 8¾ ex div.; London and Brighton, 97½; London and North-Western, 102¾ ex div.; Ditto, Fifths, 12¾ ex div.; Ditto, Eighths, 4¼ ex div.; London and South-Western, 80¾ ex div.; Manchester, Sheffield, and Lincolnshire, 49¾ ex div.; Midland, 66 ex div.; North British, 24¾; North Staffordshire, 11¾, Scottish Central, 89; Shrewsbury and Chester, 17; South Eastern, 69¾; South Wales, 58¾; York, Newcastle, and Berwick, 69¼ ex div.; Ditto, Extension, 12¾; York and North Midland, 49¾ ex div.

LINES LEASED AT FIXED RENTALS.—Preston and Wyre, Half Shares, 91¾.

PREFERENCE SHARES.—Caledonian, 100; Eastern Union, 23; Great Northern, Five per Cent, 116 ex div.; Ditto, Four-and-a Half per Cent, 106 ex div.; Midland New 4½ per Cents, 98; Norfolk 5 per Cents, 106; Oxford, Worcester, and Wolverhampton, Six per Cent, 104 ex div.; Shrewsbury and Chester, 16¾.

FOREIGN.—Great Indian Peninsula, 8¾; Grand Trunk of Canada, A Issue, 6¾; Great Western of Canada Shares, 21¾; Ditto, Bonds, 6; Luxembourg, 6¾; Ditto, Railway, 4¾; Madras, 10¾; Northern of France, 29¾; Paris and Lyons, 32¾; Paris and Strasbourg, 39¾; Zealand, 10¾.

In Rim ng Shares very few transactions have been reported. On Thursday, Agua Fria were done at 2; Linares, 1¾; Nouveau Monde, 1; Rhymney Iron, 29¾; and Weller, ¾.

Friday Evening.

The business doing in the Consol Market to day has been very moderate, yet prices are fairly supported. The Three per Cents are 93⅛ ⅜; the Three per Cents Reduced, at Monday's advance; the New Three-and-a-Quarter Cents, 99⅜. Foreign Bonds and Railway Shares command very little attention.

THE MARKETS.

CORN EXCHANGE (Friday).—The quantity of Essex and Kent on offer in to-day's market was very moderate, but in somewhat improved condition. For most kinds the demand was steady, but by no means active, at Monday's advance in the quotations. For forward delivery very little was doing. The imports of foreign wheat have extended 16,000 quarters chiefly from the Mediterranean. The best qualities of fine foreign wheat are in request, but the general business doing was moderate at the prices obtained last week. Flour was in moderate request. Barley was in good demand, and prices are full quotations. The oat trade was firm, and good sound corn was the turn dearer. In beans and peas very little was doing since commencement previous quarter. The imports consist as follows:—

ARRIVALS.—English: wheat, 2316; barley, 4523; malt, 3233; oats, 100; flour, 980. Irish: oats, 1; flour, 16,856; barley, 8260. oats, 8570; flour, 210 sacks 13.6-0 barrels. Foreign: Wheat, Essex and Kent, red, 57s. to 61s.; ditto, white, 71s. to 77s. Norfolk and Suffolk, red, 56s. to 60s.; ditto, white, —s to —s.; rye, 40s. to 42s.; grinding barley, 24s. to 26s.; distilling ditto, 28s. to 29s.; malting ditto, 46s. to 48s. Lincoln and Norfolk malt, 56s. to 58s.; brown ditto, 52s. to 53s. Knuesten and Ware, 70s. to 72s.; Chevs ter, 73s. to 75s.; Yorkshire and Lincolnshire feed oats, 27s. to 30s.; potato ditto, 29s. to 32s.; Youghal and Cork, black, 24s. to 25s.; ditto, mixed, 23s. to 24s.; ditto, brown, 24s. to 25s.; Limerick, 23s. to 24s.; Sligo, 23s. to 24s.; Londonderry, 24s. to 25s.; Galway, 23s. to 24s.; Tralee, 23s. to 24s.; Dublin, 24s. to 25s.; Waterford, 24s. to 25s.; Belfast, 24s. to 25s.; Scotch feed, 25s. to 27s.; ditto, potato, 27s. to 29s.; ditto, Angus, 28s. to 30s.; Dundee, 28s. to 30s.; Aberdeen, 28s. to 30s.; Inverness, 28s. to 30s.; Peas, white, 50s. to 52s.; boilers, 52s. to 54s.; maple, 52s. to 54s.; grey, 50s. to 52s.; Harlings, 52s. to 54s.; Egyptian beans, 40s. to 42s.; Horse beans, 40s. to 42s.; Tick beans, 44s. to 46s.; Lentils, 40s. to 42s.; Indian corn, 37s. to 38s.; white, 40s. to 42s.; flour, per sack, 45s. to 47s.; per quarter, Town made flour, 68s. to 70s.; Suffolk, 57s. to 60s.; Essex and Kent, 56s. to 58s.; per 280 lbs. *Foreign:* French flour, —s to —s per sack; American, 38s. to 40s. per barrel.

Seeds.—We have a fair demand for clover seed at full quotations. Trefoil is dull, and lower to purchase. Mustard seeds are firm. Cakes command extreme currencies.

Linseed, English, sowing, 60s. to 63s.; Baltic, crushing, 57s. to 58s.; Mediterranean and Odessa, 55s. to 56s.; bumpeed, 42s. to 44s. per quarter; coriander, 17s. to 18s. per cwt. Brown mustard-seed, 12s. to 14s.; white ditto, 14s. to 16s.; and tares, 8s. to 9s. 6d. per bushel. English rapeseed, £20 to £23 per last of ten quarters. Linseed cakes, English, £9 5s. to £11 0s.; ditto, foreign, £9 10s. to £11 10s. per ton. Rape cakes, £6 10s. to £7 0s. per ton. Canary, 55s. to 59s per quarter. English clover seed, red, 26s. to 34s.; white ditto, 34s. to 76s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d.; of household ditto, 8d. to 10d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 70s. 5d.; barley, 36s. 4d.; oats, 27s. 1d.; rye, 43s. 10d.; bean, 42s. 11d.; peas, 45s. 7d.

Duty of Foreign Corn.—Wheat, 21s. 6d.; barley, 11s. 2d.; oats, 6s. 7d.; rye, 21s.; beans, 11s.; peas, 11s.

Prices of Foreign Corn.—Wheat, in bond, duty paid, barley, oats, rye, beans, peas, at Hamburgh, Dantzic, Odessa, Marianopoli, Taganrog, Petersburg, Archangel, Memel, Riga, Pillau, Konigsberg, Stettin, Amsterdam, Rotterdam, Antwerp, Ghent, Ostend, Trieste, Venice, Leghorn, Genoa, Naples, Palermo, Messina, Marseilles, Barcelona, Valencia, Gibraltar, Malaga, Seville, Oporto, Lisbon, Cadiz, Bona, Algiers, Tunis, Tripoli, Alexandria, Salonica, Smyrna, Constantinople, Trebizond, Poti, Tangier, Mogadore, Rio Janeiro, Buenos Ayres, Montevideo, Valparaiso, Lima, Guayaquil, Havana, Matanzas, Charleston, Savannah, Philadelphia, Baltimore, New York, Boston, Portland, Halifax, Quebec, and Montreal, per imperial quarter, and per cwt. for flour.

Provisions.—We have to report a moderate sale for Irish butter, at full currencies. The best foreign qualities are firmly 3s. per cwt. dearer. In the bacon trade of English we have very little change to notice. The bacon market is dull at drooping prices. Prime sizeable Waterford, 56s. to 58s. per cwt. Of other kinds of provision, very little is doing.

Tallow.—Our market is decidedly flat. P. Y. C., on the spot, 63s. 6d. to 63s. 9d.; and for forward delivery, 63s. to 63s. 6d., net cash. Town tallow, 61s.; melted, 62s. Rough fat, 3s. 4½d. per 8 lbs.

Oils.—Linseed oil is firm, at 32s. 9d. on the spot. Fish oils are quite as dear as last week. Rape is lower to purchase. Spirits of turpentine £3 18s.; in parcheons, £3 17s.; rough, 14s. per cwt.

Hops.—Bags, Weald of Kent, West Harlsey, 2l. 2s.; East Harlsey, 2l. 12s.; Mid Kent, 3l. 3s.; Farnham, 3l. 13s.; Haslemere, 3l. 3s.; Hartlepool, 2l. 8s.; Towcester, 2l. 4s. per cwt. Sales at the Borough, 2l. 2s. to 3l. 3s.

Wool.—Friday.—Although a moderate business is doing in our market, prices, owing to the large supplies of foreign hops on offer, are still drooping. This week's imports are—5 bales from Antwerp and 65 from Ostend: Mid and East Kent pockets, 3l. 10s. to 4l. 11s.; Weald of Kent, 3l. 5s. to 4l. 7s.; Sussex, 3l. to 3l. 15s.

Smithfield (Friday).—To-day's market was moderately supplied with beasts, for which the demand ruled very dull, at a decline of 2d. per 8lb. in the quotations. Sheep—the supply of which was by no means extensive—moved off slowly, at unaltered currencies. There were a few lambs and sheerlings on offer. We had a large show of calves at extreme currencies. In pigs very little was doing. Milch cows were dull, at from £14 to £19 each, including their small calf.

Per 8lb. to sink the offals:—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s. 8d.; prime large oxen, 3s. 10d. to 4s 2d.; prime Scots, 4s. 4d. to 4s 6d.; small and coarse inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime coarse-woolled ditto, 4s. 4d. to 4s. 6d.; prime South Down ditto, 4s. 8d. to 5s 0d.; large prime calves, 4s. 6d. to 4s. 8d.; prime small ditto, 5s. 0d. to 5s. 4d.; large hogs, 3s. 0d. to 3s. 2d.; neat small porkers, 4s. 4d. to 4s. 6d.; suckling calves, 22s to 28s.; and quarter sold store pigs, 21s. to 25s. each. Total supplies:—Beasts, 1870; sheep, 13,360; calves, 218; pigs, 350. Foreign: Beasts, 363; sheep, 480; calves, 160.

Newgate and Leadenhall Markets.—The general demand was in a sluggish state, as follows:—

Per 8lbs. by the carcase:—Inferior beef, 3s. 0d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 0d. to 4s. 2d.; large pork, 3s. 4d. to 3s. 6d.; inferior mutton, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 6d. to 4s. 6d.; small pork, 4s. 4d. to 5s. 0d.

THE LONDON GAZETTE.

TUESDAY, FEB. 28.

WAR OFFICE, FEB. 28.

BENNET.—The undermentioned Officers to be Brigadier-Generals while employed upon a particular service, viz.—Colonel W. Cator, Royal Artillery, Colonel W. B. Tylden, Royal Engineers.

ADMIRALTY, FEB. 24.

Royal Marines: Captains J Buchanan and H. G. Mitford to be Lieutenant-Colonels. First Lieutenants T. J. Jones, J. H. Le F. W. Kennedy, R. Doyle, S. R. Little, J. Elliot, J. Macarthur, H. W. Tuson, C. H. Barnard, W. H. Jarvis, R. V. Allen, and N. W. de Coney to be Captains.

BANKRUPTS.

E. CAHAN (and not E. Cohan, as before advertised) and J. VANCE, jun., 171, Strand, hatters. H. WILLIAMS, Cirencester-street, Paddington, wine merchant. R. N. NEWTON, New Park-street, Southwark, gas engineer. W. F. HART Brighton and Worthing Sussex, builder. C. STANFORTH, Sheffield, joiner. J. SLATT, Sheffield, shoe manufacturer. H. HUGGINS, Manchester, wood type cutter.

SCOTCH SEQUESTRATIONS.

P. BARRY, Arbroath, shipowner. J. ARNAN, Cupar, Fifeshire, flax-spinner. J. SMITH, Inverness, iron-founder.

FRIDAY, MARCH 3.

WAR-OFFICE, MARCH 3

5th Dragoon Guards: Lieut W. Inglis to be Captain, vice Brevet-Major Bell, Cornet R. T Goodman to be Lieutenant, vice Inglis

2nd Dragoons: Capt. G. A. F. Sullivan to be Major, vice Macleod. Lieut. F. Phillips to be Captain, vice Sullivan. Cornet R. S. Hussey to be Lieutenant, vice Phillips

Coldstream Guards: Lieut. and Capt. F. G. H. Somerset to be Captain and Lieutenant-Colonel, vice Somerset, retired upon half-pay. Ensign W. J. Pym to be Lieutenant and Captain, vice Somerset, from M. A. Amherst to be Ensign and Lieutenant, vice Pym

Scots Fusilier Guards: Lieut. Col. C. H. Turner to be Captain and Lieutenant-Colonel, vice Hood, retired. Lieut. and Adjt. A. Hood, F. R. Baker to be Assistant-Surgeon

1st Foot: F. G. Currie to be Ensign, vice Conroy. 19th: Ensign P. G. Conroy to be Lieutenant, vice Hunt. 23rd: Lieut. Thomas and Lieut. the Hon. A. H. Crofton to be Lieutenant, vice Fitzgerald. 30th: Ensign G. W. Graham to be Ensign, vice Freud. 38th: Lieut. Colonel E. St. John Mildmay to be Lieutenant-Colonel, vice Hamilton. Ensign G. Bowen to be Lieutenant, vice Mylius. E. J. Cass to be Ensign, vice Tompson. 49th: Capt. J. Lawrie to be Captain, vice Wilkinson. Lieut. W. Lawrie to be Lieutenant, vice Lawrie. Ensign W. Kennedy to be Lieutenant, vice Hales. Lieut. J. G. Wilkinson to be Adjutant, vice Sargent. 50th: Lieut.-Surg. T. Longmore to be Surgeon, vice Smith. Staff-Surgeon of the Second Class J. Gibb to be Surgeon, vice [illegible]. 57th: Lieut.-Colonel R. Rumley to be Lieut.-Colonel, vice Mann. 58th: Lieut. and Adjt. J. Hall to be Captain, vice Tyndall. Lieut. T. Lloyd to be Adjutant, vice Hall. Cornet A. B. Ellis to be Lieutenant, vice Stephens. 47th: Assist-Surgeon A. W. Wellington to be Surgeon, vice Battersby. 48th: Ensign the Hon. H. Bruce to be Lieut., vice Peel. Lieut. J. Hay to be Captain, vice Handcock. 49th: Ensign W. R. Corbet to be Lieutenant, vice Bond. Lieut. W. Young to be Ensign, vice Corbet. 50th: Lieut. R. Wadely to be Lieutenant-Colonel, vice Dyer. Lieut. and Adjt. H. M. Barnes to be Captain, vice Moller. Ensign J. Thompson to be Lieutenant, vice Barnes. Cadet F. L. Darwell to be Ensign, vice Thompson. 54th: Ensign J. Wade to be Lieut., vice Peel. 60th: First Lieut. H. F. Williams to be Captain, vice Bethelby. Second Lieut. R. W. Huxtman to be Lieutenant, vice Williams. Ensign J. Wilkinson to be Second Lieutenant, vice Huxtman. 97th: Lieut. W. Rickman to be Adjutant, vice St George. 79th: Ensign J. H. Fraser to be Lieutenant, vice Weaver. 82nd: Ensign J. Bell to be Lieutenant, vice Assist.-Surgeon W. N Irwin to be Surgeon, vice Taylor. 92nd: Capt. J. J. Wood to be Captain vice Lawrie. 94th: Lieutenant C. H. Browne to be Adjutant, vice Hon. M. H. Nevas to be Lieut., vice G. W. Graham. 95th: Second Lieut. G. L. Hedley to be Ensign, vice King-Lieut. R. Jones to be Adjutant, vice Hedley. Ensign M. Brickley to be Lieutenant, vice Jones. N. Quicke to be Ensign vice Brickley

Fusilier Regt: Ensign E. F. King to be Lieutenant, vice Hedley

Royal Canadian Rifles: Major F. Hill to be Major, vice M'Dougall.

ADMIRALTY, FEB 24.

Corps of Royal Marines: First Lieut. Hon. H. E. Fyn to be Adjutant, vice Kennedy; First Lieut. T. Q. Meade to be Lieutenant and Quarter-master, vice Elliott; First Lieutenants G. S. Digby to be Adjutant, vice Barnard; First Lieut. W. H. Le F. Dunn to be Adjutant, vice Alves. Second Lieutenants J. Foster, vice Jones; H. Freeland, vice Saville. P. Barrington, vice Kennedy; F. W. Pusling, vice Boyle; W. A. De Acosbo, vice Hinkley; H. Hay, vice Elliott; W. F. B. Dashwood, vice Arthurs; G. F. Short, vice Gwynn; E. Lean, vice Barnard; A. Tait, vice Davies; J. B. Colwell, vice Allen; H. Swale, vice Dunn; C. T. Daly, W. Gardiner, C. Bamford, vice Meade. L. L. Morris, J. G. Shanks, A. C. J. M'Meekan, G. F. Walker, W. Pitman, H. L. Harrison, T. H. A. Brenan, J. Dent, G. Maltie, C. S. M'Donnell, W. H. Lennox, T. Bent, J. W. H. C. Moore.

BANKRUPTCY ANNULLED.

R. B. PARRY, Leadenhall-street, bookseller, publisher, and stationer.

BANKRUPTS.

R. M. WRIGHT and J. S ANSTIE, Bishop's-court, and Upper Thames-street, dyrsalters. H. ENDACOTT (Okehampton, Devonshire innkeeper J EGGLESTON, Saint Albans, licensed vict aller. J. DOWELL, Birmingham, chemist and druggist. C. HOLMES, Broad-street, Golden-square, surgeon and accoucheur. R. NEWTON and T. G. PAYNE, New Park-street Southwark, gas engineers J. WHITNEY, Nicknehead, carrier and leather dealer. J. HOLDEN, Bolton-le-Moors, Lancashire, and Burnley-square, Mrs. J. Leach, of a daughter, at Manchester. J. HOPE, Leeds, dyer. J. BLACKBURN and W. S STIDOLL, Leeds, flax-spinners and cotton spinners. H. HOLLINGSWORTH, Bermondsey, Fleet street, City, bookbinder. A. EYRE, Bond-and-square, Notting-hill, and Lombard-street, City. J. BRADWELL, Manchester, builder.

BIRTHS.

BAIRD.—On the 21st ult., at Errol-park, the Lady of Sir J. G. Baird, Bart., of a son.

BRAMPEY.—On the 11th ult., at Naples, the lady of Sir G. Beaumont, Bart., of a daughter.

COTSWOM.—On the 22nd ult., in Fitzwilliam square, Dublin, the Countess of Cortiwm, of a son.

DAMPIER.—At Clifton, the wife of the Rev. C. R. Dampier, Rector of Thornford, Dorset, of a son.

FITZ-ROY.—On the 27th ult., at East Sheen, the Hon. Mrs. H. FitzRoy, of a daughter.

GRAHAM.—On the 25th ult., at Berners-square, Mrs. J. Leach, of a daughter.

HARCHART.—On the 5th ult., at the Government-house, Halifax, the lady of his Excellency Sir Gaspard Le Marchant, Bart., of a son.

VAUGHAN.—On the 22nd ult., at St. John's Parsonage, Brixton, the wife of the Rev. M. Vaughan, of a son.

VERNON.—On the 25th ult., at Marchington, Staffordshire, Lady H. Vernon, of a son and heir.

MARRIAGES.

BLIGH—NEVILL.—On the 23rd ult., at Eaton Chapel, the Hon. E. V. Bligh, second son of the late Earl of Darnley, to Lady Isabel M. F. Nevill, youngest daughter of the Earl of Abergavenny.

BUTHER-JOHNSTONE—On Tuesday, Oct. 11, at St. Luke's Church, Richmond, Van Diemen's Land, by the Rev. J. T. Gen——ood, M.A., Edward William Burbidge Butcher, Esq., youngest son of the late John Butcher, Esq., of Lewisham, Richmond, and formerly of Park-hatch, in the county of Surrey, to Maria Sarah, third daughter of Major Schaw, Paymaster of the 99th Regiment, and late of Leith Fort, Edinburgh.

DALWICH—GREEN.—On the 22nd of February, at St. John's, Cambridge-square, by the Rev. M. Fenn, Dalwich, Esq., eldest daughter of Richard Welch, Esq., of Bexley, only daughter of the late John Green, Esq., of Notting-hill.

DASHWOOD—HANBURY.—On the 23rd ult., at St. George's, Hanover square, G. A. C. Dashwood, Esq., second son of Sir G. Dashwood, Bart., to the Hon. H. A. Bateman-Hanbury, sister of Lord Bateman.

DOUGLAS—CARPENTER.—On the 23rd ult., at Bath, H F. A. Goodridge, Esq., M.D., of Bath, to Anne Mary, elder daughter of the Rev. J. Carpenter, Rector of Ashington, Somerset.

GOLDIE—PHILLIPS.—On the 16th ult., at Birmingham, C. Galer, Esq., of Edgbaston, to Caroline, third daughter of the late R. Phillips, Esq., F.R.S., London.

HAMILTON—WELLESLEY.—On the 23rd ult., at Chelsea, by the Rev. Charles Kingsley Alfred Hamilton Pago, Esq., youngest son of the late Samuel Page, Esq., of Dulwich, to Lucy Augusta, eldest daughter of Richard Welch, Esq., of Tadcaster-lodge, Chelsea.

PAGET—PAGET.—On the 28th ult., at St James's, Piccadilly, Lord A. Paget, M.P., youngest son of the Marquis of Anglesey, to Agnes, daughter of the late Sir A. Paget, G C B

DEATHS.

CHEVALLIER.—On the 22nd ult., at Norwich, the Rev. J. Chevallier, eldest son of the late the Chevalier, of Aspall Hall, in Suffolk, aged 57.

FERRES.—On the 22nd ult., at Stanton Harold, Leicestershire, Devereux Hugh L. Shirley the infant son of the Earl and Countess Ferrers.

HAY.—On the 24th inst., at Kelburne, near Longford, Lieut.-General J. Hay, C.B., Colonel of the 79th Highlanders, a most distinguished Peninsular officer.

LANCELLES.—On the 26th ult., at Guildford Hall, Lady E. Lancelles.

WELLS.—On the 25th ult., at Woodcreek, after a few hours' illness, Colonel J. M. Wells, C.B., late Royal Engineers, son of the late Admiral Wells, of Bolsar, Hants.

THE ILLUSTRATED LONDON NEWS

No. 672.—VOL. XXIV.] SATURDAY, MARCH 11, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE WAR BUDGET.

MR. GLADSTONE'S first Budget was a masterpiece of financial statesmanship. Happy is the Chancellor of the Exchequer, who has a surplus at his disposal. To him all things wear a smiling aspect. If he have any annoyance (and who in this sublunary sphere has not?) it proceeds solely from that most pleasant of all causes the *embarras des richesses*. He stands upon an eminence, and all men look up to him. A crowd of eager suppliants clamour at his feet. Commerce, with a thousand heads and a thousand tongues, cries out to him, "Untax me, and you shall be repaid a hundredfold by the increased wealth of the nation." Knowledge cries, "Give me the preference, and you shall be more than repaid by the increased intelligence and industry of multitudes now steeped in poverty and in ignorance." The difficulty is how to relieve all the sufferers at once, or how to make a selection amidst claims that are almost equally urgent, and almost equally just. Mr. Gladstone, in the Session of 1853, got over every difficulty of the kind with ease and celerity. Even when he found it necessary to re-adjust the general burdens by the extension of existing taxes to classes formerly exempt from them—as in the case of the Property and Income-tax to incomes ranging between £100 and £150 per annum, and of the Legacy-duty to real estate—he managed to satisfy the public sense of justice. Those whom he fancied it impossible to relieve had faith in his sagacity and his good intentions. They trusted on Mr. Gladstone and a future surplus, and comforted themselves with the consoling reflection that they had only to bide their time, and that justice would be done them.

Had it not been for the wrong-headedness and wickedness of the Czar, many of these glowing anticipations would have been realised. A handsome surplus would have enabled Mr. Gladstone to have repealed the Excise-duty upon paper. So wise were all the previous remissions of taxation—so wonderful was the elasticity displayed by all the great sources of revenue in face of continual reductions, and so steady was the increase of the national wealth—as tested by the Customs, the Excise, the Stamp-duties, and the Property and Income-tax—that the financial system of this country was rapidly becoming the admiration and envy of the world. Mr. Gladstone's anticipations were sufficiently sanguine for a prudent statesman; but the result exceeded them. He estimated the Income for the year 1853-54—after all his reductions should have been effected—at £52,990,000. The actual receipts have been £54,025,000, or an excess of no less than £1,035,000. Nor was this the only favourable side of the question. Whilst the Revenue exceeded the estimate, the Expenditure fell short of it by no less than £1,012,000, the two together forming a surplus of £2,047,000. Such would have been our financial position at this moment, if we had not been forced into a war by the bad ambition of the irresponsible maniac, who, for the misfortune of mankind, has had it in his power to bring so terrible a calamity upon the civilised states of Europe.

It was Mr. Gladstone's duty, on Monday night, to produce his second Budget under these altered circumstances. We think the impression that will be produced upon the country will be as favourable as that produced by the Budget of 1853. The task was a less agreeable one, but the ability displayed in dealing with the subject was, in many respects, the greater, and the manfulness and honesty of the course recommended were all the more conspicuous. Calculating that the war expenditure of the year will require a further sum of nearly three millions, in addition to the ordinary surplus which will remain at his disposal from all the existing modes and sources of taxation, he made the comprehensive and simple proposal that the money should be provided by an increase of the Income and Property-tax to the extent of one-half, the whole addition to be levied during the first half year. In other words, the country is to be called upon to pay an Income-tax of six per cent per annum for the first half of the financial year 1854-55. If, during that interval, the war now about to commence shall be happily brought to a close, the tax will remain at three per cent for the second half-yearly period. Upon the contrary, if the war should continue, the Government reserves to itself the right of making a fresh appeal to Parliament for additional funds. Nothing can be

DEPUTATION OF THE SOCIETY OF FRIENDS TO THE EMPEROR OF RUSSIA, AT ST. PETERSBURG.—(SEE NEXT PAGE)

more satisfactory than such a project. War, under the most favourable of circumstances, is a costly undertaking. The present generation is too practical and sensible in itself, and has learned too much from the sad experience of its forefathers, not to be fully aware of the fact that the most expensive of wars are those which are carried on with borrowed money. None are so extravagant as those who know that they are spending the money of other people, and that no man lives who can call them to account. Posterity, being unseen and unknown, has hitherto had no friends. The men of the present day look further ahead, and have better principles of policy. If they have not more conscience, they have at least more wisdom, than their predecessors. They feel the weight of a burden that was inconsiderately laid upon them; and, knowing such a course of proceeding to have been wrong, they will not commit a similar injustice upon those who are to come after them. Were it a life-and-death struggle in which we were engaged—a struggle in which not only the honour, but the existence, of the nation were involved, we might reasonably call upon posterity to bear a portion of the burden which secured them their independence, and was the means of transmitting to them, unimpaired, the dearly-purchased liberty of their forefathers. But no such mighty interests are at stake in the present war. We fight for our own honour and security, and for the coercion of a despot who affronts the public law of all Europe. We trust to be able to make short work with him; and the nation feels that it is right that the time should pay for the necessities of the time; and that it is not only wiser and juster in itself, but more economical, to raise within the year the sums necessary for the service of the year. As yet the burden is but a light one, and this great and wealthy nation would be well able to bear it, in so righteous a cause, even were it thrice or ten times as heavy. The readiness with which the increased taxation will be imposed by Parliament, and the cheerfulness with which it will be borne by the people, ought to strike as much terror into the councils of the Emperor Nicholas (always providing that so selfish and unscrupulous a bigot has any councils but those in his own dark breast) as an additional Baltic or Black Sea fleet would do, or as an additional army would accomplish, if safely landed in Roumelia. With all his boasted power and resources, he is at this moment a bankrupt, and can only carry on the war by the aid of a depreciated paper currency. His credit is not worth sixpence upon any Exchange in Europe; and we have yet to learn that he has the means of maintaining, for three months longer, his half-starved legions in the hostile possession of the Provinces which he has stolen, even had he no other enemy opposed to him than the outraged Turkish nation. Money, as has been repeated a thousand times, is the grand sinew of war. Without it an invading army speedily eats up the produce of the countries which it may traverse, and degenerates into a mere mob of banditti. Famine first decimates them—disease next pursues them—and the outraged populations amidst whom they have passed like a pestilence do their best to exterminate them. With gold their progress is possible; but without it the most inflated of wars must collapse, and the most mighty of Sovereigns find himself face to face with ruin and annihilation.

Financially, we enter upon the war under the most favourable auspices. It is possible that the slight burden which Mr. Gladstone proposes to lay upon us will be the only one we shall have to bear. Everything seems to betoken that the war will not be a protracted one. The Emperor Nicholas is as deficient in resources as he is in arguments. He has nothing to support him but an audacity which is only to be accounted for by the insanity of him who exhibits it. Insane monarchs are not very popular among their subjects, even when their projects are successful; but when reverses overtake them, we know what becomes of the loyalty of their people. One signal defeat in the Black Sea, or in the Baltic, and where would be the Czar Nicholas? The kingly crown would in all probability not grace his brow for three weeks after such a catastrophe. In the meantime, he bears upon his head the execrations of every Englishman—execrations which will be none the less hearty when the tax-gatherer shall call upon us for fourteen-pence in the pound, instead of the customary seven-pence.

PEACE DEPUTATION TO THE CZAR.

In our last week's Number, we recorded the interview which the Deputation from the Society of Friends (Mr. Joseph Sturge, of Birmingham; Mr. Henry Pease, of Darlington; and Mr. Robert Charlton, of Bristol) had with the Emperor of Russia, on the 10th ult. This week we engrave a representation of the same, in one of the cabinets of the Imperial Palace; with Mr. Sturge reading the following address: to the left of the Emperor are seen Count Nesselrode and Baron Brunow.

TO NICHOLAS, EMPEROR OF ALL THE RUSSIAS.

May it please the Emperor, We, the undersigned members of a meeting representing the Religious Society of Friends, commonly called Quakers, in Great Britain, venture to approach the Imperial presence, under a deep conviction of religious duty, and in the compassion of the love of Christ our Saviour.

We are, moreover, encouraged to do so by the many proofs of condescension and Christian kindness manifested by thy late illustrious brother the Emperor Alexander, as well as by thy honoured mother, to some of our brethren in religious profession.

It is well known that, apart from all political considerations, we have, as a Christian church, uniformly upheld a testimony against all war, on the simple ground that it is utterly condemned by the precepts of Christianity, as well as altogether incompatible with the spirit of its Divine Founder, who is emphatically styled the "Prince of Peace." This conviction we have repeatedly pressed upon our own rulers; and often in the language of bold, but respectful remonstrance, have we urged upon them the maintenance of peace as the true policy, as well as manifest duty, of a Christian Government.

And now, O great Prince, permit us to express the sorrow which fills our hearts as Christians and as men, in contemplating the probability of war in any portion of the continent of Europe. Deeply to be deplored would it be were that peace (which, to a large extent, has happily prevailed for so many years) exchanged for the unspeakable horrors of war, with all its attendant moral and physical suffering.

"It is not our business, nor do we presume, to offer any opinion upon the questions now at issue between the Imperial Government of Russia and that of any other country; but, estimating the exalted position in which Divine Providence has placed thee, and the solemn responsibilities devolving upon thee, not only as an earthly potentate, but also as a believer in that Gospel which proclaims "Peace on earth and good will toward men," we implore Him by whom "Kings reign and Princes decree justice," so to influence thy heart, and to direct thy counsels at this momentous crisis, that thou mayest practically exhibit to the nations, and even to those who do not profess the "like precious faith," the efficacy of the gospel of Christ, and the universal application of His command—"Love your enemies; bless them that curse you; do good to them that hate you: and pray for them that despitefully use you and persecute you, that ye may be the children of your Father which is in Heaven."

The more fully the Christian is persuaded of the justice of his own cause, the greater his magnanimity in the exercise of forbearance. May the Lord make thee the honoured instrument of exemplifying this true nobility, thereby securing to thyself and to thy vast dominions that true glory and those rich blessings which could never result from the most successful appeal to arms.

Thus, O mighty Prince, may the miseries and devastation of war be averted; and in that solemn day, when "every one of us shall give account of himself to God," may the benediction of the Redeemer apply to thee—"Blessed are the peacemakers, for they shall be called the children of God;" and may evil thou be permitted, through a Saviour's love, to exchange an earthly for a heavenly crown, "a crown of glory which fadeth not away."

London, 11th of 1st month, 1854.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The opening of the Legislative Session was, from the effective manner in which all the Court and State ceremonies are, under the present *régime*, conducted, and yet more from the double importance the actual crisis gives the commencement of the Session, an event exciting the utmost interest and attention, and the effect of the *solennité* in no way disappointed the general class of spectators. Contrary to precedent, the *Cour Impériale*, and nearly all the superior officers of the army of Paris, were convoked; and six Cardinals, in full dress, with the Archbishop of Paris and his grand vicaires, occupied the right of the Emperor. A few minutes before one the Empress appeared, and at one the Emperor took his place and read his Speech. From the moment he entered on the question of war the most breathless attention, broken by applause at frequent intervals, was visible in the Assembly, and at the conclusion long-repeated cries of "Vive l'Empéreur" resounded on all sides. The Emperor was surrounded by the Princes Jérôme, Lucien, and Napoléon Bonaparte, the Prince Murat, the *corps diplomatique*, and the Ministers.

The Empress, whose presence was greeted with loud applause, and the ladies of the Imperial family and of the Court, were placed on a private stage. At the conclusion of the sitting, the Emperor announced to the Prince Napoléon, in reply to his letter, published in the *Moniteur*, offering his services in the approaching war, that he gave him the *grade effectif* of General of Division in the expeditionary army, and that the forces placed under him would be in proportion to that rank.

Notwithstanding the extremely uncertain state of the health of the Maréchal St. Arnaud, and the remonstrances which it is said even the highest dignitary of the State made use of as to the danger of his undertaking so fatiguing and anxious a duty, he is resolved to start with the expedition, accompanied, however, by Madame St. Arnaud, who will confide to no other the cares her husband's precarious state render so essential.

The *Assemblée Nationale* has been suspended for two months for "having sustained, from the commencement of the Oriental question, an anti-national system of politics"—an accusation against which it loudly proclaims its innocence in the last number, which appeared on Sunday. The sentence of course, however, holds good notwithstanding.

Despite the engrossing interest of the question of war, that which attaches itself to all that concerns the memory of the Abbé Lamennais, is no less strongly felt than it would have been at any other period, and all that can be learned respecting him is repeated and received with the utmost curiosity and attention. He has left, it appears, a large number of the most interesting manuscripts, for the greater part, unfortunately, unfinished among them, a translation of the divine comedy of Dante. But, happily, the most important and exterior of all is complete. This is a work written in the style of the Confessions of J. J. Rousseau, but more with the tone and feeling of St. Augustin. In this most singular and remarkable volume are revealed all the mental weaknesses and struggles of the writer, his aspirations, his hopes, his most private thoughts. The tendency is decidedly democratic. This manuscript, which, with all the rest of the property of M. de Lamennais, is in the hands of his nephew and sole legatee, is, it appears, accompanied with a request that it shall not be published within ten years of the death of the writer—a request which must suspend public curiosity to its great regret.

Our readers may, perhaps, have heard of the "Biography" lately published of Madame Georges Sand, by M. Eugène de Miracour, on the appearance of which, the illustrious subject of the memoir in question addressed letters to the *Presse* and the *Mousquetaire* (the journal of Alexander Dumas), contradicting, though in a milder and more moderate tone than is her wont on such occasions, nearly all the assertions of her would-be biographer. No less than twelve of the *rédacteurs* of the latter journal, and fifteen *ouvriers*, constant readers and admirers of the celebrated authoress, have taken up the cudgels in the affair, and expressed the highest dissatisfaction of the conduct and statements of M. de Miracour; and the Duc Ridé de Rovigo, in the *Chronique de France*, has published so severe an article on the subject as to cause a report that a hostile meeting was to be the result. This assertion is, however, we believe, unfounded; though some grounds for it did, it appears, exist.

It appears that the quantity of verses and other literary *hommages* addressed to the Empress, and lodged at the *Secrétariat*, amounts to not less than from fifteen to twenty pieces a day. The same *attentions délicates* are constantly being offered to the Prince Napoléon, with the addition of books, complimentary addresses, concert tickets, &c., to such an extent that an official notice is obliged to be given, requiring that an authorisation shall be obtained previously. The Prince is, however, a liberal patron of artists and literary men. A short time since, taking up by accident the "Scènes Populaires" of Henri Monnier, the admirable author and actor of "Joseph Prudhomme," he immediately sent to the writer the magnificent bronzes from Feuchères and Klagmann. *Apropos* of Henri Monnier, he is about to read at the Théâtre Français a new piece of five acts, in verse; and the Odéon will shortly bring out "Les Dernières Armes de M. Coquaral," also from his pen.

On Saturday took place the interment of Madame Salvage de Faverches, the intimate friend and *exécutrice* of the Queen Hortense. Madame Salvage was no less remarkable for her talents and mental superiority than for the constant and earnest devotion she showed to the branch of the Imperial family at all times and under all circumstances. Her death resulted from an attack of apoplexy. Her fortune, which was considerable, she has left to the Emperor.

THE FRENCH WAR BUDGET.

The Corps Legislatif displays the greatest enthusiasm towards the Emperor. The bill, which was presented on Monday, authorising the Government to raise a loan of 250 million francs, to meet the warlike expenditure already incurred, was at once passed through the committee, the report brought up on Tuesday, and adopted unanimously. Nor was this all; the committee, of which M. Billault, the President of the Assembly, sat as chairman, passed a resolution that they would themselves bring up the bill and present it, with the adoption of the house, to the Emperor at the Tuileries that very evening, in order to mark the readiness with which the representative body was prepared to vote all necessary supplies for carrying on the war against Russia. The report of the committee is spiritedly conceived. It describes the authorisation of the loan to be a vote of confidence; throws on the Czar the whole responsibility of the war, which it recommends to be carried on with promptitude; and, taking up the Czar's allusion to the disasters of 1812, flings in his teeth the fact that the French army, which had everywhere beaten the Russians, succumbed beneath the rigours of an unexampled winter. The report recognises with complete satisfaction the alliance of England.

RUMOURED RETREAT OF THE RUSSIANS.

Reports were current in Vienna on Wednesday that the Russians were withdrawing from Kalafat; and that an army was to be formed in Moravia, with the left wing at Troppau, the right at Cracow, and a reserve at Olmütz.

The same despatch informs us that there are but a few thousand men before Kalafat, and that the Russians were marching towards the Schyl. The Turks had not gone beyond the fortifications at Kalafat.

Field-Marshal Paskiewitch had been named Generalissimo of the Army on the Danube.

THE FRENCH EXPEDITIONARY FORCE.

Twelve steamers are in course of armament at Toulon, and in a few days will be ready to sail with the troops destined for the East. The first division will leave on the 20th inst., and the second on the 15th of April. It is said that Prince Napoleon will not go first to Constantinople, but to the Greek frontiers. He will take with him a numerous corps of Chasseurs of Vincennes. Marshal St. Arnaud is expected to leave by the 15th, or at the latest on the 20th, and Prince Napoleon in the beginning of next month. His departure will probably be among the last, as commanding the reserve, and his official nomination is expected daily in the *Moniteur*.

It is stated that, should circumstances require it, the French force for the East will exceed 100,000. The first corps—that is, the one intended to be first on the ground at the opening of the campaign, will be from 45,000 to 50,000 men, with successive reserves, which will complete the amount mentioned.

THE CZAR'S REPLY TO THE EMPEROR OF FRANCE.

The Emperor of Russia has replied to the letter of Louis Napoleon at great length. The document, which is of the same insolent and untruthful character as most of the previous attempts at justification from that quarter, appeared in the *Journal de St. Petersburg* of the 24th ult. As we gave the letter to the Czar in a former publication, we now publish his reply:—

ST. PETERSBURG, 26th Jan. (9th Feb.), 1854.

Sire,—I could not reply better to your Majesty than by repeating, as they belong to me, the words by which your letter terminates: "Our relations must be sincerely amicable, and rest upon the same intentions, the maintenance of order, the love of peace, the respect of treaties, and mutual good will." Accepting, you say, that programme such as I myself traced it, you affirm to have remained true to it. I dare believe, and my conscience tells it to me, that I have not deviated from it. For, in the affair which separates us, and of which the origin does not come from me, I have always endeavoured to maintain friendly (*bienveillantes*) relations with France. I have avoided with the greatest care to come in contact on this ground with the interests of the religion professed by your Majesty. I have made, for the maintenance of peace, all the concessions in form and substance compatible with my honour; and in claiming for my co religionists in Turkey the confirmation of the rights and privileges which have been acquired for them since a long time, at the price of Russian blood, I have demanded nothing else than what was consequent upon treaties. If the Porte had been left to itself, the difference which holds Europe in suspense would have been long since settled. A fatal influence alone came and threw itself across it. By provoking gratuitous suspicions, and exalting the fanaticism of the Turks, by misleading their Government on my intentions and the real bearing of my demands, it has made the question assume such exaggerated proportions that war has been the result.

Your Majesty will allow me not to enter into too long details of the circumstances exposed in your particular point of view of which your letter presents the chain. Various acts of mine, very unexactly appreciated, in my opinion, and many a controverted fact, would necessitate to be re-established at least in such measure as I conceive them, long developments, scarcely suitable in a correspondence from Sovereign to Sovereign. It is thus that your Majesty attributes to the occupation of the Principalities the wrong of having suddenly translated the question from the domain of discussion to that of fact. But you overlook that that occupation, still purely eventual, was antic pated, and in a great measure caused, by a very grave exterior fact—that of the apparition of the combined fleets in the neighbourhood of the Dardanelles. Moreover, long before that, when England still hesitated to assume a menacing attitude towards Russia, your Majesty had first sent your fleet to Salamis. That offensive (*blessante*) demonstration surely evinced little confidence in me. It was of a nature to encourage the Turks, and paralyse beforehand the success of negotiations by showing them France and England ready to maintain their cause at all risks. And, again, your Majesty attributes to the explanatory commentaries of my Cabinet on the Vienna Note the impossibility in which France and England found themselves to recommend its adoption to the Porte. But your Majesty may be able to recall to mind that our commentaries followed, and did not precede, the unexpectation, pure and simple, of that Note; and I think that the Powers, if they really desired peace, were bound to demand as a preliminary that adoption pure and simple, instead of permitting the Porte to modify what we had adopted without change.

Moreover, if any point of our commentaries was of a nature to give rise to difficulties, I offered at Olmutz a satisfactory solution, which appeared likely to satisfy Austria and Prussia. Unhappily, in the interval a portion of the Anglo-French fleet had already entered the Dardanelles, under the pretext of protecting there the life and property of English and French subjects; and I did not believe myself free to enter without protesting the treaty of 1841, it was necessary that war should be declared by the Ottoman Government. It is my opinion that if France and England had declared peace, as they did, they should, at all cost, have prevented this declaration of war, or, when war was declared, at least have acted so as to keep it within the narrow limits which I desired to trace for it on the Danube, so that I should not have been forcibly torn away from the purely defensive system it was my wish to follow. But from the moment that the Turks were allowed to attack our Asiatic territory, to storm one of our frontier posts (even before the formal fact for the commencement of hostilities), to blockade Akaltsikh, and to devastate the provinces of Armenia, —from the moment that it was left free to the Ottoman fleet to convey troops, arms, and ammunition to our coasts, could it be reasonably expected that we should patiently await the result of such an attempt? Was it not to be supposed that we would do everything in our power to forestall it? The affair of Sinope was the consequence—the forced consequence—of the attitude adopted by the two Powers; and the event surely could not appear to them unexpected. I had declared my wish to remain on the defensive, but before the explosion of the war, as long as my honour and my interests allowed me, as long as it remained within certain limits. Was that done which could have been done to prevent those limits being passed? If the part of spectator, or even of mediator, did not suffice for your Majesty, and you desired to be the armed auxiliary of our enemies, then, Sire, it would have been more worthy of you to have said so frankly and openly, and by declaring war to me. Then every one would have known his part. But is it equitable to reproach us with criminality, after an act which nothing was done to prevent? A Franco-Anglo-Turkish fleet peacefully in the bosom of all those who, in France and in England, entertain the lively sentiment of national dignity, does your Majesty suppose that the menacing presence of the same fleet before Constantinople, and the noise of their entrance into the Black Sea, are facts without an echo in the heart of the nation which I have the honour to defend? I learn from you, for the first time, that explanations made to me here did not mention it—that at the same time they protected the provisioning of the Turkish troops on their own territory, the Powers have resolved to *forbid us the navigation of the Black Sea*; that is to say, apparently, the right of provisioning our own coasts. I leave it to your Majesty to consider if that is, as you say, to facilitate the conclusion of peace, and if, in the alternative of which I am placed, I am already to discuss, to examine even for a moment, your propositions of an armistice, of the immediate evacuation of the Principalities, of negotiating with the Porte as commanded to be submitted to a conference of the four Powers—would you, Sire, yourself, if you were in my place, accept such a position? Would your national spirit permit you to do so? I boldly say no. Great to me, then, the right to think as you do. Whatever your Majesty may decide, it is not threats that will make me give in. My confidence is in God and in my right: and Russia, I will guarantee it, will know how to show herself in 1854 what she was in 1812.

If, however, your Majesty, less indifferent to my honour, should frankly return to our programme—if you will offer me a cordial hand, as I now offer it to you, at this last moment, I will willingly forget how offensive the past has been to my feelings. Then, Sire *but then only*—we may discuss, and perhaps come to an understanding. Let your first step be to prevent the Turks taking the forces of the Ottoman Empire. I willingly promise they shall have nothing to fear from attempts of mine. Let them send me a negotiator, and I will give him a fitting reception. All conditions are known to Vienna. They are the only basis upon which I can treat.

I beg of your Majesty to believe in the sincerity of the sentiments with which I am, Sire, your Majesty's good friend,

NICOLAS.

THE FRENCH CIRCULAR.

The following spirited circular to the diplomatic agents of France has been issued by the Minister of Foreign Affairs. The Czar's letter had appeared in the French papers on Saturday; and this able exposure of its falsehoods and fallacies was given in the *Moniteur* of Monday.

PARIS, March 5, 1854.

Sir,—You are now cognisant of the answer of the Emperor Nicholas to the letter of his Imperial Majesty, and you have also read the manifesto which the former Sovereign has just addressed to his people. The publi-

cation of these two documents has destroyed the last hopes which might have been placed upon the wisdom of the Cabinet of St. Petersburg; and that name hand which had acquired honour by the firmness with which it had offered support to Europe, shaken to its foundation, now opens the way to passions and chances. The Government of the Emperor is deeply afflicted at the inutility of its efforts and the ill success of its moderation; but, on the eve of the great struggle, which he has not desired, and which the patriotism of the French nation will enable him to assist, he feels it necessary once more to disavow responsibility for results, and to place the whole weight of it upon that Power which will have to account for those results to history and to God. Important considerations of propriety, I know, render my task difficult; but I shall fulfil it with the certainty that I am not saying one word which is not dictated by my conscience.

In addressing the Emperor of Russia in terms in which the utmost conciliation was united with the most noble frankness, his Imperial Majesty was desirous of clearing the question of all the obscurities which kept the world in suspense between peace and war, and endeavoured so to arrange it that there might be no offence against the dignity of any one. Instead of acting upon a similar principle, and accepting the friendly hand which was held out to him, the Emperor Nicholas preferred to secure for that upon which public opinion had definitively decided; and to represent himself as having had to contend, from the commence nent of a crisis provoked by the pressure exercised by a preconceived and systematic system of hostility, which was fatally calculated to bring about that state of things which has arrived. It is not my voice, Sir, it is that of Europe which replies, that never at any period did an imprudent policy meet with adversaries more calm or more patient in their res stance to designs which their judgment condemned, and which considerations of primary importance compelled them to resist.

I will not go back to past events, upon which such full light has been thrown; but I must once more repeat, that it is no longer allowable to assimilate the dispute respecting the privileges of the Latins in the Holy Land with the claim now put forward. That question was arranged from the commencement of the visit of Prince Menschikoff to Constantinople, and it is the claim which that Ambassador raised upon one point, when he had obtained satisfaction upon another, which has roused the whole world, and inspired all the Cabinets with the same sentiment of precaution and the same desire for conciliation.

It is necessary to enumerate all the attempts, the failure of which is only attributable to an invincible obstinacy? Nobody is ignorant of them, and there is not any one who is not aware that if decisive demonstrations were made during the progress of negotiations, each of those demonstrations was preceded by an aggress ve act on the part of Russia.

I will only recall to recol ection the fact that if the French squadron at the end of March, anchored in the Bay of Salamis, it was because since the month of January there had been an immense assemblage of troops in Bessarabia. If the naval forces of France and England approached the Dardanelles—where they only arrived at the end of June—it was because a Russian army had been encamped on the banks of the Pruth, and because the resolution to cross that river had been taken, and had been officially announced since the 31st of May. If at a is or period our fleets were at Constantinople, it was because cannon resounded on the Danube; and, in short, if they entered the Black Sea, it was because, contrary to the promise of acting on the defensive, Russian vessels had left Sebastopol to destroy the Turkish vessels at anchor in the port of Sinope. Every step which we took, in concurrence with England, in the East, had peace for its object; and we did not desire to interfere between the belligerent parties. Every day, however, on the contrary, Russia advanced openly towards war. Assuredly, if there were two Powers whose antecedents and whose recent relations rendered it likely that they would be indulgent to Russia, and abortive to our movements in a dispute which threatened to involve France and Great Brita n in a conflict with the immense empire so close to them, those powers were Prussia and Austria. You know, Sir, that the principles by which we are actuated are known, and that Europe, constituted as a jury, has pronounced a solemn verdict upon pretensions and acts of which no eulogy, however high the source whence it may emanate, can now change the character. Thus, the dispute is not between France and England, as sting the Porte, and Russia; it is between Russia and every State which has a respect for what is right, and whose opinion and whose interest must compel it to support the good cause.

I therefore confidently contrast the unanimity of the great Cabinets with that which, in the recollections of 1812 addressed directly to a Sovereign who had just made an honourable and powerful effort at conciliation. The whole conduct of the Emperor Napoleon sufficiently attests that, far proud of the inheritance of glory left him by the head of his race, he has neglected nothing in order to render his accession to the throne a pledge of the peace and tranquillity of the world.

I will say one word, Sir, of the manifesto in which his Majesty the Emperor Nicholas announces to his people the resolutions he has taken. Our epoch, however troubled, had at least been exempt from one of the evils which most afflicted the world in former days—I mean the wars of religion. Now, however, an echo of those disastrous times is made to resound in the ears of the Russian people. There is an affectation of opposing the Cross to the Crescent, and an appeal is made to fanaticism for that support which cannot be obtained from reason. France and England need not defend themselves from this imputation made against them. They do not support Islamism to the overthrow of Greek faith. They go to protect the Ottoman Empire against the ambitious covetousness of Russia. They go there with the conviction that the presence of their armies in Turkey will destroy the prejudices already much weakened, which still separate the different classes of the subjects of the Sublime Porte, and which would be reanimated by the general appeal sent from St. Petersburg, by provoking hatred of race and a revolutionary explosion, should paralyse the generous intentions of the Sultan, Abdul-Medjid. For us, Sir, we seriously believe that by giving our support to Turkey we shall be of more use to the Christian faith than the Government which uses it as an instrument to advance its temporal ambition. Russia is too obvious, in the reproaches she makes against others, that she is far from exercising in her own empire, in reference to the sects not professing the dominant faith, a tolerance equal to that to which the Sublime Porte has a good right to lay honourable claim; and that, if she were to display less apparent zeal for the Greek religion beyond her frontiers, and more charity towards the Catholics at home, she would better obey the law of Christ which she so pompously invokes.

Receive, &c. DROUYN DE LHUYS.

THE SUMMONS TO THE CZAR.

The messenger conveying the summons of France and England to the Czar, requiring him to withdraw his troops from Turkey within a specified period, left Vienna on Tuesday. Neither the Austrian nor the Prussian Government has joined the Western Powers in this act. Austria is still exclusively intent on securing the tranquility of the Slaves on both sides of the Danube. This is the leading idea of an official document published in Vienna on Tuesday, in which the demands made by France and England on Russia are characterised as thoroughly just, and in accordance with the interests of Europe. It is then said that to the last, that is until now, Austria has done its duty to Europe, and immediately following, it is said, that now the sole duty of the Austrian Government is to maintain the interests of the monarchy.

NEW RUSSIAN PROPOSALS.

At the commencement of this week the Czar sent what purported to be proposals of peace to Vienna; the reception of which at first gave rise to hopes of an accommodation. When, however, the proposals came to be examined, it was found that they contained all the inadmissible demands of previous Russian projects. The representatives of France, England, Austria, and Prussia decided, therefore, that, as the new project does not come up to the requisitions of the last protocol, to which they had set their names, it cannot be entertained.

THE RUSSIAN FLEET IN THE BALTIC.

The Russian ships were out cruising last year, and continued so, on the express orders of the Emperor himself, to so late a period, that only a portion of the fleet got back, and the remainder are now at present at Port Baltic, where they now remain, with scarcely any protection from a superior force. In a few days it is said that this portion of the fleet will be free from the impedi ments of the ice, but they can neither get up to the others, nor can the latter come down to them; hence their attempts to cut through the ice to form a junction.

To take the Port Baltic fleet as they are would require no very large force. The ships that we have already fixed to that capital would be equal to the task; but not a day should be lost, for if they mean mischief as soon as they can float, they can do irreparable damage not only to our allies, but they may visit our own northern shores, or attack some of our unprotected colonies.

The negotiations between the Russian and Swedish Governments are not yet terminated; and, in the present position of affairs, it is feared at Stockholm, that Russia, in order to give more weight to its demands, will make a demonstration. It has since been purchased by Messrs. H. Graves and Co, who have placed it in their rooms for the inspection of the numerous admirers of the truly gallant tar. The portrait is a half-length, whereas the published engraving shows only the head and shoulders; and the attitude is very characteristic and noble—the right hand resting on the hip, the left on a sword, which stands on the ground. The smoke and fire of the battle-field are seen below. In all respects it is immeasurably superior to the small print above referred to; and we think it ought to be engraved as a worthy memento of struggles for the great principle of constitutional liberty and national independence in two extreme quarters of Europe.

THE RUSSIAN HOLY WAR.

The Commander-in-Chief of the Russian army in the Principalities is said to have published a decree, ordering that all the Catholic churches and chapels in them shall be closed, and declaring that no other places of Christian worship than those of the Greek faith shall be authorised. The decree states that the measure is adopted in the interest of order and public security. If this prove true, we may reasonably infer that the relations between Russia and Austria are on a very unfriendly footing. Nothing more offensive to Austria could be done by Russia, seeing that Austria regards herself as the protectress of the Catholic religion in the provinces under the suzerainty of Turkey.

WRETCHED CONDITION OF THE RUSSIAN ARMY.

The *Vienna Medical Newspaper* contains a letter from a Russian army surgeon, of the 27th ult., who had just returned from Bucharest, having during his visit inspected the hospitals at Yassy, Roina, Fautikenon, Michai Wods, and other places, and also the field hospitals round about the capital. They were all crowded to excess, and not a bed was unoccupied, the perpetual attacks of the Turks supplying candidates for admission faster than the wounded became convalescent. The most gloomy dread was felt at the prospect of spring, at all times dangerous to new comers, but this time, coupled with famine, it is sure to bring plague and pestilence. All the diseases likely to spring from the hardships of every conceivable kind which the men have endured during their long marches and bivouacs in a wretched country, without roads, shelter, fire, or food, are rife. The very water which they are compelled to drink is brackish and unwholesome. The country is described as marshy and congenial, a land of poverty and desolation, of filth and abomination.

THE GREEK INSURRECTION.

The real cause of the present outbreak is said to have been the overbearing conduct of the governors of Albania, who suddenly demanded the taxes, which the inhabitants were unable to pay. It is not so much its character which renders it dangerous, as the absence of Turkish troops in that part of the country. The Government is about to take energetic measures for the repression of this attempt at rebellion.

DENMARK—SWEDEN.

COPENHAGEN, March 3rd.—The news from Sweden is still undecided. no one knows whether Russia has acknowledged her neutrality or not, there being good authorities on both sides. The common opinion is that the first act of the Czar in the Baltic will be a *coup de main* against Sliito, in the island of Gotland. In Carlskrona all is life and activity: a small fleet is being got ready there with all despatch. The land troops are placed on a war footing, leave being no longer given, and all the superior officers have been sent to their regiments.

Among the common people there is great enthusiasm for "war;" and if you ask with whom, the answer is ready, "Sweden's born enemy is—RUSSIA!"

PRUSSIAN PREPARATIONS FOR WAR.

The King of Prussia has put his army on a war footing. He has divided it into three grand divisions, the first of which is stationed in the Baltic provinces, the second in Silesia, and the third on the Rhine. The first two of these divisions are numerically very strong, and are composed of Prussia's finest troops. The smallest division is the one on the Rhine. This disposition of the Prussian army is considered a clear indication that, in the event of actual hostilities, Prussia does not mean to be neutral; and that when she does assume the offensive, it will be as the ally of the Western Powers. She places the main body of her forces, not towards the frontiers of France, but towards those of Russia.

RUSSIAN AMERICAN PRIVATEERS.

The New York *Courrier des Etats Unis* of the 18th ult. states that there were several Russian officers in different parts of the United States endeavouring to engage vessels and enlist men for privateering purpose.

The *New York Herald* calls upon the United States Government immediately to direct proper attention to the matter, arguing that Russia will naturally do as alleged, and adding, "So long as vessels are fitted out in American ports for the slave trade, we must believe that there is no difficulty in procuring them; we would be tempted by the promised profit of the adventure to accept letters of marque from the Russian Government, and cruise against the commerce of her foes."

THE *Independance* of Brussels states that M. de Kisseleff had a private audience of the King of the Belgians on Wednesday.

ONE of the first enterprises of the Princess Lieven at Brussels, in favour of her master, was to try to gain over the three French exiled Generals, namely, Generals Changarnier, Bedeau, and Lamoricière. She accordingly sent an intimation to them that they were the objects of Russia's hatred. To the honour of those officers, they simultaneously declined the invitation, intimating that though they were in enmity with the reigning ruler of France, they were still Frenchmen, and French soldiers; and that they could not visit any Russ an so long as Russia was at war with France, as the enemies of France would always be theirs.

HER MAJESTY'S VISIT TO THE FLEET.

Shortly after ten o'clock yesterday morning her Majesty, Prince Albert, the Prince of Wales, the Princess Royal, the Princess Mary, and Prince Alfred Albert, accompanied by Earl Mulgrave, Lord Ernest Bruce, Lord Wateriark, Colonel Grey, the Hon. Captain Byng, the countess Jocelyn, Lady Frances Bruce, Lady Fanny Howard, and the Hon. Matilda Paget, left Buckingham Palace for the South-Western Railway, *en route* for Spithead, for the purpose of viewing the Baltic fleet previous to its departure. The Royal party with suite occupied four carriages, and was attended by a company of Lancers. Upon arriving at the new station in the Wandsworth-road, her Majesty was received under a splendid marquee by Sir W. Heathcote, M.P., the chairman of the line, and the other officials. Mr. Lock, M.P., the engineer, having examined the engine which was attached to the Royal carriages, and a telegraphic message having been passed to keep the line clear, the Royal train proceeded on its way at a quarter to eleven o'clock, and arrived at the Royal Clarence Yard, Portsmouth, shortly before one o'clock, when her Majesty and suite embarked on board the Royal screw yacht tender *Fairy*, and at once proceeded to Spithead, and passed through the fleet *en route* to Osborne.

It was understood that the Queen would be again amongst the fleet at an early hour this day; and, according to present orders, at twelve o'clock at noon, the fleet will proceed *en route* to their destination: the rendezvous, it is said, at present fixed, being at a concerted anchorage some distance below the Caitegat.

The Right Honourable the First Lord of the Admiralty, Sir James Graham, with some of the other members of the Board, also proceeded to Portsmouth yesterday, their Lordships' steam-yacht, the *Black Eagle*, having arrived there for their reception, as a so for the accommodation of a distinguished par y who will be present at the departure of the fleet

Six pilots from Deal will be at Portsmouth to navigate the fleet to the Downs, and on their arrival there some pilots from Sheerness will be ready to take the fleet further northward.

Although the Cattegat may be the rendezvous of the Baltic fleet, there is no doubt that our advanced steam squadron will keep a sharp lookout up to Port Baltic. But the sooner the first division is at near Copenhagen as they are now to Portsmouth, the more satisfied will the country feel at this crisis.

FINE ARTS.

PORTRAIT OF SIR CHARLES NAPIER.

Many of the members of the two services, and the print-collecting public, may be aware that when Sir Charles Napier (then Commodore) performed those gallant feats so widely described by Lord Palmerston at the Reform Club dinner the other day, which were the means of placing Donna Maria on the throne of Portugal, his portrait was painted at his house, by Mr. Simpson, pupil and assistant of Lawrence; and that a print taken from this portrait was subsequently engraved and published by Messrs. Graves and Co. It appears that the picture itself was, shortly afterwards, lost sight of, and remained so until a few days ago, when its resting place was accidentally discovered. It has since been purchased by Messrs. H. Graves and Co, who have placed it in their rooms for the inspection of the numerous admirers of the truly gallant tar. The portrait is a half-length, whereas the published engraving shows only the head and shoulders; and the attitude is very characteristic and noble—the right hand resting on the hip, the left on a sword, which stands on the ground. The smoke and fire of the battle-field are seen below. In all respects it is immeasurably superior to the small print above referred to; and we think it ought to be engraved as a worthy memento of struggles for the great principle of constitutional liberty and national independence in two extreme quarters of Europe.

PREPARATIONS FOR WAR.

THE BALTIC FLEET.

The following is, we believe, a correct list of the vessels comprised in this division—which it is supposed will sail for its destination within a few hours after it has been inspected by her Majesty:—

Duke of Wellington, screw, 131 guns, flag of Vice-Admiral Sir C. Napier, K.C.B.
Neptune, sailing, 120, flag of Rear-Admiral Corry.
Royal George, screw, 120, Capt. Codrington, C.B.
St. Jean d'Acre, screw, 101, Capt. Hon. H. Keppel.
Princess Royal, screw, 91, Capt. Lord C. Paget.
Prince Regent, sailing, 90, Capt. H. Smith, C.B.
Monarch, sailing, 84, Capt. Erskine.
Cressy, screw, 80, Capt. Warren.
Boscawen, sail., 70, Capt. Glanville.
Edinburgh, screw, 60, flag of Rear-Admiral Chads.
Blenheim, screw, 60, Capt. Hon. F. Pelham.
Hogue, screw, 60, Capt. W. Ramsay.
Ajax, screw, 58, Capt. Warden.
Impérieuse, screw, 51, Capt. Watson, C.B.
Euryalus, screw, 51, Captain G. Ramsay
Arrogant screw, 47, Capt. Yelverton.
Amphion, screw, 31, Capt. Key.
Leopard, paddle, 18, Capt. Oxford.
Odin, paddle, 16, Capt. F. Scott.
Magicienne, paddle, 16, Captain T. Fisher.
Valorous, paddle, 16, Capt. Huckle.
Bullfrog, paddle, 6, Captain W. K. Hall.
Gorgon, paddle, 6, Com. A. Cuming.

The total force of this first division is as follows:—23 ships, 1336 guns, 13 326 men, 8540-horse power.

This first division of the Baltic fleet exceeds that of the whole force under Vice-Admiral Dundas, except in the number of vessels; for in the Mediterranean we have 32 ships, 1282 guns, 12,740 men.

TROOPS FOR THE EAST.

List of the regiments and battalions now on voyage to the East. Grenadier Guards, 3rd Battalion, embarked 22nd February, 1854. Coldstream Guards, 1st Battalion, embarked 22nd February; Scots Fusilier Guards, 1st Battalion, embarked 28th February; 4th (King's Own) Regiment, embarked 8th March; 28th Regiment, embarked the 22nd February; 33rd Regiment, embarked 1st March; 50th Regiment, embarked 24th February; 53rd Regiment, embarked 27th February; Rifle Brigade, 2nd Battalion, embarked 24th February.

Under orders for embarkation for the East: 8th Hussars; 17th Lancers; 1st Foot, 1st Battalion; 7th Fusiliers; 19th Regiment, 3rd Fusiliers; 21st Fusiliers; 38th Regiment; 42nd High anders; 93rd Regiment; 71th Regiment; 79th Highlanders; 88th Connaught Rangers; 90th Regiment; 97th Regiment.

Regiments under orders to proceed from Gibraltar to Turkey: 30th Regiment; 44th Regiment; 55th Regiment.

Regiments under orders to proceed from Malta to Turkey: 41st Regiment; 47th Regiment, 90th Regiment.

The following regiments have embarked from England: 17th, 39th, and 89th, for Gibraltar, to replace the 30th, 44th, and 55th; 9th, 32nd, and 14th, for Malta, to replace the 41st, 47th, and 49th. The 27th, 83rd, and 90th, Light Infantry, are under orders for India. The 13th Regiment, 1st Battalion, and 46th Regiment, proceed to Van Diemen's Land.

ARRIVAL OF THE GUARDS AT MALTA.

A letter from an officer in the Grenadier Guards gives a gratifying account of the health and spirits of all on board the *Ripon*. The run from Cowes-roads to Gibraltar was made in five days, under the most favourable circumstances of wind and weather. During each morning the men were exercised at the Minié rifle practice, by firing at a target hanging from the end of one of the ship's yards, whilst the officers went through their exercise with the revolver pistols. The afternoons and evenings, after leaving the colder latitudes, were devoted to singing and dancing, the festivities of the day being usually wound up with "God save the Queen," in which the military as well as the ship's crew joined with enthusiasm.

On the afternoon of the 27th ult., when within a few hours' sail of Gibraltar, the *Ripon* passed a French man-of-war, the crew of which cheered the English colours heartily.

The *Ripon* stopped a few hours to coal at Gibraltar; but the *Orinoco* passed on her way to Malta. The *Niagara*, with the 34th Regt., arrived at Malta on the 4th inst, and the *Ripon* on the following day.

INSPECTION OF THE ROYAL ARTILLERY BY PRINCE ALBERT.

It being understood that Prince Albert would inspect the Artillery under orders for the East, on Woolwich Common, on Thursday morning, an immense assemblage of persons were present to witness the imposing sight. The hour named for the troops assembling was a quarter past ten o'clock, but at an earlier period Her Royal Highness arrived on the ground, with the Duke of Cambridge and Lord Raglan, and the principal officers of the staff.

Prince Albert, the Duke of Cambridge, and Lord Raglan having gone through the various lines and inspected each company, the whole force passed in open review order. The Prince expressed his satisfaction to the officers in command at the soldierly appearance of the men, and the activity and readiness shown in their various appointments.

The Royal party visited the Royal Arsenal, and, after inspecting the works, returned to the mess-room and partook of luncheon. Prince Albert and the Duke of Cambridge, as also Lord Raglan, appeared in private costume.

LAUNCH OF THE ROYAL ALBERT.—This interesting naval event will take place on the 15th of next month, the day after Good Friday. The ceremony of christening will be performed by the Princess Royal, in the presence of the Queen and Prince Consort. The *Royal Albert* is the largest man-of-war that has been built at Woolwich. She is nearly of the same dimensions as the leviathan *Duke of Wellington*, the flag-ship of the Baltic fleet, is provided with a screw-propeller, and will carry the same number of guns (131).

TEN men-of-war gun brigs are to be immediately commissioned to guard the eastern and north eastern coast of England from privateers.

A SHIP of 350 tons burden has been chartered by Government, for the purpose of forwarding porter to the troops at the rate of 3d. per quart. An arrangement has been entered into with an eminent London brewer to carry this into effect.

ALL the British officers temporarily residing in Austria have received orders, through their Ambassadors and Consuls, to join their regiments immediately.

SEVERAL deserters from the 33rd Regiment rejoined head-quarters previous to its embarkation for Constantinople, in the hope of being reinstated and allowed to proceed with the corps to Turkey.

IT is said that the hire of the *Himalaya* steamer alone amounts to £17,000 a month; whilst others are engaged by Government at £14,000, £12,000, and various sums of near y a corresponding magnitude.

SIR HAMILTON SEYMOUR arrived at Dover, on his return from St. Petersburg, on Sunday evening.

A LARGE number of officers and soldiers will be sent to Malta and Gibraltar by each mail-packet for those ports which leaves Southampton.

MR. OLIVER, purveyor to the Mail Packet Companies at Southampton, has received an order from Government for an unlimited supply of fodder for cattle, which is to be sent from Southampton to the victualling-yard at Deptford

IT is understood that the Admiralty will provide steam-vessels for towing the sailing tran-ports to a good offing; and arrangements will also be made for towing the transports through the Straits of Gibraltar as they arrive, *en route* to the East.

THE Belfast Harbour Commissioners have put themselves in communication with the Board of Admiralty, in reference to the placing of the town and harbour in a state of security against the risks of war.

EXPORTATION OF CORN FROM SEVILLE.

THE dearness and scarcity of provisions in Spain have caused disturbances in various parts of the country. Attempts have been made to persuade Government to forbid the exportation of grain, but without effect. At Zomora and other towns, there have been riots, in which the populace has endeavoured to stop the exportation of food from one district to another; but these unreasonable outbreaks have been effectually suppressed.

The Illustration Engraved upon the next page presents a picturesque scene of commercial activity, the Shipping of Corn from the city of Seville, where the exportation is considerable, by the Guadalquiver, which is navigable for vessels of 100 tons. Apart from its trading bustle, this scene presents a striking picture of Spanish scenery and life. Here we have one of the many towers of the fine old Moorish city; the crowd in their picturesque costumes, in provincial varieties; those of the better class furnishing studies for the painter; and the country people, with their mules and waggons, not a whit less artistic.

EXPORTATION OF COEN, AT SEVILLE.—(SEE PRECEDING PAGE.)

ARRIVAL OF THE DUKE OF SAXE-COBURG AT PARIS.

The journey of the reigning Duke of Saxe-Coburg (says the *Moniteur*), has, under existing circumstances, a character of opportuneness which may be readily appreciated. His position in Germany, the importance of his relations and alliances with the great majority of crowned heads, are an element of confidence for all who see in the union of the States of Western Europe certain chances of shortening, if not of preventing, serious events. The extreme cordiality and the complete accord which presided over the first interview, and the relations which have been established between the Emperor of the French and the reigning Duke of Saxe-Coburg inspire a favourable opinion of the impression which the residence of the Prince of Saxe-Coburg will leave in France, and there is reason to believe that he will carry the same with him into Germany.

The Duke of Saxe-Coburg arrived in Paris on Friday (last week), at half-past four, from Berlin by Brussels. The Emperor had sent General Count Rognet, one of his sides-de-camp, and an orderly officer, to receive his Royal Highness at the frontier. The railway train having stopped a few minutes at Valenciennes, military honours were rendered to his Royal Highness by a part of the garrison; similar honours were rendered to him on his arrival at the Paris terminus, where his Royal Highness was received by the Prince de Chimay, the Grand Marshal of the Palace, and the Grand Huntsman of his Majesty. Court carriages were in waiting to take the Duke and his suite to the Tuileries. Scarcely had his Royal Highness entered the apartments prepared for him in the Pavillon Marsan, when he was visited by the Emperor, who afterwards led in the Empress. In the evening the Duke dined at the Tuileries; as did Prince Jerome Napoleon, Prince Napoleon, the Princess Mathilde, Prince and Princess Murat; M. Firmin Rogier, the Belgian Minister, and Madame Firmin Rogier; and the Prince and Princess de Chimay.

The Duke also paid a visit to Prince Lucien Bonaparte, who, accompanied by his secretary, returned the visit the day following.

On Saturday the Emperor drove out to the Avenue from Paris to Versailles, accompanied by the Duke of Saxe-Coburg, to review a body of cavalry collected there for the purpose. The Emperor was dressed in the uniform of a General of Division, and the Duke in a white uniform, with a silver helmet. The troops reviewed consisted of the 12th Dragoons, the 9th and 10th Cuirassiers, and the 1st and 2nd Carbineers. The fine and soldier-like bearing of these troops appeared to strike the Duke with admiration. The review lasted about three-quarters of an hour.

RECEPTION OF THE DUKE OF SAXE-COBURG, AT PARIS.

HERCULE, 100, TOWED BY CAFFARELLI, 450-HORSE POWER.
JEAN-BART, 90, 650-HORSE POWER, TOWED OUT LATER IN THE DAY, BY PRIMANGUET.
AUSTERLITZ, 100, 650-HORSE POWER, REMAINS AT BREST.
DUGUESCLIN, 90, TOWED OUT BY PRIMANGUET, 400-HORSE POWER. REAR-ADMIRAL CHARNER'S FLAG-SHIP.
MONTEBELLO, 120, 160-HORSE POWER. VICE-ADMIRAL BRUAT'S FLAG-SHIP.

THETIS, OLD FRIGATE. SAILORS' BOYS' SCHOOL-SHIP AND PRACTICE-BRIG.
ENTRANCE OF BREST HARBOUR.
HORSE-SHOE BATTERY.
PORTSIC POINT, LIGHTHOUSE, AND BATTERY

DEPARTURE OF THE OCEAN FRENCH FLEET FROM BREST.

On the 6th of February last the town of Brest was thrown into a state of considerable excitement, by the sudden announcement that the noble Fleet, which had for some months past graced its harbour, was ordered to proceed to sea without delay, under the command of Vice-Admiral Bruat.

The harbour of Brest is the finest in Europe, affording perfect shelter and secure anchorage for a fleet of the greatest magnitude. Its opening is not above two miles in width, although the bay is fully twelve miles in width at a short distance from its entrance.

The modern improvements in steam navigation have removed the only drawback which existed to counteract the advantages of this invaluable harbour—the difficulty of entrance and exit through a channel only two miles in width—the obstacles to the navigation of which by sailing vessels are still further increased by a rock which juts out in the centre of this narrow passage.

From an early hour every spot commanding a view of the bay was thronged by a multitude eager to obtain a sight of the grand spectacle about to take place. At length the signal of departure was given; and the roar of the cannon was re-echoed from the lofty cliffs surrounding the harbour; and the Fleet, composed of five sail of the line and three steamers, moved majestically towards the entrance of the bay, in spite of a head wind. Repeated cheers burst from the lips of the spectators on shore, who seemed proud to behold their country thus nobly represented. They were answered no less heartily by the men on board, who, as well as the officers, are said to be animated by the best spirit, and most anxious to contend in honourable rivalry with that nation which they had previously seldom met on the field of battle but as foes.

The destination of the Fleet was kept secret; but they have since made their appearance at Toulon, and passed the Straits of Gibraltar on the 15th ult. It is said they will be employed in the conveyance of troops, until required to join the Baltic fleet, of which they are supposed to be intended to form a part.

The accompanying Illustration is from a sketch by M. Barrellier.

The *Moniteur* has published the following circular, containing the instructions of the Minister of Marine to the general, superior, and other officers commanding at sea:—

PARIS, Feb. 23.

Sir,—My despatch of the 18th inst. has especially called your attention to the grave complications which the Eastern question has created in Europe. The negotiations opened for the purpose of settling pacifically the differences which have arisen between Russia and Turkey have remained without result, and everything leads to the belief that new efforts will remain without effect.

England and France have resolved to protect the Ottoman Empire, and to oppose, even by force, the projects of invasion by Russia. These two great nations are intimately united in their policy, and have mutually given the most certain pledges of their alliance. Their squadrons cruise in concert in the Black Sea. They lend each other the most loyal assistance. The two Governments, after having adopted a common policy, have also agreed as to their mode of action.

This alliance of France and England must not show itself only in the seas of Europe. The Government of his Imperial Majesty, and that of the Queen of Great Britain, desire that the same union, the same accord, should reign in every latitude of the globe.

The naval forces of England and France must therefore lend each other mutual assistance in all regions, even the most distant.

Immediately after the reception of these instructions you will take care to place yourself in relations with the chiefs of the stations or the commanders of the ships of war of Great Britain. You must combine, in concert with them, all the measures which may have for their object the protection of the interests, the power, or the honour of the flag of the two friendly nations.

You will lend each other, or this end, mutual assistance, whether you are to attack the enemy when hostilities will have commenced, or when the declaration of war shall have been made; or whether you should find yourself, from the present moment forth, in the position of being obliged to defend yourself.

You must grant your protection to the commercial shipping of Great Britain by the same title that the ships of war of England will lend their aid and assistance to the ships of our commerce.

In one word, the two Governments of France and England desire that their armed naval forces should act as if they belonged solely to one of the two nations. I reckon, therefore, that, in as far as you are concerned, you will never lose sight of this rule of conduct, and that you will be able to put it in practice in a manner to cement still more, if possible, the intimate union of the two countries.

As long as the hostilities between France and England on the one part, and Russia on the other, shall not have commenced, or that the declaration of war shall not have been made, you will dispense with taking the initiative in measures of aggression, and you will hold yourself on the defensive. I shall take care, as soon as the moment shall have arrived, to transmit to you the instructions necessary for the attack.

Receive the assurance of my very distinguished consideration.

THEODORE DUCOS, Minister of Marine and Colonies.

CALENDAR FOR THE WEEK.

SUNDAY, March 12.—2nd Sunday in Lent. St. Gregory.
MONDAY, 13.—Earl Grey born, 1764. Dr. Priestley born, 1733.
TUESDAY, 14.—Klopstock died, 1802.
WEDNESDAY, 15.—New London-bridge commenced, 1824.
THURSDAY, 16.—Battle of Culloden, 1746.
FRIDAY, 17.—St. Patrick.
SATURDAY, 18.—Princess Louisa born, 1848. Horne Tooke died, 1813.

THE WAR WITH RUSSIA.
SAILING OF THE BALTIC FLEET.

GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
On SATURDAY NEXT, MARCH 18th, 1854:

Giving a variety of Pictures of this glorious Fleet, which sails early next week from Portsmouth to the Baltic Sea.

The Pictures will be drawn by E. DUNCAN, G. THOMAS, E. WHEDON, and S. READ.

The following Scenes will be fully Illustrated:—

Review of the Fleet by her Majesty.
The Fleet Leaving England.
The Flag-ship of the Commander of the Fleet.
Keeping up the Supply of Provisions and Water.
Sketches on Board a Man-of-War: Gunnery Practice. Firing at a Target. Fitting for Service. Drawing Gunnery Stores. Saluting, &c.

Whole-Page Map of the Baltic Sea. With Description.

Sketches from the Seat of War: consisting of—
Officers presented to the General-in-Chief, Achmet Pachs, at Kalafat.
Turkish Regular Cavalry.
View of the Interior of the Intrenchment of Kalafat.
View of Widdin.
Turkish Convoy Proceeding to the Seat of War.
Yaooub Aga, the Polish Officer Commanding the Irregulars, or Bashi-Bozouks.
Punishing a Bashi-Bozouk.

A NEW NATIONAL SONG for Sir C. NAPIER and the BALTIC FLEET. With Music.

And a variety of other Illustrations.

TWO SHEETS and SUPPLEMENT, PRICE ONE SHILLING. Orders for extra Copies must be sent immediately. Office, 198, Strand.

In consequence of the increased and increasing sale of the ILLUSTRATED LONDON NEWS, the Charge for Advertisements will be advanced to 1s. 6d. per line.

198, Strand, March 6, 1854.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 11, 1854.

WE announced, a month ago, that Sir Charles Napier would be appointed to the command of the Baltic fleet. This day the magnificent armament under the command of the gallant Admiral will be reviewed at Spithead by her Majesty; and it is expected that a portion, if not the whole, of the fleet, will immediately hold itself in readiness to steam towards the Baltic. Since the day when Queen Elizabeth reviewed the English army at Tilbury Fort, a spectacle more exciting to the patriotic feelings of the nation has not been witnessed. A finer fleet was never borne upon the waters of the ocean, and a more popular commander than the hero of Sidon and St. Jean d'Acre: a braver sailor, or one more thoroughly representing what, to British minds, is the *beau ideal* of a great naval commander, was never appointed. His very name has the twang of victory about it; and there is not a sailor in the fleet who is not proud to serve under him. Lord Palmerston, in proposing the health of the gallant Admiral at the great banquet given to him a the Reform Club, on Tuesday evening, drew, with a few characteristic and masterly touches, the portrait of this rough and ready sailor—a man of action, and not of words; a man without pretence—of simple habits—of unassuming and modest demeanour—but of strong and resolute will; who sees at a glance what is best to be done—and, seeing it, does it in the most spirited and dashing manner, in spite of difficulties and perils, and without any other idea than the great and paramount one of duty. It is of such stuff that great men are made; and the country feels confident of success when its fortunes are intrusted to such keeping.

There is but one feeling throughout the country, indignation against the wanton disturber of the peace of the world, and impatience to begin the onset without further parley. To use the words of Sir James Graham at the Reform Club, every one feels a hope "that the war may be short, and that it may be sharp." The best way to make it short is to make it sharp. The heavier the blows we inflict, and the more rapidly we make them fall upon the head of the offender, the greater will be our mercy, as well as our glory.

THE Emperor of the French and the Czar Nicholas have severally exchanged letters. Both Sovereigns have also issued addresses to their own people, and through them to the civilised world—the Czar in a manifesto, dated at St. Petersburg on the 11th (23rd) February; and the Emperor of the French, in a speech on the opening of the Legislative session, on Thursday the 2nd instant. All of these documents stand in remarkable contrast with each other. Those which proceed from the French Emperor are clear, honest, straightforward, and full of sentiments of the most enlightened patriotism. Those which have been penned or dictated by the Czar, exhibit an amount of hypocrisy, meanness, and falsehood, which it is difficult to characterise without expressions of abhorrence, which seem out of place when applied to a personage so exalted, and holding a position of such dignity and responsibility. The Czar has two modes of speech. When he addresses his own subjects, he disguises and perverts the truth in a manner that astonishes Europe; but which, doubtless, has all the force of truth upon the minds of that ignorant population, who look upon him as head, not only of a State, but of a Church; not only as a King, but as a high-priest; not only as a magistrate, but as the prophet and vicegerent of that God whose name he so constantly and so impiously invokes. The Russians may believe, when their Emperor tells them, that the Turkish Government has listened to "treacherous instigations;" and that "England and France have sided with the enemies of Christianity against Russia combating for the orthodox faith;" but Europe will treat such allegations, and such attempts to mislead his people, with indignation, tempered only with disgust. It is hard to say which is the more abominable, the hypocrisy or the ambition of the man who dares, at this period of the world's history, to preach a new Crusade in furtherance of his own purely selfish projects, and to represent Great Britain and France as of necessity enemies of Christianity, because they are the enemies of his aggressive policy, and because they are determined to maintain the public justice of the civilised world. The letter of the Czar to the Emperor of the French, not being intended for his own people, takes a milder tone, and avoids those appeals to the Deity with which the Russians are so familiar. It is, therefore, less repulsive in its style, though equally hypocritical in its character. It assumes the airs of injured innocence, but abates no iota of his unjust pretensions, and as coolly reiterates the falsehoods of Count de Nesselrode as if they had not been effectually demolished by facts and dates, and as if the true state of the case were not notorious to every man in Europe, with the sole exception of the serfs of Russia.

The allusion to the reverse sustained by the French armies in 1812—which seems to be the only memorable achievement which Nicholas can cite in the honour and glory of his country—is peculiarly ill-timed and insulting to the French nation. It is easy to imagine the contempt with which the French Emperor and his people will regard it. They know full well that it was not the Russians, but the climate that defeated the Emperor Napoleon in his invasion of that country; and that, if the Russians at that period had had nothing else to defend them but their own right arms, Napoleon might have been as successful as he was unfortunate. M. Billault, in the name of the Legislative Assembly, rebuked the fool-hardy Czar with a dignity befitting the French nation. "Our country," said he, "which one has dared to remind of the misfortunes of 1812, has no need to remind its enemies that they had on their side the rigours of a winter more difficult to be struggled against than their arms. It could on its side speak of many other glorious reminiscences, but it considers it best to create new ones." The French are not likely to repeat the error of 1812, and Russia will soon find that she is vulnerable at her extremities, if not in the heart of her empire; and that M. Billault has uttered no idle threat in his calm but significant appeal to the spirit of the French people, to atone for the failures of 1812 by the successes of 1854.

Turning from the epistle and manifesto of the Czar to the more agreeable duty of commenting upon the eloquent speech of Louis Napoleon to the assembled Senators and Deputies of his Empire, it is impossible not to express hearty admiration for the noble sentiments to which he has so opportunely given utterance Events continually disprove the wisest of calculations. In the year 1848, when France was in the throes of revolution, a fear ran throughout Europe that the era of conquest was about to recommence; and that a great military nation, jealous of its glory, would endeavour to regain its ancient limits of Belgium and the Rhine. The continental nations looked towards Russia at that time as the great Conservative power that would stand between them and spoliation. But time has wrought a change. The great Conservative Monarch has proved to be the greatest of destructives, and a far worse revolutionist than ever shouted at the heels of Robespierre or Ledru Rollin. The Emperor of the French has, on the contrary, proved himself the friend of order, the enemy of unjust aggression, and the firm upholder, not simply of the dignity of his own nation, but of the rights and liberties of all Europe. When he proclaims openly "that the time of conquests is passed irrevocably, and that it is not by extending its territorial limits, but by placing itself at the head of generous ideas—by making everywhere prevail the empire of right and of justice, that a nation can henceforth be honoured and powerful," he strikes a chord that will vibrate through every honest heart in the world, and secure to the great French nation a host of friends and admirers. The people of Great Britain will more especially sympathise with his sentiments; and the "ancient rival" of France (rival no more except in the arts of peace and the glories of fraternal emulation) will do her part to realise his anticipation "to tighten the bonds of the existing alliance, and to make it daily more intimate." In such a case the peace of Europe will remain secure. None but a raging lunatic will henceforth endeavour to disturb it.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonries:* The Rev. W. Wilson to Manchester Cathedral; Rev. J. Baillie to York Cathedral. *Rural Deans:* The Rev. T. Dean to Lancaster; Rev. G. Maddison to Cambridge. *Rectories:* The Rev. B. W. Adams to Clophran, Swords; Rev. D. Brown to Howick, near Alnwick; Rev. T. Cupis to Edlaston, Derbyshire; Rev. J. Baillie to Faugher; Rev. A. H. Barker to Ricknansworth; Rev. A. C. Craven to Horsley, Northumberland; Rev. J. Day to Bedfield, Suffolk; Rev. R. Gell to Workesworth, Derby; the Rev. F. P. Seymour to Hannington, near Newbury; Rev. A. E. Start to Raleigh, near Rochester; Rev. B. H. Darwin to Cheddon Fitzpaine, Somerset. *Vicarages:* The Rev. W. Fleetwood to Swaffham Bulbeck, near Newmarket; Rev. C. J. Hawkins to Hexey, Lincoln; Rev. T. M. Hunt to Oulton, Norfolk; Rev H. Rowndell to Buckingham; Rev. W. Scott to Alsthorpe, near Towcester; Rev. C. F. Smith to Bishops'horpe; Rev. W. V. Turner to Spilsby, Lincoln; Rev. J. H. Wake to Sutton-in-the Forest, Yorkshire. *Incumbencies:* The Rev. S. Arnott to St. Luke's church, Berwick-street; Rev. F. Barker to Baslow, Derbyshire; Rev. E. H. Daniell to Upper Bullingham; Rev. H. Jones to St. Peter's Church, Croydon; Rev. H. Leakey to Trinity Church, Swansea; Rev. H. S. Wright to the new Church of the Holy Trinity, Barsted, Lancaster.

LENT SERMONS.—The Bishop of London has addressed the following communication to some of the incumbents of the older parish churches in the metropolis:—"London-house, Feb. 21, 1854.—Rev. and dear Sir,—The Lent Lectures, which have usually been preached, by my appointment, in four of the metropolitan churches, have of late years been so ill attended, that I have not deemed it expedient to make any appointment this year. But I should be glad if the incumbents of the larger parishes would have sermons in their churches on the Wednesdays or Fridays during Lent, or on both days, preached either by themselves or by clergymen willing to assist them, either at the morning or evening service.—I am, &c., C. J. LONDON."

THE COURT.

The stirring political events of the day have not disturbed the ordinary routine of Court life. Her Majesty continues to transact the duties of her exalted position with that ease and dignity which announce the Queen of a constitutional country.

On Saturday last the Queen had a dinner party, the guests at which included the Duchess of Kent, the Duke and Duchess of Argyll, the Marquis of Lansdowne, the Dowager Countess of Carnarvon, the Earl of Carnarvon, Lord Harris, Sir James and Lady Graham, the Right hon. Edward and Mrs. Cardwell, Vice-Admiral Sir Charles Napier, Colonel Sir Colin Campbell, Colonel Cator (Royal Artillery), and Mr. Fred. Peel.

On Monday Prince Leopold of Saxe-Coburg arrived at Buckingham Palace, on his return from Lisbon, where his Serene Highness had proceeded on a visit of condolence to his brother, the King-Regent of Portugal. In the course of the day, Mr. J. E. Jones had the honour of submitting his carts, for the busts he is about to execute, of her Majesty and his Royal Highness Prince Albert.

On Tuesday a Court was held for the reception of Sir Hamilton Seymour, on his return from St. Petersburg; and in the evening her Majesty and his Royal Highness Prince Albert, accompanied by his Serene Highness Prince Leopold of Saxe-Coburg, honoured the Haymarket Theatre with their presence.

On Wednesday the Queen held a Levee, and in the evening had a dinner party at Buckingham Palace.

On Thursday the Queen held a Privy Council, at which a proclamation was ordered to be issued, warning persons against infringing certain regulations under the Foreign Enlistment Act. The Prince Consort went to Woolwich accompanied by Lord Raglan, and inspected the Artillery Force about to leave for foreign service. The Queen and the Prince inspected a picture of the "Lying in State of the Duke of Wellington," which was submitted by Mr. Melville. In the evening her Majesty and the Prince Consort, accompanied by Prince Leopold of Saxe-Coburg, honoured the Lyceum Theatre with their presence.

Yesterday (Friday) the Queen and the Prince left town for Osborne, passing through the Baltic fleet, *en route* to the Isle of Wight.

THE LEVEE

The Queen held a Levee (the second this season), on Wednesday, at St. James's Palace. Her Majesty and Prince Albert arrived, from Buckingham Palace, soon after two o'clock, escorted by a detachment of the Royal Horse Guards, and were received by the great officers of state. The Queen and Prince Albert entered the throne-room, attended by the Duchess of Sutherland, Mistress of the Robes; the Viscountess Jocelyn, Lady in Waiting; Earl Spencer, K.G., Lord Steward; the Marquis of Breadalbane, K.T., Lord Chamberlain; Lord Alfred Paget (Clerk Marshal), officiating for the Master of the Horse; and the Ladies and Gentlemen of the Royal household. The Queen wore a train of white Irish poplin, embroidered with the Rose, Shamrock, and Thistle, in colours, trimmed with silk fringe to match. The petticoat was of white satin, trimmed with gold bands. Her Majesty's head-dress was formed of emeralds and diamonds.

Meer Jafur Allykhan, Bahadoor of Surat, appeared at the Court in an Eastern costume of great magnificence, richly adorned with pearls, diamonds, and emeralds.

His Royal Highness the Duke of Cambridge was present, attended by Lord William Paulet.

Lord Raglan had an audience of her Majesty before the Levee.

The diplomatic circle having been first introduced, several presentations took place.

The general circle was very numerously attended

The following are the more noticeable presentations, selected from a list filling nearly three columns of the daily newspapers.—

The Duke of Beaufort, by General Lord Raglan.
The Earl Dowe, by the Earl of Beshorough
The Earl of Carrick, by the Marquis of Ormonde.
Viscount Dalrymple, R.T., by the Marquis of Breadalbane.
Viscount Bolingbroke, on his accession to the title, by Lord Foley.
Sir C. Forbes Bart., on his accession to the title, by the Earl of Aberdeen.
Brigadier-General Cator, on his appointment to the command of the Royal Artillery on the Eastern expedition, by Lord Raglan.
Captain E. A. Inglefield, R.N., on promotion and appointment to the command of the Arctic expedition, by Sir J. Graham
Sir Bernard Burke, on his appointment as Ulster King of Arms, by the Right Hon. Sir John Young, Bart., Chief Secretary for Ireland.

THE DUCHESS OF GLOUCESTER.—This amiable Princess continues extremely ill. Her Royal Highness was somewhat better on Thursday, but her cough continues very troublesome; Dr. Ferguson and Dr. Hawkins are in attendance. The Queen and the members of the Royal Family, have called almost daily during the week to inquire after her Royal Highness.

The Countess Colloredo had an assembly on Wednesday evening, at Chandos House.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, MARCH 9.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 30·64 inches at the beginning of the week to 30.58 inches by the afternoon of the 3rd; increased to 30.76 by 11h. p.m. on the 4th. This reading, reduced to the level of the sea, is 30·85; and is greater than any reading for many years. The reading continued high all the week; at the end it was 30.20. The mean reading for the week, at the height of 82 feet above the level of the sea, was 30.484 inches.

The mean daily temperature of the 9th was 58·0°; and is the highest mean daily temperature at present recorded on that day, the register extending back to the year 1814.

The mean temperature of the week was 42·3°, being 2·4° above the average of the corresponding week during 28 years

The range of temperature during the week was 39·5°, being the difference between the lowest reading of the thermometer on the 4th, and the highest reading on the 8th.

The mean daily range of temperature during the week was 21·2°. The greatest was 24·2° on the 3rd; and the least 14°, on the 6th.

The weather, during the first three days of the week, was very fine, and the sky was almost cloudless; during the remainder the weather was fine, but the sky was almost overcast.

Fog was prevalent on the 3rd, 6th, and 8th.

No *rain* has fallen since February 23.

Lewisham, March 10, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—The number of births registered within the metropolitan districts within the week ending March 4, was 1739: of these, 893 were males, and 846 were females. The deaths registered exhibit a decrease from 1324 in the preceding week to 1135 in last week. The sudden rise was preceded by a fall in mean temperature, from 42° to 36°: the temperature then rose to 42°, and maintained it nearly for two weeks, and a reduction of 200 deaths within the week is the consequence. The actual number of deaths last week is less than the estimated amount by 60. The mortality from hooping-cough is still great, and scarlatina and typhus are prevalent. No death from cholera in the last three weeks. Small-pox seems to be rather on the increase: the number of deaths caused by it was 11 within the week, of which 4 occurred to persons of twenty years of age and upwards.

THE MEDICAL SOCIETY OF LONDON.—This, the oldest of the medical societies, held its 85th anniversary on Wednesday last, at the Albion. The president, Dr. Forbes Winslow, in an appropriate speech, presented the Fothergillian gold medal to the successful essayist, B. Richardson, Esq. The medal afterwards delivered by Henry Smith, Esq.; and the treasurer, Henry Hancock, Esq., stated to the fellows that the society its if was in a most prosperous condition. The fellows dined together in the evening.

ROYAL ORTHOPŒDIC HOSPITAL.—Lord Robert Grosvenor, M.P., has engaged to preside over a public festival at the London Tavern on Thursday next in aid of the Royal Orthopœdic Hospital, for the cure of deformities. It appears that patients having received from all parts of the kingdom, an influx of cases has necessitated the erection of a more commodious building, and it is towards carrying out this laudable object that the committee are endeavouring to raise funds.

DINNER TO THE DUKE OF CAMBRIDGE.—On Saturday the members of "Boodle's" entertained the Duke of Cambridge at dinner, in celebration of his being about to take a part in active warfare—the Earl of Cardigan in the chair. The party, which was necessarily confined to about sixty, comprised a number of noblemen and military officers.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

A PART of Lord Palmerston's speech at the dinner to Sir Charles Napier on Tuesday last reminds us of a passage in a letter from "charming Molly Lepel" to the Countess of Suffolk. Our noble Home Secretary alluded to the *easy* dress of Sir Charles Napier, and the members of the Reform Club recognised the truth of Lord Palmerston's description of their friend by a good-natured laugh and a hearty cheer. Sir Charles is not over-given to tailors; less so, perhaps, than the great Lord Peterborough, of whom Molly Lepel has left so charming a description in a few words. The great General was careless about dress—indifferent, indeed, about what some people would call appearances. Our great Admiral is equally indifferent. What person in London, who knows London, and has his eyes about him, is unacquainted with the figure of Sir Charles Napier?—

Loose in his gaiters—looser in his gait.

Not that "Charley" wears gaiters; but no one line, perhaps, could hit off the gallant Admiral better than the line we have just quoted from the "Rejected Addresses." Not less happy a parallel, in Plutarch's style, is drawn by Molly Lepel between the conqueror of Spain and the Commander in the Baltic. Here it is:—"Lord Peterborough is here (at Bath), and has been so for some time, though by his dress one would believe he had not designed to make any stay; for he wears boots all day, and, as I hear, must do so, having brought no shoes with him. It is a comical sight to see him, with his blue ribbon and star, and a cabbage under each arm, or a chicken in his hand, which, after he himself has purchased at market, he carries home for his dinner." One would not expect to have seen Beau Brummell or Count D'Orsay so burthened, or equipped; but one has seen—we have ourselves seen—Sir Charles Napier in a dress and with encumbrances, that would make a capital companion picture to the Peterborough full-length.

A clever and very well-intentioned young nobleman (Lord Stanley) is desirous of making Blue-Books popular. Is he not trying at something that cannot succeed? Is it not impossible to convert Blue-Books into fairy tales? Here we have a big thick folio of the last session before us, with the taking title of "Public Houses." But what a lifeless mass it is, though abounding in curious particulars well meriting remembrance. What would such a subject be in the hands of Mr. Dickens? But Lord Stanley cannot expect that any Committee of the House is to be imbued with the wonderful faculties of the author of "Oliver Twist." Does his Lordship contemplate asking for an annual vote to successful authors to make Blue-Books readable? Is every examination to be digested into a side dish? Is every Report to be reduced into a leading article of the *Times*? Much might be done by way of popular digest. It is important to make the public acquainted with the inquiries of a session. But is not the public, let us ask, already acquainted with what the House does—and by private means? Surely the public press supplies, by private capital, all, or nearly all, that is valuable in Parliamentary papers. Why, then, should the public undertake to do what it is sure to fail in—and what, moreover, is already done much better than the House can do it, by private individuals?

Our fathers, to say nothing of our grandfathers, would hardly know the west front of Westminster Abbey. Wren, were he permitted to return to the earth for five minutes, would start as in a trance at the metamorphosis before him. Even Sir Walter Scott—more modern than Wren—as he diverged from Tothill-street (a street he liked so much), would look bewildered and lost at the strange building that has arisen, like a mushroom in the night, contiguous to the best-known Abbey in the world. The Dean and Chapter of Westminster, by the line and rule of their architect, Mr. Scott, have recently raised almost within a month a block of eight houses, built half as high as the towers of the Abbey, and in a style almost as mongrel as Wren's unhappy mixture of Grecian and Gothic in the towers adjoining. In the centre of the block is a gateway leading—as of old—into Dean's-yard. The design seems an adaptation from St. Augustine's Gate way at Canterbury, and has some claims to merit as a composition. As a whole, however, we hear little that is said in praise of this recent addition to our London streets.

Artists are asking, and with justice, why the directors of the British Institution are not more alive to the necessities of the Institution; and the directors are asking, with equal justice, why artists are not more sensible that they have been of the advantages of an Institution which has done, and can still do, so much for art. There is not a better exhibition-room in London than the British Institution rooms in Pall-Mall. How admirably they are lighted; how conveniently they are situated. For years they were hung every season with some of the newest and choicest examples of English art. For years the directors gave prizes to the painters of the best pictures upon their walls. Of late artists have not supported the Exhibition as before. Of late the directors have not given prizes. In particular localities, where one was accustomed to look for a high-class picture, as confidently as an angler would look into a certain pool for a certain kind of fish, one now only finds a third-rate Art Union prize. How is this? Surely the Institution was an admirable market for a painter. A better (not a larger) attendance is to be found there than at the Royal Academy. You see all the patrons—you see every well-known purchaser.

Is it found that the Academy Exhibition is not only the best, but also the only good sale-room in London, for pictures? It is of course the desire of every artist, that his pictures should be seen by as many people as possible—as it is the desire of every author, that his books should be read by all who can read. It is still more the desire, however, of an artist, that his pictures should be bought!—that when they leave the walls of the Exhibition room they may not return to their studios in which they were executed. Where, then, could they be seen to a greater advantage, it is asked, than in the British Institution? We confess we are at a loss to understand why the Institution has fallen off. There is, however, a fashion in all things, and the Institution has perhaps had its day.

Subscribers and prizeholders complain, and with reason, that the distribution of the London Art Union is made so late in the season that the best pictures are sold before they are enabled to enter the market. "Is it not enough," says a clamorous prizeholder of last year, "that I have to glean after patrons, but that I must be obliged to select after provincial Art Unions as well? I have paid for a picture last year. I expect, of course—who does not—that a prize will be given to me on this, as on the last, occasion. Well—I obtain a prize, and hurry in a Hansom to the Academy for a picture. I cannot find one to my liking. I run excited to the British Institution, and what do I find there?—that the Glasgow Art Union, or some other provincial institution, has been there before me, and the best pictures are gone. What alternative have I? I must buy a picture, and I cannot get even an ordinarily good one. One is bought for me by the secretaries, or by a committee-man. It is sent home. I do not like it. From the drawing-room it descends to the dining-room; from thence seconds to the garret; and is at last sent to take its place in an auction-room. If the London Art Union would distribute its prizes earlier, I might have had a chance at the British Institution, and that which has gone to a Glasgow Art Union might have been obtained for the patient institution in London." There is much in this. Mr. Godwin and Mr. Pocock (clever men both) should devise some remedy for an evil of this kind.

We have heard with pleasure that the Hand-books to the several "courts" in the Crystal Palace have been placed under the editorial care of Mr. Samuel Phillips. They could not have been placed in better hands; not that Mr. Layard, Sir Gardner Wilkinson, Mr. Jameson, Mr. Scharf, &c., will require much looking after. An editor, however, is necessary; and what the Company and the public want, Mr. Phillips is more than competent to supply.

A NATIONAL SONG FOR SIR CHARLES NAPIER AND THE BALTIC FLEET.

BY CHARLES MACKAY.

Don't you know the wrong you're doing?
Mighty Czar! mighty Czar!
Don't you see there's mischief brewing?
Mighty Czar!
France and England, one in council,
Are impatient for the day,
And are steaming to the Baltic,
Ripe and ready for the fray,
We have hearts that never fail us,
So look out for wounds and scars;
For there's Charley Napier coming,
With his gallant Jack Tars!
For there's Charley Napier coming,
With his gallant Jack Tars!

Oh, you think you're very clever,
Mighty Czar! mighty Czar!
But we'll do our best endeavour,
Mighty Czar!
To convince you of your folly,
We are strong when duty calls,
And since reason will not teach you,
Here's success to cannon-balls!
You shall rue the day you roused us
From the sleep of bygone wars.
So, look out for Charley Napier,
With his gallant Jack Tars!
So, look out for Charley Napier,
With his gallant Jack Tars!

'Tis a foolish course you've chosen,
Mighty Czar! mighty Czar!
Russia's strong, no doubt—when frozen—
Mighty Czar!
'Twas not you that beat Napoleon,
But your ugly ice and sleet;
And we'll profit by the warning,
And we'll try you with our fleet.
Ere you feel the summer breezes,
You may thank your happy stars
If you do not yield to Napier,
And his gallant Jack Tars!
If you do not yield to Napier,
And his gallant Jack Tars!

*** We have much pleasure in publishing the above opportune and characteristic National Song—which will be re-inserted, with appropriate music, in the ILLUSTRATED LONDON NEWS of Saturday next, the 18th instant.

BANQUET TO SIR C. NAPIER AT THE REFORM CLUB.

VICE-ADMIRAL SIR C. NAPIER, K.C.B., was entertained at a splendid banquet by the members of the Reform Club on Tuesday evening. The dinner took place in the coffee-room of the Club-house, in Pall-mall; but, owing to its limited dimensions, accommodation could not be provided for more than 200 gentlemen. Many members of the club, however, who were unable to obtain seats at the dinner-table, crowded the ante-chambers and the approaches to the coffee-room, in order to hear the addresses of the noble chairman and the invited guests. The only decorations of the dining-room consisted of the French, English, and Turkish ensigns, which were arranged alternately around the apartment. A considerable crowd had assembled in front of the club, by whom Sir C. Napier, Lord Palmerston, and others of the guests, were loudly cheered upon their arrival.

Lord Palmerston took the chair; and among the gentlemen present were Sir J. Graham, M.P.; Sir W. Molesworth, M.P.; Mr. Peto, M.P.; Mr. Ferguson, M.P.; Admiral Berkeley, M.P.; M. Musurus, the Turkish Minister; Namik Pacha; Mr. Keogh, M.P.; Solicitor-General for Ireland; Mr. Sadleir, M.P.; Mr. Oliveira, M.P.; the Hon. W. Cowper, M.P.; Sir J. Lillie, &c. Lord Dudley Stuart, M.P., and Sir de Lacy Evans, M.P., acted as Vice-Chairmen on the occasion.

After the usual loyal toasts the Chairman gave "The health of the Emperor and Empress of the French," which was received with great enthusiasm. Lord Palmerston passed a high encomium on the Emperor for his "single-minded sincerity, energy of purpose, and great straightforwardness." In proposing the health of the Sultan Abd-al-Medjid, the Chairman said there never was a Sovereign who was more the object of the most abominable injustice on the part of others than the Sultan now is (Loud cheers); an injustice which was only to be equalled by that which is described in the old fable of the "Wolf and the Lamb." But the wolf, this time, has made a mistake; it was no lamb he has had to deal with (great laughter and cheering). As to the deeds of the Sultan himself, speaking as a member of the Reform Club, it was surely a title to esteem that the Sultan is a great Reformer. It is true that he had not wounded the consciences and prejudices and habits innate of his subjects. He had been too wise to go at that speed in reform which would defeat his own purposes. But, making allowance for their ancient prejudices, and the rooted habits with which he had to deal, he ventured to say that the Sultan has made greater improvements of all sorts and kinds throughout his wide dominions than has fallen to the lot of any other Sovereign to make in the same period of time, and he was now reaping the fruits of that wise course which he then pursued. There was one act of the Sultan which could never be forgotten by the generous people of England. In 1849 (Cheers), when the Hungarians were overpowered by the united armies of Austria and Russia, and when they were compelled to seek for safety and refuge in the territories of the Sultan, and he, the Sovereign of a weaker power, was threatened with war by his two great and powerful neighbours, unless he gave up those unfortunate fugitives to the vengeance of the powers they had offended, the Sultan bravely, firmly, and generously refused to give them up. Ay, and he refused even before he was assured of the support of England and France, which, when he demanded, we lost not a moment in giving him. But, merit be to him, he did not wait for that assurance, but bravely and generously placed himself as a shield to the unfortunate, and declared that he was ready to encounter any extremity of danger rather than give them up.

M. Musurus returned thanks in French

The Chairman then gave "The Allied Fleets and Armaments of France and England," to which Admiral Berkeley and Sir De Lacy Evans replied.

The Chairman, in proposing the health of Sir Charles Napier, passed a high eulogium on the gallant Admiral. After describing his successes in Syria, by sea and land, Lord Palmerston went on to show that he had not been content with acting a successful part as an Admiral and a General:—

He must needs act the part of a diplomatist too; and that with equal success, for he went to Alexandria and landed there, and persuaded Mehemet Ali to sign a convention which eventually led to the peaceful evacuation of Syria, to the accomplishment of the purposes of the war, and which rescued Syria from the horrors of invasion. Gentlemen, that successful campaign has had no unimportant bearing upon the state of things which we are now considering; for the ruler of Egypt, who was then directing his fleets and armies against the Sultan—the result of that campaign has been what we now see, that the ships and troops of Egypt are ranged side by side with those of the Sultan, and that the Pacha of Egypt is now as loyal as any subject in the Sultan's dominions (Loud cheers). We have reason to hope he will be equally successful in the future as the past; and, bearing that in mind, I cannot refrain from repeating an observation made to me by a very discriminating and calculating friend of mine, who passed some portion of his time in the East at the period to which I have adverted. I mentioned my gallant friend to him, and praised his boldness, his intrepidity, his daring. My friend said "Yes; all that is very true; but there is another quality Sir Charles Napier possesses—I never saw a man in my life who calculated so many moves beforehand as Sir Charles Napier" (Great cheering). Now, when a man calculates his moves beforehand, and has a spirit and genius to execute them, I think that the country which places its fortunes in his hands may well feel confidence in his success (Cheers).

Sir Charles Napier returned thanks for the very handsome manner in which they had expressed their congratulations. With reference to the expedition, he said:—

I cannot say that we are in a state of war, because we are still in a state of peace; but I suppose we are very nearly at war. I suppose that when I get to the Baltic I shall have an opportunity of declaring war (Loud cheering). And certainly, if I have the opportunity, I hope it will end in a prosperous war; because I can safely say that this country never sent out such a splendid fleet as that which is about to go into the Baltic in a few days. My right hon. friend, Sir James Graham, deserves the greatest credit for having, after so long a peace, when we had no seamen, or very few, been able to fit out such a magnificent fleet. Well, with that force—I do not say that it is equal to the force of Russia—but, with the assistance of the screw, we shall be able to attack a very large and a superior force; and I trust every officer and sailor on board the fleet will remember the words of the immortal Nelson, "England expects every Man to do his Duty" (Loud cheers).

Sir James Graham, whose health had been drunk with enthusiasm, spoke also in high terms of the gallant Admiral.

He possesses my entire confidence (said the right hon. baronet) and I rejoice in having had the opportunity on this great occasion to commend him to the choice of my Sovereign. The selection, I believe, is approved by the country; it is approved by the profession; and although the propelling power of the fleets may be changed, though naval tactics may be altered, as he goes forth the commander, not of a pressed body of men (Cheers), but of volunteers in her Majesty's service—though all these old plans may be changed, yet there is one thing that is unchanged—the gallantry and the power of command of my hon. friend. He does not go forth under the hypocritical pretence of conducting a religious war (Loud and vehement cheering); but he goes forth to assert the independence of Europe—peaceful, and I hope successful—to resist, that lawless spirit of aggression and aggrandisement which now threatens to disturb the general peace (Cheers). My gallant friend says that when he gets into the Baltic he will declare war. I, as First Lord of the Admiralty, give him my free consent to do so (Loud cheers). I hope that war will be short. It may be sharp, but I trust that with the spirit and energy that has ever guided my gallant friend, it will be decisive.

The other toasts were "The Turkish Minister," by Sir William Molesworth; "The Turkish Army and Navy" (coupled with the names of Omer Pacha and Admiral Slade), by Lord Dudley Stuart; "Lord Palmerston" (the chairman), by Sir Charles Napier; "The Vice-Chairmen, Lord D Stuart and Sir De Lacy Evans," by the Chairman; "Namik Pacha," by Sir De Lacy Evans; "Admirals Hamelin and Dundas, and Success to the Combined Fleets," by Sir J. Scott Lillie; and "The Reform Club, and continued Prosperity to it," by Admiral Berkeley. The company did not separate till a late hour.

VICE-ADMIRAL SIR CHARLES NAPIER, K.C.B., CHIEF IN COMMAND OF THE BALTIC FLEET.

THE appointment of Sir Charles Napier to the command of the Baltic Fleet was hailed by the public of this country with unqualified delight. It is not less consonant with the more refined civilisation of the present day than with old British instincts, that the blow to be struck at Russia should be sharp and decisive; and to what naval commander could the country look for more dashing service than to this illustrious member of the great Napier family? Apart also from motives of policy, there was the stigma upon his general reputation uttered by one Prime Minister that he lacked "discretion." This hastily-recorded taunt received its triumphant refutation at the banquet given to Sir Charles Napier, on Tuesday, in the assurance of reliance which the Lord Palmerston and Sir James Graham declared in the judgment, foresight, and valour of the gallant Admiral.

Sir Charles Napier was born on the 6th March, 1786, and is the eldest son of the Hon. Charles Napier, of Murchison Hall, in the county of Stirling, a captain in the Royal Navy, by his second wife, Christian, daughter of Gabriel Hamilton, Esq., of Westburn, Lanarkshire. The gallant Admiral is grandson, by a first marriage, of Francis, fifth Lord Napier, brother to Colonel Thomas Erskine Napier, and cousin to Lord Napier, R.N., who, in 1834, died in China.

Sir Charles entered the navy as a first-class volunteer before he was fourteen years old. If we abridge the particulars of his early career, it is not because they are abstractedly without interest, but that a record of his numerous services would impose an enormous inroad upon our space. His life has been one of continued activity in his profession, and involves an infinite variety of services to the State. He entered the navy on the 1st Nov., 1799, on board the *Meteor* sloop, commanded by the Hon. Matthew St. Clair, employed in the North Sea; and, in the spring of 1800, removed to the *Renown*, 74, the flag-ship of Sir John Borlase Warren. He next proceeded to the Mediterranean, where, in 1803, he became a midshipman of the *Greyhound*. After various other employments, he became Lieutenant in Nov., 1805. In March, 1807, he was made Acting Commander of the brig *Pultusk*. In August, 1808, he removed to the *Recruit* brig, of 18 guns, in which vessel he fought a smart action, and put to flight, the *Diligente*, French corvette, of 22 guns, and 140 men. In this action he had his mainmast shot away, and was himself severely wounded. Although his thigh was broken, he refused to leave the deck. In 1809 he served with great distinction in the reduction of Martinique, and in the capture of the *Cleopatra*, 74. In the first instance, he considerably shortened the siege by the manner in which, with only five men, he landed, scaled the walls, and, in open day, planted the union jack on the ramparts of Fort Edward. In the latter engagement, his services were so much appreciated, that he was at once posted to the prize.

Passing over a variety of brilliant services performed, we come to the year 1813, when, in company with the *Surveillante*, 36, which had on board the second battalion of the 10th Regiment, under Lieutenant-Colonel John Pine Coffin, Captain Napier, in the teeth of the fire of four batteries and a tower mounting ten 24 and 18-pounders, two 12-pounders, and two 9-inch mortars, succeeded in taking possession of the island of Ponza. His services in the brilliant expedition against Alexandria drew from Captain James Alexander Gordon, the conducting officer, a remark in one of his despatches, "that he owed this officer more obligations than he had words to express." Captain Napier had been in command of the *Euryalus*, and, in June, 1815, she was paid off, when the gallant Captain was nominated a C.B. He was not again called into activity until 1823; when, for three years, he was employed in particular service in the *Galatea*, 42. In 1833 he succeeded Admiral Parterin in the command of Don Pedro's fleet, and gained a signal victory over the more numerous fleet of Don Miguel, off Cape St. Vincent; a service for which he obtained the title of Count Cape St. Vincent, with the Grand Cross of the Order of the Tower and Sword. In 1839 Captain Napier took the command of the *Powerful*, 84, intended for the Mediterranean, where, in the following year, hoisting the flag of Commodore, he became second in command under Admiral the Hon. Sir Robert Stopford, of the force engaged on the coast of Syria. He was destined, on this new scene, to eclipse even the splendour of his own past services; and, as the events in the East, in which he played so auspicious a part, are more easily within the reach of the reader, we can a little simplify the record of his exploits. On the 10th September, 1840, he effected a landing at D'jounie, on the Syrian coast, in a manner which called forth the eulogy of his Admiral. In the course of the same month he defeated a body of the enemy at Kelbon, and on the 27th he bombarded, and necessarily stormed, with a force of not more than 900 allies and 500 Turks, the town of Sidon, protected by a fort and citadel, and a line of wall defended by 2700 men, all of whom were made prisoners. On that occasion, at the head of the British Marines, he broke into the enemy's barracks, and obtained possession of the castle. On the 8th of the following October he entirely routed an Egyptian force, stationed, under Ibrahim Pacha, in a strong position on the mountains near Beyrout. The result of the forward movement, which had immediately preceded this success, was the surrender of Beyrout itself; and the effect of the victory the entire submission of the army of Soliman Pacha. After co-operating in the memorable attack at St. Jean D'Acre, he proceeded to take charge of the command of Alexandria, where he landed, and concluded a convention with Mehemet Ali. For these brilliant services he was created a K.C.B., included in the thanks of Parliament; and was presented with the Cross of the Order of St. George of Russia, and the Insignia of the second class of the Order of the Red Eagle of Prussia. In November, 1841, after his return from the East, he was made a Naval Aide-de-Camp to her Majesty. He was promoted, in 1846, to the rank of Rear-Admiral of the Blue; and in May, 1853, he attained his present standing of Vice-Admiral.

We may now add a few words upon Sir C. Napier's career ashore. As member for Marylebone, every one will remember his uncompromising opinions upon Reform; everyone will recal, with a keen relish, his terrible onslaughts upon the "shams" and ship-building peculiarities of Boards of Admiralty, both by word of mouth and by his pen. Sir Charles unsuccessfully contested Portsmouth and Greenwich in 1832 and 1837; but, in 1841, he was returned for Marylebone.

We give a specimen or two of the gallant Admiral's bluntness of address and thorough sailor-like style, even when addressing the House

VICE-ADMIRAL SIR CHARLES NAPIER, K.C.B., COMMANDER OF THE BALTIC FLEET.—(FROM A DAGUERREOTYPE BY MAYALL.)

of Commons. We take them at random, simply observing that, in all his speeches, whether from the platform or delivered in Parliament, there lurked, under a sledge-hammer style of expression, a good deal of sound sense and a good deal of humour. In moving the amendment to the Address in reply to the Speech from the Throne, before the Government of Lord Melbourne quitted office, Mr. Stuart Wortley attacked the Ministry for falsified promises of peace and retrenchment. Sir Charles Napier thought himself qualified to speak to the first point, if not to the second; and he, therefore, retorted upon the hon. and learned gentleman that if his party had been in power, the country might possibly have had large wars, and with them great contracts and loans. He doubted if any other person than the noble Lord (Palmerston) could have preserved the peace of the country in the manner in which that noble Lord had been able to do. The hon. gentleman had accused the Government of making little wars, and said that the Government which had held office for eighteen years before the present Government came into office had made but one war—the war of Navarino; but the Tory Government had also made war with Algiers, and in India had engaged in the Burmese War; but he had also forgotten to admit that, when that Government was in office, they had suffered France to go to war with Spain, and to march 100,000 troops into that country, and put down constitutional Government there. A more characteristic bit of blunt satire grew out of a discussion whether the Hon. Mr. Scarlett should receive compensation for the loss of a legal office he had held. Commodore Trunnion, if he had spoken at this day, would have modified his indignation at the "land sharks," somewhat in the following language of Sir C. Napier:—He had always noticed, he said, that the House of Commons was most liberal in dealing with any case where any gentleman of the law was concerned. It was not long since they had voted £3,500 as a retiring pension for a Vice-Chancellor. Now that would just be the retiring pension which would be given to eight Admirals, after fifty years' service. He mentioned a few of the pensions given to officers on the abolition of the Navy Board (then) some ten years ago. There was Sir F. Seymour, a very old officer, who had lost an arm; he had a patent place, which, being abolished, he was compensated by being sent out to the Brazils, where he died. Another officer, who held a patent place, was compensated by a transportation of three years to South America; and another officer, under the same circumstances, was compensated by five years' employment, and to remain the rest of his life on half-pay. He might also mention the name of Captain Hornby. He enjoyed a patent place of £1000 a year. It was abolished, and he was compensated by five years' employment at Woolwich. He only mentioned these things to *show the difference in the way of dealing with gentlemen of the long robe and gentlemen with short jackets!*

Sir Charles Napier has been rather a prolific author on naval subjects. He has written several articles in the *United Service Journal*. In 1832 he published in that journal "Observations on the Construction and Qualities of the *Vernon* and *Castor*, and Naval Architecture in General," and "Remarks on Steam-vessels." He is also author of an "Account of the War in Portugal between Don Pedro and Don Miguel," and an "Account of the War in Syria." About the year 1828 he submitted to the Admiralty the model of a ship, which was afterwards placed in the United Service Museum; and, in 1846, we find him constructing the notorious *Sidon* steam-frigate, of 560-horse power.

Sir Charles married Eliza, daughter of — Younghusband, Esq., widow of Ewards Elers, Esq., Lieutenant in the Royal Navy, by whom he had issue one son and one daughter.

[The accompanying Portrait of Sir Charles Napier is from a daguerreotype by Mayall.]

THE WAR ON THE DANUBE.

ARMED DERVISHES ACCOMPANYING TROOPS ON A SKIRMISH.

(*From our Special Correspondent.*)

KALAFAT, February 9, 1854.

THE monotony of camp life at Kalafat has scarcely been once broken since the last advance of the Russians until the 5th. At eleven o'clock on that day a squadron of irregulars, under Yacoub Aga, and a squadron of dragoons, rode out of the entrenchment, in the direction of Golenz, for the purpose of beating up the quarters of the enemy in that village. The enemy's videttes, who occupied the brow of the precipices that skirt the bank of the Danube, were to be driven in, and the moment of their disappearance was to be seized to advance a couple of battalions of infantry, three squadrons of Lancers, and a half battery of three guns, under cover of some hilly and broken ground, in which the whole might lie concealed from the enemy. The bashi-bozouks, breaking out into an irregular line, advanced in a straggling manner, and drove in the videttes, who seemed, however, to be tolerably protected.

They merely retired behind the cover of a set of hayricks, conveniently placed amongst some semliks. The sharp twang of bullets exchanged between the solitary videttes and the bashi-bozouks soon began to swell into a louder and more continuous rattle, as a fresh squadron of horse came up to drive us back. Little harm seemed to be done on either side. Both parties fired at a considerable elevation, for the purpose of increasing the distance of the range; and appeared to take but little aim in consequence. A chance shot brought down a bashi-bozouk, whose horse came flying back without his rider; and a Russian dragoon on the other side bit the dust. Matters, however, did not long remain in that comparatively inactive state. The semliks and hayricks which formed the protection of the Russians were at the angle of a precipice, in the centre of a bend formed by the Danube; and as the skirmishers on both sides were firing dropping shots at each other, a body of horse rushed up a ravine with a loud hurrah, and charged with wonderful speed on the bashi-bozouks. To turn and fly was for them the work of an instant. They galloped off, as it their wont, and scattered themselves in all directions; whilst a squadron of Turkish dragoons broke into skirmishing line, and the fire on both sides was renewed, little damage being done on either part. At this moment an endeavour was made to gather the Irregulars together, in order to form them again into line; but this was a work of some difficulty: many had retired to a considerable distance, and were out of reach of orders; others were unwilling; and the captains were to be seen rushing here and there, bringing up the stragglers and driving on the unwilling. Many, however, appeared deaf to the command of their officers, and refused altogether to advance; and here occurred one of the most curious incidents of the day. Accompanied by a couple of dragoons, the chief of the Irregulars seized three of the worst-behaved bashi-bozouks, whom he ordered to dismount for punishment. The men howled piteously, crying "Amman Effendim" ("Pardon, master!") but the Captain resolutely commenced proceedings. The unfortunate Irregular, having been deprived of his sword, was held down on the ground by two Dragoons, and, in spite of his cries, was beaten with the back of his own crooked sword. Blow after blow came down upon his shoulders and legs, until the Captain, apparently tired, desisted. The same scene was repeated with two others who were then marched off, tottering upon their beaten limbs, tied with ropes, and forced to run on foot after the Dragoons who led them. Meanwhile, the enemy had not been idle; and, whilst your Correspondent stood looking on at this singular scene, the group of punishers and punished, together with the bystanders, were dangerously in the rear of the retreating Turks. A squadron of Russian horse, with two field-pieces, came rushing on at triple speed. The guns were unlimbered, and began firing. The bullets at the same time were whizzing about our ears, and a speedy retreat became necessary. We had hardly retired behind the infantry and guns which lay concealed in the broken ground, when the Turkish guns returned the fire of the Russians, and a smart cannonade followed. The pieces on both sides were ill-served, the shells of the enemy bursting in the air short of the Turkish battalions; whilst the Russians, surprised at the volleys which were fired at them, retired out of range immediately; and the shots on our side also fell short. The bashi-bozouks again advanced as the Russians retired; and the traces left on the ground, together with the discovery of a couple of swords, only proved that the loss on both sides had not been very great. This was the end of what is called here a reconnaissance; an operation, however, which did not seem to us to have the character assigned to it. On the part of the Turks, no knowledge was gained as to what might be the force of the enemy; and on the part of the Russians, there seemed to be no desire to do aught than repel with as little trouble as possible the attack that was made upon them. Much has been heard of the force of the enemy in the surrounding villages between this and Krajova, and some surprise is felt at his apathy at a time when the mildest weather and a pure sky would render operations as easy as in summer. It is said that there are now from 30,000 to 40,000 Russians in Little Wallachia, and their apparent unwillingness to hazard a force of that magnitude against the intrenchments of Kalafat, is considered as a symptom of the respect in which the Turks are held by their enemy. But who shall say what are the real intentions of the Czar?

In the camp, of course, politics are as much discussed as anywhere else. The periodical changes of Ministers in Constantinople are made the subject of loud debate, and the Turks abandon their usual quietude of demeanour in the warmth of contending opinions. The Turks, it must be remarked, are usually much like Indians in their mode of settling questions of importance. In contemplation of a forward movement against the enemy, they hold a *medjlis*, or council; and then the most profound silence is preserved whilst each General or officer broods over what is supposed to be an idea. In the majority of instances silence is not a sign of thought; and the medjlis of the Turks is more frequently without results than fruitful in expedients. In the councils of the great, a mute—*i.e.*, a person who in his youth was considerately deprived of his tongue—is used to bring in the coffee, which prevents the councillors from going to sleep; but, in real truth the mute is merely a thing of supererogation, for a Turkish council is as silent as the grave; and, when decision, which is rare, is known to have marked the proceedings, the mute will be found to have been carefully excluded. Councils are always fatal things. If Clive had listened to their advice we should not have won Plassey. If Charles XII. had held one, would he have won Narva? But, with the Turks, councils are a necessity—a dull one, it is true; but one which they may not abolish without danger. An instance took place not long since which was ludicrous enough. In a reconnoissance that was made in the direction of Citaté, a Captain of Lancers rushed up to inform his commanding officer that the Russians were about to cut us off. "Peki" (good), said the commander, proceeding as if he had not received the information. "What!" said a Captain, "shall we not halt and hold a council?" "D——n your medjlis!" said the Commandant, who was a Pole, to the astonishment of all around. There is no Turkish officer, in such a case, that would not have halted; pipes would have been lighted all round, and by the time a decision was come to, the enemy would, perhaps, have made progress so far as to bring about a catastrophe, which might otherwise have been avoided.

The apathy of the Turks has, however, been somewhat shaken by the intelligence that a change of Ministry had taken place at Constantinople; and that Riza Pacha, lately at the head of the Admiralty, had been promoted to the post of Minister of War. Riza Pacha is supposed, whether with truth or not, to be less favourable to warlike measures than his predecessor in office, and it is feared lest the ascendant of a peaceful Minister may produce some change in the policy hitherto pursued at Constantinople. It need scarcely be said that an attempt to check the ardour of the Turks against the Russians at the present moment might lead to serious consequences. I do not believe that a Ministry of peace would be likely to live any time. The softas of the capital betrayed the feelings of the population, when they grumbled against the Imperial proclamation, of which they had mistaken the tenor; but there are other symptoms which prove the existence of the popular sentiments, and amongst them may be noted one which is strongly telling. The town of Widdin and the camp of Kalafat are this moment full of dervishes, armed with poles, to which are attached scythe blades. (*We have engraved our Correspondent's sketch of the scene, and shall, next week, present other sketches received with this communication.*) These fanatics are, in truth, a disgrace to the Turks, for their avowed intention is the cutting off of the heads of defunct Russians; but the presence of these men in the ranks of the army, where there may be seen at every skirmish calling on the Prophet to destroy the Giaours, is a sign of the fanaticism which now animates the people; and the proof that this fanaticism is shared by the soldiers, is shown by the charity which the latter afford to the Dervishes. The feelings excited by the news of Ministerial changes in Constantinople, have been replaced by others within the last twenty-four hours, by the receipt of a supplement to the Turkish Constantinople journal, in which it is announced that England and France have declared war against Russia. This, however, is a piece of news which is considered to require confirmation.

Intelligence of a character more likely to be true, has come up from Rustchuk. It appears that a few days ago Omer Pachs, appeared in that city, and ordered the bombardment of Giurgevo. The guns in position on the island between the two cities, were belching forth their deadly projectiles during an entire day. It is now rumoured that thirty battalions of Turks have passed the Danube at Sistova, and invaded Wallachia in that direction. Whether this be true, or not, it is impossible to ascertain; but on the day before yesterday a movement was made by the Russians, which tends to confirm the opinion, either that Omer Pacha has already made a diversion, or is about to make one. The enemy was seen to advance at about noon, simultaneously from Payana and from Golenz, with upwards of 20,000 men and fifty-four guns. Nine battalions marched from the former place, eight from the latter, and two battalions moved in the centre. This infantry was further supported by four regiments of cavalry. The enemy came up in this force for the purpose apparently of burning the forage in proximity to the entrenchment. Whilst the Russian infantry remained out of gun-shot, behind the undulations of the ground, parties of Cossacks were to be seen galloping to and fro, and setting fire to hayricks and maize-magazines. This they did without molestation from the Turks, who seemed to look on unconcerned at the destruction before them. Having remained about three hours in order of battle, and doubtless obtained from the heights around a tolerable notion of the strength of Kalafat, the Russians retired, and were only followed by a few of the Irregulars, at whom they fired with six-pounders—rather a useless operation. As the shades of evening drew on, the glare of the fires was distinctly visible, not only in the plains in front of the position, but far away towards Payana, Maglavitz, and Citaté, where huge masses of flame cast up a lurid light upon the hills of sand, and announced a wide and regularly-organised conflagration. Such a proceeding on the part of the enemy seemed to argue a determination to retire; and it was resolved, at night, to reconnoitre the nearest villages, for the purpose of ascertaining if they were still occupied. Achmet Pacha accordingly marched out at eleven o'clock, with nine squadrons of horse, and a few irregulars, and took the road to Golenz. Four guns accompanied the force, which came before the village, without encountering more than a couple of Cossacks. The bashi-bozouks rushed at these two individuals with terrific ardour, firing their fusees and pistols as if a whole regiment were in front of them, but no enemy appeared. A halt was ordered; the guns were brought up, unlimbered, and fired at random in the direction of the village. No reply was given, no Russian appeared, and the General in command, satisfied with what he had done, turned back and came in to quarters as ignorant as to the point which it was necessary to ascertain as when the party set out. I have thought it necessary to state these facts because they show great lack of judgment on the part of the officers who hold command here. The Turks are brave; their discipline has struck me on more than one occasion. It is only a pity that bravery should be liable to such singular misdirection from officers who exhibit ignorance in the details of their profession. More than half the day has passed, and yet we are still ignorant as to whether the Russians are in full retreat towards Krajova or not.

THE CZAR'S MANIFESTO.

From the following proclamation, which appeared at St. Petersburg on the 23rd inst., it will be seen that the Czar is using every means of excite the fanatical zeal of his degraded serfs:—

We, Nicholas I., &c.,—

We have already informed our beloved and faithful subjects of the progress of our disagreements with the Ottoman Porte.

Since then, although hostilities have commenced, we have not ceased sincerely to wish, as we still wish, the cessation of bloodshed. We entertained even the hope that reflection and time would convince the Turkish Government of its misconceptions engendered by treacherous instigations, in which our just demands, founded on treaties, have been represented as attempts at its independence, veiling intentions of aggrandisement. Vain however, have been our expectations, so far

The English and French Governments have sided with Turkey, and the appearance of the combined fleets off Constantinople served as a further incentive to its obstinacy; and now both the Western Powers, without previously declaring war, have sent their fleets into the Black Sea, proclaiming their intention to protect the Turks, and to impede the free navigation of our vessels of war for the defence of our coasts. After so unheard-of a course of proceeding among civilised nations, we recalled our embassies from England and France, and have broken off all political intercourse with those Powers.

Thus, England and France have sided with the enemies of Christianity against Russia combatting for the orthodox faith.

But Russia will not betray her holy calling; and, if enemies infringe on her frontiers, we are ready to meet them with the firmness bequeathed to us by our forefathers. Are we not still the same Russian nation, of whose exploits the memorable events of 1812 bear witness?

May the Almighty assist us to prove this by deeds. With this hope, combatting for our persecuted brethren, followers of the faith of Christ, with one accord let all Russia exclaim, "O Lord, our Redeemer! whom shall we fear? May God be glorified, and His enemies be scattered."

St. Petersburg, Feb. 9 (21), 1854.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

CRIMINAL LAW BILLS.

Lord ST. LEONARDS called the attention of the House to the reports which had been made at various times by the Commissioners appointed for the Codification and Consolidation of the Criminal Law. On these reports bills had been framed, which had been referred to a select committee of their Lordships, and on which the opinions of the Judges had been asked. Those opinions, it appeared, were decidedly against the measure. He wished, therefore, to know the intentions of the Government as to the bills in question.

The LORD CHANCELLOR intimated his intention of referring the bills to a select committee.

Lord BROUGHAM addressed their Lordships (who were by this time reduced to four) at great length, expressing his sorrow at the prospect of fresh delay in giving the public the advantage of a criminal code.

The subject then dropped.

HOUSE OF COMMONS.—MONDAY.

THE EASTERN QUESTION.

Mr. LAYARD wished to know whether, in the event of the Emperor of Russia withdrawing his forces from the Principalities, he would be placed in the same position as he was before the commencement of this war—whether the old treaties were still to be in force?

Lord J. RUSSELL: The proposal made to the Emperor of Russia has no reference whatever to the treaties. We consider that the occupation of the Principalities belonging to the Sultan is a wrongful occupation, and we have therefore requested the Emperor of Russia to evacuate those Principalities by the 30th of April; but if he accedes to that request it is by no means to be conclusive as to the war between Russia and Turkey, nor will it include any treaty between those two Powers.

Mr. LAYARD said, the noble Lord had not answered his question. What he wished to know was, whether this was a definite proposal, which enabled the Emperor of Russia to resume the negotiations which existed at the time when a day was given him to accept certain proposals made to him in consequence of what took place at the Conference of Vienna and at Constantinople. If so, we should return exactly to the *status quo ante bellum*.

Lord J. RUSSELL: I do not know how I can explain further my answer to the hon. gentleman's question. What we proposed was, that the Principalities should be evacuated; and, supposing the Emperor of Russia were to consent to that request, it would then, of course, be open to him and the Sultan to negotiate, and it would be open to the Four Powers to mediate or to take part in any way in those negotiations.

Mr. LAYARD: I beg to give notice that I shall take an early opportunity of bringing the subject in a definite shape before the House (Hear, hear).

THE FINANCIAL STATEMENT.

The CHANCELLOR of the EXCHEQUER brought forward the "consideration of the financial state of the country." Considering the gravity of the circumstances in which the country was placed, the Government thought that they would best discharge their duty by submitting, at that unusually early period of the session, the financial statement for the year, and the measures they thought requisite to be adopted to meet the exigencies, which must make a serious addition to the public burdens. He then proceeded to detail the actual state of the revenue and expenditure. The sums at which he had last year estimated the produce of the different sources of revenue, and the actual receipts, were, in round numbers, as follows:—

	Estimates.	Actual Receipts.
Customs	£20,680,000	£20,800,000
Excise	14,640,000	15,170,000
Stamps	6,200,000	6,260,000
Taxes	2,250 000	2,178,000
Income-tax	5,550,000	5,700,000
Post-office	900,000	1,042,000
Crown lands	320,000	321,000
Miscellaneous	320,000	503,000
Old stores	460,000	481,000

The total amount of revenue for the year, as estimated, including saving by reduction and conversion of debt, was £52,920,000, whereas the actual receipts produced £54,959,000, showing an improvement, as compared with the estimates, of £1,035,000. On the other hand, the expenditure for which the House provided last session was estimated at £52,185,000; but the actual expenditure, though swelled by charges for military operations, was but £51,171,000; so that, while the income of the country was £1,035,000 more than the estimates, the expenditure was £1,012,000 less. Mr. Gladstone then detailed the results of the measures of last year for the remission of duties, and of those for the extension and augmentation of taxes. He had calculated the net produce of the Irish income-tax for the year at £460,000, and the result had been an excess of £20,000, or about £480,000. The extension of the tax downward, in Great Britain, to incomes of £100 a-year would, he expected, yield to the Exchequer at least as much as he had estimated, namely, £250,000. The extension of the spirit duty in Scotland, which he had calculated would produce £278,000, had yielded only £203,000, but the apparent diminution was explained by the increased temperance of the people, and there was not so much as the breath of a suspicion of any revival of illicit distillation. The result of the augmentation of the spirit-duty in Ireland had been altogether satisfactory, the amount for which he had taken credit having been £198,000, whereas the actual amount was not less than £213,000. With respect to the succession duty, so far as regarded the ultimate probable yield, he saw no reason to depart from his conjectural estimate; but certain relaxations would almost overtake the actual receipts. He did not expect to realise more than £500,000 from this tax in the next year; and he had every reason to believe that the florid calculations of those who had predicted that the tax would realise from £3,000,000 to £4,000,000 were visionary. The whole of the facts he had stated, combined together, proved that the finances of the country stood upon a sound and solid foundation. The future, however, must be governed by an altered state of circumstances; and, making moderate allowances, he submitted the following estimate of the probable revenue in the year 1854-55:—

Customs	£20,175,000
Excise	14,895, 00
Stamps	7,090,000
Taxes	2,015,000
Income-tax	6,375,000
Post-office	1,200,000
Crown Lands	320,000
Old Stores	430,000
Miscellaneous	330,000
	£53,849,000

The expenditure for the year was less satisfactory. The charge for the funded debt had indeed been reduced from £27,570,000, to £27,000,000—a difference of £570,000 in favour of the country—which was in part due to the act of 1844, and in part to the measure of last session for paying off certain minor and South Sea Stocks. The charges for 1854-5 would stand thus:—

Funded Debt	£27,000,000
Unfunded Debt	546,000
Consolidated Fund	9,460,000
Army	6,857,000
Navy	7,498,000
Ordnance	3,846,000
Commissariat	645,000
Miscellaneous	4,772,000
Militia	541,000
Packet service	792,000

To the foregoing must be added a provision for the extraordinary military expenditure connected with the existing war, which, he remarked, must necessarily be indefinite. It was proposed to calculate the vote for this extraordinary military service at the rate of £50 per head for 26,000 men, or £1,300,000. Adding this amount to the other estimated charges, the total expenditure would be £56,189,000, and the estimated revenue being only £53,849,000, there would be a deficiency of revenue in 1854-55 of no less than £2,340,000. This sum, however, would not represent the whole cost of the war; but for this event, there would be a surplus of £1,166,000, and, with the saving accruing on the funded debt of £500 000, we should have had a fund for a further remission of taxation of £1,666,000. The total difference of the account against the Exchequer, including the surplus, was no less than £4,506 000. We had, therefore, an actual deficiency to provide for amounting to £2,840,000 a year. How was this deficiency to be made up? He trusted not by interfering with the reduction of taxation already made. The net amount of loss to the Exchequer by the remission of taxes in 1853 was £1,002,000, which might be saved by retracing our steps. He hoped the committee would support the Government in standing by the different branches of the revenue as they existed. They did not propose, in the face of the figures he had stated, and of the circumstances of the country, to part with any of the branches of the public revenue; and, if so, and if money must be had, would it be right to increase the rates of duty of Customs and Excise, or to replace the duties abolished? The answer of the committee would, he hoped, be, like that of the Government, in the negative.

We have entered upon a great struggle, (said the right hon. gentleman), but we have entered upon it under favourable circumstances. We have proposed to you to make great efforts, and you have nobly and cheerfully backed our proposals. You have already by your votes added very nearly 40,000 men to the establishments of the country; and, taking into account changes that have actually been carried into effect with regard to the return of soldiers from the colonies, and the arrangements which in the present state of Ireland might be made—but which are not made—with respect to the constabulary force, in order to render the military force disposable to the utmost possible extent, it is not too much to say that we have in addition to the disposable forces of the country, by land and by sea, at the present moment, as compared with our position twelve months ago, to the extent of nearly 50,000 men. This looks like an intention to carry on the war with vigour, and we wish and hope that her Majesty's Government is that that may be truly said of the people of England, with regard to this war, which was, I am afraid, not so truly said of Charles II. by a country his great poet, Dryden.—

"He, without fear, a dangerous war pursues,
Which, without rashness, he began before."

(Cheers). That we trust will be the motto of the people of England (cheers); and you have this advantage, that the sentiment of Europe, and we trust the might of Europe, is with you. (Renewed cheers). These circumstances—though we must not be sanguine, though it would be the wildest presumption for any man to say, when the ravages of European war had once begun, where and at what point it would be stayed—With circumstances justify us in cherishing the hope that possibly this may not be a long war. I would not go further than the modest epithet I have used. I say that this may be a protracted struggle; but, as long as that possibility exists, I think the committee will agree that it would not be wise, in the endeavour to supply the wants of the country, to do so by a series of measures which would be injurious to different classes and different interests, to different trades and different industries, disturbing everybody's calculations and everybody's operations. I am sure the committee will agree with her Majesty's Government that that is not the course which, in the present exigency, ought to be pursued. (Hear, hear). Whatever we do, therefore, I shall take further for granted, that we are bound in honour to do it with a minimum of disturbance to trade and to industry (Hear).

There were economical reasons and there were moral reasons, that should fasten the House to the sound policy of raising the supplies within the year, instead of having recourse to that system which has been termed "a wholesale and systematic deception of the people"—the raising of funds for the war by loans. There could not be a doubt, therefore, of the course the Government intended to propose. Referring to what he had observed last year of the Income-tax, that it was a great engine of taxation—an engine which might be used to the extent of a great part of the demands of any war—the Government proposed, he said, to repair the deficiency of £2,840,000, and to provide a moderate margin besides, by increasing the Income-tax by one half, levying the whole addition for and in respect of the first moiety of the year, that was, to double the tax for the half-year. The fiscal result of the proposition would be this: he had taken the amount of the Income-tax for 1854-55 at £6,375,000; a moiety of that sum was £3,187,000; but, in the case of the Income tax, the cost of collection diminished in proportion as the amount increased, and he took the real moiety at £3,307,000, which would make the whole produce of the Income-tax £9,682 000. The aggregate income for 1854-5 would then amount to £56,556,000; and the expenditure being estimated at £56,189 000, a small surplus would be left of £367,000. Mr. Gladstone then explained a financial change proposed by the Government, interesting, he said, to the commercial community, relating to stamps on bills of exchange, the law respecting which was in a most unsatisfactory state. We charged bills of exchange drawn at home, and exempted bills drawn abroad, contrary to the policy of France, where the stamps were uniform, whether the b lls were home-drawn or foreign-drawn. Moreover, there was reason to believe that the tax was evaded, and, while the Exchequer was defrauded, the ultimate holder of a bill found it worthless. It was therefore proposed to abolish the distinction between home and foreign-drawn bills, making them pay the same rate of tax—namely, 2d. for each £50, or for each £100, on short bills; and 4d. per £25, or 1s. 4d. per £100, on long bills, up to £3000; the stamps to be not impressed, but adhesive. He did not expect that the change could take effect until the 6th of July; the amount which this duty would produce was calculated at £430,000, against £550,000, the yield of the present duty. He had no doubt, however that the effect of the change would be to throw a good deal of capital into action which had hitherto been dormant; and he estimated that the ultimate revenue would be within £11,000 of the present revenue. He saw his intention, he said, to lay on the table a resolution for a vote of £1,750,000 for an issue of Exchequer-bills. The balances in the Exchequer, he observed, were low at present. They would have gone very low, had there not been no extraordinary demand. The additions to the revenue would not be realised before Christmas, whereas a large portion of the expenditure must be provided for in the next quarter, and he asked for permission to make this moderate issue of Exchequer Bills, not thinking it would be necessary to exercise the permission to its full extent; but, if it should be, the unfunded debt would only stand at present as it stood twelve months ago, when its amount was £17,750 000, and it was now £16,000,000. The Exchequer Bills were connected with the abortive operation of last year upon the public debt; the amount of the new securities taken under that measure was about £3,500,000, so that £6,000,000 had been or would be presented for payment, and the public balances had been, and would be, employed to pay off these stocks, together with the liquidation of debt charged upon the land revenues of the Crown. In consequence of this drain on the public balances, a less sum had been applied than would otherwise have been applied to the sinking fund. But the total saving from the measure had been £30,000. The summary of the whole was, that the Income-tax for the first half-year would be doubled for and in respect of the year 1854-55; and that a provision would be made for the interval by an issue of Exchequer Bills to the extent of £1,750,000, which, if issued, would be paid out of the growing produce of the revenue. He concluded by moving the vote above mentioned.

Mr. HUME thought it right that the revenue should be raised within the year, and that those corporations throughout the country which had been urging the Government to a war, without the information requisite to enable them to judge of its propriety, should now be called upon to pay their share towards the consequent burdens of the policy they recommended.

Mr. W. WILLIAMS entirely approved of the proposal to raise the supplies within the year.

Mr. HENLEY thought it impolitic to keep the balances in the Exchequer at so low a point as to compel the Government to enforce the payment of a whole year's tax within the first six months.

Mr. C. GLYN suggested the propriety of reconsidering the act of 1844, with a view to ascertain whether its operation was not of more than doubtful policy.

Mr MALINS contended that it would be impossible to carry on a great war with a restricted currency.

Mr. J. O'CONNELL thought it unwise to give another turn of income screw to Ireland before the first even had got into operation.

Mr. DISRAELI admitted at once that the House was bound to support her Majesty in all just and necessary wars; and he would not, therefore, oppose the vote. He protested, however, against the doctrine that in a prolonged contest we should rely upon taxation alone for our requisite supplies, or that even in resorting to taxation it might not be necessary to rely upon indirect as well as upon direct taxation. He also felt it necessary to impress upon the committee that the present state of the balances in the Exchequer was unsatisfactory, and might lead to danger. He wished to know what were the balances now in the Exchequer, and what were the engagements the right hon. gentleman had to meet on the 5th of April? At that date the right hon. gentleman ought to have a balance of about £10,000,000, whereas he believed he would only have about £3,000,000, while he would have to meet at least demands to the extent of £6,000,000, and about £2,000,000 more to meet the conversion scheme. Those demands, with the current expenditure, would approach £10,000,000, and he would have only £3,000,000 to meet it. This deficiency would betray a weakness of finance which must always be detrimental, and when he considered that the late Government had left balances to the extent of £9,000,000 in the Exchequer, he was compelled to ask how it came to pass that that balance had disappeared?

The CHANCELLOR of the EXCHEQUER said the fact was, that though the scheme had not succeeded, yet it had not occasioned any loss to the public. On the contrary, so far as it had gone, it had been actually profitable.

Mr. DISRAELI said that his argument was untouched—that it was most impolitic and unwise, when entering upon a great war, to make up for the reduction in the amount of the balances in the Exchequer by the issue of deficiency bills to the extent of at least £4,500,000 per quarter.

Mr. HILDYARD wished to have an assurance that the Government would not, under any circumstances, consent to subsidise foreign powers, and more particularly Austria, whose finances were known to be in a most desperate condition.

Mr. H. DRUMMOND deprecated any return to a paper currency, which was more than hinted at by several gentlemen that evening, some of them connected with the banking interest.

The resolution was ultimately agreed to, and the House resumed.

HOUSE OF LORDS.—TUESDAY.

The public business was confined to the reception of petitions.

HOUSE OF COMMONS.—TUESDAY.

RELEASE OF FROST, WILLIAMS, AND JONES.

Viscount PALMERSTON, in reply to a question from Mr. T. Duncombe, stated that her Majesty had been graciously pleased to grant a pardon to Frost, Williams, and Jones, the Newport convicts, in the same manner as to Mr. Smith O'Brien; and, also, to extend her clemency to MARTIN and O'Doherty, transported for a minor offence.

POSTAL COMMUNICATION WITH SCOTLAND.

Mr. LIDDELL moved the appointment of a select committee to inquire into the postal communication between London and the cities of Edinburgh and Glasgow, with a view of ascertaining whether greater despatch and punctuality can be attained in the transmission of letters, as well between the termini as the intermediate places

Mr WILSON suggested that the inquiry should embrace the whole subject of the conveyance of mails by railways generally.

After a short discussion, he amended motion, in the form suggested by Mr Wilson, was agreed to.

The Coasting Trade Bill was read a third time and passed.

The Mutiny Bill was brought in, and read a first time; after which the House adjourned.

HOUSE OF COMMONS.—WEDNESDAY.

SUCCESSION TO REAL ESTATE BILL.

Mr. LOCKE KING moved the second reading of this bill.

Sir J. PAKINGTON opposed the motion. The object of the bill was to alter the principle of the law of England with reference to the succession to real estate in the event of intestacy. The example of France, in reference to the breaking up of landed property, ought to convey a warning. Reviewing the provisions of the new Reform Bill, Sir John Pakington deduced evidence to show that Ministers were displaying much aptitude in falling into the views of their democratic followers. He moved that the bill now under consideration be read a second time that day six months.

Mr. BRIGHT ridiculed Sir J. Pakington's fears, and urged that the bill was founded upon the principle of "recast legislation" The object was not to interfere with the right of a man to dispose as he likes of his real estate, but to provide that in the case of intestacy the law shall step in, and make such a distribution of his property as is consistent with justice and the tendencies of natural affection.

Lord LOVAINE detested the democratic principle in the bill, and was convinced it would lay the foundation for abolishing the law of primogeniture.

Mr. M. MILNES maintained that there was no law of primogeniture, with the exception of the law sought to be amended. The existing arrangements depended upon the habits and customs of the people themselves, and not upon direct legislation. It was altogether right that in cases of intestacy property of every description should take the natural course.

Sir F. THESIGER contended that the law of primogeniture does prevail, and not merely the custom. He considered the proposed change at once useless and mischievous -useless, as having no other consequence than to make every person possessed of real property extremely careful to make a will; and mischievous, as declaring that a division of real property among the children is desirable in cases of intestacy.

Mr. HENLEY objected to the bill, which, instead of freeing land from its trammels, would have the effect of tying it up still more, and illustrated the absurdity of carrying out the principle of the measure by stating that in France, under the minute subdivision of land, thirty persons were sometimes found claiming property in a single tree.

Mr. DRUMMOND regretted the opinion of Mr. Ladlaw, that the compulsory subdivision of land would be the ruin of France, and of Burke, that the land, under such an arrangement, would inevitably fall into the hands of the Crown.

Mr. HADFIELD supported the bill, and hoped, if not passed now, the time was not far distant when its wise and beneficial propositions, which were calculated to "sweeten the breath" of families, would be engrafted on the laws of the land.

Lord J. RUSSELL opposed the bill. If they laid down the rule that it was unjust to vest in the person of the eldest son the possession of the real estate, to the exclusion of the other members of the family, they would erect a dangerous platform of discontent and agitation throughout the country, and engender many evils in the social circle.

Mr. PHINN supported the bill, and replied to the objections of Sir F. Thesiger and other opponents.

Mr. DISRAELI did not wonder at the strenuous advocacy which Mr. Phinn gave to the measure. It would certainly, if passed into a law, promote the interests of the legal profession, while there was no doubt that it would prove one of a series of pernicious encroachments upon the institutions of the country, and, in its operations, seriously obstruct the welfare of the whole community.

Mr. L. KING replied, and expressed surprise at the opposition of her Majesty's Government.

A division was taken For the second reading, 92; against it, 203. majority, 111. The bill is, therefore, lost.

HOUSE OF LORDS.—THURSDAY.

The Earl of ELLENBOROUGH, in asking for some returns relating to the manning of the navy, observed that the Government had experienced considerable difficulty in obtaining the requisite number of seamen to man our fleet. He thought that that difficulty could be at once surmounted by holding out greater inducements to seamen to enter her Majesty's navy, than the merchant service was offering.

The Earl of ABERDEEN said that he had the highest testimony for saying that the fleet that was to start for the Baltic was adequately and efficiently manned.

In reply to Earl Grey, the Earl of ABERDEEN said, that when Lord J. Russell postponed the second reading of the Reform Bill until the 27th April, he did so in all sincerity and true faith, with the intention of proceeding with the measure on the 27th April. If, however, he were asked whether the intention of the noble Lord will be irrevocably executed on the 27th April, in respect to the second reading of the Reform Bill, he must decline to make any positive pledge on the subject. In the present state of this country and of Europe, it was impossible to say what a day or an hour might bring forth.

The Earl of BARROWBY called their Lordships' attention to the report of the Sanitary Commission, especially as regarded the metropolis, and asked the Government to take such steps as were recommended to secure the health of the people.

The Earl of SHAFTESBURY also urged upon the Government the propriety of adopting immediate measures for effecting the removal of all nuisances, particularly in the metropolis.

Lord GRANVILLE said that the Home Secretary was now collecting information on the subject with a view of introducing a bill to remedy the evils complained of.

After a short conversation their Lordships adjourned.

HOUSE OF COMMONS.—THURSDAY.

The Thames Improvement Bill was postponed until the 2nd May.

Mr. RICH asked whether the Government contemplated making any provisions for the better discipline of the troops on the occasion of the capture of towns by storm?

Mr. S. HERBERT said that the Commander-in-Chief had ample power over life and death; and he thought that this matter had better be left entirely in his hands.

Sir F. FAGAN moved that the House will to-morrow resolve itself into a committee to take into consideration the law relating to the rate or tax called "Ministers' Money" in Ireland, with the view to repeal the same.

Mr. HUME seconded the motion.

Sir J. YOUNG moved, as an amendment, that, after the first of October next, houses rated under £10 a year should be exempt from the tax; as should, also, all houses, however rated, built in future.

After some discussion, the House divided, when the Amendment of Sir J. YOUNG was carried by a majority of 103 to 88.

Mr. CRAWFORD obtained leave to bring in a Bill to enable Executors

to issue in any part of the United Kingdom, under a judgment in any court in England, Scotland, and Ireland.

On the motion of Lord J. RUSSELL, the issue of New Writs for the Suspended Seats was postponed until the 17th of March.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

Lord Brougham laid upon the table a Bill to Assimilate the Law of Bankruptcy and Insolvency in Scotland to that of England. The bill was read a first time.

THE WAR.

The Earl of SHAFTESBURY moved for papers in continuation of those formerly presented in reference to the state of Christians in Turkey, and, after alluding to the pretences put forward by Russia in justification of her invasion of the Principalities, said it was quite obvious that these hostile proceedings had their origin in ambitious motives. He would undertake to prove that there was in Turkey a far greater degree of religious freedom than in Russia, the whole aim of which power appeared to be to darken all that was light, and to subjugate all that was free. The question was not whether we should range ourselves on the side of a Mahomedan State against Christians, but whether we should permit the principle to be established, that the more powerful states might aggrandise themselves at the expense of their weaker neighbours; and, in ranging ourselves on the side of Turkey, we were resisting that principle in prohibiting the encroachments of Russia. The noble Lord proceeded, in an able speech, to repudiate the principle that this contest could in any way be considered as a religious war.

The Earl of CLARENDON, in conceding the papers, highly eulogised the speech of the noble Earl, which was all that could be desired, both as to its spirit and the moment at which he had brought it forward. Their Lordships would be glad to hear that he had that evening received a despatch from Lord Stratford de Redcliffe, which stated that a firman had been completed by which the Christian and the Mahomedan subjects of the Porte were granted equal privileges with respect to religion.

Earl GREY said that the real facts must not be lost sight of amidst the compliments paid to Turkey. All Christians were still styled "dogs," and Mahometans becoming converts to the Christian religion were liable to be punished by death.

Lord BEAUMONT said that the law condemning proselytes from Mahometanism to Christianity to death was repealed some years ago.

Earl GREY was glad to learn that such was the fact. He regretted that the Greeks of the western provinces were making themselves the tools of Russia. Still, there was every excuse for them; and, if they came into serious conflict with the Turks, he hoped the arms of this country would not be employed to coerce them into submission.

The Earl of ELLENBOROUGH knew nothing more likely to complicate the future relations of Europe than that we should take the position which we had refused to Russia, and become the protectors of the Christian subjects of Turkey. Insurrection on the part of the Greeks at the present moment was the worst step they could take. They ought to join the Turkish standard, and, by rallying in the defence of their country, take the step most likely to make them equal, practically and legally, with the other subjects of the Porte.

Earl FITZWILLIAM doubted whether the present was the time for this country to make any effort to obtain privileges for the Greeks of Turkey, and he did not think that we ought to give any guarantee for their future protection.

The motion was then agreed to, and their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY.

In consequence of the illness of Lord John Russell, several bills upon the paper were postponed.

On the motion of Sir J. YOUNG, the House went into committee upon Municipal Corporations (Ireland).

Sir J. YOUNG moved a resolution to enable him to bring in a bill to make such alteration in the law respecting Ministers' Money, as he had proposed on the previous evening.

Mr. FAGAN said that he felt himself justified, by the recent proceeding of the House upon this subject, to repeat his motion, by way of amendment, the effect of which was to abolish Ministers' Money; and, in lieu of it, to provide for the payment of the clergy out of the Ecclesiastical Commissioners' fund.

Mr HADFIELD and Mr. BRIGHT severally supported the amendment.

Upon a division the original motion was carried by a majority of 136 to 21.

Mr. HADFIELD said he would oppose the bill when introduced in every stage.

The resolution was then agreed to.

The Marine Mutiny Bill passed through Committee.

The Exchequer Bills (£1,750,000) Bill was read a second time—

The CHANCELLOR of the EXCHEQUER observing that the issue was in anticipation of the Income-tax, to come in towards the latter part of the year.

Mr. B. ROOKER obtained leave for the appointment of a Select Committee, to consider the best means of improving the ventilation of the House.—Adjourned.

MUSIC.

THE PHILHARMONIC SOCIETY.

The first concert of the season took place on Monday evening, and its programme was a fair specimen of the spirit which has generally actuated the management of the Society. As usual, there were two Symphonies of the great masters, each a *chef d'œuvre* of its author—Mozart's sixth Symphony in C, known by the name of "Jupiter," and Beethoven's "Pastorale." As usual, also, there were two Overtures, both highly effective, and calculated to display the powers of a great orchestra—Rossini's Overture to the "Siege of Corinth," and Weber's Jubilee Overture, in which our National Anthem is clothed with such splendid harmony. Mendelssohn's Pianoforte Concerto in D minor, which it is to all intents and purposes a grand orchestral symphony, gave Mrs. Thompson (so long and so much admired under the name of Miss Kate Loder), an opportunity to display her high qualities as a performer. She was received with enthusiasm; a feeling mingled with deep regret on the part of those who knew that this was her very last appearance in public. Her marriage has induced her to retire from the blaze of celebrity into the quiet shades of private life; but it is satisfactory to know that she does not entirely abandon her professional duties, and that she is to continue her useful course, as one of the ablest and most successful teachers of whom London can boast.

DRURY-LANE THEATRE.

The "national demonstration in aid of the wives and children of the British soldiers sent as an expeditionary force," at Drury-lane Theatre on Wednesday morning, did credit to Mr. Smith, the lessee, for his public spirit in originating it, and for his tact and skill in rendering it effective. He obtained the active patronage of the Lord Mayor and the City authorities, who gave debt to the occasion by their presence in all the "pomp and circumstance" of civic state. The theatre was crowded in every part; and the enthusiasm with which the audience received our two great loyal and patriotic songs, "God save the Queen" and "Rule Britannia," was an echo of the feeling now prevalent throughout the length and breadth of our land. The passages, in both these songs, which bore an application to the present crisis, were received with reiterated shouts and acclamations. At the end of this performance Mr. Smith was loudly called for, to receive the expression of public approval; and "Virginius" (in which Mr. Brooke is happier than in any other piece in which he appears) was well acted and received with great applause.

PROCLAMATION.—Last night's *Gazette* contains a proclamation, under the Act of Geo. III., against the "Enlisting or Engagement of his Majesty's Subjects to serve in Foreign Service, and the Fitting out or Equipping Vessels for Warlike Purposes," &c.

THE WIVES AND FAMILIES OF SOLDIERS.—On Tuesday a public meeting was held at Willis's Rooms, King-street, of the association recently formed to relieve the wives and families of those soldiers who have been suddenly sent off to the East. In the absence of the Bishop of London, Lieut.-General Sir Peregrine Maitland took the chair. Amongst the company, which was large, were a number of ladies of rank and influence. Resolutions in accordance with the object of the association were moved and seconded by Lord Shaftesbury, Mr. Hume, Lord St. Leonards, Lord Ingestre, Mr. Colquhoun, and Dr. Cumming.

THE LABOUR PARLIAMENT.—This conference, which commenced its sittings at Manchester, on Monday, appears to have been a failure. On Tuesday they determined to invite Louis Blanc and Nadaud, and letters were addressed to those parties; but it was not expected that they would attend.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Chichago, which twenty-five years ago was a marsh, is now a city of 60,000 inhabitants. It has six parishes, and a cathedral is about to be built in it.

Government has instructed the General Board of Health to prepare suggestions for a Buildings Bill, to serve for the country as well as for the metropolis.

M. Chacornac, the discoverer of the planets Massilia and Phocea, has been appointed assistant astronomer at the Observatory of Paris.

Mr. Marth, assistant at Mr. Bishop's Observatory, Regent's Park, has discovered, close to the bright star Spica, in Virgo, a new planet, evidently belonging to the group between Mars and Jupiter. It appears like a star of the tenth magnitude.

At the Wexford assizes the widow and children of Samuel Boyce, who lost his life in the *Queen Victoria*, wrecked off Howth on the 14th July, 1853, recovered damages from the City of Dublin Company to the amount of £400, and 6d. costs.

From this time, until the 1st November, the hour of commencing business in the landing and waterside departments of the Customs will be eight, instead of nine o'clock, as during the winter months.

A farmer, in the neighbourhood of Inverness, had last season, on 15 acres, no less than 600 bolls of excellent potatoes, or 40 bolls per acre. The ground had been manured with two tons and a half of Australian guano.

The house of Dickson and Co., Glasgow, largely engaged in the Austra lian trade, has suspended payment. The liabilities are said to be from £360,000 to £400,000.

Marriages are steadily increasing in the rural districts of Ireland. Previous to Lent, this year, the number was far more numerous than in any previous year since the famine, and nearly equal to the average in the most prosperous times.

A flour dealer in New York, in September last, purchased 21,000 barrels of flour, at the average price then current, 5 dols. 75 cents, and sold it a fortnight ago at 9 dols.—net profits, 67,500 dols.

During the month of January last no less than 319 merchant vessels were shipwrecked; in February 179 were lost: making altogether no less than 498 vessels in two months.

At York a servant girl, while at work last week, died suddenly of apoplexy, caused by tight lacing.

A ukase has been issued by the Russian Government, forbidding Jewish women in Poland to wear any kind of head-dress under their bonnets. The Rabbis are forbidden to marry any woman who refuses to obey the new law.

A new railway is projected from the northern counties to London, for the exclusive carriage of coals and other bulky commodities.

The Glasgow spinners, after standing out several months, have resumed work on the masters' terms.

At the meeting of the Institution for the Preservation of Life from Shipwreck, last week, cheques amounting to nearly £600 were signed, to pay for new life boats.

Cholera has made its appearance in Leeds. Out of the first thirteen cases six had proved fatal. In Ireland, also, the epidemic has broken out in a very malignant form

Prince Lucien Bonaparte, brother of the Prince of Canino, has left Paris for Italy, on a special mission from the French Government.

During the period of his command in Turkey, Marshal de St. Arnaud is to receive 60,000 fr. a month above his ordinary pay and other emoluments, besides 400,000 fr. for his preliminary expenses, outfit, &c.

The French Government are about to withdraw their extensive military establishments from Guadaloupe and Martinique.

The number of licensed victuallers in England and Wales, in 1853, was 51,640; of beerhouse keepers, 40,913. The number of licensed victuallers in Scotland was 14,812; and in Ireland, 16,289.

Mr. Samuel Owen, to whom Sweden owes the introduction of steam boats into that country, died at Stockholm the other day, at the age of eighty.

Mr. Hobbs, the patentee of the American lock, has offered 200 guineas for any one who can accomplish the task of picking it.

The works for the Central Italian railroad commenced on the 9th February, in the direction of Castelfranco and Modena

Mr. Grenville Murray, one of the *attachés* of the British Embassy at Constantinople has founded a museum of antiquities and three scholarships at the public school in the island of Lesbos.

Several earthquakes have taken place in Calabria lately, attended with great loss of life. One village, containing 900 inhabitants, has been completely destroyed. Altogether 3000 lives had been lost up to the latest accounts.

Three Princesses of the Sultan's family are to be immediately married: one, of fourteen years old, to Redschid Pacha's son; a second, eleven years old, to Ethem Pacha, son of the ex-Minister, Mehemet Ali Pacha; and a third, ten years old, to Achmet Pacha, son of Fethi Achmet Pacha, the grand master of artillery.

Thirty thousand pounces were paid upon spirits in bond at Glasgow on Friday and Saturday last from a notion that Mr. Gladstone would propose an increase in the duties.

Twelve hundred pounds is wanted for the erection of baths and washhouses in Lynn. Lord Stanley, M.P. for the borough, offers to give one-fourth of that sum if the corporation and inhabitants act liberally.

A new Episcopal church has been built at Cincinnati, which has cost 140,000 dollars.

The Russian Five per Cents have fallen about 35 per cent, since the beginning of last year.

A stratum of coal, about six inches thick, has been discovered in the town of Gloucester, at a depth of eleven feet from the surface.

The *Edinburgh* steamer struck on the coast of East Friesland, on the 27th ult., when twelve persons lost their lives.

It is said that the Earl of Durham will succeed to the Lord-Lieutenancy of Durham, vacant by the demise of the Marquis of Londonderry.

The Duke of Cambridge will pass through Paris, on his way to the East, and has been invited to visit the Emperor. His Royal Highness, it is expected, will reside during his short stay at the Tuileries.

There are now, at Southampton, on their way to Liberia, four liberated slaves from Cuba. They lived in Cuba twenty years, about twelve of which they were in slavery.

A gentleman at Havannah has invented a sewing-machine which makes button-holes and sews on buttons.

Only three Government emigration vessels have sailed from Liverpool for Australia during the past month.

One of the titles of the Emperor Nicholas is "the Most Pious Autocrat" in Russian, "*Bita otcshestvetselchi Avtokrator.*"

The public prosecution of Stockholm has commenced the prosecution of seven women in that city, for having abandoned the Lutheran faith, and embraced that of Rome.

Mr. Webb, of New York, has contracted to build a line-of-battle ship, of 90 guns, for the Czar.

The Maine Liquor-law has passed the Maryland Legislature, and, if applied by a vote of the people, will go into operation in two years.

It is said that M. Isturitz, the Spanish Ambassador, is about to be recalled to Madrid, to mark the displeasure of the Queen of Spain at the freedom used in speaking of her conduct.

A large party of the Spanish insurgents has taken refuge in France.

The seabord of the United States was visited by a most severe snow-storm on the 20th and 21st ult. The average depth of snow was about two inches.

A gentleman residing at Christopher-street, Finsbury-square, was robbed in the City of £1675 in bank notes, on Tuesday. On discovering his loss he apprised the police of the circumstance, and stopped payment of the notes, the numbers of which he knew.

The Senate of Rhode Island have passed a law abolishing capital punishment.

Tillage in Ireland has considerably increased this year; several graziers, tempted by high prices, having broken up their grass-lands.

The 22nd ult., the birthday of George Washington, was celebrated at New York with more enthusiasm than it ever called forth before.

In five consecutive years, ending 1849, the estimated production of yarn in Birmingham was 1,324,329 stand of arms, or an average of 264 865 a year; and the gun-makers are fully prepared to produce a larger number of arms, if required.

The young King of Portugal is to spend some time in visiting the European Courts, but the period of his departure is not yet fixed.

Lord Londesborough has determined to discontinue the preservation of game on his estates in Yorkshire, on account of an accident to the Holderness hounds.

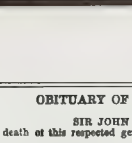
The Royal Agricultural Society have offered a premium of £200 for a steam cultivator which shall do the work of the spade or plough more economically than either of those ancient implements.

A well-known authoress in Dresden is involved in a "criminal process," because she mentioned "Newman's Crimes of the House of Hapsburg," in an account of modern literature in Dr. Kuhne's "Europa," published in Leipzig.

OBITUARY OF EMINENT PERSONS.

SIR JOHN CONROY, BART.

THE death of this respected gentleman is announced. Sir John Conroy, born at Caerhyn, in Carnarvonshire, 21st October, 1786, was the descendant of a very ancient Irish family. At an early age (in 1803) he entered the army and served with much credit till 1815. Subsequently, he was placed on the retired list of the Royal Artillery. Many years ago he entered the service of the late Duke of Kent, and after his Royal Highness's death was appointed Comptroller of the Household of the Duchess, which office he continued to hold until the accession of her present Majesty, devoting himself with great zeal and ability to the interests of the Royal personages with whom he was for so long a period connected. In 1837 he was decorated with the insignia of a Knight Commander of the Guelphic order, and in 1841 was created a Baronet of the United Kingdom. He received also the Grand Cross of the Saxon Order of Ernestine and of St. Bento d'Avis, and was a Commander of the Tower and Sword of Portugal. In 1843 Sir John filled the office of High Sheriff of Montgomeryshire, and in 1853 became Lieutenant-Colonel Commandant of that county's Militia. Of late, the worthy Baronet has principally resided at Arborsfield-hall, near Reading, in Berkshire, where he occupied himself much in agricultural improvements. Sir John Conroy married, in 1808, Elizabeth, daughter and heir of Major-General Benjamin Fisher, and niece of Dr. Fisher, Bishop of Salisbury; and by her leaves issue, of whom the eldest son, now Sir Edward Conroy, second Baronet, is married to Lady Alicia Parsons, daughter of the Earl of Rosse.



CHARLES WILLIAM (STEWART) VANE, MARQUIS OF LONDONDERRY, K.G

THIS distinguished nobleman died on the 6th inst., in his 76th year. His Lordship, the eldest son of Robert, first Marquis of Londonderry, by Frances, his second wife, eldest daughter of Charles, Earl Camden, entered the army as Ensign, in 1794, and took part in the unfortunate expedition to Holland, during the course of which he received a severe wound. In the Peninsular campaigns there was no more gallant cavalry officer than Charles Stewart. At Corunna, Talavera, Busaco, Fuentes d'Onor, and Badajos, he was especially distinguished, and received a brevet and one clasp for his services. It was not, however, on the battle-field only that the Marquis earned honourable fame. From time to time he was engaged successfully in important missions to the camps of the Allies. "He was," to use the eloquent words of a contemporary, "as fearless a soldier as ever drew sword, and as undaunted in battle; and it can with truth be said, that there never was one braver in the British army than the Charles Stewart whose death it is our duty to announce."

His Lordship was created, in 1814, Baron Stewart, &c.; in 1822, he succeeded to the Irish honours, at the death of his half-brother (formerly so well known as Viscount Castlereagh). In the following year he obtained the Earldom of Vane, with special limitation to the issue of his second wife, the heiress of Sir Harry Vane Tempest, Bart.

At the period of his death, he was a General in the Army, Colonel of the 2nd Life Guards, a Knight of the Garter, a Knight Grand Cross of the Bath, a Knight Grand Cross of Hanover, and a Knight of the Tower and Sword of Portugal, of the Black Eagle and Red Eagles of Prussia, of the Sword of Sweden, and of St. George of Russia. He was also Lord-Lieutenant of the county of Durham, and Custos Rotulorum of Downshire and Londonderry. At one period he was Ambassador at Berlin, and at another, at Vienna. Without referring to the circumstances attending his appointment to, and relinquishment of, the embassy to St. Petersburg, during Sir Robert Peel's short-lived administration, in 1834-7, it will be sufficient to observe, as connected with the political part taken by Lord Londonderry, that his conduct was generally that of a moderate and independent Conservative. Few men have more freely indulged in the expression of uncompromising opinions upon any subject with respect to which conviction was fairly awakened, and, at the same time, so generally succeeded in avoiding the incurring of personal enmity. Indeed, personal enemies his Lordship had none. His thorough goodness of heart was evidenced by so many acts of kindliness and liberality, that those who knew him best respected and loved him most. The affection entertained for him by his immediate relatives, and by all who came within the sphere of domestic and personal correspondence, was of a warmth which attested his sterling qualities of temper and character. Among his leading impulses was a deep-seated and devoted attachment to the memory of his brother, whose character, when assailed by ignorance, thoughtlessness, or malignity, he spared no effort to vindicate from misrepresentation. This feeling was conspicuously manifested in the one of the latest acts of his life—the publication of the "Correspondence and Despatches of Lord Castlereagh," a work which takes rank as one of the most valuable contributions to the political history of Europe.

Lord Londonderry married, August 1, 1804, Lady Catherine Bligh, daughter of John, third Earl of Darnley, and by her (who died Feb. 11, 1812) had one son, Frederick William Robert, Viscount Castlereagh, now fourth Marquis, who is married to the Dowager Viscountess Powerscourt. The Marquis married secondly, April 3, 1819, Lady Frances-Anne Vane Tempest, only child and heiress of the late Sir Harry Vane Tempest, Bart., by Anne-Catherine, his wife, Countess of Antrim; and by her (who inherited vast property in the county of Durham) his Lordship leaves three sons (of whom the eldest, George Henry Robert Charles, Viscount Seaham, now becomes second Earl Vane), and three daughters, of whom the eldest is Marchioness of Blandford; and the second, Countess of Portarlington.

His Lordship died from the effects of a sudden attack of influenza, which proved too severe for a constitution already weakened by long service and the natural decay of age. His death was free from pain; and his last hours were soothed by the presence of nearly all the members of his family.

BARON DE REHAUSEN.

His Excellency the Chevalier John G. Baron de Rehausen, Swedish Envoy Extraordinary and Minister Plenipotentiary at the Court of St. James, was a diplomatist of long standing, and was very generally and deservedly respected and esteemed.

Baron de Rehausen was born in 1802, and may be said to have passed the greater part of his life in this country; in early boyhood he was sent to England, his father then being a Swedish Minister at the Court of St. James's. The son was, in fact, brought up in diplomatic service: he was successively attached to the Swedish Legations at St. Petersburg, the Hague, and Paris. From the latter capital he was removed to London, where he first became Consul and then Secretary of Legation under Count Bjornstjerna, who for a long period was Minister from Sweden in England: during the occasional absence of the Count Baron de Rehausen was accredited Charge d'Affaires. In 1846, on the recal of Bjornstjerna, Baron de Rehausen was appointed his successor. Since that period, the Baron has discharged the diplomatic functions of his office with great satisfaction both to the Majesties of Sweden and of England.

The Baron died of the small-pox on the 2nd inst. at the house of the Swedish Legation in Halkin-street West.

ESCAPE FROM ASSASSINATION.

(From a Correspondent.)

PESHAWUR, December 30, 1853.

You have probably heard of the Khans or Sirdarzai Chiefs, who receive salaries from our Government, and are consequently supposed to be well affected towards us; but which in reality are jealous of our power—disgusted at seeing the Sikh yoke cast to their tyranny; utter as any religious fanatics could possibly be, and constantly exciting the people against us and our religion; designating us with the appellation of Kaffirs, in which they are frequently assisted by their Moollahs. The most powerful of these Khans is one Kadir Khan, of Teroo, a large village, some three miles distant from Murdan, the site of the Fort for the Corps of Guides. In his service, as a scowr, was an old man named Jellalah, who had been employed by him, and his father before him, in ridding the world of obnoxious people; he had committed eighty murders, and, supported by his high master's name, had been for years dreaded in every village in the Eusufzai. Such was the villain, who, having arrived at the age of seventy years, and feeling that in the natural course of events he could not live much longer, and that a terrible punishment awaited him in another world, wished to do some act which would save him: taught by his Moollahs to think that to kill a Kaffir was the only act which would enable him to gain that object, and knowing that his master wished to be rid of the fort-building infidels, he came to camp *to murder me, and gain Paradise.*

On the morning of the 2nd I had just returned from the lines, and was

WRECK IN COREJOU BAY, ON THE COAST OF BRITANNY.

standing at the door of my tent talking to some native officers, when I saw an old man, covered with a sheet, walking about listlessly. I asked him who he was and what he wanted. He hardly made any reply, and appeared so old and idiotic, that I took no further notice of him. Shortly after I was going over to see some of Hodson's traps, sent to Peshawur, when I saw a snake in the path, and was stooping to kill it, when I received a blow on the back, which I thought was accidentally struck by some one endeavouring to pass me, and kill the snake; and, turning round, there stood the ruffian Jellalah, with a drawn sword in his hand, and a dagger hanging from his neck by a long string. I then put my hand to my back, and discovered that I had been stabbed. Luteef Jemadar, of 1st troop, the only armed man of my party, threw himself between me and the assassin most gallantly, or he certainly would have given me another blow. I then dashed into my tent for my sword; but, before I return-d, the villain had been cut to pieces. Up to this time, no one but myself knew that I had been stabbed, and I said nothing for fear that my men would commence assisting me, before seizing the ruffian, who certainly stood his ground well. I am sorry that Luteef was not the man who cut him down, for, when he found himself opposed hand to hand with the fanatic, he threw his sword at him; at the same time my orderly, Yakoob Ali, threw a "make" (tent-pin) at his head, which caught him in the wrist, and his arm dropped. Thus he laid himself open; and young Secundur, a sepoy, another orderly, pricking up Luteef's sword, dealt him a blow on the head, which brought him to the ground. All this occurred in just about as short a time as you could say "knife," although it takes some time to relate. Meanwhile I was bleeding like a pig; and, now that Jellalah was despatched, I thought it about time to attend to myself; so called for a needle and thread, and a native doctor; sent off four sowars as hard as they could go to Peshawur (fifty miles), to call our doctor—who, luckily, had that day arrived there with the infantry, who were returning from Boree. The man of medicine got on his horse immediately the sowars arrived; and, riding by night (and it's a long and dangerous ride across the Mehrah by night), arrived at about one o'clock, and found me gasping, and in great pain from the inflammation in my chest. By his skilful treatment, in three days I was out of danger, and thank Heaven for a most miraculous escape. The knife entered between the seventh and eight ribs, and, slanting upwards, injured my chest; how my lungs escaped I can't say. I had on a thick posteen at the time, which did much in saving me.

WRECK ON THE COAST OF BRITANNY.

THE scene of the Illustration, a picturesque portion of the coast of Britanny, will be best described in the words of the Correspondent (M. Barrellier,) to whom we are indebted for the Sketch. The name of the wrecked vessel is the *Grace M'Eva;* she was laden with timber, and appears to have been abandoned at sea, by her crew:—

"The place where the ship lay (says our Correspondent) is Le Corréjou, three miles from the village of Plonguenneau, about seven leagues from Brest. The ship is on rocks two miles from the strand. A very strong current runs crosswise, between these rocks and the shore. Several boats were at work, bringing the sails, running rigging, spars, and other articles on shore, where they were stowed under care of the Custom-house officers, of whom ten or twelve were in attendance. As usual, the Marine took possession, and the salvage was carried on with regularity and safety.

"I went off to the ship, and my clerk took the accompanying View of the wreck. I found the vessel broken-backed, stove in in several places, and impossible to be repaired. Her loading ports were open, and the sea making a clean run through these ports, and the holes in the ship's sides. The foremast was carried away close to the board, and the mainmast broken off close to the head, which headpart, attached to the topmast, was hanging as represented in the view. I think it probable that many small articles have been washed out through the ports. The bulk of the cargo appeared untouched. Whilst I was there the ship floated, and were it not for the anchors which the Marine Agent had got out shoreward, there would be danger of her being washed out from between the rocks and carried away to sea.

"The cargo of timber is sure to sell well, timber being scarce throughout the country; the customary supply from the North having failed this year, and prices having risen fifty per cent."

Our Correspondent could not learn the fate of the crew. No effects, provisions, flags, nor any other portable articles being found on board, it is hoped that they were picked off by some other ship, or that they saved themselves in the boats, of which none remained with the ship.

HORTICULTURAL FETE AT COLOMBO.

A CORRESPONDENT, writing from Colombo, date Jan. 12, describes a recent Horticultural Exhibition at Colombo, the principal seaport town and modern capital of Ceylon. This Show, it is hoped, may lead to much improvement in a country where nature so amply repays human exertion with beautiful flowers, luxuriant vegetation, and useful products in the shape of edible fruits and roots.

The accompanying scene of the Fête is from a Sketch by a young native artist of Ceylon, Napoleon Silvoff. It represents a general view of the Fête; the main objects are the Cocoanut-house, and Plantain Grotto, on the left; and next the canvas tent on the right is a talipot-tree, and a building formed of its leaves. The main building, our Correspondent adds, was filled with flowers of the most brilliant hues.

Among the trees indigenous to Ceylon, the cinnamon is the principal; but the cocoanut-tree is the most important to the island. It contributes largely to the sustenance of the people, when the grain crops fail, or are destroyed by inundation. The leaves of this tree, each twelve or thirteen feet long, and three feet broad, together with the flowers, are used by the natives to ornament their dwellings on festive occasions. They are also platted for thatching houses. The uses of all parts of the tree are, however, too various for us to recount. Of its growth it may be instanced that, in 1813, it was estimated there were, between Dondra Head and Calpentyn, ten millions of cocoa-nut trees, which produced, in addition to a great quantity of cocoa-nut oil and 6000 leaguers of arrack, upwards of three million pounds weight of coir. The Palmyra palm is hardly inferior in importance to the cocoa-nut: the leaves are used in the construction of native huts, and also as a substitute for paper and various other purposes. The leaves of the talipot-tree are so large as to be used by the natives to protect them from the sun and rain. With such means and appliances, the Colombo Exhibition presented many curious instances of ingenuity in the adaptation of the products of luxuriant nature to the wants of man.

HORTICULTURAL FETE, AT COLOMBO.

THE NEW ASYLUM FOR IDIOTS, AT EARLSWOOD COMMON, REDHILL, SURREY.

THE NEW ASYLUM FOR IDIOTS.

THE occurrence, on Wednesday, of the Annual Festival of the supporters of this Institution, has suggested the accompanying Illustration of the grand object to which the exertions of the Society are at this moment directed—namely, the completion of the new Building at Redhill, the first stone of which was laid by his Royal Highness Prince Albert in June last. For this purpose, the Secretaries have just issued "A Special Appeal," wherein they state:—

The Board have already received 270 patients and pupils, and they have upwards of 200 now knocking at their doors, and craving admission.

They have declared their readiness to meet the urgent occasion, by providing an Hospital with 400 beds.

Still, the Board cannot look to complete this work of mercy with safety and prudence, except they can, during the erection, secure some £10,000 in addition to what they now have for the object.

They submit the matter in its own urgency and simplicity to a beneficent public, and earnestly entreat the needful assistance.

The New Asylum is now in course of erection, at Earlswood Common, Redhill, near Reigate; half an hour distant from town; and is strongly commended by its salubrity, its convenience, and its capacities for the physical exercise of the inmates.

The building will accommodate 400 inmates, classified in the following manner—84 adult females; 66 adult males, 133 boys; 67 girls, 100 infants. Accommodation is also provided for the Governor, or Superintendent, Matron, Sub-Matron, Steward, Schoolmaster, and Mistress, and their assistants, and an appropriate number of nurses and domestic servants.

The main object in the design of the edifice (after considering the convenience of arrangement and classification) is to present to the eye of the unfortunate inmates nothing that is not calculated to produce an agreeable impression. The apartments will, therefore, throughout be finished in a neat and pleasing, but at the same time economic, style. Provision is, however, made for a few superior cases, or inmates, whose friends are willing to pay for the great advantages, in point of treatment, obtainable in an institution of this description. Some of these have private sitting-rooms, with accommodation for attendants.

The sitting-rooms and dormitories throughout are 13 feet in height; and the allowance of fresh air to each person is believed to be very much greater than in any other charitable institution in England.

The building is approached by a noble flight of steps from an elevated terrace. The visitor, on entering, finds himself in a spacious hall, 30 by 21ft., with waiting-rooms attached. Proceeding directly thence, he passes through the principal staircase (in the central tower, 90 feet high), and, crossing one of the principal galleries, enters the children's dining-hall—a noble apartment, 60 feet by 35 feet, and 40 feet high, with an open timber roof. This room will be used for Divine service on Sundays. Immediately adjoining the dining-hall are the kitchen offices, which are also connected with the other wings of the building at back by light and airy covered ways, 16 feet wide and 520 feet long, in all—which, being formed principally of glass, will serve the purpose of conservatories and greenhouses. The principal recreation galleries are 340 feet long, 11 feet wide, and 13 feet high. From these open the dormitories and sitting rooms. The board-room is a handsome apartment, 30 feet by 21 feet, having an open timber roof and panelled ceiling. The fittings of the principal apartments are of oak; those of the rest of the building are of deal, stained and varnished.

There are ten staircases in the various departments of the establishment. The principal staircase, six feet wide, is formed of stone, from Hopton Wood, in Derbyshire—a splendid stone, perfectly white, almost equal to the finest marble; the other staircases, of a fine durable stone, from Wingeworth, in Derbyshire. The whole of the exterior is of stone, procured in the neighbourhood; the dressings are of Bath stone; and the windows are intended to be filled with plate-glass, which, being bedded in the stone itself, is considered more economical than glass of an inferior description with wood frames, while a much finer effect is produced.

The declivity in the ground on which the Asylum is being erected, has enabled the architect to introduce under one of the wings a basement, containing suitable workshops for tailors, shoemakers, basket-makers, carpenters, upholsterers, and other trades. The inmates of the Asylum are instructed in these trades, and have the advantage of every description of gardening, &c., as the estate of the charity consists of upwards of 120 acres. The building is supplied with bath-rooms, plunge bath, and other conveniences; and everything necessary for the health and comfort of the unfortunates who may have to reside within its walls.

The contract is taken, at the sum of £32,440, by Mr. Jay, the contractor for the new Houses of Parliament. Works to the amount of about £3000, are, how-

ever, not included in this contract. These, with the fittings, &c., will probably make the total cost of the building, fit for habitation, about £35,000.

The architect is Mr. W. B. Moffatt (of the late firm of Scott and Moffatt), of No. 2, Adelaide-place, London-bridge.

The annual festival of this interesting charity was held at the London Tavern, on Wednesday evening. In the absence of the Duke of Cambridge, it was expected that Lord Montegle would preside, but he also was prevented from doing so by the pressure of public business, and Lord Dudley Stuart, M.P., kindly consented to take the chair. He was supported by the Rev. H. Christmas, Rev. E. Sidney, Dr. Conolly, Dr. Tuke, Dr. Little, and other friends of the society.

The usual loyal toasts having been given, that of "The Army and Navy," which came next, was received with great enthusiasm. The chairman made a few appropriate remarks on the subject; and the toast was replied to by Captain Scobell, R. N. and M.P., who happened to be present at the anniversary of the Seamen's Hospital Society, in the house, and on hearing that there was a gathering of Englishmen without a soldier or a sailor among them, he deemed it his duty to say a word or two on behalf of the service. In allusion to the present aspect of foreign affairs, he stated that he had served in the Baltic for three years, during the late war, at the time when England blockaded the Russian fleet. The latter remained close in harbour, and as there were no screw steamers then, the British fleet was unable to reach them. This country had much greater difficulties to contend with at that time than we have at present, as we had both Denmark and Sweden opposed to us. In the war we were now about to wage, England would have plenty to do, but he felt confident that every man would do his duty.

The chairman, in proposing the toast of the evening, enlarged on the benefits derived from the Society by the most helpless class of the community, whose intellectual defects were, by gentle culture, supplied, and in many instances so far removed as to enable the inmates to engage in some active pursuit.

Dr. Conolly, the Rev. E. Sidney, and other gentlemen afterwards addressed the company. The list of subscriptions during the evening exceeded £1300.

CHESS.

CORRESPONDENTS.

E. T.—A Pawn takes diagonally, never by the line of its march. Get some elementary book on the game, or beg some friend to teach you the moves.

"COWLEY ROY" Try again: you are quite abroad at present. According to your defence, Black would be mated in two moves.

J. G. Contributors of games, problems, &c., should always send their addresses. It is very inconvenient and a great waste of time and postage to communicate with them through the newspaper only

M de J., St Petersburg.—Replied to by post immediately.

R. B. M.—All safely received, and under consideration. Solutions correct.

QUERY.—Join the Chess-club at Richmond, which is immediately in your neighbourhood, and rapidly rising into note. The Secretary is Mr Harris, Chemist, Richmond.

SIGMA A.—It shall appear shortly.

HERE O' CHAT Received and acknowledged with thanks.

CAROLUS.—The last sent will be examined. The former was much too easy

I.—Your Solution of No. 523 is wrong. The 6s act in No 524 we have already noticed

Address in future, simply "To the Editor." Communications directed otherwise will not be attended to

ARGUS. You must apply by letter to the Committee of the St. George's Chess-club, 53, St. James's-street Piccadilly, being a stranger.

THE GUERNSEY Chess club will be happy to play a game by correspondence with any other club, or against an amateur. Apply to the Secretary, No. 1, Havilland-street, Guernsey.

OXONIENSIS.—We were so misformed, it appears, with regard to the match in question. It was not playing between the Oxford and Cambridge Chess-clubs, but between the Oxford Club and the Club of Trinity College, Cambridge.

AMATEUR.—Mr Löwenthal is now open to give lessons in Chess to a limited number of pupils. You cannot do better than put yourself in his hands. A letter addressed to him at the Walthamstow Chess-club House, 100, Piccadilly, will no doubt meet a solution.

SOLUTIONS OF PROBLEM NO 523, by Otho Quixano, Fatey, Oldjam, Omicron, Sinilus, J. R. of Melrose, Guillebaud Foxes, Med ons, Philip, Lynx, Subscriber, Reader, L.L.D., Occasional, Invalid, A student, are correct All others are wrong.

SOLUTIONS OF ENIGMAS, by Jack of Worcester Pitt, Dereton, M.P., Mungo, Ted, J. P., Sigma, Rugby, Ernest, Medi, O. F. Q., R. H., Omega, are correct. All others are wrong.

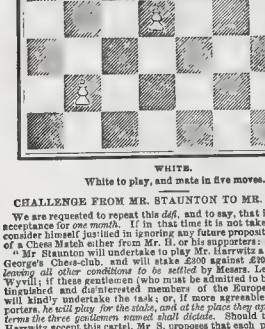
PROBLEM NO 524.

In the diagram of this clever position, the Printer has unfortunately placed a *Black Pawn* instead of a *Blace Bishop*, at Black's Q B 3rd. The reader is requested to substitute the *Black Bishop*, and we will withhold the Solution for a week.

PROBLEM NO. 525.

By A. KEMPE, Esq.

BLACK.



WHITE.

White to play, and mate in five moves.

CHALLENGE FROM MR. STAUNTON TO MR. HARRWITZ.

We are requested to repeat this *défi*, and to say, that it will be open for acceptance for one month. If in that time it is not taken up, Mr. S. will consider himself justified in ignoring any future proposition on the subject of a Chess Match either from Mr. H. or his supporters:

"Mr Staunton will undertake to play Mr. Harrwitz a match, at the St. George's Chess-club, and will stake £300 against £200 on the result: *leaving all other conditions to be settled by* Messrs. Lewis, Buckle, and Wyvill; if these gentlemen who must be admitted to be three most distinguished and disinterested members of the European Chess circles) will kindly undertake the task; or, if more agreeable to Mr. H.'s supporters, *by any three gentlemen named, and the place they appointed, upon any terms the three gentlemen named shall dictate.* Should the friends of Mr. Harrwitz accept this cartel, Mr. S. proposes that each party stakes immediately £50 in the hands of Mr. Lewis, as a guarantee of intention to play, according to any conditions which Messrs. Lewis, Buckle, and Wyvill shall stipulate; and that Mr. S., on his own part, and the backers of Mr. Harrwitz, on the part of that player, shall sign an agreement, by which *either party, in default of making good the remainder of the stakes, and playing the match at the time and upon the terms fixed, forfeits the £50 so deposited to the other party.*"

NATIONAL SPORTS.

DONCASTER SPRING MEETING.—TUESDAY.

Trial Stakes.—Snowdon Dunhill, 1. Eulogist, 2.
Sheffield and Rotherham Plate.—Mowbray, 1. Communist, 2.
Hopeful Stakes.—Bendy Palmerston, 1. The Fratterer, 2.
Grand National Steeple-chase.—Bourton, 1. Star of England, 2.
Municipal Stakes.—Penitent 1. Criterion, 2.

WEDNESDAY.

Betting-room Stakes.—Plo'emy, 1. Gamekeeper, 2.
Scurry Stakes — King David, 1. Julius Cæsar, 2.
Juvenile Selling Stakes.—Cinderella, 1. Red Tape filly, 2.
Doncester Handicap.—Alonzo, 1. Catherine Parr, 2.
Innkeepers' Stakes.—Criterion, 1. King David, 2.

SALISBURY RACES.—THURSDAY

Third Triennial Stakes.—Dan Copuld walked over.
Trial Stakes.—Dudley, 1. Orvaine 2
Wiltshire Stakes.—Trifle, 1. Cleveland, 2.

FRIDAY.

Handicap Plate.—Revvitzee, 1. Old Rowley, 2.
Queen's Plate.—St Spiro 1. Little Harry, 2.
Willen Park Stakes.—Ouiston 1. Saucebox, 2.
Bowl Handicap.—Cable, 1. Herbert, 2.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The determination on the part of the Chancellor of the Exchequer not to increase the amount of the National Debt to meet the expenses of the war with Russia, and the great abundance of money, have kept Consols tolerably steady during the whole of the week. The merchants—chiefly in small amounts, on account of the public—having unquestionably exceeded the sales, money stock has continued very scarce.

A feature of some importance has at length transpired, viz.: the official announcement of the French Loan of £10,0,0,000 sterling. On the whole, it has been well received here: and it is pretty well understood that a large portion of it will be raised in the Stock Exchange. We may, therefore, anticipate very large exports of bullion to meet such portions of the loan as will be subscribed for in this country. Austria, too, has come forward for a loan of £5,000,000: but it may be safely concluded that a very limited amount will be taken in London. Much discussion has taken place in reference to the future payments upon Russian Stock. At present, the Russian Government hold no funds here; and the dividend payments of the Five per Cents have been, as yet, made by Messrs. Rothschild, to whom a remittance of £200,000 is now on its way from St. Petersburg. It is thought that, by the event of war, the dividends will be only payable in Russia. Should such prove to be the case—which is very likely, as all Russian property will become liable to confiscation—the bondholders in this country are in a very poor position as hereafter them.

As the Continental exchanges are still considerably against this country, we have no direct imports of gold to notice; and the arrivals from the United States amount to only 65,000 dollars. From Mexico, the West Indies, &c., £586,000 have come to hand. The total exports have been little short of £300,000; and we learn that very large parcels have yet to follow.

On Monday, Consols were tolerably steady, though the amount of business doing was by no means extensive. The Three per Cents marked 92¾ ⅞ to 93; and the New Three-and-a-Quarter per Cents, 92¾ ¾. India Stock was 235; Bank Stock, 220 to 218. India Bonds were 8s.; and Exchequer Bills, 12s. to 15s. premium. On Tuesday, the Three per Cents were officially quoted 92¾ ⅞ to 93¼ ⅜; and the New Three-and-a-Quarter per Cents, 92¾ to 93. Several transactions took place in Long Annuities at 8½. India Bonds sold at 4s. to 3s.; and Exchequer Bills, 12s. to 15s. premium. The market, on Wednesday, was very inactive, but no material change took place in the quotations. Consols were dearest at 93 ⅛; and the New Three-and-a-Quarter per Cents, 92¾ ⅞ ¾. The New Five per Cents marked 114 and Counter for Account, 90¾ to 91. Long Annuity sold at 8 15-16. Bank Stock marked 210 to 211. India Bonds, 4s.; and Exchequer Bills, 12s.; 15s. premium. On Thursday, the Three per Cents were officially quoted 92¾ ⅞ to 93. Consols advanced about ¼ per cent, the prices being 90¾ 91 to 91¾ ¾ for Money, and 90¾ to 91¾ for the next Account. The New Three-and-a-Quarter per Cents were 92¾ ⅞. Exchequer Bills were done at 15s. to 12s. premium.

In Miscellaneous Securities a very limited business has been transacted. Australasian Bank Shares have marked 77½; Bank of Australia, 14½; London and Westminster, 37; South Australia, 40½; Union of London, 22½; Australian Royal Mail Steam Shares have been sold at 6s. to 8s.; and Exchequer Bills, 12s. to 15s. premium. The market, on Wednesday, was very inactive, but no material change took place in the quotations. Consols were dearest at 93⅛; and the New Three-and-a-Quarter per Cents, 92¾ ⅞ ¾. The New Five per Cents marked 114 and Counter for Account, 90¾ to 91. Long Annuity sold at 8 15-16. Bank Stock marked 210 to 211. India Bonds, 4s.; and Exchequer Bills, 12s.; 15s. premium. On Thursday, the Three per Cents were officially quoted 92¾ ⅞ to 93. Consols advanced about ¼ per cent, the prices being 90¾ 91 to 91¾ ¾ for Money, and 90¾ to 91¾ for the next Account. The New Three-and-a-Quarter per Cents were 92¾ ⅞. Exchequer Bills were done at 15s. to 12s. premium.

Austrian Five per Cents, 76; Ecuador, 3⅜; Granada Deferred, 6⅛; Mexican Three per Cent, 24½; Peruvian, 83¾ ex div.; Portuguese Three per Cents, 31 ex div. Sardinians, 73; Spanish Three per Cents, 26¾; the New Deferred, 17⅜; Dutch Two-and-a-half per Cents, 59¾; and the Four per Cent Certificates, 88¾.

Although the Railway Share market has been decidedly flat, the changes in prices have not been extensive. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 20¾; Ambergate, Nottingham, and Boston Consolidated, 14½; Bristol and Exeter, 92; Caledonian, 55; Eastern Counties, 12¾; Ditto 8 Stock, 26; Great Northern, 90¾; Ditto A Stock, 80; Great Western, 75½; Lancaster and Carlisle, 94; Lancashire and Yorkshire, 66¾; Leeds Northern, 13½; London and Blackwall, 8¾; London and Brighton, 97; London and North-Western, 101¾; Ditto, Eighths, 1⅜; Manchester, Sheffield, and Lincolnshire, 36; Midland, 60¾; Norfolk, 47½; North London, New, £10 Shares, 5¾; Scottish Central, 90; South-Eastern, 62¾; South Wales, 35½; South Yorkshire and River Dun, 32¾; Vale of Neath, 16½; Waterford and Limerick, 2¾; West Cornwall, 5¾; York, Newcastle, and Berwick, 68 ex div.

PREFERENCE SHARES Chester and Holyhead, 17½; Eastern Counties, No. 1, ¾ premium; Edinburgh, Perth, and Dundee, 52; Great Northern, 5 per cent, 116 ex div.; Ditto, redeemable at 10 per cent premium, 106 ex div.; Ditto, 4½ per cent Scrip, 3⅝ ex div.; London and South-Western Consolidated Thirds, 78 ex div.; Consolidated Bristol and Exeter, Four Per Cent, 105; North British, 107⅞; Oxford, Worcester, and Wolverhampton, 101 ex div.

FOREIGN.—Antwerp and Rotterdam, 4¾; East Indian, 22⅝; Great Western of Canada Shares, 22½; Luxembourg, 7⅛; Ditto, Railway, 4⅝; Northern of France, 20½; Paris and Lyons, 22½; Paris and Strasbourg, 20⅝.

Mining Shares have met a dull and inactive market. On Thursday—Agua Frias were 2; St. John del Rey, 80¾; Cobre Copper, 42 to 41; Linares, 11⅞, and Santiago di Cuba, 3⅜.

Friday Evening.

The Consol Market has been very inactive during the whole of the day. The Three per Cents have been marked 91¾ ⅞ to 92, and the New Three-and-a-Quarter per Cents, 92 to 92½. The Unfunded Debt, as well as Foreign Bonds and Railway Shares, have been dull. Money has continued in demand.

THE MARKETS.

CORN EXCHANGE (Friday).—To-day's market was but moderately supplied with English wheat, the quality of which was good. For millfeeds, we had rather a steady demand, nevertheless, very little change took place in prices. The supply for forward delivery samples was heavy. The show of foreign wheat was good. Fine dry samples realised late rates. To barley, the demand was in a sluggish state. In floating cargoes, next to no thing was doing, yet they were not pressed for sale. The show of barley was but moderate. The trade was less active, yet the quotations were supported. Malt was in good supply, and fair request at late rates. Oats, beans, peas and flour sold at Monday's prices. The imports of the latter exhibit a falling off.

ARRIVALS.—English wheat, 1,930 qrs.; barley, 1,026; malt, 6,770 oats, 450; flour, 1090. Irish oats, 4100. Foreign wheat, 10,300; barley, 1,800; oats, 800; flour, 1440 casks, 2,400 barrels.

English. Wheat, Essex and Kent, red, 67s. to 68s.; ditto, white, 71s. to 72s.; Norfolk and Suffolk, red, 66s. to 68s.; ditto, white, 70s. to 72s.; rye, 47s. to 47s.; grinding barley, 30s. to 32s.; distilling ditto, 33s. to 40s.; malting ditto, 42s. to 45s.; Lincoln and Norfolk malt, 64s. to 70s.; brown ditto, 58s. to 62s.; Kingston and Ware, 66s. to 72s.; Chevalier, 72s. to 75s.; Yorkshire and Lincolnshire feed oats, 27s. to 30s.; potato ditto, 30s. to 32s.; Youghal and Cork, black, 25s. to 26s.; ditto, brown, 26s. to 28s.; ditto, white, —s. to —s.; ditto, mixed, 24s. to 26s.; grey peas, 44s. to 46s.; maple, 47s. to 49s.; white, 51s. to 56s.; boilers, 54s. to 60s per quarter. Town-mixed flour, 40s. to 42s.; Essex and Suffolk ditto, 38s. to 40s.; Hants and Dorset, 40s. to 42s. per sack.

Foreign. French,—s. to —s. per 280 lbs.; American flour, 30s. to 44s. per barrel.

Seeds.—Clover seed is steady, and quite as dear as last week. Spring tares are dearer. All other articles are firm.

Linseed, English, sowing, 56s. to 64s.; Baltic crushing, 50s. to 55s.; Mediterranean and Odessa, 52s. to 57s.; hempseed, 40s. to 44s. per quarter. Coriander, 7s. to 8s. per cwt. Brown mustard-seed, 10s. to 12s.; white ditto, 8s. to 9s.; tares, 7s. to 8s. per bushel. English rapeseed, £31 to £35 per last of ten quarters. Linseed cakes, English, £10 5s. to £11 5s.; ditto, foreign, £10 to £11 5s. per ton. Rapeseed cake, £6 15s. to £7 5s. per ton. Canary, 50s. to 54s. per quarter. English clover-seed, white, 54s. to 64s.; ditto, red, 36s. to 64s. per cwt.

Bread.—The prices of wheaten bread in the metr-polis are from 11d. to 11½d. of household ditto, 8½d. to 10½d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 72s. 3d.; barley, 37s. 10d.; oats, 27s. 0d.; rye, 47s. 2d.; bean, 45s. 10d.; peas, 46s. 8d.

The six Weeks' Average.—Wheat, 80s. 10d.; barley, 40s. 4d.; oats, 27s. 2d.; rye, 49s. 8d.; bean, 4 s. 1d.; peas, 50s. 7d.

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

TEA Our market is dull, and prices are barely supported. Common sound congou is offering at 1s. per lb. The sales in London offer a fair estimate.

Sugar.—In most kinds of raw sugar we have a slow sale, and, in some instances, the quotations have a downward tendency. Good to fine colour refining goods, 34s. 6d. to 35s. 6d.; ditto, 34s to 35s., good to fine brown, 32s. to 34s. 6d.; brown Havannah, 34s. 6d. to 36s. 6d.; yellow ditto, 33s. to 34s.; brown ditto, 30s. to 32s. 6d.; low to fine ditto, 28s. 6d. to 30s. 6d.; brown, 30s. 6d. to 31s. per cwt. Refined goods are steady. Brown lumps, 44s. to 45s.; and low to fine grocery, 46s. 6d. to 47s. 6d. per cwt. Crushed commands extreme rates. The total clearances to the 4th inst. were 1 061,833 cwt., against 1,052,763 cwt. in 1853.

Coffee.—There is more doing in this article, at full quotations. Good ordinary native Ceylon has changed hands at 47s 6d to 48s per cwt.

Rice.—Our market continues flat, as barely late rates. Low mild, to good white Bengal, 18s to 19s 6d.; Madras, 14s. 6d. per cwt

Provisions.—Irish butter is in very moderate request, at last week's extreme, fine foreign is 2s. to 4s per cwt dearer; English is steady, and rather higher. There is no re doing in bacon, at the late decline. Most other kinds of provisions are unaltered in value.

Tallow.—There is more doing in this article, on higher terms. P. Y. C. on the spot, 64s.; for March and April, 64s. 3d. to 64s. 6d.; and for May and June, 65s. to 65s. 3d. per cwt.

Oils.—Linseed oil is steady, at 32s 6d on the spot. Other oils are quite as dear as last week. Turpentine is now 36s. per cwt.

Spirits.—Both rum and brandy are dull, and lower to purchase. Geneva and corn spirits sup, ort at previous rates.

Hay and Straw.—Meadow hay, £3 15s. to £5 5s.; clover ditto, £3 15s. to £5 5s.; and straw £1 10s. to £2 2s. per load.

Wool.—Since the close of the public sales all kinds of wool have met a very dull sale. In prices however, we have no change to notice

Potatoes.—The supplies being less extensive the demand is steady, at very full prices. York Regents—waterside open tints—10s. to 160s.; South ditto, 110s. to 130s.; Irish Whites, 100s to 110s.; Rhine ditto, 100s to 110s per ton.

Hops (Friday).—There is rather more business doing in our market, and prices generally are well supported This week's importa are—from Belgium, 210 bales from Denmark, 1 from Hamburg, and 10 ditto from Antwerp Past Kent pockets, 2s 10s. to £13 0s.; Weald of Kent, 5s 0s. to £7 0s.; Sussex, £5 12s. to £6 10s. per cwt.

Coals (Friday).—Carr's Hartley, 21s.; Tanfield Moor, 18s. 6d.; Eden Main, 21s. 6d.; Ball, 21s.; Belmont, 21s.; Stewart's, 21s. 6d.; Hough Hall, 20s. 6d.; South Kelton, 20s. 9d. per ton.

Smithfield (Friday).—To day's market was but moderately supplied with beast, for which the demand was in a sluggish state, at Monday's decline in the quotations. Sheep, the number of which was rather limited, moved off slowly, at barely stationary prices. The few lambs in the market realised from 6s to 6s 8d per 8lbs. We had a fair inquiry for calves, at extreme rates. In pigs very little business was transacted. Milch cows were very dull at from £14 to £17 each, including the small calf

Per stone to sink the offals:—Coarse and inferior beasts, 3s 0d to 3s 2d; second quality ditto, 3s 4d to 3s 6d; prime ditto, 3s 8d to 3s 10d; prime oxen, 4s 0d; Scots, 4s 4d to 4s 6d; coarse and inferior sheep, 3s 0d to 3s 4d second quality ditto, 3s 6d to 4s 2d; prime ditto, 4s 4d to 4s 6d; coarse calves, 4s 6d to 4s 8d; prime ditto, 5s 0d to 5s 2d; large pigs, 3s 0d to 3s 2d; neat small porkers, 4s 4d to 4s 6d; lean ditto, 4s 8d to 5s 0d; suckers and store pigs, 21s. to 27s. each Total supplies Beasts, 2970; cows, 132 sheep, 23670; calves, 190; pigs, 270. Foreign: Beasts, 262; sheep, 479; calves, 100.

Newgate and Leadenhall (Friday). The general demand ruled heavy, as follows:—

Per 8lbs. by the carcase.—Inferior beef, 2s 8d to 3s 2d.; middling ditto, 3s 4d to 3s 8d.; prime large ditto, 3s 8d to 4s 0d.; prime small ditto, 3s 10d. to 4s 0d.; large pork, 3s. 4d. to 4s. 0d.; inferior mutton, 3s 0d. to 3s 4d.; middling ditto, 3s 6d. to 4s. 0d.; prime ditto, 4s 2d. to 4s 6d.; veal, 4s 0d. to 5s 0d.; small pork, 4s. 4d. to 5s 4d. ROBERT HERBERT.

THE BURNHAM MURDER.—Moses Hatto, the groom of Mr Goodwin, at Burnham, near Eton, has been found guilty of the murder of Mary-Anne Sturgeon, the housekeeper of Mr. Goodwin, on the 1st November last. The trial lasted two days. Lord Campbell passed sentence in the usual form on the prisoner.

DEPARTURE OF THE SCOTS FUSILIER GUARDS.

THE inspection of this Regiment by her Majesty and the rest of the Royal family, previous to its departure last week, has been commemorated by our Artist in this day's publication, as one of the most interesting of the day.

At half-past six o'clock on the morning of Tuesday week, her Majesty, accompanied by Prince Albert, the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Helena, appeared at the drawing-room window overlooking the principal quadrangle of the Palace. Their appearance was the signal for a tremendous outburst of cheers from the crowd, who shouted and waved hats, sticks, and pocket handkerchiefs with the most intense enthusiasm. Her Majesty smiled on the window, which opened to the front, and stepped out into the balcony, accompanied by the Royal family, when the cheering became still more enthusiastic. The Queen was attired in a dark green merino morning dress, and a lawn-bordered shawl of the same colour, with a dark green velvet bonnet, the ribbons of which tied under the chin in the fashion might have led one to expect). The Princess Royal (who is now very nearly as tall as her Majesty) wore a dark-coloured merino dress, with cape to match, and mixed straw bonnet. The young Princes wore grey tunics, caps, and belts. Presently the seven colour Sentinels-gates were thrown open, and the Guards commenced their march in slow time, in extended column of sections of companies down Birdcage-walk, and into the esplanade in front of the Palace. At the head of the column marched the splendid regimental band, playing "O where, and O where, is my Highland laddie gone?" the plaintive and rather melancholy air of which gave, for the moment, an impression of solemnity to the whole scene which will become more lively when the band is in the field. This feeling was fully felt at the instant the troops began to pass in front of the Palace, the crowd outside the railings commenced such deafening cheers as quite drowned the notes of the whole band. Amid such marks of enthusiasm the regiment steadily pursued its way until the whole force had passed inside the gateway, where it halted on the esplanade in front of the Palace, every window of which was thrown open and crowded with eager heads. Instantly wheeling the whole regiment into line, the ensigns with their colours stepping out in advance, the Lord Lieutenant, the Duke of Cambridge rode to the front, and ordered the Royal salute. The whole force presented arms as one man—the colours were lowered—the officers saluted—the band tried to play "God Save the Queen," but were fain to desist, for the cheers of the assembled people during the salute Prince Albert and the young Princes uncovered. When the men had "recovered arms," they took off their bear-skin caps, and gave three deaf-ning cheers, and were about to fall into marching order, when the crowd, which had been by no means slow to make itself visible, insisted on one cheer more. Both the Guards and the people gave it, and another and another, till the troops, as if carried away by the enthusiasm of the moment, moved nearer to the balcony, cheering—crying "God save the Queen," waving their muskets, or tossing their huge caps high into the air. The Royal party seemed quite moved by this manifestation of devotion. Prince Albert and the Prince of Wales waved their hats, while the Queen smiled, bowed, and waved her hand repeatedly. After this scene of real en husiasm had lasted about a minute, the regiment again marched forward tolerably quiet, though as each company passed near the Royal party the same scene of vociferous cheering was renewed.

AMUSEMENTS, &c.

ALFRED WRAGGE, Secretary.

15, Parliament-street, Westminster March 1st, 1854.

THE CONSERVATIVE LAND SOCIETY. ONE HUNDRED RIGHTS OF CHOICE AND FIFTY ADVANCES BY SENIORITY Shares taken before the final numbers are place in the Ballot on WEDNESDAY, MARCH 15th, at Three o'clock, will participate in the advantages of the Sixteenth Public Drawing. In Pre-mature Shares at the Sixth Quarterly General Meeting of the Members. Viscount Ranelagh in the chair

CHARLES LEWIS CRUNESHEN, Secretary.

33, Norfolk-street, Strand, London, March 8th, 1854.

CITY of LONDON TENANTS' INVESTMENT and FREEHOLD LAND SOCIETY.—Only office in town, 70, King William-street London-bridge.

LONDON.

Sir James Duke, Bart., M.P.
Thomas Hen S Lushington, D.C.L.
CHAIRMAN.—James Pennell, Esq., Cornhill.

At a public meeting held this day at the London Tavern, Bishopsgate street, to ballot for Rights of Choice in the Society's first parcel of Shares, situate at Dulwich, James Pennell, Esq. in the Chair,

It was unanimously resolved—That this society is well worthy the confidence of the public, and this meeting pledges itself to it's aid in its hearty support.

The following were the shares drawn at the ballot:—218, 178, 132, 167, 149, 84, 76, 46, 67, 107, 150, 170 74, 64, 133, 106, 118, 214, 63, 110, 31, 189, 193, 172, 201, 224, 154, 55, 113, 223, 160, 141, 184, 192, 48, 169, 177, 73, 207, 144, 176

The purchase of another very valuable estate will be shortly announced to the members.

For Prospectuses and other information apply to any of the Officers or Agents of members in the country, or to

March 4. WILLIAM RAYNER, Managing Director.

Receipt of amounts of £10 and upwards received every day, at £5 per cent.

Day of Sale altered from Friday, March 3, to Wednesday, March 22, of the Hyde-park Estate, within two miles of Chelmsford, in the county of Essex, including Moulsham Hall, for the immediate occupation of a nobleman, seated in a highly ornamental Park of about 600 acres, and surrounded by a Domain of nearly 2000 acres—the whole of the value of upwards of £8000 per annum.

MR. BEADEL has been favoured with instructions to SELL by PUBLIC AUCTION, at the Mart, London, on WEDNESDAY, MARCH 22, at Twelve, in one lot, that magnificent Estate known as Hyde Hall, situate about eight miles from Chelmsford, and 27 miles from London. The splendid mansion is perfect order, most elegantly furnished, and adapted for the residence of a nobleman or gentleman—the present proprietor having, at enormous cost, rendered the residence all the car finishing, comfort, or luxury the most luxurious could wish.

It is surrounded by beautiful and ornamental pleasure-grounds, and a Park of about 160 acres, including Cottages, Farm and Lodges, of about 16 acres, with hot-houses, green-houses, conservatories, forcing pits, &c., and is beautifully undulating, gracefully studded with ornamental timber, and belted with luxuriant plantations. From the park there are magnificent views over the park and the mansion are obtained delightful views o the surrounding country. The domains include nearly 2000 acres of land (upon which the game has been strictly preserved), lying almost in a ring fence, divided into suitable farms, and occupied by a most respectable tenantry. This annual value of the property may be fairly estimated at £8000. This estate is one of the most desirable residential properties in the kingdom—its central position in the county, and the necessarily influential character of its proprietor, point it out as a fitting residence for the leading gentry of the county; its easy access from London, either by rail or road, renders it desirable for any one engaged in the upper walks of commercial or political fortune to have here and find every means of enjoyment, whether in the sports of the field or the discharge of useful public duties. Essex is confessedly one of the first agricultural districts in England, is second to none in the practice of improved husbandry, and is famed for its liberal landlords, and the quiet and orderly demeanour of its labouring tenantry. Hyde Hall is perhaps not equal in picturesque beauty or mineral wealth to other districts, it has claims on both these heads which require only to be developed to be appreciated. The purchaser will have the option of taking, by valuation, the herd of nearly 300 deer, the valuable and modern furniture, and articles of taste and vertu with which the mansion is replete. Particulars (3s. each) may be obtained of Mr. Coleman, Accountant, 36, Coleman-street; Mr. Rhodes, Solicitor, 47a, Parliament-street, London; of Messrs. Bourne and Wainwright, Solicitors, Dudley, and at Mr Beadel's Offices, 76, Gresham-street, London. The estate can be viewed only by an order to be obtained of Mr. Beadel, 76, Gresham-street, London.

Harwich.—Days of Sale altered from Thursday and Friday, March 2 and 3, to Tuesday and Wednesday, March 21 and 22. Important and very valuable Freehold and Copyhold Property, in the borough of Harwich, including several Farms, in the parishes of Dovercourt and Ramsey, and numerous Cottages, Houses, and Building Land adjacent to Harwich, forming first-class Investments either for occupation or otherwise.

MR. BEADEL is instructed to SELL by AUCTION, at the MART, London, on TUESDAY, the 21st, and WEDNESDAY, the 22nd of MARCH, at Twelve on each day, in numerous lots, the following PROPERTY, including, in the parish of Dovercourt, in and adjacent to the borough of Harwich—Dovercourt Hall Farm, containing 144a. 3r. 8p. Barn, occupied by Messrs Fowling and Freeman; the Toll gate Farm and Dovehouse Farm, let to Messrs Barber and Durrant, containing 144a. 3r. 8p. together with gardens and lands, let to Messrs Osborne, Peck, Rowland, Johnson, Elwish, and others; and many valuable enclosures of accommodation land, in the occupation of Mr Durrant; the King's Arms public-house, building, and Bowling Green Inn, let to Mr Hewitt; Holly Lodge Farm, with the three residences and gardens, let to Mr Ann Dingle, Messrs. Mercy, Chisnal, four slips of accommodation land in Hail fields, occupied by Mr Fuller; together with about seventeen acres of very valuable building land, and several cottages. In the town of Harwich and parish of St. Nicholas, Church-street, four houses, occupied by Messrs Cousins and others; the Church and Globe public-houses, occupied by Messrs Cousins, Alexander, and others, and the whole of Cobbold's estate in King's Head-street and premises, let to Messrs. Cobbold and others, in Marsh-street, houses and premises, let to Messrs Horlock, Fiery Marborough, and others; in St. Austin's-gate and Orchard-lane, two tenements, let to Messr. Moore and Jowers, in Rectory-street, a house and premises, occupied by Messrs Brogan and Richardson; in Cattlegate street, the bake-office, house, and shop occupied by Mr. Leaman; two houses opposite the Government Victualling Works, let to Messrs. Webb and Beasley; and in Ramsey parish, a most valuable Farm, with offices and gardens in hand, with upwards of fourteen acres of land in the rear, let to Mr Durrant. This valuable property is now in the occupation of the several tenants as tenants from year to year, and the whole is in excellent repair. Particulars (2s. each) may be obtained of Mr. Coleman, Accountant, 36, Coleman-street; Mr. Rhodes, Solicitor, 47a, Parliament-street, London; of Messrs Bourne and Wainwright, Solicitors, Dudley, and at Mr Beadel's Offices, 76, Gresham-street, London.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, MARCH 11, 1854. [GRATIS.

THE BRITISH INSTITUTION.

WORKS OF BRITISH ARTISTS.

(THIRD NOTICE.)

WE again return to this Exhibition. To commence with historical, fancy, or figure subjects:—

"Viola and her Child" (16), by G. Holmes, from Bulwer Lytton's "Zanoni," represents the mother sitting watching over her child, who is asleep in a cradle. The picture would be much more agreeable if the artist had eschewed the sickly hue which he has spread over the figures in the foreground, which is aggravated by the trying grey-drab of the wall at the back. We look in vain for the effect of "happy noon"—the sun-rays piercing through the casement, which the author describes.

"Marino Faliero, Doge of Venice" (11), by J. Holland. A scene from Byron's tragedy (Act III.—Scene 1); representing

> A tall warrior's statue
> Bestriding a prond steed, in the dim light
> Of the dull moon.

A purely theatrical subject, represented with all theatrical aids; but as such not badly painted.

"The Balcony" (23), by F. Stone, A.R.A. Here we have a lady with rather a pretty face, leaning on her hand, looking from a balcony into the street. But her features are expressionless, and her blue dress looks sold, and of formal and comfortless make—in fact all is sadly wanting in the roundness and warmth of life.

"Love and Folly" (39), by T. Hall.—A pair of chubby Cupids, floating on the water in a shell: and one of them blowing bubbles. Very conventional in treatment, but the colour bright and catching.

"Venice—The Lovers' Hour" (49), F. Cowis.—A gay cavalier in his gondola seen in the distance below, serenading his mistress; who sits in

[illegible] BY GEORGE LANCE.—FROM THE EXHIBITION OF THE BRITISH [illegible].

her chamber, attended by her maid, and appears pleased and moved by the compliment. A little black page is presenting to her her lute, upon which she will shortly realise Rogers's line—

Sung to her lute, her answer, as she sat.

"The Recognition" (90), by G. Pope, represents a lady, in a fine dress, smiling significantly as she gives a piece of money to a man, evidently in forlorn condition, who averts his head. We confess we do not "recognise" the artist's intention.

"Ma Carissima" (101), by C. Brocky—A happy Italian mother, caressing her child, who hangs in a very natural and picture que attitude in her arms. Richly coloured; that of the drapery in extremely good taste. The same artist has another domestic subject—"Now Catch it, Dear!" (409), representing the mother holding out a wild flower over the head of the child, whose arms are out to it; but this production does not please us so well as the first-named.

In No. 107, Mr. H. Barraud attempts a representation of the Madonna and Child, after the fashion described by the author of the "Christian Year"—

Ave Maria! mother blessed!
To whom, caressing and caressed,
Clings the eternal child.

The design and general treatment are meritorious, and afford an example of the danger of dealing with such subjects, in utter disregard of the solemn sentiment which inspired the masters of an earlier and purer school. But for the haloes round the heads there would be nothing in this group to distinguish it from that of any "mother and child" in ordinary life.

"Adam and Eve Discovering the Dead Body of Abel" (110), by T. Brown; and "Christ and the Woman of Samaria" (127), by R. Reynolds, are two more instances of the hopeless decline in sacred art amongst us; which we only mention by way of indicating that we have not overlooked them.

"The Master of Ravenswood and Lucy Ashton" (146), by H. Weigall, jun. A scene from Scott's "Bride of Lammermoor." The hero has an imposing aspect in his black cloak and hat; and Lucy, who is habited in white satin, looks very much like a subdued sylvan.

"The Youthful Artist" (147), by J. Sant, is a clever little study of an intelligent and interesting boy; though, as we stated in our former notice, we recognise in it a repetition of a still more admirable figure in the Academy Exhibition last year, the "Infant Samuel." The paint-brushes and colours scattered about indicate the character assumed; but the expression of the face is too evidently a studied one, and is not altogether appropriate. The colour and handling are unexceptionable. (Of this little work we give an Engraving elsewhere.)

"The Wanderer" (152), by J. P. Drew, is a sketchy, but not ineffective production. The colouring is harmonious, and there is something pleasing in the face. "A Country Girl" (322), in the same style, by the same artist, also has considerable merit.

H. W. Phillips has a careful portraiture of a dark-eyed beauty (189), inscribed—

Ho girato di qua e di là
Sol in Venezia trovai Bella.

The face and figure are of the true Italian mould, and the colouring is rich and sober. The drapery exhibits nice finish.

"Innocence" (229), by G. Wells, is a pleasing little sketch of a girl with a rose. The colouring of the dress is nicely studied chiefly pure and orange, the background in deep shade.

"Othello" (239), by W. Long. A careful study of an Oriental head; but not exactly the head of Shakespeare's Moor. The drapery and turban judiciously sober in tone.

"Othello," Act V. Scene 2 (345), by H. C. Selous. A striking presentation of the fine closing scene in this immortal tragedy. Othello—his deadly purpose speaking too plainly through his flashing eye, lifts aside the curtains of the bed, in which his unconscious victim is yet asleep. There is a good deal of energy in the action, and fineness is bestowed upon the execution. The colouring, however, is a little too high; even the face of Desdemona is flushed as in a high fever; although the poet describes it otherwise:

No scar upon that whiter skin of her's than snow,
And smooth as monumental alabaster.

"An Incident as related in the 'Life of Jo eph Grimaldi,' edited by Boz" (314), by George Cruikshank. Conceived in the full flow of animal spirits which marked the artist's earlier works, and full of masterly drawing. We do not know the "incident" referred to, but presume it is the immortal Joe who sits in the chair, whose wife offers him the physic; when an unearthly grimace by the patient plunges barb r, barber's wife, and a dandified chum of the mime's into an uncontrollable fit of laughter. And they *do* all laugh, and no mistake; Joe himself eats ing the infusion, and laughing too, in spite of his teeth, which protrude marvellously from his capacious maw.

"Ariel" (387), by J. G. Naish.

On the bat's back I do fly,
After summer merrily.

A laboured production, of very lan dscaph appearance. Ariel is represented in *parti colored dress*, perched uncomfortably, rope-dancer fashion, on the back of a bat, in the midst of a waste of pale, stone-coloured canvas. Such affairs are of the *genus* trash; of which, nevertheless, the public purchase largely.

"Ruth" (388), by G. Landseer. This subject has been, and still is, so often called in requisition, that we presume it to be popular. In the present version Ruth is represented alone in the corn-field. The figure

LITERATURE.

ILLUSTRATIONS OF ANCIENT ART, SELECTED FROM OBJECTS DISCOVERED AT POMPEII AND HERCULANEUM. By the Rev. EDWARD TROLLOPE, F.S.A. 4to. Bell.

We are not quite sure, from the words of Mr. Trollope's preface, and from the terms in which he speaks of his own drawings, now/far he wishes to intimate that this is a collection of previously unpublished materials. To us most of the objects he has delineated appear to be old familiar acquaintances; and we doubt not but most of them will be found in the large works on Pompeii and Herculaneum. Still, as good selection was a book to be desired, and he has given us them in the same time an elegant book for the drawing-room table, and a useful one for those who are commencing the study of any zoology, or who are seeking models of classical taste in the various branches of art which it illustrates. It is more especially the latter object which we presume that Mr. Trollope had in view in the illustrative of the antiquities of Pompeii and Herculanæum, or in reference to Roman antiquities in general, it is a very imperfect work. It is, in fact, a collection of examples of Roman decorated articles belonging to the four departments of religious worship, domestic utensils and furniture, personal ornaments, and arms.

The first plate consists of articles used in sacrifices, and is chiefly remarkable for several interesting examples of censers and incense-boxes. The other sacrificial implements are not very remarkable; they are rather exceptional in their forms; and the selection might, we think, have been improved. The two plates of altars are more varied, and several of them are elegant in form, or peculiarly rich in ornamentation. The most striking articles in the five plates of arms are the helmets and the arm-plates and greaves: the remains found in Pompeii threw quite a new light on the history of armour among the Romans. The helmets engraved in this selection are very nicely decorated; and the construction of some of them bear a considerable resemblance to those of the Middle Ages. Not the least interesting of Mr. Trollope's plates is that which gives us quite a complete collection of the implements used in writing and painting. We are struck with the ele ts of various forms, the styles to write upon them, books, the receptacles in which they were kept, with inkstands and reed pens for writing them; and in like manner we have the painter's easel, and his pane for painting, as well as canvas stretched on a frame; and beside the colour table, pallet, and paint box. We are thus introduced into the very studio of the Roman artist, and are made acquainted with his method of working in a manner in which no written description could convey the same information. We are struck with the ele t of resemblance, even in their forms, between the implements of the ancient painter and those used by his representative at the present day. Next come plates of musical instruments; here fountains and vessels used for the purpo es of bathing and ablution. The examples of heating and cooking apparatus are especially curious. They include small furnaces and ovens and braziers of different dimensions for holding the fires to warm the apartments. Most of the last mentioned articles are elegantly formed and ornamented. Several of these are formed like tea-kettles, and are constructed like the large urns used on our own tea-tables, so as to heat water or other liquid at the same time that they gave out heat. Another is still more ingenious, and will bear comparison with some of our modern portable cooking stoves. Mr. Trollope describes it as "supported on four winged figures, terminating in lions' legs, and supplied with the same number of handles, to render it easily moveable. It consists of a kind of tray, about 14 inches square, joined to which, on the right, is a hollow semicircular vessel, intended to hold water between its inner and outer surface, serving as a boiler. It is surmounted by three eagles, on which any dish or vase might be heated, whilst below the aperture seen in the interior is the receptacle for the charcoal. On the left rises a high circular vessel, fin shed with a beaded rim, and further ornamented with a grotesque face. A lid, slightly concave in shape, covers the top, to which a small bust forms the handle: this acted as a reservoir to the semicircular boiler, a communication existing between them, whilst the heated water was drawn through the mask seen projecting on the right." Another portable cooking and warming stove, but of a simpler form and construction, is engraved in the same plate.

It is hardly necessary to inform any one who has the slightest acquaintance with Roman antiquities that the lamps and candelabra, of which numerous examples are given by Mr. Trollope, are highly ornamental, and that they furnish excellent models for imitation at the present day. There is nothing novel in the tables and seats found in Pompeii; but they are less distinguished by the taste exhibited in their forms than many of the other objects. The articles of jewellery are rather curious than beautiful, and though by no means deficient in richness, we have seen in modern jewellery much superior in style. Mr. Trollope's selection of culinary utensils is extremely good and varied, consisting of water jars, buckets of remarkably elegant forms, cauldrons and boilers, a portable handmill, mortars, stew-pans and frying pans, egg-pans, and various kinds of pale or salt strainers; with funnels, spoons, ladles, and knives, in great variety. The latter part of the volume is devoted to vessels for the table and other purposes, in metal, glass, and earthenware; and it is here especially that we meet with an abundance of those noble forms which it has been the ambition of modern artists in these branches of manufacture to imitate. Many of the silver drinking-cups are of exquisite design, and the forms of the jugs and other vessels in glass and pottery are perfect. Among the plates belonging to this division of objects, given by Mr. Trollope, are coloured representations, on a larger scale, of the beautiful glass jug from Pompeii known as the Auldjo Vase, and of the superb glass amphora called the Naples Vase. A single plate of "miscellaneous articles," at the end of the volume, embraces writers, pens and inkstands, examples of scales and steelyards, a metal gong, and a drawing of the *stocks* which stood in the Forum Nundinarium of Pompeii, a site chiefly occupied by the military. The circumstances connected with the discovery of these stocks are extremely interesting. They were of iron, much corroded when found, and about six feet in length. "The bar forming the foundation was apparently fastened to the pavement beneath by means of spikes driven through the cross-pieces; and, from the bar, rise short upr ghts, t rminating in rings placed at convenient distances, for the purpose of detaining persons, which would be perfectly effected by passing a rod through the row of rings, and securing it by means of a lock, of which there are the remains. . . They were mainly in use at the time of the eruption, four skeletons (supposed to be the remains of soldiers) having been found with their leg-bones inserted in them."

Circumstances like this bring forcibly before us the realities of the city whose remains have furnished us with these interesting memorials of the past. We can hardly imagine anything more horrible than the hopeless position of these four no doubt petty offenders, fixed by the legs, amid the scene of destruction which surrounded them. But even the soldiers, when free, seem to have been addicted to inserting their posts; and there are pictured in these plates the arms of him who happened to be on duty, as sentry, at the time of the eruption, and who died in his position beside the city gate, whence he might have escaped without much difficulty.

This slight view of its contents will give our readers a sufficient den of Mr. Trollope's book. As we have already observed, its object is not to illustrate Pompeii and Herculanæum, but to give a series of examples of Roman art as applied to furniture, domestic utensils, arms, &c.; and, as such, it is a very praiseworthy book. The various objects are in general well drawn, though, to our taste, on rather too diminutive a scale for sufficient distinctness. The text is brief, and hardly goes beyond the character of a catalogue; but Mr. Trollope has been careful in identifying the Latin name of each particular article; and thus, by means of its index, it is a very valuable companion to the student of classical antiquities.

THE BHILSA TOPES, &c. Illustrated with Thirty-three Plates By Brevet-Major ALEXANDER CUNNINGHAM, Bengal Engineers. Smith, Elder, and Co.

This work and Mr. Layard's "Nineveh" are on kindred subjects. A topes means an artificial mound, and the words is applied to the Indian monuments that remain of one of the most ancient superstitions in the world, that of the Buddhists. Major Cunningham, with a brother officer, Lieutenant Maisey, having spent many months in a district of these relics, possesses the record in his present book the sum and the detail of their discoveries. It is the opinion of the author that a thorough investigation of all such remains throughout India ought to be undertaken officially by the East India Company; and that they would throw more light by such a measure on the primeval history of their territory than could be obtained by "the most critical and elaborate edition of the eighteen Puránas." We think it is very likely that the researches recommended would enable us to form a very clear conception of one of those thousand systems of heathenism which men in distant and barbarous times have accepted, and which have, and long, to a large extent, lost their power. That any given form of exploded error should revive, or that error in some form should not continue, is either way, an impossibility. Therefore, the lesson of human credulity, which is illustrated in one instance, is not enforced by minutely adding the details of every other. In these profit of a practical kind in making ourselves less perfect adepts as, perhaps, the most learned hierophants themselves were in their day, in all the rites, and ceremonies, and impostures, and delusions, of some once wide-spread and popular variety of the imagination among barbarous and benighted millions. There is useful learning; and there may be a wearisome display of frivolous erudition: there is a philosophy that betters the condition of the world; and there is a philosophy that merely wastes the hours of the student. And so are there archæological inquiries that recall for our advantage the escaping and fugitive sequestions of past ages; and again, archæological inquiries, which, demanding an equal expenditure of time and of labour, result in nothing.

Certainly, the history of human wisdom contributes to the progressive wisdom of ages; and, better still, towards the same result does the history of wisdom, and of folly, and of Providence overruling all, in the great plot of the destinies of mankind, contribute to help. But all this marvellous exercise of patience and ingenuity to set us right about how people went wrong in some special and artificial form of melancholy absurdity long ago, is, we fear, one vast blunder, growing into fashion.

However, we praise the gallant and able workers, even when the work may be of no value at all, commensurately. Antiquarianism, too, is a passion with many; and hundreds feel an interest so keen in purgations of this nature, that they have essayed to soothe themselves with the intrinsic capability of usefulness which may or may not exist in the various results. Nay, the less they could assign a reason for exulting in any queer discovery, revealing the exact purpose to which it had been applied—we will suppose, how long incomprehensible vessel of sacrifice—the more pure and unalloyed their delight perhaps may be.

But we will not further discuss the *cui bono* of such labours; the person most interested in the solution of that question are those who undertake the labour. The antiquarian and geologist of mankind are far more than it can concern us. His work is before us; and it remains only that we should say in as few words as possible what it contains. It contains 368 large octavo pages of the author's own production; and several of his engravings, furnish a fine antique-looking ruin, in the Oriental originals, with representations of the tumuli themselves, and a general sketch-map—in all some thirty or forty plates, of which several are executed very beautifully indeed. The mass of the text breaks up into chapters on antiquarian and physical engraving; and the style is dry, difficult, unengaging, and fatiguing. In this the production is inferior to Mr. Layard's, which amuses the idle reader very frequently, while interesting the scientific student. We are end not to adjudicate between the intrinsic claims of the respective subjects to be regarded as important. Certainly, Bhilsa is gone—but no more gone, or more obsolete, or more entirely evanished, than Nineveh the Mighty, and Babylon the Cruel. Leaving, therefore, these points, we may further observe that Major Cunningham's book is in reality partitioned into three distinct topics. First, he gives a rapid history of Buddhism; secondly, he explains the tenets of Buddhism; and thirdly, he describes the discoveries which he has made in ransacking the Druid-looking and barrow-like topes of northern India.

The part first mentioned will of course prove by far the most general in its attractions. The second part mentioned, the exposition of Buddhist doctrine is so minute and plenary, that, by "getting it up" well, we have no doubt any young gentleman might make himself a capital theologian in one of the most tremendous and powerful systems of heathenism, and even qualify himself for the degree of Buddhist Doctor of Divinity. The third part, the detail of the monumental discoveries, or recoveries, will fix at once the antiquarian zeniot.

We have now given as full an account as the miscellaneous public can need, or will desire, of such a production. Those who want more intimate acquaintance, can accomplish it by reading the work themselves. Of its kind, it is very spirited in design, and very painstaking in execution.

A LADY'S VISIT TO THE GOLD DIGGINGS OF AUSTRALIA IN 1852-3. By MRS. CHARLES CLACY. Hurst and Blackett.

This is by far the best book produced by the Gold Diggings; lively, picturesque, and truthful. The fair author makes no attempt at fine writing, but tells what she saw, and felt, and feared, and heard; and tells it well. Many of the adventures might, in the hands of a bookmaker, have been spun into a volume, or even three.

Mrs. Clacy appears to have accompanied her brother, who was induced, by the accounts of the Victoria diggings, to fling aside his "Homer" and "Euclid," and, with three weeks' preparation, set out for the modern El Dorado. There he found a sufficient degree of success to content him, while his sister found a husband and made her wedding trip back to England. She seems to have made the copious notes on the spot from which she has prepared this volume. Landing at Melbourne after a prosperous voyage, the first scene occurs on the wooden logs miscalled a pier, where their stout captain, after being obliged to row himself ashore, administers a pugilistic lessons of civility to saucy boatmen. After resting in a clean well-furnished room for a short time, the "bus" for Melbourne arrives—a long tumble to-pieces-looking waggon, not covered in, with a plank down the middle to sit on. Into this ample, with an innumerable series of luggage, are crammed in; a pair of miserable Rosinantes begin to move on through "the beautiful scenery of Australia"—mud and swamp, swamp and mud—relieved here and there by some few trees "which looked starved and miserable as ourselves; the cattle we passed appeared wretched the human beings, all of the Vandemonian cast of countenance." Arrived in Melbourne they long searched in vain for shelter, and began to calculate on sleeping beneath the portico of the Post-office, when, fortunately, they met with a brick in the house-keeper of a surgeon who had gone to the diggings, and at 30s. a week each, obtained one small room for the gentlemen—four in number, with half the housekeeper's bed and board for the fair author.

They set out for the diggings, Mrs. Clacy's brother and four shipmates, with four others who joined, for protection, on the road, with drays loaded with provisions to be sold at the diggings. The following was the order of march:—There were two drays, each drawn by a pair of horses, and the property of two farmers; three packhorses, one laden with a speculation in bran, belonging to a queer-looking sailor named Joe. At length the word of command was spoken. Foremost came the leader, the Captain we had dubbed him, and with him two ship doctors, who carried their tools in the shape of a most surgeon like mahogany box. Then came the two Germans, smoking their meerschaums, and attending to their restless horses and dray." After these came a party of six, including Gregory and two lively Frenchmen. Joe walked by himself, leading his packhorse. Then came our four shipmates, two by two, and last our own particular five. Most carried on their backs their individual property—blankets, provisions for the road, &c., rolled in a skin, and hung across over the shoulders by leathern straps. This is the diggers' swag, it being too great a luxury to place in the dray anything not absolutely necessary. In every heat was stuck either a large knife or a tomahawk, some had thick sticks, fit to fell a bullock, two had double-barrelled rifles. The lady, the only one allowed to ride, was perched comfortably upon the dray, amid a mass of soft lumber; a bag of flour formed an easy support to lean against on either side, well walled in by the canvas and poles of their tent; a large cheese made a convenient foot-stool. Her own dress consisted of a common dark blue serge; a felt wide-awake, and a waterproof coat wrapped round her, made up a costume comfortable, but rather comical." The journey to the diggings is very graphically and amusingly described.

We have not room or space to give the descriptions of the author's gold party: of Frank, the son of a Cheapside merchant, disrobed for a love-match; William, the scholar (not Grecian) of Christ's Hospital; Richard, the music-mad whistler of operas tunes, whose governor, a Stock-Exchange broker, would not allow him a latchkey; Benjamin, the rough-and-ready youth seeking fortune; the doleful prophecies of the Scotchman; the architect; the musical house painter; and the gentleman farmer, who, having been foolish enough to put trust in the Christopher and Bennett scheme of colonisation, gave up a good farm, and took to the pick;—or to recount the adventures of our heroine—now lost in the bush, now attacked by bushrangers; at one time, "being a pocket edition of womankind," nearly drowned in a deserted hut; at another, saved from murder by her humanity to a little girl. We must omit, too, the story of the pretty youth who turned out to be an affectionate wife, disguised in trousers and a blue jersey. For this, and much more of amusing and useful information, we must refer our readers to the book itself.

THE GREYHOUND: a Treatise on Breeding, Rearing, and Training Greyhounds for Public Running; their Diseases, &c. By STONEHENGE. With Illustrations. Longmans.

This is not only the best work on the subject that has ever appeared, but in its style, arrangement, contents, and illustrations, it is a model of what a book devoted to a single animal should be; while the engravings, the paper, the type, the printing, are all of the first class. We hope the publishers will not allow it to stand alone on their shelves, but follow it up with other treatises on the horse, on the ox, and on the sheep, worked out with the same care and completeness. The author, who is master of his subject, and seems to have availed himself of information, both scientific and practical, from every available quarter, has divided his work into seventeen chapters.

In Chapter I he defines the qualities necessary to make a first-rate public courser; and sweeps away some vulgar prejudices on the subject of "blood." Chapter II. contains a very lucid description of the anatomy of the greyhound. Chapter III. is devoted to physiological remarks on circulation and respiration, the digestive organs, the kidneys, and general hints on the treatment of disease. Chapters IV., V., and VI. contain a complete epitome of the diseases of greyhounds, and the best remedies. Chap. VII. is on accidents. Chap VIII. contains advice to young coursers on the best means of obtaining a stud of good dogs. Chap. IX. is a very ingenious and elaborate essay on the art of breeding. Chap. X. contains a capital sketch of each of the four varieties or breeds of greyhounds—viz., Newmarket, Wiltshire, Lancashire, and Scotch. Chaps XI. and XII. are devoted to advice on breeding and the bull dog. cross. Chap. XIII. and XIV. are devoted to instruction for rearing, feeding, and breaking-in whelps. Chaps. XV. and XVI. contain full instructions for training and running greyhounds. The last chapter contains the rules for coursing meetings.

To show by example what is meant, the author has given admirable portraits of the following celebrated dogs, drawn to scale, and given their pedigrees in an Appendix:—Black cok, War Eagle, Cerito, Mocking Bird, Miss Hannah, Ruby, Cressida, Hannah, Jemidesse, Whiff, Cocktail, King Cob, Fearless, Czar, Sam, Monarch, Ruglide Graham, Vixie Foy, and Maid of Islay.

It is difficult to make extracts from such a book; but the following contains a good deal of us ful advice and information in a small compass:—

The first advice I would give to an inexperienced courser would be to start a few greyhounds at the lowest possible price, without any hope of running in public; but in order to gain experience in their management. Of course, it is desirable to get as good dogs as possible; but it is useless for the tyro to hope to procure greyhounds by purchase, of such a character as to win a stake in public; for, except under par icular circumstances, no one will part with them. Even in the case of an entire kennel, there are always some few in the secret who buy up the valuable lots; and the inexperienced eye has little chance in competition with the man who is in the secret, and has made it also the business of his life.

Besides a young hand would be more likely to select a good-looking dog, which has had all his work taken out of him, than one which would be really useful to him. It is better, therefore, to devote all your energies and money to the procuring a good broodbitch or two, and while her progeny are growing up, to try the "practice hand" upon what you can get by buy at four or five pounds a piece, counting your trials to a friendly competition with your neighbours dogs. In this way you will gain the experience at a little cost, which would otherwise empty a long purse to obtain.

BUST OF PROFESSOR GRAHAM.

This Bust is a good example of the talent of Mr P. Park, R.S.A., in portraiture. The features and character of the original are happily caught. The expression of the whole is manly and unaffected, and the arrangement of the drapery is agreeable. It is the portrait of Mr. John Graham, an eminent calico printer, near Manchester, where Mr. Park has a studio

Mr. Graham is a native of Glasgow, where he studied chemistry under his brother, the distinguished Professor in University College. In 1833 he was appointed chemist to the firm of Thomas Hoyle and Sons, the well-known calico printers in Manchester. He there devoted himself assiduously to the study of that business in both its theory and practice, and rapidly rose to be one of the partners of the concern. While he was the active manager at the works at Mayfield, he originated or introduced many improvements in the mechanical as well as chemical processes followed in the print trade, particularly the washing machinery, which is now universally used in bleaching, and which effects a great saving in labour.

Mr Graham, having withdrawn from the firm of Thomas Hoyle and Sons, has established extensive print works at Harishead, near Stalybridge, where he follows his business with his usual energy and success.

BUST OF PROFESSOR GRAHAM.—BY P. PARK, R.S.A.

Mr. Park has in progress beautifully modelled busts of Sir John Potter and Sir James Bardsley, M.D.; the former destined for the Manchester Free Library. In the sculptor's studio is also his plaster model for the Wellington Monument—a circular base, with a series of subordinate figures of the hero's most distinguished Generals all erect, and so arranged, that, in some points of view, five of these figures are seen at once, in others four; and this pentagonal arrangement is claimed by Mr. Park as his own invention.

THE BEARD AND MOUSTACHE MOVEMENT.

(To the Editor of the Illustrated London News.)

Sir,—I was with great pleasure that I read, in the Illustrated London News of the 4th ultimo, your article on the subject of Beards. Your concluding remark is too true Custom is ordinarily too strong for reason. Grey-headed folly will take precedence, with the world, of youthful sagacity. It is the old story of the big bully. Nevertheless, why not make some stand for the rights of reason and common sense?

Here are we, the proud master-creatures of the world, after centuries of boasted civilisation, still humbling ourselves to observances of barbarous fancy, such as in the people of other climes we ridicule and reprobate. On this side of the globe fashion has prescribed the necessity of a certain scraping operation performed upon the visage, called shaving; on the other side she has established, for the proprieties of polite society, the duty of another cognate treatment of the face, in what is called tattooing—a kind of scraping which has more permanent effects. The latter disfigurement we deem barbarous, and attach to our notion of a savage. But why so? Is not our practice of shaving equally unnatural and absurd? He who made "the human face divine" equally formed it with the accompaniment and appendage of freely-growing hair, as with the smooth and delicate skin of soft and sober hue. Surely then, the European barber is as great a barbarian, in his desecration of the work of Providence, as the professional operator with the tattooing prongs in the islands of the Pacific. Was the hair of the face given us for less useful a purpose than hair elsewhere? or why do we suffer such a natural disfigurement to remain over our eyes and upon our heads? Surely fashion has forgotten her vocation. Reformation fell asleep before she had half finished her work. She does not perceive what important steps she has omitted to take in correcting Nature's blunders. Let her look to her office well; she may yet enlighten us to a degree beyond all present conception.

Why, in these days of liberty and independence, do we submit to be slaves still to that fickle tyrant Fashion, to such a degree as to disfigure and unman ourselves? As for the women, they have, we may be sure, too much good sense, after all, to send us to Coventry because we may choose to leave our locks to nature's care. They will not keep up the quarrel long, although they do threaten us so unsparingly at first. Why may not the hair of the beard be kept as clean and becomingly as that of the head?—for they tell us that beards necessitate dirt. Such need not be the case But, consider the pain in time—that article which, to the principal classes of the community, is of the highest value—that would be secured by the change advocated. Consider, also, the advantages that would accrue to military and prison establishments were the daily business of scraping, or of being scraped, dispensed with. But, by far the most serious agreement to be used, and upon which we wish to lay the greatest stress, is on the ground of health. It seems to be universally allowed that the beard not only acts as a most effective protection against the cold and dampness of the atmosphere, but also serves as a defence against the entrance of deleterious particles of matter into the lungs, an effect by no means to be despised, at least by a people too ready a subject to pulmonary diseases, while it imparts generally a genial warmth to the throat—that part of our bodies which, with its glands and arteries, is peculiarly susceptible and dangerously delicate. We are forced to muffle ourselves up with wrappers and respirators, in order to effect the very purpose for which, apparently, beard and moustaches were given us. No sooner have we cut off the natural protection, but we have to fabricate its substitute. What unnatural folly! Why not breathe through our own hair, and leave it to shield our throats and chests from the cold air, rather than make ourselves hideous with suffocaters of white wool and black bombasine? Depend upon it, nature never made what would be useless; God never gave what man should take away.

I am, &c.,

Inkerlib.

TESTIMONIAL

PRESENTED TO THE

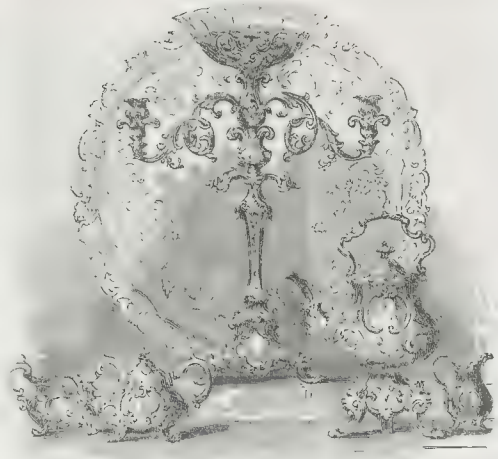
REV. W. C. FENTON.

One of the most valuable Hospitals established for the relief of suffering humanity is the "Yorkshire Institution for the Deaf and Dumb," originated by the Rev. W. C. Fenton, of Mattersey, who has been a firm supporter of the establishment from its commencement to the present time. In order to testify their high sense of the active benevolence of the reverend founder, the subscribers to the Institution have lately presented him with a superb service of plate, consisting of a salver, a candelabrum, and a tea-service, and is so arranged as to value as to be divided into three, so that a portion may be left to the members of Mr. Fenton's family. On the principal pieces is the following inscription, written by Charles Jackson, Esq., at the request of the committee:—

Presented to the Rev. William Carr Fenton, by the friends whose privilege it has been to co-operate in his work of Christian love, as a token of their respectful gratitude to the benevolent mind which originated, and the diligent hand which has fostered, under the abundant blessing of God, and to the relief of affliction in its most deplorable form, through a course of twenty-five years, the Yorkshire Institution for the Deaf and Dumb.—June 16th, 1853.

The presentation of this superb gift took place last June, at Eastfield, when the chairman, W. Aldam, jun., Esq., of Frickley-hall, in an eloquent address, thus referred to the origin of the testimonial:—"It is now twenty-five years since Mr. Fenton began his exertions in behalf of the Yorkshire Institution for the Deaf and Dumb; and I believe it is not too much to say, that if he had not taken it in hand, this institution would never have existed And, without such an institution, what would have been the fate of those unfortunate children now amongst us—unfortunate if they had not been instructed, but, having been instructed, happy, and no longer unfortunate. Having been brought to the means of acquiring knowledge, and taught the duties of religion, they have been trained to their common duties, and are fitted to be active and useful members of society. The consciousness of having taken so great a part in this good work is no doubt in itself a sufficient recompense to a benevolent mind; but it has been thought that such well-spent efforts ought to be marked by some durable and public memorial, to commemorate the merits of the undertaking, and which may show the public sense entertained of such efforts, and be handed down to Mr. Fenton's family as a pleasing subject for their contemplation. With these views, a service of plate has been purchased, to be presented to Mr Fenton; and an inscription has been prepared by a gentleman who is well fitted to carry out the wishes in this respect of the supporters of and contributors to the testimonial. Having read the inscription, Mr Aldam formally presented the gift.

The Rev Mr Fenton thanked the company in an impressive address, and first casually remarking: "When we look round at these 104 deaf and dumb children, and reflect upon the situation which they would have been in as they were once placed; and when we see what a condition they are in now, the result is highly gratifying. I remember a remark that was made by Sir John Johnstone, at a meeting at Scarborough, that in every village we met with deaf and dumb children, pointing to their mouths and ears, and begging for money. This was the case generally throughout the county of York. Now we see that the parents can have their children educated and brought up in such a way as they ought to be some of them not only supporting themselves by their talents and industry, but even supporting their indigent parents. Such a reflection is a pleasure to me which I cannot by words express As an individual I have used some exertions in this cause, and I thank God that I have been enabled to do so, and that he has been pleased to select me to carry out this work of love. And I hope, whenever it may please the Almighty to remove me from this world—which now cannot be long—that I may reflect on my death-bed upon the good that has been done for these poor children, and that I may meet them in another world. This beautiful present which you have given is far too valuable for me ("No, no") But it is not the value of the articles that I estimate, so much as the feeling which has induced you to present them to me. I have a particular feeling upon this occasion, which is, that if I should have no lineal descendants, these articles should revert to the institution, and remain in it as memorials of my humble exertions in its behalf. I wish them to go to no collateral branches of my family; and, should I have no lineal descendants, it is my desire that they should revert to and be the property of the institution."



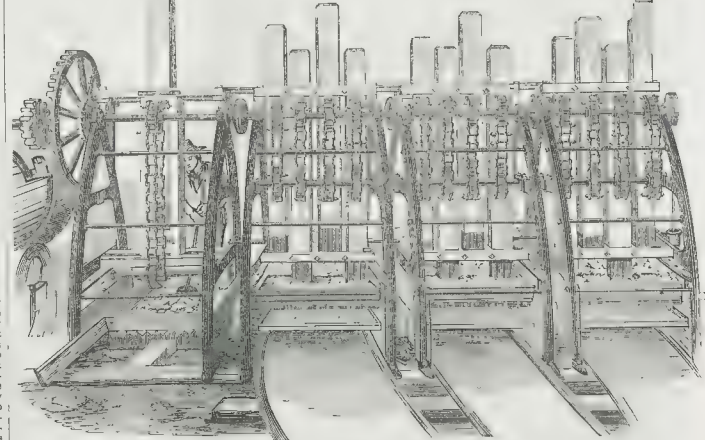
TESTIMONIAL PRESENTED TO THE REV. W. C. FENTON.

At the close of Mr Fenton's address, a vote of thanks was passed to the Chairman, and the proceedings terminated.

QUARTZ-CRUSHING MACHINERY FOR CALIFORNIA.

Although a very large amount of gold has already been gathered in California, without the exercise of much skill, or the aid of machinery, except of the rudest character, it is well known that immense quantities of the precious metal lie embedded in the quartz, and require for their extraction the skilful application of suitable machinery. Mr. Walker, of Cowper-street, City road, has provided for this purpose the apparatus here illustrated. It has been completed for Messrs. Dawson, who have proceeded with it to California

The apparatus consists of a series of stamping frames, arranged in a line, so as to be worked by a main shaft, which runs through its whole length, and is connected at each frame with a coupling and bolts. In the first frame there is a single stamp of great power, iron-shod, and working upon a corrugated iron bed plate; a greater lift being given to this stamp, so as to render its operation very energetic and effective in breaking the larger pieces of the quartz into moderate sized pieces. The smaller fragments are then transferred to the next frames, three in number, in each of which there are four stampers, each stamper having a fall of 18 inches, and through which the quartz is gradually passed until it is so completely disintegrated as to permit the extraction of its metal. At the end of the shaft is a crank, for working a pump, by which, at the same time, water is raised for washing the lighter particles, or refuse, from the gold. Instead of lifting the stamps by wipers or cams in the usual manner, Mr Walker has introduced an endless chain, caused to revolve by the main shaft round a toothed wheel, upon which there are two projections, which take hold of a corresponding one fixed on the stamper; so that each revolution of the chains gives two blows to each stamper. By this simple and ingenious contrivance, considerable fall is conveniently obtained, with great advantage in the saving of power over the old method.



WALKER'S QUARTZ-CRUSHING MACHINERY.

This machine will crush with ease twenty five tons of quartz per day; and, assuming each ton of quartz to contain half an ounce of gold, which is a very small percentage indeed, we are informed this will afford ample profit to the proprietors.

Motive is given to the stampers and pump by one of Messrs Clayton and Shuttleworth's portable steam-engines, of 6-horse power mounted upon wheels, similar to those which have been so extensively manufactured by this firm for agricultural and other purposes. The regular, noiseless, and apparently easy movement of this engine is remarkable; while it requires no skill in fixing or attaching to the machinery, as it stands upon its wheels when at work, and motion is imparted to the stampers through the medium of a wheel and pinion, as shown in our illustration. Mr. Walker states that the small six-horse engine does an enormous duty, and works the stampers as effectively as any 12 horse fixed engine he has ever seen applied to such purposes. The boiler is so constructed that either wood or coal will generate and [illegible] plenty of steam, which is a great advantage, either in California

THE BRITISH INSTITUTION.

(Continued from page 218.)

is carefully painted, but rather stiff. In the elaboration of the straw on the ground, crossing the feet in all directions, the artist has committed an offence against one of the canons of art, which prescribes the neglect of insignificant and accidental details, the more especially when their realisation, as in this case, is calculated to annoy the eye.

"The Rose-bud" (403), by A. H. Corbould. A comical conceit, not devoid of merit. "Mamma's darling," a fine little fellow, is standing, leaning against the wall; his shoulders shrugged up, his eyes cast down, in a charming fit of the sulks. It is evident, however, that it is more than half put on: and that a little coaxing and a large slice of cake will bring him round.

"A Turkish Khowajà" (488), by W. Ross (Anglice, "A Turkish Gentleman"), is a well-painted portrait of an intelligent-looking Oriental, in Turkish costume.

"A Sleeping Boy" (495), by Miss E. Hunter, is a small picture, nicely painted, and fondly realising Hood's lines—

'Tis a perfect picture to see him lie,
As if he had supped on dormouse pie, &c.

"Sancho Panza Informing his Wife of his coming Dignity, and of his intention to make his Daughter a Countess" (509), by J. Gilbert. In this picture Mr. Gilbert has achieved a success which he has not attained in some recent efforts in a more severe school, and has discovered a talent for the humorous—a rare quality when genuine—which we trust he will be encouraged to indulge in abundantly for the future. The scene is familiar to all who are read in "Don Quixote":—

"I tell you, wife, that did I not expect ere long to see myself the governor of an island, I should drop down dead upon the spot."

"Go you, husband," replied Teresa, "to your governing and islanding, and puff yourself up as you please; as for my girl and I, by the bones of my mother, we will neither of us stir a step from our own town." *Don Quixote*, Part ii., ch. 5.

Sancho, of course, occupies the centre of the picture, and is the very ideal of the bragging, gutfilling, credulous squire. Throwing himself back in the chair, his feet perched on the bar in front, his pompous mien is no assumption, but a reality, as he waves his hand with supreme contempt and horror at the onions with which his wife is about to prepare his *olla*. The latter's face shows a mixture of contempt and pity, and even the dog observes his master's extravagant conduct with bewilderment and misgiving. The colouring shows a nice gradation of hues from the rubicund focus, through rich yellow, brown, and plum-colour, to pale green and stone grey; and the finish is very delicate.

"The Vicissitudes of Science—First Subject" (555). Such is the title by which Mr. E. Hopley introduces a picture (one of an intended series, probably) representing "Sir Isaac Newton explaining to the Lord Treasurer Halifax his Theory of Colour." It is recorded in the Biography of Newton, by Sir David Brewster, that the philosopher had a lovely and accomplished niece, who presided over his household, and for whom the Earl of Halifax entertained the most profound friendship, leaving her at death, the bulk of his property. Moved more by this "attraction," probably, than that of "gravitation," he made frequent visits to Newton's house, under pretence of studying the various branches of natural philosophy. In the present picture Newton is expounding to him the theory of colour, as exemplified by the prism, which Halifax holds in his hand, whilst the pretty niece holds a sheet of paper upon which the rainbow hues fall. But the gallant student is obviously indifferent to the phenomena which the Doctor is gravely expounding; his eyes being fixed upon the young lady. The study of the niece is from a picture by Kneller, in the collection of the Earl of Portsmouth, and that of Newton from the records in the possession of the Royal Society.

"THE YOUTHFUL ARTIST."—PAINTED BY J. SANT.—EXHIBITION OF THE BRITISH INSTITUTION.

We have already mentioned some of the principal efforts in landscape in this Exhibition; some few, however, still remain to be noticed. Linton's "Scene on the Lagunes of Venice" (139) is effective at a distance, full of clear architectural detail, and the atmosphere and water in subdued and well blended tones. But, upon nearer approach, the thick dabs of colour, laid on with a coarse brush, offend and disappoint the eye. "Wind on the Thames" (102), by E. C. Williams, is an agreeable little composition, of low flat scenery, with a barge in the midst to break the monotony. Copley Fielding has two views—one in Yorkshire, the other in Scotland; and a sea-piece, "Scene at the Entrance of Dover Harbour—Stormy Weather" (113), which we remark as very spirited: executed chiefly in blacks, greys, and whites. Callow has a "View of Venice" (112), which is a successful exhibition of lineal perspective. W. A. Knell has a very glittering "Evening on the Thames;" but surely such a sky as he has contrived was never seen in nature. G. E. Hering's large landscape of "The Monte Monterone, and the Borromean Island" (174), is a work of no ordinary merit. Under a doubtful sky is a wide expanse of sea, extending, in parts, to the extreme limits of vision. After travelling over the varied effects which so extensive a landscape naturally combines, the eye rests upon a spot of rich green in the midst of the foreground, which affords admirable relief to the hazy blue of the distance. "Mount's Bay, Cornwall" (286), is a picturesque coast-scene, with a bold mountain in the midst. In the landscape, by W. P. Jackson, a ship is introduced on the beach. The general effect is good, but the colouring in parts is dabby and uncertain. J. W. Huntington has a very meritorious piece, "Cave Mountain, Belfast" (459); treated with great unity and simplicity of purpose. The sun is setting gloriously behind the steep dark mountain; in the shade beneath which the houses which skirt the shore are dimly seen. The sea, which occupies the foreground, is as calm as a lake; and the surface is here and there gilded with the soft reflex of the sun's broad parting rays.

We have already honourably mentioned T. Danby's brilliant little picture, "A Summer Evening in North Wales," which may be pronounced one of the gems of its class in the room. We now greet pictures in producing an Engraving of it.

Lance exhibits four of his magnificent Fruit Pieces, upon one of which (30) he has lavished all the resources of his florid pencil. It is of considerable dimensions, and comprises almost every variety of fruit; amongst which a cut melon is a principal object. The jewelled cup and crystal glass are also brilliantly painted. (We have engraved this superb picture on the front page.) Miss E. H. Stannard has a pleasing specimen, "Fruit Painted from Nature" (164); and W. E. D. Stuart an indifferent one which he facetiously denominates "Belshazzar's Feast" (321).

NOTE, BY SIR H. R. BISHOP.

RAISE HIGH THE FLAG.

"Fortune, my Foe."—The fine ancient ballad-air of "Fortune" may be found in "Queen Elizabeth's Virginal-Book," which contains nearly 300 compositions, and is now preserved in the Fitzwillian Museum, Cambridge. The melody of "Fortune" was arranged, with variations, by the famous Maister William Byrd, who contributed seventy pieces of music to the above singularly curious volume. Among them are the old tunes entitled, "John, come kiss me now," and the "Carman's Whistle," both of which Bird has ingeniously arranged. The variations composed by him to the first of these are so elaborate and difficult of execution (for Byrd was a skilful performer on the virginal and organ), that Dr. Burney refrained from publishing them in his "Musical History;" and we may imagine them to have suggested some parts of the laboured eulogium written in 1591 by Byrd's great admirer and contemporary, John Baldwine, who, in "very humble verses" (as Sir J. Hawkins rather satirically remarks), says that

With fingers and with penne he hath not now his peere;
For in this worlde so wide there is none can him come neere:
The rarest man he is in musick's worthy arte
That now on earthe doth live,—I speak it from my harte,—
Or heeretofore hath been, or after him shall come:
None such I feare shall rise that may be calde his sonne.

It has been stated that the old ballad called "Titus Adronicus' Complaint" (which furnished the subject of Shakspeare's play of "Titus Andronicus") was originally written to the tune of "Fortune, my Foe;" and it is also probable that this bold and inspiring air was composed at a much earlier period than the latter part of the sixteenth century. There are extant of it some slightly different copies, from which I have selected the one that appeared to be most in accordance with the sentiment of the present words.

London: Printed and published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, March 11, 1854.

THE ILLUSTRATED LONDON NEWS

No. 673.—VOL. XXIV.] SATURDAY, MARCH 18, 1854. [WITH TWO SUPPLEMENTS, 1s.

NEW LIGHTS ON THE EASTERN QUESTION.

THE Eastern Question has begun to complicate itself at a time when everything seemed about to become clear, and to prognosticate that war, and war only, was to settle it. A somewhat serious difficulty has been started by Turkey. The Sultan objects to the terms imposed upon him by the Allies as the price of their assistance. They have required, it seems, that he shall place the Christians of his Empire upon a perfect equality of rights and privileges with his Mahometan subjects. Although willing and anxious to extend the principles of civil and religious liberty among the Christians, he has two reasons for objecting to the demand of the Allies. The first is, that, by conceding perfect equality to Christian with Mussulman, he would be acting in opposition to the solemn injunctions of the Koran; the second is that compliance with such a demand would be as much a sacrifice of his independence, as submission to the demands of the Czar. We cannot say that the Sultan is in this respect either obstinate or unreasonable. To degrade him in the eyes of his whole people, as the price of fighting his battles against his encroaching neighbour, is to render him a very questionable service. If any proof were needed beyond those which cool reflection would supply, of the impolicy of imposing such a condition upon the Sultan, it might be found in the eagerness with which the Emperor of Russia has endeavoured to turn the fact to his own advantage; and in the zeal with which his views have been forwarded by his pusillanimous and vacillating brother-in-law, the King of Prussia. The Czar, it appears, declares, "that a concession of so much importance, if obtained, would render the protectorate claimed by Russia over the Christians without any object; and, that being the case, he would be disposed to treat, in common with the great Powers, for the regulation of the general position and rights of the Christian population in the Ottoman empire." The Czar has astuteness enough to see that the terms sought to be extorted from the Sultan would, if acceded to, destroy the independence of the Turkish empire. Provided that result were attained, it does not signify greatly to him whether the instruments of its accomplishment be Great Britain and France, or himself and his armies. The humiliation of the Sultan, come from what quarter it may, is the triumph of Russia. Having waited, since the days of Peter the Great, to gain possession of Constantinople, the Czars would be well content to wait a little longer, provided they could see that progress was making, however slow. Happily, it is not too late for the Allies to deprive Russia of the opportunity. It will be enough for them to recommend to the Sultan, as a matter of expediency and sound statesmanship, to grant as many privileges to his Christian subjects as be consistently can. He must be free to act, or we shall injure him in the attempt to defend. The Governments of Great Britain and France may safely trust him. There is more religious liberty in Turkey than there is in Russia; and the Sultan is, in every respect, a more liberal and enlightened Sovereign than the Czar. The Greek Christians of Moldavia and Wallachia, who consider the Russians as heretics, look with no favour upon the idea of Russian supremacy over their faith; and the religious pretence of interference on the part of Russia is by this time known to the whole world to have been a false pretence from the beginning. We expect, therefore, to hear either that the Allies have made no such imperative stipulation with the Sultan, or that, having made it, they have withdrawn it.

A flood of light has been poured upon the subject by a remarkable article in the *Journal de St. Petersburg*, and which has evidently been written under the inspiration of the Czar. Lord John Russell having complained, in his place in Parliament, that Russia, in the assurances which she had given to this country, with respect to the objects of Prince Menschikoff's mission, "had exhausted every form of falsehood," the Emperor Nicholas, in an evil moment, felt himself goaded to reply. In alluding to what it calls this "brutal outrage" on the part of Lord John Russell, the *Journal de St. Petersburg*, speaking for the Czar, insinuates that the British Ministry need not have expressed any surprise on the occasion, for that it perfectly well knew what the real objects of Russia were. Whatever might be the grounds of mistrust entertained by other Powers, the English Ministry, it alleges, had no reason to doubt the views of Russia; as, at a period anterior to Prince

THE BALTIC FLEET.—HER MAJESTY'S RECEPTION OF THE ADMIRALS ON BOARD THE ROYAL YACHT.—(SEE PAGE 243.)

Menschikoff's mission, the Emperor Nicholas had "spontaneously communicated with the Queen of England and her Ministers, for the purpose of establishing an intimate agreement with them, even in the event of the most formidable contingency which could befall the Ottoman empire." In other words, the Emperor Nicholas, fancying that he foresaw the approaching dissolution of the Turkish empire, sounded the British Government to know whether it would become his accomplice in expediting that event, and in sharing the plunder. In Jan., 1853, Sir Hamilton Seymour, our Ambassador at St. Petersburg, was invited by the Emperor to a private conversation on this subject. He was also invited to communicate the details to the British Government, and to request their opinion. We are not informed by the Russian organ what the reply was, but Lord Aberdeen, released by the act of the Emperor himself from any secrecy upon the subject, explained to the House of Lords the character of the answer made by Lord John Russell, who temporarily held the office of Secretary for Foreign Affairs, when the communication was made to him. Lord John Russell made a similar statement to the House of Commons. The whole correspondence has been ordered to be printed, and the country will then be enabled to judge whether Lord John Russell spoke out upon the occasion as became a British statesman. Nor was this the only occasion upon which the Czar, with a strange miscalculation or ignorance of the views and interests of the British nation, endeavoured to enlist our Government in his nefarious projects against Turkey. Ten years ago—when he visited this country, and was received with a respect which he little merited, and with an adulation on the part of some, which, to say the least of it, was fulsome as well as unnecessary—he expressed similar views with regard to the proximate dissolution of the Ottoman empire; and endeavoured to find supporters, among the honourable statesmen of England, for his dishonourable policy. We do not doubt, in the slightest degree, the indignant character of the refusal which he met from such men as the Earl of Aberdeen, the late Duke of Wellington, and Sir Robert Peel. These overtures, and the replies, have—as we learn from Lord Aberdeen's speech on Monday evening—been reduced into writing, and will, doubtless, be produced, for the satisfaction of the people of this country, and for the edification of the few amongst us who still believe that the war has a religious character—who feel a regret that Christian nations should arm against Christians in defence of Mahometans.

The Emperor of Russia has been truly unwise to dig up these facts. Honest men will rejoice, however, that he should be the instrument of his own exposure; and that his own hand should have levelled to the ground the vaunted religious pretext under which he lodged the purely selfish object of an ambition that may have loved the Greek religion a little, but that loved the Turkish territory far more. Neither he nor any of his apologists can pretend that the question of the Holy Places, and the privileges granted by the Porte to the Latin Christians, excited him in 1844 to beat up for allies in the dismemberment of Turkey. He is convicted and reconvicted of duplicity in every effort which he makes to vindicate himself. What he in reality feared in Turkey was not Turkish oppression, but Turkish liberty. He dreaded that, by a liberal and enlightened course of policy, the Turkish Empire would grow strong, and able to resist his and all other foreign aggression. He had no care for the Christians; but, on the contrary, as we learn from his own showing, he blamed the Sultan for departing from the ancient principles of Islamism "From the year 1829," says the Emperor, in his avowed official organ, the *Journal de St Petersburg*, "his Majesty followed with great attention the march of events in Turkey. The Emperor could not shut his eyes to the consequence of the changes which were, one after the other introduced into that State. *Ancient Turkey disappeared from the time when it was sought to establish those institutions diametrically opposed as well to the genius of Islamism as to the character and usages of the Mussulmans—institutions more or less borrowed from modern Liberalism, and, consequently, entirely opposed to the spirit of the Ottoman Government. It became evident that Turkey was undergoing a complete transformation, and that these experiments, at least doubtful so far as regarded the re-organisation of the empire, seemed rather calculated to lead to a crisis which would overturn it.*" Thus the Emperor Nicholas stands unmasked, and his own hand has done the deed. It is not as the friend of the Greek Christians, that he is anxious to fight, but as the enemy of liberal principles all over Europe; principles, he knows, which, sooner or later, must find their way into his own stronghold of St. Petersburg, and which are only kept down at Warsaw by an army of a quarter of million of men, whom he dare not move beyond the frontiers of Poland. After such avowals as these, it seems impossible that the Governments of France and Great Britain can impose any further conditions upon the Sultan. Christianity, or the rights of Christians, have nothing to do with the subject.

FRENCH SHIPS FOR THE BALTIC.

PARIS, Thursday Evening.—The French fleet, being occupied in the Mediterranean in transporting troops to the East, will for the present be only represented in the Baltic by the *Austerlitz*. At a later period the squadron of Admiral Parseval Deschenes will enter that sea to join the fleet of Admiral Napier.

The Three per Cents closed at 66f. 30c., and the Four-and-a-Half per Cents at 92f. 20c., for the end of the month.

Lord Stratford has been empowered by the Turkish Government to grant from time to time, and as occasion may require, the requisite permission to Russian vessels which have been freighted by Englishmen to pass the Bosphorus and the Dardanelles."

We are enabled to state that the only Cavalry regiments at present under orders for the East are—the 4th and 5th Dragoon Guards, the 8th and 11th Hussars, and the 17th Lancers. It is reported that Major General the Earl of Lucan will be appointed to the command. Colonel the Honourable Yorke Scarlett is named as Brigadier General to the heavy brigade, and Colonel the Earl of Cardigan to the light brigade. The 8th Hussars and 17th Lancers have drafted their old and untrained horses, and the vacancies have been supplied from other corps. The establishment intended for each regiment will be 250, making a total altogether of 1250 horses.

TRADE WITH RUSSIA.—The Board of Trade has decided that, in the event of war, every indirect attempt to carry on trade with the enemy's country will be illegal; but, on the other hand, *bonâ fide* trade, not subject to the objections above stated, will not become illegal, merely because the articles which form the subject matter of that trade were originally produced in an enemy's country.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The preparations for the departure of the troops form, of course, the principal subject of interest for the moment. The health of the Maréchal St. Arnaud continues to present obstacles that few men would overleap, even in so honourable and distinguished a mission, but his resolution to accompany the troops remains unshaken. Madame St-Arnaud, who is many years the junior of her husband, intends to accompany him, at all events to Constantinople, and probably farther. Since the period of her marriage, in 1847, till the return of M. St. Arnaud in 1851, from Algeria, the Maréchale has attended him in all his campaigns, frequently accompanying him in the most difficult expeditions, and sharing all the fatigues, privations, and dangers to which he and his soldiers were exposed. The Maréchal takes with him all the staff attached to his person as Minister of War, and a large retinue besides.

A rumour—one of the thousand afloat—goes so far as to hint that the Prince Napoleon may have a personal, as well as a national interest in the expedition in which he is about to engage: that the Czartoryski and other great Polish families have proposed, in the event of the success of the coming struggle, to offer him the crown of Poland! Doubtless, the frequent presence of the Prince Czartoryski at the Palais Royal, and the intimacy known to exist between the Prince and the Count Branicki, who is to accompany him in the expedition, is the ground on which so strange a story is founded. M. Méry, the *spirituel* author, poet, and conversationalist, is, we believe, to be one of the followers of the Prince, as far as Constantinople. He is then, after passing some time at the camp, to proceed on a voyage to Egypt and different parts of Asia, partly on a voyage of pleasure, partly to recruit his health, which requires the sun of a hot climate.

None of the officers of the Emperor's household, who solicited permission to join the expedition, have obtained the authorisation demanded, and only two officers among all those about to serve, have ever held posts about the Emperor—the Maréchal St. Arnaud, late *grand veneur*, and M. Excelmans, formerly Officier d'Ordonnance, now commanding a steamer of the Baltic squadron.

The Legislative Body is engaged in the organisation of a grand banquet, where the deputies are to fraternise with the general officers about to start for the East. The dinner is to take place in the Jardin d'Hiver. A *chant de guerre*—the words composed by a Legislator, whose name is not declared, the music by M. Vogel—is to be performed on the occasion.

A few words more respecting the Abbé Lamennais, which we are sure cannot be uninteresting to our readers. Béranger, the *chansonnier*, the old and intimate friend of Lamennais, is preparing, in his retreat at Beanjon, a short biography, which is, we believe, to appear the end of this week. The talent of the writer, the opportunities his close intimacy with the subject of the memoir have afforded him for the study of character, and the collection of those minute details which give such charm and reality to such a work, promise a book of no common value and interest. We beg to rectify a mistake in our last letter, in which we stated that the Abbé had not been able to complete his translation of the "Divine Comedy." This is happily terminated; it was an introduction to this work, on which Lamennais was engaged, when his fatal illness arrived to interrupt his labours.

The *rédacteurs* of the Assemblée Nationale, lately struck with the sentence of temporary suspension, contemplated the plan of establishing a literary weekly journal, but the idea is not, we believe, likely to be carried out. It appears that the *Union* is to be distributed to the subscribers of the Assemblée, while the sentence continues in execution.

On Sunday took place the first steeplechase of the season, at La Marche, near Versailles—the principal course, for this sort of race, in the neighbourhood of Paris. The extreme beauty of the weather, which indeed has been uninterrupted for nearly three weeks, caused an unusual assemblage; and the best-appointed equipages, and most elegant toilettes of the capital, made their appearance on the ground. The prizes were 1000 francs for the first horse, 500 for the second, and 300 for the third; fifteen started, and the race was won easily by Hopeful, belonging to Mr. Henry Gibson. A second steeplechase is to take place at the La Marche, on the 2nd of April: on this occasion two races will be run.

The Gymnase has brought out one of those charming little *tableaux de mœurs* which it and the Théâtre Français are alone possessed of artists capable of representing, among all the theatres of Paris. This is a little comedy, from the pen of M. Octave Feuillet, one of the purest, most delicate, most observant, and most moral of the living French writers in this style. "La Crise," the piece in question, though new on the stage, is not so in the literary world. It was published, some short time since, in a charming collection, entitled, "Scènes et Proverbes," all from the same hand. We recommend this volume to our readers, as one of the best specimens of the kind extant. Some of the pieces—"La Clef d'Or," "Le Jeu de Dominos," and one or two of the others contained in it, are *chef-d'œuvres* of sentiment and expression. The personages of "La Crise" are represented by Madame Rose Cheri, Dupuis, and Lafontaine, with all the tact, grace, finesse, and nature, which those admirable performers never fail to display in all their parts. The Ambigu Comique has a sufficiently interesting drama, entitled, "L'Enfant du Régiment." Mdlle. Thuiller has a brilliant success in the part of the youthful hero of the piece, the general effect of which is decidedly satisfactory.

UNITED STATES.

By the steam-ship *Canada*, we have letters and papers from New York to the 28th ult., and Boston to the 1st instant. The *New York Herald* scouts the idea of Russian agents being engaged in inducing persons in the States to send out privateers, in the event of a war with Russia. A despatch from Washington states the British and French ministers had called upon Secretary Marcy for the purpose of protesting against the fitting out of Russian privateers in the United States. It was also understood that they informed the Secretary that such vessels would be treated as pirates by their respective Governments. The reply of Secretary Marcy had not been made public.

Letters from Havannah, of the 25th, report a rumour to the effect that a negro insurrection had occurred east of Cardenas. A change of troops had been unexpectedly made at Puerto Principe. In Havannah all was quiet.

In the Illinois Legislature a resolution had been offered against the aggressive policy of the Emperor of Russia. The resolution concludes:—"Resolved, that the Governor be required to forward to the aforesaid Czar a copy of the above resolution."

SOUTH AMERICA.

The screw steamer *Brazaderia* arrived in the Mersey on Saturday, with dates from Buenos Ayres, to the 28th January, nearly a month later than those previously to hand. The social and political aspect of affairs at Buenos Ayres presented little of striking importance. Activity in business, buoyancy of the money market, and gaiety of the upper classes were the chief characteristics of the time, and the *British Packet* could see nothing to endanger the internal peace of the province, or the stability of the Government.

INDIA AND CHINA.

The steamer *Calcutta* arrived at Trieste on the 11th of March, in 117 hours from Alexandria, with advices from Calcutta to the 10th of Feb., Shanghai to the 20th of January, and Bombay to the 14th of February. The condition of Burmah is rapidly improving. Dacoitie is declining, and there is a promise of an abundant harvest. The Nizam's country is overrun by bands of predatory cavalry, which are being hunted down by the troops of the contingent. The *Auckland* had returned to Bombay from the Persian Gulf, and left all quiet at Bushire, Teheran, and Bagdad.

From Shanghai the most important news was that the Imperialists were likely to make themselves masters of that city.

THE WAR.

RUSSIA DECLARED IN A STATE OF SIEGE.

The *Moniteur* of Thursday, under the date of St. Petersburg, March 7th, gives copies of five official documents (dated March 5th), declaring various parts of the Russian dominions to be in a state of siege.

The first states that his Majesty thinks it necessary to declare the Government of Ekatherinowsla and the arrondissement of Taganrog to be in a state of siege, and places those localities under the orders of the General of Cavalry, M. Khomoutoff.

The second ukase declares St. Petersburg to be in a state of siege, and places the Government under the authority of the Grand Duke, heir to the throne, with the prerogatives accorded to the Commander-in-Chief of the Army.

By the third ukase, the Government of Esthonia and Livonia are placed in a state of siege; Esthonia to be under the orders of General Berg, and Livonia under Count Suwaroff-Kiminsky, Governor of Riga.

The next ukase declares the Government of Archangel to be in a state of siege, under the orders of Vice-Admiral Boël.

By the fifth ukase, the kingdom of Poland, and the Governments of Courland, Kowno, Wilna, Grodno, Volhynia, and Podolia are declared to be in a state of siege, under the authority of Prince Paskewitch, the Commander-in-Chief of the active army.

The ukase states that the Government of Podolia, the part of the Government of Cherson, situated on the right bank of the Bug and Bessarabia, shall be placed under the authority of General Prince Gortschakoff.

The ukase then provides that the kingdom of Poland and the Governments of Courland, Kowno, Volhynia, and Grodno, during the absence of the Field-Marshal, shall be under the authority of General Rüdiger, and that General Osten-Sacken shall retain in Bessarabia and in the Government of Cherson, the powers granted to the commanders of detached corps by the ukase of November 19, 1853.

RUSSIAN PREPARATIONS.

A gentleman who left St. Petersburg on the 27th ult., states that along the road from Narva to Riga, and from Riga to Mittau in Kurlandia, Livonia, and Courland, he observed a considerable movement of troops. At St Petersburg the departure of the Imperial Guard was spoken of, but without any precise date being fixed. An extraordinary activity pervaded all the navy offices, those of the War Department, the Foreign Affairs, as also at the private Chancellerie of the Emperor. A service of special *estafettes* was organised for the province of Baltic Russia, with which an uninterrupted exchange of couriers is kept up. The garrisons of Helsingfors, Sveaborg, Frederikshamn, Rotschenshin, had been greatly augmented. That of Sveaborg, which the Russians are wont to call the Gibraltar of the Baltic, has been reinforced to the amount of 10,000 men. A few days before he left St. Petersburg, an aide de camp of the Emperor, a general officer, had been despatched with orders to inspect all the coasts on this side of the Gulf of Finland. His orders were to proceed to Revel, and provide the promptest and the surest means of placing the fleet in safety from a *coup de main* of the Anglo-French squadron. Other general officers of the engineers and artillery were also received orders to urge on the completion of the works in the military posts and the fortresses of the coast. These are not the only measures of defence that the Russian Government adopts. He describes it as doing everything to excite the national pride and the fanaticism of the nation. All their efforts tend to give to the impending struggle a character of religious ardour, which is not that of 1812. Thus the Greek Cross appears everywhere as the sanctifying symbol of the present war, and on every side may be heard the words repeated of "Orthodox faith," "Holy confidence," "Holy Russia," &c. Texts from the Holy Scripture have come to be mingled with the jargon of the fashionable saloons. The Emperor himself adopts them in conversation of the most ordinary kind, and in all his public addresses; and he appears struck with the monomania of preaching and haranguing to all about him in a manner that is truly ridiculous. Very recently, and in presence of the whole Court, he uttered a sort of sermon, which terminated nearly with the following words:—"Russia, whose destinies God has especially entrusted to me, is menaced. But woe, woe, woe to those who menace us! We shall know how to defend the honour of the Russian name, and the inviolability of our frontier. Following in the path of my predecessor—faithful, like them, to the Orthodox Faith—after having invoked like them, the aid of the Almighty God—we shall await our enemies with a firm foot, from what side soever they come, persuaded that our ancient device, 'The Faith, the Czar, and the Country,' will open to us, as it has ever done, the path of victory."

Nicholas is making important dispositions at Cronstadt, on various points of the Gulf of Finland, and the Gulf of Bothnia. He has increased the armament of the forts of Cronstadt, and constructed several batteries on the island at the water level. It had also been decided to increase the garrison by a supplementary force of 12,000 men drafted from the Imperial Guards. Three ships (partly propelled by steam) of 90 guns each—the *Georgy*, the *Constantine*, and the *Orel* (Eagle), have been put into commission. They are intended to join the first division of the Baltic fleet, which is to be raised to twenty-seven or twenty-eight vessels. But, among these men-of-war, several belonging to the divisions of Revel and Helsingfors are in a sorry state; nor can they be repaired, since at neither of these harbours are there the requisite materials. The Russian Admiralty has given orders to build at Vyborg, Abo, and Sveaborg, 200 gun-boats, on the model of those which are in the Cronstadt channel.

A letter from St. Petersburg of the 2nd, in the *Cologne Gazette*, says:—

People only occupy themselves here with the warlike preparations for all eventualities by land or sea. Twenty thousand pounds of gunpowder for the navy have been sent from Cronstadt and St. Petersburg to Petrozamock, and cannon and shells have been sent to Cronstadt and Archangel. About 40,000 lbs. of gunpowder are to leave for the latter town. The sea forts are being fortified, and the coast batteries strengthened. The Guards and Prince Paskiewitch are to leave us shortly. The Prince will first of all go to Warsaw. Patriotic donations are continuing to be made.

On the 28th ult. the Czar visited the fortifications of Cronstadt, accompanied by his son, the Czarowitch and hereditary Grand Duke Alexander.

GREAT ALARM IN THE BALTIC.

According to advices from the Russian Baltic provinces, the utmost perturbation and alarm exists among the inhabitants of the sea-border towns, from the neighbourhood of Cronstadt to the frontier near Memel. At St. Petersburg, many families are preparing to depart for the interior; and it is asserted on good authority, that orders have been issued by the Emperor to the effect that all women and children should quit Revel, and all other open, or even closed towns, subject to the assaults of the terrible squadrons which are about to sweep the Baltic. The name of Napier, whom some compare to the redoubted Suvaroff, strikes terror into all minds; and the more so since no one can foretell where the gallant Admiral may establish his first school for the "culture of laurels." The Swedes are actively engaged in repairing and strengthening their maritime fortifications, and in placing their coast defences in a good state, especially upon the island of Gothland, to which place seven battalions have been sent to hold garrison.

THE RUSSO-GREEK INSURRECTION.

The intelligence from Greece and Albania is so contradictory that it is difficult to avoid falling into error; but the following information appears to be the sum of what has happened lately. The inhabitants of the villages in Thessaly, which lie close to the Greek frontier, have joined the insurrectionary party; but the towns are quiet. The excitement in Athens and in the Greek provinces has subsided, since it has become evident that, if necessary, the great Powers will interfere; and in Epirus the insurrection has no chance of success. On the 27th of February, the garrison of Arta made a sally, and inflicted a serious loss on the besiegers. The Greek troops which have joined the insurgents may amount to 500. Emissaries are extremely active in the Morea, but have hitherto met with little success. The English and French vessels now at Piræus took provisions for the garrison of that city, which is in no danger. The citadel at Arta was in the hands of the Turks on the 3rd, and is likely to remain so. Janina is well provided with all the necessaries for a vigorous defence.

The latest news from Constantinople is, by telegraph, to the 5th inst. Disturbances were said to have broken out at Samos, attended with a great massacre. The French steam-ship *Mercure* had been despatched to the scene of confusion and bloodshed, for the purpose of protecting the European inhabitants; and a Turkish steamer, with troops on board, was to follow. At Jerusalem there had been quarrels between the Greek and Latin inhabitants. The Latin Patriarch, Valerga, was expelled by the Greeks, and the French Consul, not having been seconded by the authorities, felt it his duty to accompany him to Jaffa.

Nothing of importance had occurred in the Black Sea.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

KALAFAT, Feb 16, 1854.

SINCE the day when the Russians committed the apparently wanton devastation of burning all the hay and maize-ricks within a circuit of eight miles, the equanimity of the people of Widdin has been disturbed by the intelligence that a vast number of caïques, or boats, had been brought together at a village on the banks of the Danube, above Citate, for the purpose of passing a Russian force into Servia. The Turks have taken the precaution of despatching Selim Pacha, with three battalions of infantry, three squadrons of cavalry, and a battery of six field guns, to prevent any attempt on the part of the enemy to pass the Danube; but these precautionary measures appear to many to be a waste of resources. Had the Russians any serious intention of passing into Servia, there is every reason to believe that they would have concentrated a force at a place where there was no danger of encountering an enemy. It would be folly in the Russians to land a force in Bulgaria, and on this side of the frontier river Timok, at the risk of opposition, when they might make the same movement higher up the river, without let or hindrance, and land their forces at once in Servia. But the Russians have much to do at the present moment besides invading Servia. They have taken up such a position in front of Kalafat as to render all communication between the Turks and the interior impossible; and there they will remain, no doubt, until reinforcements arrive, which may enable them to attack the intrenchments here. The supposition founded on their recent advance, and their burning up of every species of forage, has turned out to be unfounded. They have not retired as it was supposed they would. They still occupy the villages on all sides of Kalafat, and it is ascertained from a spy, who was captured a few days since within the lines, that they still hold Poyana with two regiments of infantry, a regiment of hussars, a battery of six guns, and a battery of horse artillery, consisting of eight guns. They are, moreover, intrenched in front of Poyana, and do not live in the houses, but camp in the open ground.

The corps of Osten Sacken, which, as is now ascertained, only reached Bucharest on the 11th ult., must, by its arrival, enable the Russian General, Gortschakoff, to bring together a considerable force in Lesser Wallachia; and, unless a serious diversion is made by Omer Pacha, it is probable that an imposing force will be assembled to the attack of these lines. The idea of invading Servia can only, therefore, be a bugbear of the timid. Nor do I believe, indeed, that it is the policy of Russia at the present moment to take a step so serious. The Servians are divided into partisans of Turkey and partisans of Russia. The latter, perhaps, are the most numerous, and to be found amongst the lower class of the people. The Government and the educated are, in a great measure, friendly to Turkey. The appearance of a Russian force invading Servia would be the signal for a civil war, from which more than one result might be expected. The *corps d'armée* in reserve at Sofia would immediately march into the Principality and rally round it the partisans of Turkey. Austria could not afford to allow the quarrel to be settled without its interference, and she also would march in with her armies and her budget of persuasions. There is no knowing, then, what might result from such a move, if once it began. The Hungarians might seize an opportunity to revolt, the Transylvanians to rise, and such a storm might then ensue, as I can scarcely conceive it politic on the part of Russia to have raised. If Russia were to be victorious in her struggle against Turkey, she would hardly think of appropriating Servia. That province might, perhaps, become the reward of Austrian assistance; but, in that case, why should Russia undertake what Austria may do herself. Russian intrigue has been carried on in Servia for the purpose of keeping up amongst the Sclavonian populations the great prestige of Panrussism; but no immediate or present advantage can be expected to accrue from it, on the part of Russia, in the way of territorial aggrandizement.

The principle of Panrussism, which Russia calls by the misnomer of Panslavism, is one which has been pursued with increasing tenacity, by the policy of the Czars; it is a policy as hostile to Austria as it is to Turkey; but its effects can only be felt by the former, after the latter has been humbled. Russia has no interest in spending her energies now, on what must presently benefit Austria, rather than herself. Let Russia be victorious, and Turkey lowered in the scale of nations, and Servia cannot for the moment become aught else than Austrian; but Russia, bordering on Servia, will find a pretext to absorb, not merely Servia, but even the Banat, the Nolvadina, perhaps Bohemia. These are distant visions which might be realised by Russian victories, but the triumph need not be in Servia; and the end will be attained as well at Kalafat or Schumla, at Bucharest or Adrianople, as at Belgrade or Semendria. It is a great misfortune for the Czar that such a nation as the Rouman should interpose between his dominions and the Sclavonian populations bordering on Germany. The mode in which Russia works upon the hopes and fears of the Sclavonic populations can scarcely be expected to have much influence upon Wallachia and Moldavia, and, in order to attach the latter, other means must be employed. The Russians have, therefore, been generous in promises of late, and have fed the imagination of the Roumans with visions of thorough independence, a constitutional Monarchy, and what not. But are the Roumans likely to be gulled by such pretences? It is very true that they are by no means a wise or a far-sighted population. Long enslaved and kept within the bonds of serfdom, they might with ease be led into a belief that all these promises are fair, and likely of fulfilment; but they have had some slight experience of the worth of Russian promises; and they cannot but remember that the men who made them were those who, in 1848, marched in to deprive them of their new-born liberty. By the movement which then took place, the peasants entered into a new existence. No longer tied to the glebe by the tenure of their holding, no longer forced to pay in labour for the right to cultivate their own fields, they saw with pleasure, and accepted with eagerness, the measures which made them independent, which enabled them to have a will of locomotion, and to possess the ground which they had tilled from childhood. The revolution did not make them freeholders—it altered their connection with the landlord, and they were no longer serfs. This arrangement, after all, was one as beneficial to the landed proprietors as it was enticing to the peasant; for the latter, in consideration of the new advantages held out to him, was willing to pay the former an amount of rent much greater than he did before.

But the Boyards could not look upon this emancipation of their serfs without jealousy. Russia entered the Principalities, and, with the assistance of the Boyards, smothered the privileges of the Roumans at their birth. Is it possible that a people so treated can forget such a deprivation? Is it probable that the Roumans should cease to think of '48? There are facts to prove that they preserve the memory of their transient benefits, and are still anxious to attain them. A gentleman whose movements in their favour had caused him to be exiled at the entrance of the Russians, paid a visit lately to a village near this place. He called the people round him—reminded them of the time when a peaceful revolution had produced those beneficial changes which they must now regret; and asked them had they quite forgotten the principles for which he and they had fought and suffered. They answered not by words, but they led their friend and leader to the church, and there behind the screen they showed him the tri-color flag—the symbol of their freedom which had lain concealed until that moment. They expressed their readiness at once to unfurl the standard, and prove their attachment to the principles of 1848. On the following day the Russians entered the village, and beat to death the priest who had permitted a revolutionary flag to be preserved so long within the sacred precincts of a church. With such sentiments alive amongst the Roumans, Russian rule can never keep a hold in the Danubian Principalities. The great idea of Panslavism has no charm for them. On the contrary, they oppose it; and, should the Russians even succeed in wresting these vast territories from the Turks, the moment of emancipation from the Porte must be the signal for a movement in favour of national independence. But Russia thinks this, doubtless, an obstacle to her onward progress. She conquered the Crimea and reduced the Tartars; by the exercise of her rule she has reduced the latter to the feeble number of 30,000 families, and surrounded them by a mixed population of Greeks and Russians. She may hope to efface the Roumans as she effaced the Tartars; but the eyes of the world are too much directed towards the northern Colossus to permit of a nationality being crushed; and thus the Roumans must continue to remain a bar between Russia and the fulfilment of her Panslavistic views.

Four days have now elapsed since the rumour of an advance of Russians into Servia was spread, and as yet no sign of anything is visible. Yesterday, however, one of those harassing movements to which the enemy have accustomed the Turks took place in the direction of Chuperchin—a village occupied by three battalions of infantry, three squadrons of horse, and two guns. The Russians, in number two battalions, with two regiments of horse and six guns, endeavoured to cut off this Turkish force. Under cover of a fog created by the intense cold they succeeded in passing between the videttes, but they were luckily met by a patrol who gave the alarm. The Turks retired in good order, and suffered no damage from a continued fire from the Russian guns, which remained most of the time too distant to be within good range.

The only item of intelligence to be added to these, is that of an encounter which took place on the 3rd instant, at Rustchuk. Opposite the lower extremity of that fortress is an island, on which a battery is placed. Opposite the island, on the Wallachian side, is the village of Siabodzie. On the 3rd, a battalion of Turkish infantry, about 600 men and 300 irregulars, with two guns, crossed to the Wallachian side, drove in the Russian picquets, and burnt some houses. They were protected in this operation by the guns of the battery on the island, as well as by the heavy ordnance from Rustchuk. The Turks advanced, however, beyond the cover of these defences, and were then attacked by the enemy. The Russians, it is said, came out with a force of three battalions—say 2500 men—a regiment of cavalry, and six guns, but probably much less, and attacked the advancing Turks, who gradually retired. A company of Turks from Rustchuk crossed over to the island in the meanwhile, with one gun; and from this and the batteries on the island, and the heavy guns of the fortress, the Russians suffered considerable loss: the Turks state it to have been 800 killed, and a comparative amount wounded. This must be taken with considerable reservation. The Turk themselves lost thirty-five killed and 102 wounded. Both retired without coming to close contest.

We hear from Constantinople that General Guyon, who had been sent to Asia to re-organise the Turkish army, has been entrusted with the command of a division at Batoum. Colonel Beschanowski, a Pole, whose name has been coupled with honourable services in Poland, in Africa, and in Hungary, is raised to the dignity of Pacha, together with Colonel Breniski, also a Pole. They have taken their departure for Anatolia.

It is stated that Russia has asked again at Constantinople for a conference with Turkey alone; and that this has been refused. I am happy to say that, in lieu of the old system, which consisted in giving 100 piasters for the ears of an enemy, the Turkish Government now offer the same sum for every prisoner brought in alive. There is thus a chance of prisoners being saved from the excesses of irregulars.

THE CZAR'S REPLY TO LORD JOHN RUSSELL.

The *Journal de St. Petersburg* of the 2nd inst. contains the answer of the Russian Cabinet to Lord John Russell's speech on the 17th of February. The article begins in the following words:—

It is not here the place to repeat brutal outrages of which every faithful servant of the Emperor will preserve the recollection, but which do not reach the august person to whom they are addressed. We shall confine ourselves to remarking that the Parliamentary annals might be searched in vain for an example of such intemperate language from the mouth of a Cabinet Minister in reference to a Sovereign against whom the country of that Minister had not yet declared war. What are of importance in this speech are not the invectives of the Minister, but the nature of the determinations of the Government which the speech reveals. It must be very evident henceforward that the peace of the world does not depend upon chance only, but that war forms a decided element of the plans of the English Ministry. From this cause has necessarily arisen that fatal distrust which in the Eastern Question was the origin of all the previous difficulties, and which will lead at last to the most deplorable results.

The article then goes on to affirm that, whatever might be the grounds of mistrust entertained by other Powers, the English Ministry had no reason to doubt the views of Russia, inasmuch as at an early period preceding Prince Menschikoff's mission, the Emperor Nicholas had "spontaneously communicated with the Queen of England and her Ministers, for the purpose of establishing an intimate agreement with them, even in the event of the most formidable contingency which could befall the Ottoman Empire." It further stated that, in the course of Lord John Russell's brief administration of the Foreign-office—that is, in January, 1853—Sir Hamilton Seymour was requested by the Emperor, and empowered by his own Government, to enter into a detailed private conversation with the Emperor himself on this subject, and a correspondence ensued, not of an official character, and the secrecy of which does not concern the Emperor alone; but which disclosed in the fullest confidence the views of the Court of St. Petersburg with reference to the approaching dissolution of the Ottoman Empire.

In reply to Mr. Disraeli, on Monday evening, Lord John Russell has declared his willingness to produce the correspondence referred to.

RUSSIAN CIRCULAR NOTE.

The *Journal de St. Petersburg* of the 3rd inst. publishes in a supplement extraordinary a circular addressed by the Russian Cabinet to all the Ambassadors and diplomatic agents of the Emperor of Russia, giving an account of the negotiations on the Eastern question, and justifying, according to the opinion of the Russian Cabinet, all its proceedings. The circular fills not less than seventeen columns of the *Journal de St. Petersburg*, and is ten times as long as that prepared by M. Drouyn de Lhuys for the French Government with a similar object. The greater part of the Russian circular, however, consists of a history of the Eastern affair, inter-spersed with arguments, which have all been brought forward in the notes of Count Nesselrode and the letter of the Emperor of Russia, published in the French and English Journals. Throughout this historical review the desire for peace and the moderation of the Emperor of Russia are much spoken of, and he is represented as having been constantly thwarted by doubts, suspicion, and distrust, which he had done nothing to deserve. An attempt is made to make the world believe that the Eastern question has been brought to the present crisis, not by any refusal on the part of the Czar to make all the concessions which were compatible with his honour and dignity, but by the want of confidence in his declarations evinced by the French and English Governments.

Great complaints are made that Turkey was not made to accept the Vienna Note, and still greater that Count's Nesselrode's "examination" of that Note, which fixed upon it the meaning ascribed to it in Turkey, should have been given to publicity, through "a culpable breach of confidence, the source of which is unknown to us." The Emperor endeavours to justify the shameful outrage at Sinope, which he asserts was "only a legitimate act of defence." The Circular concludes by affirming that a policy of intimidation has been carried out by France and England, while the conduct of Russia is described as a succession of sacrifices.

THE NEW OVERTURE BY THE CZAR.

The object of the diplomatic mission of the Prince of Hohenzollern-Sigmeringen is said to have been the presentation to the Western Powers of new proposals towards peace. The Emperor of Russia, having learned that England and France were taking active steps to induce the Porte to place the Christian subjects of the Sultan on an equality with the Musulmans, declared that a concession of so much importance, if obtained, would render the protectorate claimed by Russia over the Christians without any object; and that being the case, he would be disposed to treat, in common with the great Powers, for the regulation of the general position and rights of the Christian population in the Ottoman Empire. If the negotiation were accepted on this basis Russia would evacuate the Principalities, on condition that England and France would at the same time withdraw their fleets from the Black Sea. Prussia undertook to make this communication to the Cabinets of London and Paris, with the understanding that if the last offer on the part of Russia should be rejected, the Prussian Government was determined not to take any part in the war against Russia, and to preserve the neutrality which it had already announced, and which it was determined not to depart from, excepting in the case of the interests of Germany being in danger. So far as can be ascertained, the mission has been a failure.

THE PRUSSIAN NEUTRALITY.

An address signed by several members of the Prussian Chambers has been presented to the Government, calling upon Baron Manteuffel to give some explanation as to the position of Prussia in the impending war, to state whether its intimate relations with the Cabinets of Vienna, London, and Paris are maintained, and to establish by a frank declaration that confidence which can alone oppose "the illegitimate voices" that seek to present themselves as organs of the country. To this requisition Baron Manteuffel replied, on Monday last, that the Government would shortly make some communication to the Chamber on explanation of its policy, and that the fleets about to enter the Baltic Sea are those of the Powers with which Prussia is on good terms and at peace. However incomplete this intimation of the Prussian Cabinet may be, the King of Prussia has already given another indisputable proof that he admits the necessity of offering some explanation of the recent change in his policy; for he has despatched Prince Hohenzollern Sigmaringen to Paris on a confidential mission for that purpose; he has sent General Groeben to England on the same errand.

LINES

ON THE DEATH OF MR. JUSTICE TALFOURD.

THE instantaneous plunge from life to death
Is ever awful: if it be the votary
Of empty pleasure, that completes the fulness
Of his brief time amid the revel's roar;
Or soldier, in hot blood, while taking life,
Losing his own. But more profoundly deep
The lesson strikes, when, startled we behold,
The Judge called from the judgment-seat to judgment!

* * * * * *

Let Hope (most giv'n to scan the future) now
Turn to the past, regardful of *his* deeds.
And, through her tears, look upward and exclaim,
"May that sweet MERCY which he lov'd on earth,
Welcome his gentle soul to peace in Heav'n!"

Garrick Club, London. SAMUEL LOVER.

MR. JUSTICE TALFOURD'S LAST ADDRESS.

The cause of Mr. Justice Talfourd's sudden death, which took place at Stafford, last Monday, was an attack of apoplexy, brought on by the excited feelings under which he was addressing the grand jury in reference to the atrocious crimes by which the calendar of Staffordshire is stained on the present, even more than on ordinary occasions. His Lordship, in alluding to the state of the calendar, containing a list of upwards of one hundred prisoners, many of them charged with the most atrocious crimes short of murder, called the attention of the grand jury to the fact that there were no fewer than seventeen cases of manslaughter, and thirty cases where persons were charged with the crime of highway robbery. Many of these might be traced to intemperance, "the greatest English vice," which was so prevalent in the mining districts; but that would not account for them all. No small amount of the crime by which the calendar was stained, he ascribed to another cause:—

I cannot help thinking (said his Lordship), that it may in no small degree be attributed to that separation between class and class which is the great curse of British society, and for which we all, in our respective spheres, are, in some degree, more or less responsible. This separation is more complete in this district, by its very necessities and condition, than in agricultural districts, where there is a resident gentry, who are enabled to shower around them not only the blessings of their beneficence and active kindness, but to stimulate by their example. It is so much a part of our English character, that I fear we all of us keep too much aloof from those dependent upon us, and they are thus too much encouraged to look upon us with suspicion. Even to our servants we think that we have done our duty in our sphere when we have performed our contracts with them—when we have paid them the wages we contracted to pay them—when we have treated them with that civility which our habits and feelings induce us to render, and when we curb our temper and refrain from any violent expression towards them. And yet how painful the thought that we have men and women growing up around us, ministering to our comforts, supplying our wants, and continual inmates of our dwellings, with whose affections and tempers we are as little acquainted as if they were the inhabitants of some other sphere. This feeling arises from a species, from a kind of reserve which is perhaps peculiar to the English character, and which greatly tends to prevent that mingling of class with class—that reciprocation of kind words and gentle affections—those gracious admonitions and kind inquiries, which, often more than any book education, tend to the cultivation of the affections of the heart and the elevation of the character of those of whom we are the trustees. And if I were asked what is the great want of English society, I would say that it is the mingling of class with class. I would say, in one word, that that want is the want of sympathy. Now that is never more entirely felt to be so than in the case of that man who is engaged in pits in the bowels of the earth during a large portion of his time. The large ironmasters and coalmasters have a great number of men in their employ, with whom it is utterly impossible for them to cultivate sympathy; the overlookers and sub-agents, themselves engaged in the active duties of life, and having the claims of their own families on their sympathies, are unable, even where they are not unqualified by want of education, from entering into the domestic relations and circumstances of the middle aged and the young amongst whom they themselves move; and thus it is only when a lurid light is cast by some acts of crime like those in the calendar, that we really understand what the habits and pursuits of these people are.

While commenting upon these topics, his Lordship became considerably excited and flushed in the face, and those near him noticed that the veins became somewhat thick and inordinate; and, on a sudden, he fell forward with his face upon his book, and then swayed on one side towards his senior clerk, and his second son, Mr. Thomas Talfourd, his Lordship's marshal, who caught him in their arms. Dr. Holland and Dr. Knight, two magistrates, who were on the bench at the time, immediately rushed to his Lordship's assistance, removed his neckcloth, &c., and called for water; but it was of no avail. His breathing was stertorous and his face livid, and but a feeble action of the pulse could be felt. Mr. Justice Wightman was hurriedly summoned from the Civil Court, and hastened to the spot, but only arrived in time to see his brother Judge borne in mournful procession on the shoulders of six gentlemen, to the Judge's lodgings adjoining the court. On arriving there it was found that life was quite extinct.

DEPARTURE OF THE PARIS GARRISON FOR THE EAST.

On Sunday the 5th inst., that portion of the Paris garrison which was under orders for the East was reviewed by the Emperor, in the court of the Tuileries. The Empress, attended by the ladies of her Court, was seated on the balcony of the palace, which was covered with crimson velvet. On the following day the troops took their departure for Toulon, but not amidst such a display of popular enthusiasm as was exhibited in London on the departure of the Guards. So quiet was the leave-taking of the French troops (of which our Artist has given a Sketch), that none of the Paris Correspondents of the London papers mention the circumstance at all. Among the crowd attracted by the movement of the Paris garrison were a number of the conscripts of the class of 1854, who had just been drawn. They hailed the soldiers as they passed, shouting "We shall soon rejoin you."

The greatest enthusiasm is manifested by the French army who are eager to measure their strength with the Cossacks. Upwards of 400 corporals

DEPARTURE OF THE REGIMENT OF THE GARRISON OF PARIS FOR THE EASTERN EXPEDITION.

and sergeants have thrown up their ranks, and have entered other regiments as privates. All the non-commissioned officers of the 70th Regiment of the Line have entered as privates in the 74th Regiment now at Toulon.

The *Moniteur* of Monday contains an Imperial decree, ordering chaplains to be named to the various bodies of troops now proceeding to the East. They are to be named by the Minister of War, according to the wants of the service. A superior chaplain, charged with the task of centralising the whole religious service of the French army of the East, and an assistant chaplain, are to be appointed to the head quarters of the army. A chaplain is to be attached to each division, and another to each large moveable hospital. The superior chaplain is to receive the pay and allowance of a chef-de-bataillon in the infantry, and the other chaplains those of a captain of infantry of the second class. Each chaplain besides, during the expedition, is to be allowed a horse for his service.

Generals Canrobert and Bosquet left Paris on Monday morning for Toulon, preparatory to their embarkation for the East.

Marshal Saint Arnaud leaves Paris on the 24th inst. General Canrobert takes with him the commission of Commander-in-Chief in the event of anything occurring to the Marshal, whose health is still delicate. Prince Napoleon will embark on the 8th of April at Marseilles or Toulon. An aide-de-camp of General Prim left Paris on Monday night for Marseilles, *en route* for Turkey. The General himself will soon follow.

THE BANQUET TO SIR CHARLES NAPIER, AT THE REFORM CLUB.

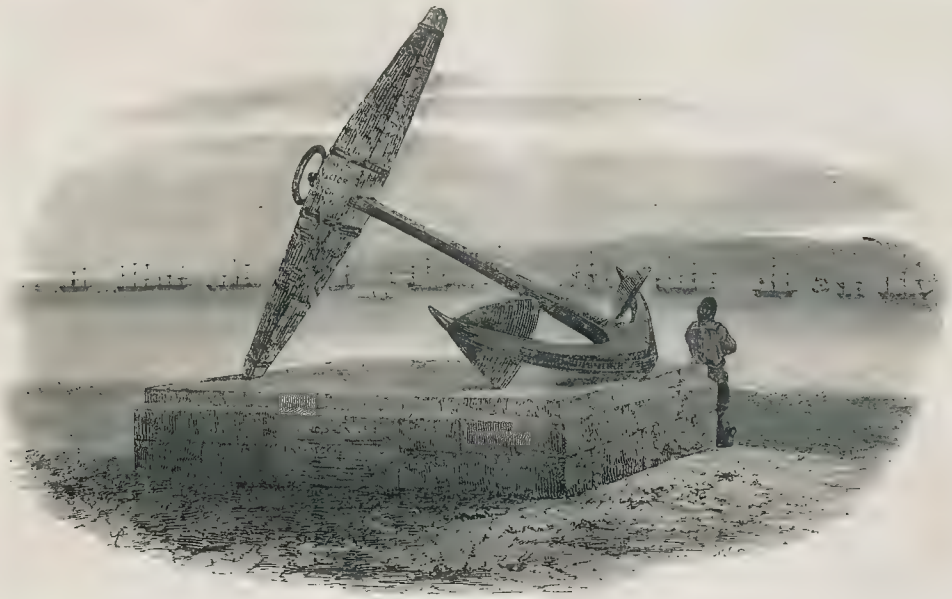
In propitious association with the events of the great war upon which we are about to enter must be regarded the splendid entertainment given at the Reform Club, on the 7th inst., to the Commander of the Baltic Fleet. Our series of Illustrations would, therefore, be incomplete without a commemorative Picture of this Festival, alike characterised by an enthusiasm truly English, and well bespeaking the national feeling upon this momentous occasion.

The descriptive details of the Entertainment were fully reported in our Journal of last week. We now engrave a Sketch from the principal table.

Sir Charles Napier, upon the right of the Chairman (Viscount Palmerston), is addressing the company, in return for his health. Next Sir Charles Napier are seated Sir James Graham and Admiral Berkeley and on the left of the Chairman are the Turkish Minister and Namik Pacha.

In the rear are the only decorations of the dining-room, for the Festival, namely, the French, English, and Turkish ensigns—which were arranged alternately around the apartment.

THE BANQUET TO VICE-ADMIRAL SIR CHARLES NAPIER, AT THE REFORM CLUB, PALL-MALL.



"THE VICTORY'S" ANCHOR, ON SOUTHSEA BEACH.

THE "VICTORY'S" ANCHOR, ON SOUTHSEA BEACH.

This very interesting memorial attracted much attention during last week, when so many thousands assembled at Portsmouth to witness the departure of the Baltic Fleet.

The *Victory's* Anchor is placed upon a pedestal upon the beach at Southsea, as related in the following inscription:—

Close to this spot embarked the
HERO OF THE NILE,
Alas or the last time, to take command of the British Fleet,
That fought and conquered
At TRAFALGAR, where our NELSON fell.
This tribute of respect is placed in humble admiration of
the departed Hero
by
LORD FREDERICK FITZCLARENCE,
Lieutenant-Governor of Portsmouth.
1852.

WRECK OF A WAR-STEAMER.

We have been favoured by a Correspondent with the following details of the wreck of the H.E.I.C. war-steamer *Medusa*, Lieut. H. A. Fraser, I.N., commanding; with the accompanying Sketch of the scene, made by Lieut. B. Ford, Adjutant of the Madras Sappers.

This remarkably fine little steamer was politically employed under Lieut. Fraser, I.N., in communication with the principal Commissioner in Pegu (Captain Phayre), for the protection of British interests on the frontier, and in the execution of which duty took place the unfortunate occurrence depicted in the Sketch.

The vessel was proceeding from Prome towards Kamma, which is situated fifteen miles north of Prome, and on the right bank of the river Irrawaddy. The steamer had accomplished about half the distance, when she struck on a sunken rock, where to all appearance the proper channel existed. The hull is an iron one, and the injury received was very considerable, as she immediately commenced to fill, the compartments bursting as the water rushed in the fore part of the vessel; and although every exertion was made by the officers and men to get sails over the bows, she settled down fast; and they had barely time to place her near the bank of the river, when the vessel sunk head-foremost. The crew and officers jumped overboard to save themselves, which they happily did, with the exception of one man, the Captain's cook, who got entangled in the ship's awnings.

Next day Lieut. Fraser proceeded to Prome, leaving Lieut. T. W. Aylesbury, I.N., with one of his gun-boats for the protection of the wreck; and for the purpose of saving any thing that might float to the surface of the water. On Lieut. Fraser's arrival at Prome, Brigadier General Sir John Cheape most kindly and readily placed all available aid from the several departments there stationed at that officer's disposal; and the next day he proceeded with the flat, *Luckior*, Captain Sevenoaks commanding, in tow of the H.C. steamer *Lord William Bentinck*, to the scene of the wreck. Lieutenant Fraser was accompanied by Lieutenant Ford, commanding a detachment of Madras Sappers and Miners, having pontoons and rafts of casks, and other naval apparatus with him. The exertions of these men and their officers deserve great praise. The quick manner in which they formed their rafts; and their diving in four fathoms water, first cutting the awnings of the vessel away, and then slinging the guns, was the admiration of everyone who witnessed the operation; and it was entirely through the great exertions of this fine corps and their gallant officer, Lieutenant Ford, that the whole of the vessel's guns were saved.

WRECK OF THE WAR-STEAMER "MEDUSA," IN THE IRRAWADDY RIVER.—RECOVERY OF THE GUNS.

CALENDAR FOR THE WEEK.

SUNDAY, March 19.—3rd Sunday in Lent.
MONDAY, 20.—Spring commences.
TUESDAY, 21.—Benedict. Duc d'Enghien shot, 1804.
WEDNESDAY, 22. First English Protestant Charity School opened, 1638.
THURSDAY, 23.—Southwark-bridge opened 1819.
FRIDAY, 24.—Earl of Chesterfield died, 1773.
SATURDAY, 25.—Annunciation. Queen Elizabeth died, 1603.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

THE BALTIC FLEET.

We have much pleasure in announcing to our Readers, that Mr. O. W. Brierley, the well-known Marine Artist, has sailed in the *St. Jean d'Acre* for the Baltic; and that we hope to receive from him several interesting Sketches, which will immediately appear in our Journal.

*** Our Notices of the Exhibition of the National Institution of Fine Arts (opened on Monday) is unavoidably deferred till next week.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 18, 1854.

Some uneasiness begins to be felt as to the course which will be pursued by the Governments of Austria and Prussia in the approaching war. Were it given to the people of Germany to decide upon the attitude which they should assume towards Russia, there can be no doubt what the decision would be. A firm and cordial alliance with Great Britain and France would be inevitable. The baneful influence and Upas-like protection exercised by Russia in the affairs of Germany have long been the sources of humiliation to the intelligent classes in the great and minor kingdoms and principalities of the Confederation. But, unfortunately, the dynastic interests, or supposed interests of the Emperor of Austria and the King of Prussia have more to do with the decision of the question than the wishes of their subjects. To both of these Sovereigns the aggressive policy of Russia cannot be other than distasteful. Any disturbance of the existing equilibrium of Europe is fraught with peril to their thrones; and their obvious policy is to prevent a war, if it be possible, or to take part with Great Britain and France, if the Emperor of Russia persists in his designs against the Ottoman Porte. In spite, therefore, of the past and present wavering of these two Potentates, and their determination to remain neutral in the struggle, there can be little doubt, if the war proceed, that they will not only be compelled to take part in it, but that they will join the rightful side. The mutual jealousy between Austria and Prussia for the leadership of Germany is not the least powerful of the causes that have hitherto prevented those States from assuming their proper position during this great European crisis. But the leadership, even if it did not belong to Austria, must be assumed by that Power, in virtue of the energetic character of the young Sovereign, of the sagacity of his advisers, and of the dangers that menace the Empire. From the King of Prussia little is to be expected, and that little only on the compulsion of an overwhelming necessity. He is a man of good intentions, but of weak judgment and irresolute will. He is prone to enthusiasm; but it is unstable and short-lived. In the convulsions of 1848 and 1849, his good intentions and his foolish conduct were near upon producing his expulsion from the throne. His Imperial brother-in-law knows as well as any man how little he is to be depended upon. If he have a strong feeling upon any subject, it is for a cellar of choice wines. His stock of Clicquot's champagne is said to be unrivalled; and the grim Czar once gave him, in a playful mood, the contemptuous soubriquet of *M. Clicquot*. The two Sovereigns, as may be gathered from this and other circumstances, have but little personal liking for each other. The neutrality of Prussia, if circumstances allow her to maintain it, will, in all probability, have a bias hostile to Russia; and if Austria, alarmed for Italy and Hungary, should determine on joining the Anglo-French alliance, Prussia will be compelled to follow, whatever may be the personal feelings of the King. The chief interest, therefore, attaches at the present time to the conduct of Austria. Prince Metternich, the venerable Nestor of the Empire, is strongly opposed to Russia; and the influence of his age, his character, and his talents, is naturally great over the Princes of the House whom he has served so long. Count Buol and the more modern statesmen who surround the Emperor, participate in the views of Prince Metternich; and, sooner or later, there seems every reason to believe, Austria will take the part which becomes alike her interest and her honour. If Prussia follow, instead of leading, the Germanic movement, the discredit of previous vacillation will attach to the King, and not to the people of that country, and will be remembered against him by his own subjects. It would seem as if the Czar himself were wavering; and if Prussia and Austria, instead of being alarmed by the prospect of war, would boldly, and without hesitation, throw their influence into the scale against Russia, it is possible that, even now, the war would be averted. The mission of Prince Hohenzollern Sigmaringen to Paris, with the object of reconciling the French Government to the absolute neutrality of Prussia, is understood to have signally failed. A similar fate will follow the mission of General Groeben to London; and the Prussian Monarch will gain nothing by his efforts at isolation but present discredit and future peril. Baron Manteuffel, in the name of his Government, has promised that communications shall shortly be made to the Prussian Chamber in explanation of its policy. He has, in the meantime, declared "that the fleets about to enter the Baltic are those of Powers with which Prussia is on good terms, and at peace." It is not only the Prussians, but France and England that require a more explicit declaration.

Oxford Circuit.—The Lord Chancellor has appointed Mr. Russell, Q.C., to transact the remaining business of the Oxford Circuit, in the place of the late lamented Mr Justice Talfourd; and Mr. Gurney has appointed Mr. Ryland to act as his deputy in the Sheriffs' Court of London during his own necessary absence therefrom

LATEST INTELLIGENCE.

ADMIRAL CORRY'S DEPARTURE FOR THE BALTIC.

Admiral Corry's flag-ship the *Neptune*, 120, and the *Bulldog*, 6, sailed from Spithead on Thursday for the Baltic; and the *St. George*, 120, with the *Desperate*, 8, left Plymouth Sound on Thursday evening for the same destination—the *St. George* sailing at Spithead to complete her crew.

Rear-Admiral Corry's departure from Spithead was honoured by the presence of her Majesty. Immediately on the *Fairy's* arriving within a couple of miles of the three-decker, the latter opened a Royal salute, which was taken up by the *Prince Regent*, 90, Captain Smith; *Boscawen*, 70, Captain Glanville; and *Frolic*, 16, Commander Nolloth. The *Neptune* and *Bulldog*, paddle-frigate, Captain W. H. Hall, then leaving through the squadron and receiving the homage of the crews in the *Prince Regent*, *Cæsar*, *Boscawen*, and *Frolic*, followed the huge *Neptune*, until outside the Nab, when another demonstration was made, the men clambering up to her trucks to shout again and again in vociferous loyalty.

Her Majesty and Prince Albert, from the deck of the *Fairy*, acknowledged Jack's enthusiastic loyalty, the Queen by waving her handkerchief, and the Prince his hat. Her Majesty, however, appeared unwilling to part company with the gallant crew, and proceeded with the noble ship a short distance outside the Nab, notwithstanding a fresh gale which was blowing, and the roughness of the water. A large war steamer appearing in the distance, her Majesty ordered the "demand signal" to be run up, and received in reply that it was the *Penelope*, a fine paddle-steamer from the coast of Africa. Her Majesty is fully conversant with the code of signals, and on board the Royal yachts not unfrequently takes that department under her own management, selecting and reading the signals with as much promptitude and accuracy as many of her own officers. Having ascertained the name of the *Penelope*, the *Fairy* were round, at a quarter to twelve, and for the third time the *Neptune* manned her rigging, and gave a loud, a long, and an enthusiastic parting hurrah—her Majesty still lingering on the spot, as though reluctant to leave the good ship. Passing the *Bulldog*, which accompanied the *Neptune*, and the anchorage, on her way to Osborne, her Majesty inspected the rigging, and cheered her Majesty, who arrived at Osborne shortly before one o'clock. The *Neptune* and *Bulldog* will anchor in the Downs, and wait orders and despatches, when they will proceed to join the other portions of the fleet, either at Wingo Sound or Kiel Bay, a capacious harbour, with good anchorage, within the Belts, and on the eastern coast of Holstein, a short distance south of Schleswig.

GENERAL INSPECTION OF THE 19TH REGIMENT.

In obedience to orders received on Thursday evening from the Horse Guards, for a general inspection of the 19th Regiment of Foot, preparatory to embarkation to join the first division of the Expeditionary Army in the East, the garrison of the Tower, consisting of the above-mentioned corps, and a company of the Royal Artillery, was under arms at nine o'clock yesterday morning, and a crowd of spectators assembled. On the arrival of Lieut.-General Turner, the Colonel-in-Chief, the regiment having formed line and presented arms, the band playing the National Anthem, the men were most minutely inspected, and subsequently went through the manual and platoon exercises, and such evolutions as the circumscribed nature of the ground would permit, with admirable precision. Close column of divisions having been formed, the General addressed the men in the most enthusiastic language, recommending them, when on active service, to persevere in the same line of conduct that they had hitherto pursued. Lieut.-Colonel Unett, the several captains of companies, and Lieut. Burne, adjutant, were highly complimented on the discipline and fine appearance of the men. Line having been again formed, and a general salute given, the General withdrew.

THE CZAR'S DECISION.

Rumours were current at the Paris Bourse on Thursday that a telegraphic despatch had been received from Berlin, announcing the refusal of the Czar to accept the *ultimatum* addressed to him by the Western Powers. The announcement is incorrect. The messenger who carried the *ultimatum* to St. Petersburg could not have arrive there before Tuesday. If an answer be returned at all, it will probably not be given before the expiry of the six days, which will be Monday next; and it will take at least six days more to bring the substance of the answer from Berlin by telegraph to Paris. In that case we cannot expect to have any positive information on the subject before the 26th of the month.

THE FRENCH PREPARATIONS.

Some surprise is expressed in Paris at the apparent inaction of the French Government as to the embarkation of the army of the East, but it appears that the delay has been one of necessity. The necessary number of vessels could not be collected so soon as could have been wished, and there was a deficiency of coal for the steamers. A great number of officers, however, have already embarked, and must have arrived at Constantinople. Marshal de Saint Arnaud is in the country endeavouring to recruit his health, and will, it is said, wait to accompany Lord Raglan and the Duke of Cambridge, who are expected daily at the Tuileries, where apartments are prepared for them on the ground floor.

SWEDISH PREPARATIONS.

A despatch from Stockholm, of March 7, announces that the Swedish Government has ordered the fitting-out of seven line-of-battle ships, with crews amounting to 2807 men. Prince Oscar had gone to Carlskrona, to visit the fleet. Two camps are to be formed, one at Carlskrona, and the other to the north of the capital. The garrison of the island of Gothland, inclusive of the local militia, is to amount to 16,000 men.

THE MINISTERIAL CRISIS IN DENMARK.

A telegraphic despatch from Copenhagen announces that in the evening sitting of the 13th last. the Danish Chambers adopted, almost unanimously, the address to the King, presented on the 11th, requesting his Majesty to maintain the Constitution and dismiss his present Ministers.

THE GREEK INSURRECTION.

The French and English Ambassadors had an audience of King Otho on the 3rd, and communicated to him their instructions; at the same time promising assistance in case the insurgents should foment disturbances in the Greek territory. The King engaged to observe a strict neutrality, and expressed a hope that there would be no necessity for aid.

The latest intelligence from Athens comes down to the 9th. The first sortie of the Turkish garrison at Arta was repulsed by the insurgents. A second was carried to the Greek territory, where it was stopped by the Royal troops.

Lieut.-Colonel Mundy has been appointed Military Assistant Under-Secretary to the Secretary of State for War and the Colonies.

Pirates off the Sea of Marmora.—Advices from Umea, dated Feb. 20, state that the *Hedwig Sofie*, Larsen, from Limerick, which arrived at Constantinople Jan. 13, was hailed by a pirate on Jan. 12 off the Sea of Marmora, which, under the plea of obtaining a supply of water, ranged up alongside, but finding the crew armed, and ready to defend themselves, sheered off again.

Reform Meeting at Birmingham.—On Thursday evening a meeting, convened by J. Baldwin, Esq., Mayor, was held in the Town-hall, for the purpose of considering the new Reform Bill. The Mayor took the chair, there being on the platform the following gentlemen:—W. Scholefield, Esq., M.P.; W. Matthews, Esq.; P. H. Muntz, Esq.; &c. The following resolution was carried:—"That this meeting urges upon the Government, in the most emphatic manner, not to abandon the bill, but to persevere to the utmost in carrying it through both Houses of Parliament during the present Session." Resolutions of a similar nature have been passed by public meetings at Yarmouth and Maidstone.

South-Eastern Railway.—On Thursday the half-yearly meeting of this company was held, at the Bridge house Hotel: Mr James Macgregor, M.P., in the chair; when the report of the Directors was adopted, and a dividend of 12s. per share declared. In consequence of the expression of the opinion of the shareholders by their proxies, the retiring directors declined to offer themselves for re election, and Sir John Campbell, Mr. Matthew Forster, and Mr. Seymour Teulon were elected; the Bromley Branch Extension, and other disputed questions, being reserved for the consideration of the new board.

THE COURT.

The past week has been rendered memorable by her Majesty's visit to the Fleet at Spithead preparatory to its departure for the Baltic. The Queen and the Prince Consort, with the Prince of Wales, Prince Alfred, the Princess Royal, and Princess Alice, attended by the Ladies and Gentlemen in Waiting, embarked on board the Royal yacht *Fairy*, at a quarter past twelve o'clock on Saturday, for the purpose of inspecting the Baltic fleet at Spithead. Sir James Graham, First Lord of the Admiralty, and Vice-Admiral Sir Thomas Cochrane, also embarked in the *Fairy*, and had the honour of attending her Majesty. A Royal salute having been fired from the ships on the Queen's approach, signal was made for Vice-Admiral Sir Charles Napier, Commander-in-Chief, and all the Rear-Admirals and Captains, to come on board the Royal yacht, where they severally had the honour of being presented to the Queen by Sir James Graham. On their return to their ships—the order having been given to weigh in succession—each ship sailed past the Royal yacht, which had proceeded towards the Nab Light, manning their rigging and cheering as they passed. The Queen returned to Osborne at a quarter before five o'clock.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, and Princess Alice, attended Divine service, at Osborne. The Rev. G. Protheroe officiated.

On Monday the Queen and Prince, accompanied by the Princess Helena and Princess Louise, drove out in an open carriage.

On Tuesday the Queen gave audiences to the Earl of Clarendon, the Prussian Minister, and the Count de Groeben, who has arrived in the country on a special mission from the Court of Berlin. The party had the honour of dining with her Majesty.

The Countess of Mount-Edgcumbe has succeeded the Viscountess Jocelyn as Lady in Waiting.

The Duchess of Gloucester.—We are happy to announce that her Royal Highness the Duchess of Gloucester is better. The Duchess of Kent paid a visit to her Royal Highness on Thursday afternoon.

His Serene Highness Prince Leopold of Saxe Coburg left town, on Friday the 10th instant, for the Continent.

The Marquis of Anglesea continues to improve in health. His Lordship took a drive in the Parks, on Sunday, with his daughter, the Viscountess Sydney.

Lord William Paulett, and Major the Hon. J. Macdonald, will be on the staff of his Royal Highness the Duke of Cambridge, with the army destined for the East.

On Wednesday evening the Earl of Clarendon, Foreign Secretary gave a grand banquet, of a farewell nature, to his Royal Highness the Duke of Cambridge, Lord Raglan, the Earl of Cardigan, and other members of the staff destined for the East. There were also assembled on this valedictory occasion his Excellency the French Ambassador and his Countess Walewski, the Duchess of Sutherland, the Countess of Newburgh, the Earl and Countess of Bessborough, Lord Brougham, Lord Burghersh, Sir Hamilton and Lady Seymour, Major the Hon J. Macdonald and Mr. Norman Macdonald. The Countess subsequently held her first reception for the season, when a brilliant circle of the *corps diplomatique* and nobility assembled.

MUSIC.

The production of "Elijah," at St. Martin's Hall, on Wednesday evening, under the direction of Mr. Hullah, did the highest honour to his energy and ability—to his energy, in having been able, by his own unassisted efforts, to set on foot a series of choral concerts of such great magnitude and importance; and to his ability, in giving one of the finest performances of Mendelssohn's *chef d'œuvre* that have ever been heard in England. The chorus, numerous and powerful, was selected entirely from among the pupils of his own schools; and their admirable manner of singing, so correct, intelligent, and expressive, attested the merits of his system of tuition. The solo parts were ably sustained. Mr. Weiss supported the grand and lofty character of the Prophet, and sang the music with a magnificent voice, and the skill of a consummate artist. The other principal parts were sung by Mr. Augustus Braham, Mrs. Endersohn, Madame Weiss, and Miss Dolby. Mr. Braham, it appears to us, is pursuing well-directed energies; and is rapidly improving. He already possesses a precious gift—too rare among English vocalists—a distinct and emphatic elocution; and he seems to be getting rid of the mannerisms which have hitherto vitiated his style. Miss Dolby stands at the head of our English contraltos; and Mrs. Endersohn and Madame Weiss are both singers of great merit. The hall was crowded to the doors; and the audience were warm in their expressions of approbation.

An opera, called "Leonie," was produced at Drury-lane on Tuesday night. It possessed no dramatic merit, being a tedious development of a little plot. It called "Monsieur Jaques," brought out in an English dress some years ago, and now entirely spoiled by being spun out into an opera which occupied four hours in the performance. The music is by Mr. Duggan, a young composer who has shown considerable talent as a writer of songs and ballads; but is evidently unskilled in dramatic composition. The opera, however, had that sort of fictitious success which generally attends the first night of a new musical piece, and which misleads the uninitiated, but is perfectly understood by those who are at all conversant with theatres. The house was packed with friends and *claqueurs*, who applauded indiscriminately, forced upon the audience encore after encore, in spite of opposition; and enabled the manager next day to announce the piece as "the immense hit" and "great attractive success, when, in truth, it was a decided and palpable failure. How, indeed, could it be anything else, when, had the music been in itself ever so good, there is not a single individual worthy to be called a singer in the establishment? It is, after all, a short-sighted policy. It may draw two or three houses for the manager, and may "get out" a few copies of the songs at the music-shops; but it never does either author or manager any substantial good, while it does the public a great deal of harm, by increasing the obstacles to the establishment of a proper National Opera.

The Royal Italian Opera is to open on Tuesday week, the 28th of this month. Mr. Gye has returned from Paris, whither he went in order to make arrangements for the production of Meyerbeer's new opera, "L'Etoile du Nord," which we may expect in the course of the season.

Post-office London Directory.—The March edition of this work has just appeared: usually, it varies from this published at Christmas only in the addition of the supplemental names, and the reprinting of the postal and parliamentary port one. This year it has been necessary to re-print the entire work; and, although time has not admitted the re-arrangement of the whole, many very important alterations have been introduced. The Official, Parliamentary, and Postal Directories have been entirely re-compiled and corrected. The publishers have also made the experiment of distinguishing the different divisions of the work by various colours, in addition to printing the name with a dark line, showing to which division the name applies. We need scarcely add, that these emendations add considerably to the utility of the work.

The Late Marquis of Londonderry.—The mortal remains of the late Marquis of Londonderry were removed from Holderness House to the Terminus of the Great Northern Railway, on Monday night, en route to Wynyard, where they were to lie in state on Wednesday, preparatory to their interment on the following day at Long Newton. The body was conveyed in a hearse drawn by six horses; after which followed two mourning coaches and four, and about a dozen carriages, belonging to the relatives of the late Marquis.

The Preston Strike.—The attempt of the masters to supply the place of the men on strike by importing new hands has led to considerable exasperation in Preston, and the authorities have forbidden the holding of public meetings in the town, in consequence of some attempts to mob the imported operatives. The proclamation of the magistrates to this effect was added to by the following document. On Saturday last an immense gathering of Blackburn and Preston operatives took place near Hoghton Tower, half way between the two towns; and on Sunday a still larger meeting was held at the same place. Hymns were sung and speeches made in favour of the ten per cent. Mr. Cowell told the meeting on Sunday that, if the present struggle were successful, lock-outs would be put down for ever.

Captain Nolan, 15th Hussars, was summoned to town by telegraph last week, and immediately despatched to Constantinople on "particular service."

Royal Orthopedic Hospital.—On Thursday the fifteenth anniversary festival of this institution, established for the cure of club foot, lateral curvature of the spine, and other contractions and deformities, was celebrated at the London Tavern; Lord Robert Grosvenor, M.P., in the chair. It appeared, from the speech of the noble Lord, that during the past year 1705 in and out patients had been received; the number of in-patients being 72, of whom 58 had been discharged cured. There were now nearly 200 patients seeking admission, but the hospital was not sufficiently large for their accommodation. After some eloquent appeals to the company, a subscription was announced, amounting to upwards of £2000.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

THE author of "Jon" is no more. The able and kind-hearted Judge—who added grandeur to the law by his skill in literature, and added to the dignity of literature by his sympathy with its necessities and his skill in removing them—died in his robes of justice, on the beach, on Monday last. He could not have died better, had he died with what Milton calls his "singing robes" about him. We had the pleasure and honour of his acquaintance. His range of information was not, it is true, very large; and we suspect that, of late years, his reading was confined to his judicial necessities and to current literature; but he had been, in early life, an assiduous and an attentive reader; and what he had acquired thus early, he retained and employed with skill. His memory was great; and while, at one time, you suspected he was a better poet than lawyer, you were not long in finding out that he was as good a lawyer as poet; that he was subtle and large-minded with his wig on, and often a true poet (even in prose) when without it. Unlike Lord Chief Justice Jefferies, he had no rough side to his tongue; at least, if he had, unlike that monster, he never used it. In society he was esteemed by a very large circle of friends, whom he delighted to see about him. He was, we suspect, the first English judge who courted literary society. Lord Mansfield, who owed his early rise to his friendship with Pope, and who should have had a visible sympathy with authors, appears to have cared little about them: he preferred heads with horse-hair upon them to heads bound with the laurel—assigned alone to conquerors and poets.

As a poet Sir Thomas Talfourd will not hold a high place. His chances to remembrance rest on his play of "Jon," which, as it keeps, so is it also likely to retain, possession of the stage. The character of *Jon* is one which any young and aspiring actor will desire to appear in. The story, too, is good, and the interest well sustained throughout; while, in the level of its poetry, it never rises higher than Smith's "Phædra," Tenison's "Marianne," or Hughes's "Siege of Damascus." But Talfourd has other claims to remembrance than from one clever play. His friendship with Charles Lamb will lend an enduring interest to his name. His "Life of Lamb" is far from a good specimen of biography. His prose style is too ambitious, and he is apt to give an undue consequence to small matters. He does not treat a book like a picture. He is apt to put everything in the foreground. As an orator he was fervid and manly, often indulging in well-sustained outbursts of true eloquence. He was, however, frequently turgid and unaffecting, and, oddly enough, about matters which he understood the best. There are fine passages in his Copyright Speeches; and never, while there is a grain of gratitude among authors, will his name be unremembered among them for the leading part he took in restoring to literary men a portion of those rights of which they were robbed by an Act ostensibly for their benefit.

When Talfourd ascended the bench, he did not, like Blackstone, sing a farewell to the Muse. He courted her less frequently, but his heart was sensibly with her; and when he could escape from his arduous duties as a judge, he would sketch a scene or pen a stanza. His liking, and his unwillingness to acknowledge publicly such a liking, were well known to his friends, who would, however, at times tease him upon the subject; and one (the wittiest man alive), is known to have observed to him, on his repudiating all further intimacy with the Muse—"What! have you no more Ions (irons) in the fire?" The poet-judge was not too well pleased; for he is said to have been engaged, at the time, on another tragedy already in print, and designed by himself for publication a little after Easter. How little we can foresee events immediately near! The play (it is in Mr. Moxon's hands) will, we trust, be made public; it is wrong, with such a man, to suppress what the author himself thought worthy of publicity.

On the very day on which the author of the most successful tragedy of our day was taken so suddenly from among us, a new tragedy in five acts was produced for the first time at the Haymarket Theatre. Oddly enough, the tragedy (if it still lives) ends with a funeral, done in a style worthy of Mr. Banting, of St. James's-street. The circumstance has occasioned some good-natured remarks in theatrical circles, and one critic (celebrated for his want of moroseness) has been heard to compare the anonymous writer of the play with the Honourable James Howard, whose unhappy "United Kingdoms" suggested the "Two Kings of Brentford," and gave birth to the funeral so charmingly ridiculed in "The Rehearsal.' Mr. Howard be gan his play with a funeral—a bold stroke for a poet—but he was unable to "pit, box, and gallery it;" and, as it began with a funeral so it ended with one, for it died the first night. Such a beginning and such a fate were fine subjects for the pen of the Duke of Buckingham, and Mr Howard and his play are thus humorously introduced:—

Bayes: Gentlemen, because I would not have any two things alike in this play, the last act beginning with a witty scene of mirth, I make this to begin with a funeral.

Smith: And is that all your reason for it, Mr Bayes?

Bayes: No, sir; I have a precedent for it besides. A person of honour and a scholar, brought in his funeral just so; and he was one, let me tell you, that knew as well what belonged to a funeral as any man in England, I'gad.

If it were still the fashion to act "The Rehearsal" (and why it has dropped from the stage it is not easy to discover), the new tragedy at the Haymarket would hardly escape a hit or two; for it was usual with the actor who played *Bayes* to glance, often sarcastically, at the leading defects of recent pieces.

People who laugh at antiquaries (and there are many that deserve to be laughed at) are expressing a good-natured surprise at an official advertisement issued by the Society of Antiquaries announcing the discontinuance of its annual dinner. Here, it is said, is a society actually in existence to preserve old customs, setting an example of innovation only worthy of a Society of Moderns. "Surely," exclaims a hearty laugher at your Dryasdusts and Oldbucks, "the Society of Antiquaries was established for the maintenance of Guy Faux, and attendance at church on King Charles's martyrdom. Men born to preserve and illustrate customs should support and attend bull and bear-baitings; petition to re-transfer the Zoological Gardens to the Tower of London; and memorialise her Majesty to coin rose-nobles and two-guinea pieces. But here are men who should do these things actually abandoning the old English custom of a dinner on St. George's-day, held by their predecessors since the foundation of the society—now more than a century ago. The next step will be to turn the cocked-hat (the ensign of the society) into a Bread-street four-and-ninepenny silk." We shall see.

The private library of the deservedly well-known Mr. William Pickering, the publisher, passed this week under the hammer of the auctioneer. The scattering of a library, the formation of which had been the labour of a life, is always suggestive of serious thoughts. Mr. Pickering not only dealt in books, but he bought books for himself. He had his favourite authors, and loved to read them in the editions which they themselves had seen. Thus, he was curious about Milton, and Fuller, and Ken, and old Izaak Walton—and his shelves were rich in choice editions of their writings. Nor was he alone in his liking. There are many who share his taste. Fullers never sold so high before. Indeed, whatever was very good brought war prices. A fair copy of the first edition of "Paradise Lost," with Milton's name in it, (in some say) his own handwriting, sold for £13; but the autograph is at least questionable. The copy of the first edition of Milton's "Minor Poems" (1645), that belonged to Jonathan Richardson, the earliest enthusiast about our great epic poet, brought £6 6s. Some choice small pictures by Stothard (with which the sale concluded) realised good prices, and would have sold for more had they been shown to any advantage. We have seen since the sale the "Venus Rising from the Sea," which sold for £13. It looked worth more in the room it was sold in; but now, by the cheap aid of a little warm water and a silk handkerchief, it looks a little Raphael. The fortunate purchaser of this very choice Stothard was Mr. Murray, of Albemarle-street.

THE THEATRES.

HAYMARKET.

A new five-act play, entitled "Duchess Eleanour," was produced on Monday. It is the production of Mr. F. H. Chorley. The plot is sufficiently romantic, and, in some respects, even melodramatic; but the action is, nevertheless, languid. The heroine who gives name to the tragic business, has been a great actress, and is the *Duchess of Ferrara*. The *Duke* (Mr. W. Farren) makes, however, but an indifferent husband; and suspicions are afloat, to which one *Count Aleiard* (Mr. Howe) gives currency, that he had been pre-contracted to one *Lady Violet* (Mrs. S. Buckingham). Meanwhile, troubles begin to accumulate on the *Duchess*, naturally over-careful of appearances, and, indeed, herself of immaculate propriety. She is the daughter of an infamous father, who had hated her while he coined her talent into the means of supplying his own vices; but whom she believed to be dead. Wrecked he had been, but not lost; and now inconveniently appears as the *Incognito* (Mr. George Vandenhoff) to perplex her with his demands. Moreover, he appears to have been an old acquaintance of the *Duke's*, to whom he had sold another daughter as an intended wife, the very *Violet* aforesaid, who is, therefore, though unknown to her, *Eleanour's* sister. Fearful mistiness hangs over the action of the play, from the revelation of these and other particulars being withheld, until the deeds are done of which they form the proper motives. Mr. Chorley must be warned against this mode of construction—one more vicious it is impossible to adopt. None, besides, is more perilous. Intelligible motives and expectations are the mainsprings of dramatic success. The result of the circumstances we have detailed is, that the *Duke* is slain by the disreputable father, in the presence of his wife, who thus falls under the suspicion of the people; she is about to clear herself by means of the ordeal, when the murderer is himself brought in wounded to death. There is also another character, one *Bellotto*, a conjuring charlatan (Mr. Rogers), who had given asylum to the miscreant parent, and ultimately becomes his betrayer; but whose position, though somewhat prominent, we could not precisely understand.

The play was in parts much applauded; but the religious ceremonies of sepulture in the last act displeased some fastidious folk, whose sibilation was, however, properly discouraged. Miss Cushman well deserved the plaudits that she received, and at the conclusion of the play was called for. The appointments and scenery were costly and picturesque, and do the utmost credit to the management.

"Willikind and his Dinah" rendered so popular by Mr. Robson's singing of the doleful ballad, has been made into a pleasant burlesque by Mr. Sterling Coyne. Several scraps of the ballad are scattered through the piece, in dialogue and lyric illustration, both of which are ably supported by Mr. Buckstone, Miss Louisa Howard, and Mrs. Fitzwilliam. The performance was eminently successful.

LYCEUM.

Two new pieces have been added to the repertoire of this theatre: one for the introduction of a new actress, whose personal qualifications for the assumption of the brilliant heroines of the drawing-room are indisputable. The piece in which this lady appeared is called "The Charming Widow"—a slight adaptation of M. Alfred de Musset's comedy of "Un Caprice;" and Miss Talbot undertakes the conversion of the courteous husband (Mr. C. Mathews), whose *penchant* for purses made by herself is ingeniously corrected. Miss M Oliver, as the suffering wife, was touching. The second piece is of more elaborate structure, under the title of "Number One round the Corner." It is in two acts, and the production of Mr. William Brough, owing some little to a vaudeville by MM. Lefranc, Labiche, and Nyon, entitled, "En Manche de Chemise," but for the most part the work of the English adapter. "Number One" is a pawnbroker's office, whither *Mr. Flipper* (Mr. C. Mathews) takes a coat, not his own, and then applies the money received for it in the purchase of a pair of boots. The owner of the coat, *Mr. Nobler* (Mr. Roxby), gets possession both of the boots and the duplicate, and, in turn, selling the boots, raises the means of redeeming his garment, but is short of two pence for interest. Both parties, who are fellow-lodgers, afterwards meet; and an outrageous quarrel ensues for this small balance, neither of the parties having a farthing towards it. As both of them had, however, interchanged certain social charities during the period of their tenancy under the same roof, a reconciliation, and ultimately an explanation takes place. The motive for Flipper's anxiety to get a new pair of boots, vanishes, on discovering that *Nobler* is the person advertising a place worth five pounds a week for the consideration of twenty pounds, out of which he had hoped to dupe some expectant correspondent. Two characters like these, exactly fit Messrs Mathews and Roxby, and it is needless to add that the piece was triumphantly successful.

DRURY-LANE.

A piece, called a "new farce, entitled "My Cook and My Housekeeper," was produced here on Thursday week. It is merely another version of the little drama better known as "A Phenomenon in a Smock-frock." Mr. Belton takes the part formerly played by Mr. C. Mathews—in the character, however, of a bod-man instead of a milkman; and much dialogue has been added to the Housekeeper's *rôle*, supported by Miss Featherstone, who makes quite a feature of the character, and acts it admirably.

PRINCESS'.

A new farce, entitled "Away with Melancholy," was produced at this theatre, on Monday evening, preceded by the play of "Richard III." The house was densely crowded, and the noble acting of Mr. Charles Kean, in the part of *Richard* (without exception the finest performance on the modern stage), elicited the most enthusiastic applause. At the conclusion Mr. Kean was thrice called for, but did not respond to the call.

The new farce was of the broadest character, and was completely successful. The main humour of the piece consisted in the unaccountable forgetfulness of the air "Away with melancholy," by the hero *Windsor Brown* (a part admirably sustained by Mr. Fisher), who undertook to sing it as a signal at the door of a house, of whom he was enamoured. At the appointed moment he could have sung any tune in the world but that, and in his confusion of mind, he begun to hum the air of "Buffalo Gals." This by an unlucky *contretemps* brings out the wrong lady in the person of *Kitty Cobb* (Miss Daly), a pretty pastrycook, with whom he had previously had some flirtations, and with whom he by no means desired to renew his acquaintance. A whole scene of comical incidents are the result. The narration might be dry even if we could render it intelligible, but the performance was ludicrous in the extreme, and kept the house in a continual roar. The other characters were sustained by Mr. Meadows, as *Mr. Trimmer*, a rival claimant for the hand of the fair widow; whose rendering of the part was full of quaint humour and irresistible drollery; and by Miss Murray, who took the part of the heroine, and acquitted herself in a manner that greatly tended to the success of the piece.

SURREY HALL.—We were present, on Wednesday, at a reading of "Othello," by Mr. Adolphus Francis, and can speak of it in terms of commendation. The variations of voice distinguishing the characters were managed with apparent facility and certainly with effect. In other respects, the speeches were delivered judiciously, with occasionally power and skill, and sometimes with considerable passion. There is no much that is expressive in Mr. Francis's countenance, or imposing in his personal appearance, but he has the requisite qualifications of voice and judgment for the task he has undertaken.

HANOVER-SQUARE ROOMS.—A novel entertainment, under the title of a Musical and Elocutionary Monody on "Life and Song," was repeated on Thursday, by Mr. Wrighton, who, both in its composition and execution, shows much originality and power. Like Rogers's poem on Human Life, it is poetical essay on the progress of man from the cradle upwards—treating of infancy, childhood, adolescence, matrimony, maturity, and, above all, of the delights of "Home, sweet home." The lyric illustrations of this interesting theme were well rendered; in the elocutionary part Mr. Wrighton was less happy: nevertheless, he won considerable and well merited applause.

WILLIS'S ROOMS.—On Wednesday Mr. J. H. Stocqueler delivered a lecture, on the war between Russia and Turkey, in which he proposed to depict its causes, progress, and prospects, and its probable influence on British interests. It is needless to say that the lecture was neatly composed and well delivered. It was, in fact, remarkable for the clearness of its historical details and its logical inferences. The manner of the lecturer was, moreover, as easy as his style was intelligible.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has been pleased to signify her intention to confer the Order of the Garter, vacant by the death of the Marquis of Londonderry, upon the Earl of Ellesmere.

The Spanish Bishops have taken alarm at the turning and speaking tables. The Archbishop of Toledo has published a pastoral letter commanding the clergy and faithful to have nothing to do with them.

A general battle took place at Coimbra, during the Carnival, between the "town and gown" men, in which several were killed, and many wounded.

SIR Charles Hobart, the new Governor of Victoria, is to take his departure from England in the *Queen of the South*, which will carry the Australian mail of the 4th of April.

Rubini, the great tenor, died, a few days since, at Bergamo, in his fifty-ninth year.

The New Brunswick papers announce the death of the Rev. Dr. Gerdes, the oldest missionary connected with the Church of England in the British colonies.

M. Zalewski, a clerk of the Bank of Poland, and M. Pieffzinski, a Polish actor, have had their propery confiscated, in consequence of having gone abroad and joined the Democratic Polish Association.

The members of the Liverpool Chamber of Commerce met on Tuesday, and passed resolutions against privateering.

The Professorship of Greek, King's College, Aberdeen, has become vacant by the death of Dr. Hugh Macpherson, who occupied it for fifty-seven years. The patronage is vested in the Senatus Academicus, but lapses to the Chancellor, Lord Aberdeen, should the Senatus fail to elect within thirty days from the date of the vacancy. The emoluments amount to about £600 per annum, with a free residence.

The Hon. R. Somerset, son of Lord Raglan, who holds an appointment at the Court of Hanover, has arrived from the Continent to leave of his noble and gallant father.

The American Clipper-ship *Red Jacket* was sold at Liverpool last week, for the sum of £30,000, the largest amount ever got for a ship in Liverpool.

George Walker, a shipbroker, was committed for trial at Liverpool, on Monday, charged by the Post-office authorities with having fraudulently obtained possession of a letter and money enclosure for the sum of £11 16s 10d.

The Rev. Hugh Fowler, of Bideford, North Devon, has been elected Head Master of the Gloucester College School, in the room of the Rev. Dr Evans, deceased.

The Hon. Henry Edward Stanley, son of Lord Stanley of Alderley, has gone to assume his duties as Secretary of Legation at the Court of the King of Greece.

At the French Opera-house, New Orleans, three persons were killed the other day, and upwards of fifty wounded, by the falling of the gallery.

The Bishop of St. David's has given thirty guineas to University College. The Council has also received offers of a rich case of fossils from Sir Roderick Impey Murchison, and of another valuable collection of fossils from Mr. G. B. Greenough.

A Liverpool, who had been an inmate of the Bethnal-green union workhouse for the last twenty years, died a few days ago at the advanced age of 104.

The number of American vessels engaged in the fisheries is 3160; British, 3715; French, 580. The capital invested is—American, 8,880,018 dollars; British, 8,900,175 dollars; French, 1,255,000 dollars. While the value of the annual products is—American, 4,018,030 dollars; British, 5,650,000 dollars; French, 1,849,000 dollars.

The long-pending appeal of the Mayor and Corporation of London *versus* Combe, Delafield, and Company, after nearly a quarter of a century's litigation, was brought to a close on Tuesday, the Corporation having undertaken to withdraw the appeal and defray the costs.

The Duke of Cambridge has consented to be put in nomination to fill the vacant office of President of Christ's Hospital. The Lord Mayor is also a candidate.

The paper manufacturers of Holland have memorialised the Government against the exportation of rags free of duty, on the ground that such a course would completely ruin their business, by making paper so dear as to forbid competition with other states.

Her Royal Highness the Infanta Isabella Ferdinand Bourbon of Spain, gave birth, at Brussels, on Tuesday, to a Prince, who has received the names of Charles Frederic Augustus Leopold Melchior Wladislas. His godmother is her Royal Highness the Princess Mary Amelia of Saxe, daughter of the late King Maximilian: his godfather, his Royal Highness Duke Charles II. of Bourbon, Infante of Spain, Duke of Lucca and Parma.

Mr. James Heywood, teacher of chemistry at the Wesleyan College, Sheffield, while preparing for a lecture, last week, accidentally inhaled the breaking of a large bottle of sulphuric acid, the fumes of which he inhaled, that he died next morning.

When the proposed copyright treaty between Great Britain and the United States comes on for discussion in the American Senate, Mr. Everett will propose a clause limiting the benefit of the treaty to such British works as shall be reprinted in America by their authors.

The *Times* publishes a letter from Dr. Cullen, of Dublin, announcing that he has remitted to the editor the sum of 3,000*l.* for the benefit of the Archbishop of Friburg and his clergy.

Whilst Mr. Justice Cresswell was "administering justice" in the Crown Court, at Durham, last week, some audacious scoundrel actually entered his Lordship's retiring-room, immediately behind the bench, and carried off his luncheon!

On the 1st April, and thenceforward, increased facilities will be afforded in procuring money orders and obtaining payment of them, when such payment is to be made through a bank.

The King of Prussia has presented the convent of Einsiedlen with a splendid bound copy of the "Monumenta Coleranæ," a work well known to the learned world. The founder of the convent, the pious Meinrod, in the ninth century, was an ancestor of the house of Hohenzollern.

The archiepiscopal see of Pisa having lately become vacant, the Pope and the Grand Duke named to it Cardinal Corsi, a Florentine of noble family. The Cardinal has declared that he will not assume his functions until the Ecclesiastical Courts, abolished by the Leopoldine laws a century ago, are re-established.

The Newfoundland House of Assembly has refused to transact any business whatever, until they are put in possession of the views of the Colonial Secretary on the subject of responsible government, in reply to the memorial recently submitted to him.

In consequence of the indifferent harvests of the last five years, and the slow arrival of foreign corn, great distress prevails in many of the Swiss cantons. At Berne, it has been found necessary to augment the number of cheap soup establishments.

The progress of railways in Virginia has lately been so rapid that the Board of Works has recorded its opinion that "the lines now in progress and projected are fully sufficient, for the present, to engage the energies and consume all the available means of the State."

It is proposed in Manchester that any one who likes to turn "jarvey" may do so, obliging him, however, to have painted upon his coach, in legible characters, what he will run for per mile, and to that he must adhere.

The demands at the Royal Mint for supplies of the new copper coinage during the last fortnight have been so great, that the quantity they have received from Birmingham (50 tons), as the first portion of the contract with the Master of the Mint, is now nearly exhausted, and much difficulty is experienced in obtaining to the amount of even a few hundred of pounds worth.

The Archbishop of Armagh has declined to join the Dublin Protestant Association.

The mansion-house and garden of Croft-an-Righ, once the property of the Regent Murray, have just been purchased by her Majesty's Board of Works, in the view of contemplated improvements on the grounds of Holyrood Palace.

Three thousand five hundred pounds have already been subscribed for the benefit of the passengers by the *Tayleur*.

Mr. Henry Drummond, M.P., in a pamphlet just published, called the "Fate of Christendom," proclaims the end of the world to be immediately at hand.

The Manchester, Sheffield, and Lincolnshire Railway Company have made arrangements for two steamers to run weekly between Grimsby and Hamburg, and the like number from Grimsby to Rotterdam.

At the meeting of the directors of the Manchester Chamber of Commerce and Manufactures, last week, five small specimens of coal, recently discovered in Natal, were exhibited.

It is computed that during the last ten days an aggregate amount of *upwards of one million sterling* in gold has been withdrawn from the Bank of England, in consequence of the drain of bullion to the Continent.

The well-known and wealthy Prince Demidoff lately gave a grand fancy ball at Florence, to the society of that place. The lights were scarcely extinguished, when he received a summary order to return immediately to Russia.

The Town council of Bury St. Edmund's, Suffolk, have selected the plans of Messrs. Bidlake and Lovatt, of Wolverhampton, for the new Provision market to be erected in that town.

THE WAR ON THE DANUBE.

PUNISHMENT OF THE BASHI-BOZOUKS.

We now engrave the Sketches received from Kalafat, with the letter of our Special Correspondent, which we inserted in our Journal of last week, rather than delay its intelligence until the completion of the Engravings. The first incident illustrated is

MILITARY PUNISHMENT,

wherein the Captain Yacoub Aga is punishing on the field one of the bashi-bozouks (irregular cavalry) for cowardice, or misbehaviour before the enemy. The Captain is a Pole (now a Musulman), and is dressed

REGULAR CAVALRY.—LANCER.

like a Regular, except that he wears a blue shawl round his head; and, although attached to the regular army, has been intrusted with the command of a force of nearly 800 volunteers, called *bashi-bozouks*. This scene was witnessed by our Artist, upon one of the reconnoitring points before Kalafat. The culprit was ordered to alight from his horse, and to lie down on the side of a ditch, when the Captain took the offender's own sword, and, with the back of the blade, inflicted some twenty blows, as shown in the Illustration. The Captain then threw the sword as far as he could, whilst the offender was ordered to go and pick up the weapon, and make better use of it in future. The man was, however, deprived of his horse, and sent to the camp. This incident is more fully described in our Correspondent's last letter. In the background of the Sketch bozouks are galloping, and in the far distance may be seen Cossacks, and masses of columns of infantry, with rising smoke; as the Russians have always their artillery in their sorties. The country is the plain before Kalafat, the Danube being hidden by the hills on the left. On the right, in the extreme distance, are the steeple of the church of the village of Foyana, and the advancing Russian outposts.

TURKISH CONVOY.

This Scene was sketched on the barren hills between Rustchuk and Widdin. The convoy are proceeding to the seat of war; foremost in the line advancing between the hills, are cars drawn by two and four bullocks. The officer is mounted on a horse; but the persons in the cars and on foot are mostly Bulgarian peasants, wearing black and white caps, large trousers, and white woollen wrappers tied round their legs.

KALAFAT.

The large Sketch in the centre is a view of the interior of the intrenchments at Kalafat, on the left bank of the Danube, facing Widdin. In

KALAFAT, WIT

THE WAR ON THE DANUBE.

TURKISH CONVOY PROCEEDING TO THE SEAT OF WAR.

the horizon, are the snow-capped Balkans; in the middle the line of intrenchment is broken, but protected by a semicircular parapet, there being an open passage, right and left, through one of which a column of Lancers is advancing; the head being already within the intrenchment; while a column of irregulars (bashi-bozouks) is defiling on the left. The heads of horses and men rise above the conical roofs of the *zemliks*, or underground huts, which serve as barracks for the garrison. Inside the parapets are soldiers, placed at two feet distance, and arms are piled. Each bastion has three cannons, and in a cavity behind each are two artillery waggons. In the foreground is the cart of a water-carrier.

ENT.

REGULAR CAVALRY.

In the lower Illustration on the left hand, and the smaller one above it, are portrayed specimens of the Turkish regular cavalry; the single figure is a Lancer, and the squadron beneath are Carabiniers. The mounted figure in the middle is Yacoub Aga, the Polish officer commanding the bashi-bozouks, who is shown dismounted in the first Sketch.

Each regiment of the Regular Cavalry (of French formation) is composed of four squadrons or four troops of 24 men; in all, officers, trumpeters, &c., some 120. The men wear a sort of tunic, with three rows of buttons, and lace like Hussars. Over the tunic they wear a coarse dark grey cloth great-coat, with a hood; they have coarse woollen leggings, or gaiters (sometimes rags tied up with common rope), over which are pulled their boots. The officers wear a blue frock-coat, with fur collar and cuffs; and large boots like our leather hunting leggings. Over the hind-quarters of the horses are coarse woollen cloths, or blankets.

PRESENTATION OF OFFICERS.

The lower right-hand Illustration is a rude picture of military state—a sort of out-door levee upon the plains of Kalafat—held by Achmet Pacha, the General-in-Chief of the garrison. Two Piedmontese

YACOUB AGA (POLISH OFFICER) COMMANDING THE IRREGULARS.

officers are being presented to the Pacha, beside whom stand our Artist and his two fellow travellers, introduced in his interview with Omer Pacha. Immediately to the left of Achmet is the Correspondent of a London morning journal. Around are the aides-de-camp of the General. On the right is the hut, or cabin, of the Pacha, his charger, and his black servant. In the middle distance are tents; and on the left is a hay-rick, with soldiers, and a waggon loaded with hay.

PIEDMONTESE OFFICERS PRESENTED TO ACHMET PACHA, BEFORE HIS HUT, AT KALAFAT.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE RUSSIAN MANIFESTO AND THE "TIMES" NEWSPAPER.

The Earl of DERBY referred to the document published in the *St. Petersburg Journal*, purporting to be an official answer from the Emperor of Russia to a speech of Lord John Russell in the House of Commons. It appeared from this document that, through unreserved communications made to Sir Hamilton Seymour, the British Government had no right to express the least surprise at the course pursued by Russia with respect to Turkey. The noble Earl referred to the comments made by a morning paper upon this document, and complained of the betrayal of State secrets, which could only be made by the Cabinet and the Sovereign. The noble Earl at the head of the Government might disclaim all connection with the paper referred to, but not all his disclaimers would persuade any man of common sense that Cabinet secrets could be published without some person or persons having betrayed them. The *Times* said that the representations of the Emperor of Russia were met by an indignant refusal on the part of the Government, and that Lord John Russell's answer to the Russian overture would give him no dishonour How had this newspaper become possessed of the nature of this answer? The *Times* also referred to another circumstance. It stated that when the Emperor of Russia visited this country (the noble Earl being then Foreign Secretary), he had attempted to gain over this country to his designs. Under these circumstances, he wished to put two questions to the Government—first, whether they would lay on the table the whole of the correspondence, confidential though it might be, which preceded the refusal to be challenged by Russia; and, next, whether there was any authority for the statement that there had been similar communications made in 1844, when the Emperor of Russia was in this country?

The Earl of ABERDEEN said the question raised by the noble Earl was one of considerable interest and importance. The correspondence referred to had not been printed in the papers laid on the table, in consequence of its character. The Government did not think it proper, consistent with that respect and delicacy, which they were bound to preserve towards a Sovereign with whom they were still in alliance, to produce papers which had the character described by the noble Earl. There appeared, however, to be no reluctance on the part of the Russian Government to the publication of the correspondence, and therefore her Majesty's Government were relieved from all anxiety upon the subject. Not only this; he begged to say, that, if no reference had been made to it at all, her Majesty's Government would have felt it their duty to lay it upon the table. Reference had been made to the hasty comment made by the *Times* upon the document published by the *St. Petersburg Journal*. Until that very morning he had not seen the comments; and neither directly nor indirectly had he the remotest conception of their origin He was perfectly ignorant of the source from which they were derived; nor could he conjecture, unless it might be from a clerk in the Foreign-office, appointed by the noble Earl who was no longer in that department. With regard to the second question, he had to say it was true that when the Emperor of Russia was in this country, he had some verbal communications with the Duke of Wellington—and he believed, but was not sure, with Sir R. Peel—on the subject of Turkey. These communications had been put in the form of a memorandum by Count Nesselrode. He had not seen this document for the last ten years, and was not prepared to say whether it would be produced; but he would ascertain

The Earl of MALMESBURY complained of the assertion that he had appointed the party who might be supposed to have betrayed confidence. Was the noble Earl quite sure that he was correctly informed? He wished to know whether the noble Earl would name the party.

The Earl of ABERDEEN said he did not know it.

The Earl of DERBY contended that the name of the party ought, under the circumstances, to be disclosed.

Earl GREY complained of offic al information having been published through the newspapers before being communicated to Parliament. He did not consider the explanation satisfactory, though of course he placed every reliance upon the assurances of the noble Earl, that he knew nothing of the case referred to.

After a few words from the Earl of Ellenborough and Earl Fitzwilliam, the Earl of MALMESBURY said he had not received the satisfaction which he expected at the hands of the noble Earl. He had made only three or four junior appointments whilst he held the seals of the Foreign-office, and unless the names were mentioned, the stigma of the accusation would remain upon all the department.

After a few words from the Earl of GLENGALL, the subject dropped.

HOUSE OF COMMONS.—MONDAY.

THE DINNER AT THE REFORM CLUB.

Mr. F. FRENCH referred to the report in the *Times*, of the 8th inst., of a public dinner given to Sir Charles Napier, the previous evening, at the Reform Club, at which the First Lord of the Admiralty gave Sir Charles Napier liberty to declare war when he entered the Baltic. He wished to know by what authority the right honourable Baronet had delegated that power to Sir Charles Napier?

Sir J. GRAHAM: Although not altogether disposed to admit the right of the hon. gentleman to put a question to me with respect to what passed after dinner—(Loud laughter)—I have no objection (Renewed laughter)—it might not, perhaps, be thought respectful to this House if I should not give some answer to his inquiry. I have to state, therefore, to the hon. gentleman that, with respect to the authority given by me, as alleged in the report to which he refers, Sir C. Napier had observed that he hoped that, before entering the Baltic, he might have authority to declare war. I, following him, said that, when he entered the Baltic, I hoped there would be no difficulty on his part in declaring war. At present there is no declaration of war, nor has any order been given to Sir Charles Napier to enter the Baltic; but when war is declared, the proper explanation will be given to the House (Cheers).

Mr. BRIGHT rose amid a scene of some confusion, and said that, lest he might be out of order, he should move the adjournment of the House. He was not satisfied with the way in which the right hon. gentleman had disposed of the question by speaking of "after dinner" speeches. But there was another and more important connection with this question, which affected the Government as a Government. The projected dinner at the Mansion-house, to distinguished officers of both services, had been put off in consequence of an intimation from authority—either from the Cabinet, or from the head of the Government—that he (Mr. Bright) had been much pleased thereby. The dinner at the Mansion-house accordingly did not take place, but the dinner at the Reform Club "came off" He did not want the Government to put an end to dinners at the Reform Club; dinners celebrated for their gaiety; and as in that House, so, too, in clubs—many members found the preparing for their dinner, and the eating of it, the chief object of their existence during the day (Loud laughter, and marks of disapprobation). But, although it was no part of the duty of the Government to put an end to dinners at the Reform Club, he should like to know by what parity of reasoning it could be shown that, if it were inexpedient to have a dinner at the Mansion-house, it was befitting that there should be one at the Reform Club, and that three Cabinet Ministers, and the Admiral who had been appointed to the command of the fleet, should be present at it (Hear, hear). He suspected that that House should one day have to ask who was the Minister at the head of affairs, and who were the Cabinet, and where were they to look for the Executive of this country (Laughter). He looked upon the case to which he was referring as affording evidence that there was some majority and minority in the Cabinet, and some difference of opinion upon this, as probably upon other important questions. He would not say anything of the good or bad taste of Ministers of the Crown in attending the dinner at the Reform Club. He could imagine, however, that, after Ministers had succeeded in bringing this nation to the verge of the precipice of war, they would not be very particular as to the means they took to stimulate and keep alive the passions of the public, in order that some blunders they had themselves committed, might, under the prevailing frenzy, be undiscovered (Sensation). It was understood that the noble Lord the member for the City of London had been invited, if not to preside, at least to attend, at the dinner, but that noble Lord who, through the many changes, reverses, and vicissitudes of his career, had generally managed to show that he had some respect for his dignity and character, was supposed to have declined the invitation. The noble Lord, the member for Tiverton, was chairman on the occasion He (Mr. Bright) would not go into an inquiry whether the noble Lord should have been chairman or not, but he could not help contrasting the language which the noble Lord used when he talked of the "high minded sincerity," the "good faith," and the "honour" of a certain ruler abroad, with the language which the same noble Lord used not more than two years ago, when he sought to frighten this country by describing the imminent probability that 60,000 marauding Frenchmen would land upon the southern shores of England in the course of a single night. Another exhibition at the dinner gave him (Mr Bright) still more pain—that which was made by his right hon. friend the Chief Commissioner of Public Works. It was wonderful to observe what a change twelve months of official life made on a man (Laughter). Horace Walpole, remarking on the difference between the frankness of the language which members used in opposition with the tone of diplomatic insincerity which characterised their speech when transferred to the Treasury bench, said that the Ministerial language was the easiest of all languages, and that a man might learn it in a week. The right hon. Baronet (Sir W. Molesworth) had taken some twelve or fifteen months to lose all taste for that principle of non-intervention upon which, in 1850, he gave a vote emphatically condemning the foreign policy of the noble Lord the member for Tiverton. He (Mr. Bright) had read the account of the proceedings with pain and humiliation. This war might be justifiable, or it might not; but whether justifiable or not, war was an awful thing to any nation which engaged in it. If war were not in itself a crime, it was the inevitable parent of innumerable crimes. Thousands of lives depended upon it, and the happiness of millions was involved in it. Was it right for his noble friend the member for Tiverton—was it becoming—to entertain the country with stories and jokes at a time like this? This was one of the greatest questions which could be discussed by a country or a Legislature, or undertaken by a Government, and the reckless levity which had been displayed with reference to it was, in his opinion, discreditable in the very last degree to the grave and responsible statesmen of a Christian nation (Laughter and partial applause.)

Lord PALMERSTON rose amid loud and general cheers, and said: The hon and reverend gentleman (Laughter)——

Mr. COBDEN rose to order. The noble Lord had used an expression which was not justified by the rules of the House. He (Mr. Cobden) believed that the noble Lord would not charge him with misinterpreting his meaning when he said that the noble Lord had used a word which was intended to be personally offensive—a word which the House would probably concur with him in regarding as flippant and uncalled-for.

Lord PALMERSTON: I will not quarrel with the hon. member for the West Riding as to words, but I was going to say, that as the hon. member for Manchester has been pleased to advert to the circumstance of my being chairman at the dinner to which he refers, and as he has been kind enough to express an opinion as to my conduct on that occasion, I deem it right to inform him that any opinion he may entertain either of me personally, or of my conduct, private or political, is to me a matter of perfect indifference (Loud cheers); and I feel persuaded that the opinion of the country with regard to me or my conduct will not be in any way influenced by anything he may think fit to say (Continued cheering). I meet his censure with perfect indifference and utter contempt (Loud cheers, and cries of "Oh!"). That may be Parliamentary or not—if not, I do not insist upon it (Laughter, and cheers.) He says he has felt the greatest pain in reading the proceedings which took place at that dinner. That pain arose, no doubt, from the manner in which the members of the Reform Club were pleased to testify their confidence in Sir Charles Napier, and their satisfaction at finding a distinguished member of his profession, who also happens to be a member of the club, selected for a most important post, at a period of great public emergency (Cheers). The hon. gentleman would, I dare say, read with great pain any manifestation of opinion on the part of any number of men tending in any degree to express the opinion that recourse to arms ought on any occasion to be resorted to, whatever may be the interest, or whatever the cause for which that resort might be made. I have no doubt that he sympathises with that respectable gentleman to whose pamphlet I felt it my duty, on a former occasion, to call the attention of the House, and I dare say he thinks that this country should submit to any degradation rather than have recourse to war. That is an opinion he is quite justified in maintaining. I do not dispute his right to hold such a doctrine, but he stands almost singly in that doctrine, with the great majority of the country against him. For my own part I felt very proud to be being invited by the Reform Club to preside on that occasion. I thought it an honour to preside at a dinner given to Sir C. Napier. The hon member for Manchester, however, thinks that these dinner arrangements must be Cabinet questions. Now, I can assure him that they are open questions—(Laughter)—and are not discussed in the Cabinet at all. But, although I confess that the speech of the hon. gentleman was not calculated to excite friendly feelings in my breast, I will only say that if he will get himself elected a member of the Reform Club (Laughter)——

An HON. MEMBER.—He is a member.

Lord PALMERSTON.—Oh, he is a member—a most unworthy one, I must say (Laughter). Well, if, being a member, he will fall into the humour of the Reform Club, and attend the next dinner that may be given in honour of a distinguished officer who has been selected for an important public service, we shall be happy to hear a speech from him, even though it may interrupt the conviviality of the evening (Loud laughter); and I am convinced that, whether he is in that state which he has complimented my right hon. friend (Sir James Graham) for not having been in (Laughter), or whether he is able to go through the festivities of the evening with the same clearness of tongue and intellect which he displays here, we shall be ready to discuss with him any question, public or private, of peace or war that may come to order; and I for one shall not think that he has disgraced himself by attending an entertainment which the club may think right to give to a distinguished officer, when it is about to depart on a service of the deepest national importance (Loud cheers).

Sir W. MOLESWORTH denied that he had changed his opinions on the subject of non intervention, as the hon. member for Manchester had endeavoured to show.

I never belonged to the hon. gentleman's school, nor do I acknowledge his guidance; for, although I admit him to be an able man, I believe he is full of illiberal and narrow-minded prejudices (Cheers from the Government and Opposition benches).

Mr. DISRAELI thought the matter had been taken up too seriously. It was quite a mistake to suppose that Ministers meant anything but the reverse of what they said; and therefore, when Sir Charles Napier was told that he would be at liberty to declare war whenever he entered the Baltic, this merely meant that Sir Charles would maintain peace, as it was well known that he never obeyed orders.

Mr. COBDEN expressed his willingness to indorse every word which Mr. Bright had uttered, both as regarded the charge brought against the honourable member for Sunderland, and the remarks on the dinner at the Reform Club. If there was one man in the world whom he would have expected to abstain from attending a dinner at the Reform Club on such an occasion, that man was the right honourable Baronet.

TIL.. "ST. PETERSBURG JOURNAL" AND "THE TIMES."

Mr. DISRAELI alluded to the statement made in a late article of the *Journal de St Petersbourg*, that confidential communications had taken place in the early part of last year, between the Emperor of Russia and the British Government, in which Lord John Russell then held the office of Foreign Secretary. And he wish to know from the noble Lord would consent to produce that correspondence, and also the communications asserted to have been made by the Emperor of Russia in the year 1844, during his visit to this country.

Lord J. RUSSELL said, with regard to the correspondence of last year, since its existence had been divulged by the *Journal de St. Petersburg*, there could no longer be any scruple as to producing it. It would, therefore, be laid on the table; and he hoped it would show that Ministers, while paying every respect to the Emperor of Russia, had rejected every suggestion made that tended to the dismemberment of Turkey. When the Emperor of Russia visited this country in 1844 he had held conversations with the Duke of Wellington, Sir R Peel, and the Earl of Aberdeen. The substance of these had been reduced to the form of a memorandum, of which Baron Brunnow, lately Russian Minister, admitted the correctness. He could not say positively whether this memorandum would be produced, it not having come under the view of the members of the Government.

THE INSURRECTION IN ALBANIA.

Mr. MONCKTON MILNES called the attention of the House to the circumstances of the Greek insurrection in Turkey, and expressed apprehensions that the most disastrous consequences would follow if it were permitted to be suppressed with unrestrained cruelty and violence. It was the duty of this country to endeavour, by mediation and every fair means, to put a stop to these calamities; and the appointment of a British Commissioner to watch the contest might be attended with the best effects.

Lord J. RUSSELL agreed very generally in the opinions expressed by the honourable gentleman. It was necessary for the British Government to discourage the insurrection, even whilst sympathising with the sufferings to which the Christian population of Turkey was often exposed

Mr RICH held it to be unquestionable that the measure we were giving to Turkey against the unjust aggressions of Russia, entitled us to make conditions in favour of the Christian population

Lord PALMERSTON was not disposed to rate too highly the danger to be apprehended from the Greek insurrection, which was well known to owe its origin rather to excitement and instigations from without than to national or religious enthusiasm.

Mr. GIBSON expressed alarm at the different versions of Ministerial policy given by the various members of the Government, and the indefinite responsibilities we were incurring in the East. He called for the production of the convention said to have been concluded between Great Britain, France, and Turkey.

THE INCOME TAX RESOLUTION.

The House having gone into Committee of Ways and Means, after some opposition, the resolution for doubling the income-tax was proposed *pro formâ*, the Chairman was ordered to report progress, and the further proceedings were postponed until Friday.

HOUSE OF LORDS.—TUESDAY.

CABINET SECRETS.—THE FOREIGN-OFFICE.

The Earl of MALMESBURY, referring to the complaint made on Monday of the publication of Cabinet secrets by the public journals, alluded to the statement of the noble Earl at the head of the Government, that it was very probable a clerk in the Foreign-office had scandalously betrayed his duty in this respect. The noble Earl added that this clerk had been appointed by himself. He (Lord Malmesbury) had since looked over his memoranda, and found that, during his tenure of office, he had appointed only four junior clerks. Three of those gentlemen were still in the Foreign-office; the fourth, therefore, was the only person to whom the noble Earl could have referred; but he had left the office six months ago, not compulsorily, but in consequence of his marriage with a lady of considerable fortune. Under these circumstances, he hoped the noble Earl would frankly say he had been mistaken when he said that this gentleman was the party who had communicated the nature of the correspondence to which allusion had been made to the *Times* newspaper. The editor of the *Times* had been called upon, and he had distinctly stated that he never received any communications whatever from the gentleman in question, and that he had no acquaintance with him.

The Earl of ABERDEEN said he was very desirous that this matter should rest upon the most accurate foundation It would be recollected that the noble Earl opposite (the Earl of Derby), when he introduced this subject, imagined that he (the Earl of Aberdeen) was the source from whence the information proceeded; and, in peremptorily rejecting this imputation, he had said it was possible the information might have been derived from a clerk in the Foreign office who had left the department. He had now to say that this gentleman knew of the existence of the correspondence, and he had talked of his knowledge of its nature without hesitation or concealment. If the gentleman, on being referred to, said he had not mentioned the existence of this correspondence and its nature, he (the Earl of Aberdeen) would confess he had been more deceived than any man ever was. He had, however, ascertained the fact from quarters which he could not doubt.

The Earl of MALMESBURY said it was very remarkable that the noble Earl was not in possession of this information on the previous night He thought the manner in which the charge had been made, and the way in which the noble Earl had closed it, reflected very little credit on their Lordships' house.

TESTAMENTARY JURISDICTION BILL.

Several petitions having been presented for and against the Testamentary Jurisdiction Bill,

The LORD CHANCELLOR moved the second reading of the measure, the details of which he recapitulated in a speech of considerable length. If the bill were read a second time, he proposed to have it referred to a select committee admitting that it had been framed in a hurry, and required some modifications to reduce it to working order.

Lord BROUGHAM offered many comments upon the measure, whose objects he approved; but hoped that some means would be found to avoid sacrificing the interests of the existing proctors.

After a short discussion, the bill was read a second time.

HOUSE OF COMMONS.—TUESDAY.

SUBSTITUTION OF DECLARATIONS FOR OATHS.

Mr. PEACOCKE very moved for leave to bring in a bill to substitute declarations for oaths. The object of the bill was to carry the principle of civil and religious liberty one step further, and the application of the measure would be to all cases in which oaths were now required.

Viscount PALMERSTON would not object to the introduction of the measure, but would reserve to the Government the power of dealing with it as they chose on the second reading. He could not consent to the abolition of testimony taken on oath in courts of justice.

After a few words from Mr. HUME and the ATTORNEY-GENERAL, the House divided, when there appeared For the motion, 109; against it, 108; majority in favour, 1.

HIGH TREASON.

Mr. WHITESIDE obtained leave to bring in a bill to assimilate the law and practice existing in cases of high treason in Ireland to the law and practice existing in cases of high treason in England.

DISPOSAL OF PROPERTY—CONVENTUAL INFLUENCE.

Mr. WHITESIDE moved for leave to bring in another bill, to secure to persons under religious vows the free exercise of their lawful rights in the disposal of their property. He was essential, he observed, to apply a remedy to the overbearing exercise of spiritual influence on the same principle as that which courts of equity applied to cases of undue influence of another character. He explained the grounds upon which these courts interfered in cases of guardian and ward, husband and wife, and other relations, where influence was presumed; and to the anticipated question, why it was necessary to interfere with deeds executed within the walls of a convent, he replied that the necessity arose from the difficulty of getting at evidence as to what took place within those walls He referred to cases of alienation of property where the alienor was denied the exercise of free will, and which demonstrated, he said, the necessity of his bill, showing that the practical working of the system placed persons in a worse position than before the Reformation, previous to which a nun was held to be civilly dead and incapable of making any transfer of property. The remedy proposed in his bill was by enacting that any deed, gift, &c., executed by any female who had been a religious vow, should be deemed to have been executed under the coercion of such vow and against her own free will, unless the contrary be proved before a judicial tribunal; thereby throwing the *onus probandi* upon those who obtained such deed, gift, &c.

Mr. G. H. MOORE opposed the motion, for this reason—that if the intention was to place nuns in the same situation as married women, the measure would be found completely nugatory.

Mr. J. O'CONNELL likewise opposed the introduction of such a bill, the preamble of which condemned establishments forming an important and useful part of the machinery of his church, while its principle was repugnant to the ordinary rules of jurisprudence, in requiring proof of a negative.

Mr. J. O'CONNELL characterised the bill as a wanton and mischievous measure, for which no case had been made out.

Mr. MALINS supported the motion, and justified the principles upon which the bill was based.

Mr. LUCAS said, upon the very showing of the advocates of this bill, the law, as it now stood, was practically effective for the object in view. Moreover, a committee was about to be nominated to inquire into the whole subject.

Lord PALMERSTON thought there was some force in the last objection; and although, upon principle, he was not disposed to object to the measure, yet he suggested that, if the bill was brought in, Mr. Whiteside should postpone the further stage until the committee had made a report.

Mr. WHITESIDE was ready to adopt this suggestion, and to refer the bill to that committee.

The ATTORNEY-GENERAL could not convince himself that nuns were such passive instruments as Mr. Whiteside represented. If they were, it was undoubtedly the duty of the State to interfere, and the measure should go further. If there were abuses, he would not hesitate to set up a barrier against them; but, if Parliament did legislate, it should legislate effectually.

Mr. NAPIER and Mr. KINNAIRD made a few observations; and, the House having divided, the motion was carried by 68 against 40.

HOUSE OF COMMONS.—WEDNESDAY.

PAYMENT OF WAGES.

Mr. C. FORSTER moved the second reading of the Payment of Wages Bill.

Mr. HUME opposed the bill. Since 1824, when the Combination Laws were done away with, the operatives had had nothing to complain of in the state of the law. The practice sought to be put down (the truck system) was purely local, and did not extend beyond a few counties.

Mr. CRAUFURD moved, as an amendment, the appointment of a select

committee to inquire into the laws affecting the relations of masters and workmen.

Mr. HEYWORTH seconded the amendment.

Mr. DRUMMOND supported the bill. The plea urged by Mr. Hume amounted to this—that the defrauded workmen were bad political economists, and that the robbery could not be helped. The question, therefore, came to be whether the Parliament or the rogues were the strongest.

Sir J. Walmsley, Mr. Booker, and Mr. H. Bruce, supported the bill.

Mr. BRIGHT opposed the bill, and omitted Mr. Booker with opposing truck shops, while he had, with all his might, maintained as long as he could the great national truck-shop, established by the landed interest for their exclusive benefit. He did not think there was any defect in the existing law which the workmen could not correct. He held it to be tyrannous to prohibit an ironmaster, or any other employer from keeping a shop for the sale of any article he chose. Any such proposal was tainted with protection.

Mr. FORSTER defended his bill, and quoted the opinion of Mr. Huskisson as a set-off to the opinion of Mr. Hume Should the principle of the measure be affirmed, he would agree to send it to a select committee

Lord STANLEY objected to the bill as unsound in principle, and unnecessary. Although passed into law, it would prove inoperative. Its supporters assumed that the workman was in the hands of the employer; but recent occurrences had shown that such was not the case. But, although he was, it did not follow that the proposed measure would mend the matter. The master's gain from the truck shop did not necessarily involve the workman's loss. The House must exercise the utmost delicacy in interfering further between workman and employer.

Mr. MOFFATT thought the appropriate description of the bill would be "protection to shopkeepers."

Mr. BOUVERIE spoke of the ill-will, discontent, and heart-burning, which the existing state of things created in the mining districts of Scotland. The present law was evaded, and the object of the proposed measure was the reasonable one of putting a stop to evasion.

Sir G. GREY did not concur in the propriety of several of the proposed enactments, although he thought that some correction of the existing act might be necessary.

On a division, the second reading was carried by 166 to 56.

HOUSE OF LORDS.—THURSDAY.

The following bills were read a second time, viz., the Coasting Trade Bill, the Mutiny Bill, the Commons Inclosure Bill, and the Highways (South Wales) Bill.

The Consolidated Fund (£8,000,000) Bill was read a third time, and passed.

The Testamentary Jurisdiction Bill was referred to a select committee. —Adjourned.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. Disraeli, Lord J. RUSSELL stated that no new propositions had been submitted by Russia.

Mr. F. PEEL informed the House that the Colonial Office, in consequence of its having now acquainted with the conduct of Mr. Stoner in connexion with the Sligo election, would not confirm his appointment to the office of Judge in the colony of Victoria.

LAWS OF MORTMAIN.

Mr. HEADLAM asked for leave to bring in a bill to consolidate and amend the laws relating to mortmain, and to gifts for religious and charitable purposes.

Mr. HADFIELD seconded the motion.

The ATTORNEY-GENERAL, on the part of the Government, said that he had no objection to the introduction of the measure.

After a few words from Mr. BOWYER, the motion was agreed to.

ENDOWED SCHOOLS.

Mr. A. FELLATT moved an address for the appointment of a Royal Commission of Inquiry into the state, average number of pupils, discipline, studies, and revenue, of endowed schools of England and Wales; also of the endowments for scholars, their number, and revenue; likewise of all bequests of libraries, and endowments for their support; the character, number, and condition of the books; the number of the librarians, and their salaries—with the view of increasing the educational, and other advantages, to the public in general

Lord J. RUSSELL said that the motion would lead to a very great expense, and to an interference with the proceedings of the Commission appointed last year. He thought that the Government should, before taking any further steps, ascertain what had been already done in the way of inquiry; and under these circumstances, he moved, as an amendment, the previous question.

Mr. BUME hoped his hon. friend would withdraw his motion, as the objects he had in view must necessarily come under the supervision of the Commission already appointed.—Adjourned.

HOUSE OF LORDS.—FRIDAY.

The Earl of MALMESBURY called their Lordships' attention to the charge made by the Earl of Aberdeen against a gentleman who was formerly a clerk in the Foreign Office, of violation of duty, in disclosing some secret correspondence in that department; and read a letter from the young gentleman in question, denying in the most positive terms that he had ever been guilty of any breach of confidence.

The Earl of ABERDEEN expressed his deep regret at having cast the aspersion upon this gentleman; but said that, when he did so, he believed the charge to be well founded. He would furnish the noble Earl with the authorities he had for making the charge.

The Earl of DERBY thought that his noble friend ought to accept the explanation given by the Earl of Aberdeen, in respect to the matter. In such as it ought to prove most satisfactory to all parties. He, however, must complain of the manner in which some of the secrets of the Foreign office had been communicated to the *Times* newspaper; and referred, as an instance of such di closure, to the publication of the ultimatum sent by this country to Russia, which was published in the *Times* newspaper the second morning after the sitting of the Cabinet at which such ultimatum was agreed to.

The Marquis of CLANRICARDE moved for copies of the late correspondence between her Majesty's Secretary of State for Foreign Affairs and her Majesty's Consul at Riga, regarding the export of the produce of Russia belonging to her Majesty's subjects, and to the rights of neutrals in the event of war. The noble Marquis urged the importance of adopting measures to protect the rights of neutrals, many of which were connected with the mercantile institution of the country, and whose property had been paid for.

The Earl of CLARENDON said, that inasmuch as this country was connected with a great naval power, he could not state the exact course that would be taken in this respect; but the greatest liberality would be shown to the property of neutrals.

The motion was agreed to.

The Marine Mutiny Bill, and the Exchequer Bills (£1,750,000) Bill were severally read a second time.

The Coasting Trade Bill, and the Commons Inclosure Bill severally passed through Committee.—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Mr. T. DUNCOMBE asked Lord John Russell, in the event of war taking place, whether the purchase of Russian produce would become illegal and liable to seizure on its transit overland, viâ Konisberg, in England; or would Russian produce, purchased by the subjects of any neutral state, and re-purchased of them by English merchants, be illegal or liable to seizure on its transit from such neutral state to the port of London.

Lord J. RUSSELL said, if the goods were seized on the high seas, the question as to their liability would be one for the Admiralty. With respect to the transit overland he could not see how it would be liable to seizure.

UNIVERSITY OF OXFORD.

Lord J. RUSSELL moved for leave to bring in a bill to make further provision for the good government and extension of the University of Oxford, and of the colleges therein. He said he had carefully considered the report of the Commissioners, who were favourable to the measure he was about to introduce, as was also his right hon. friend the member for the University (Mr. Gladstone). In considering the question, he proposed to take in their order the subjects which he had last year pointed out on the matter of education. Formerly the University itself took the lead in education, having no less than 300 halls for that purpose, but in more modern times the colleges took up the subject and the halls had become extinct. If, however, education was to be confined to those colleges, it was evident that it would be confined to certain branches of study to which they might have devoted themselves, instead of giving a useful and solid education. It appeared to him that they had an opportunity of combining the advantages of sound general education with those of the tutorial system There were two classes of persons for whom this educational system was required—those who were about to enter upon professions, and those who sought to obtain fellowships and scholarships. The restrictions applicable to the latter class excluded many of the most eminent scholars in the University, and should be removed. Rules should also be laid down, so that the revenues of the University should not only be sufficient for the liberal maintenance of the professors, fellows, and lecturers of the University, but should also be applicable to further and extend the extension of the objects of education. There were no objections to the present mode of distributing revenues. The only question being as to their better application for the purpose of rendering the University more efficient for the purposes for which it was established. Parliament had not only the right to apply those endowments to the best advantage in promoting education, but it was in fact its bounden duty to do so. In early times there were sums set aside by the colleges for lectures on divinity, natural and moral philosophy, &c.; but he had it on the authority of Dr. Routh, of Magdalen College, that in modern times there was only one lecture given on these subjects at the close of every term. This was not as it should be, for the students should have the means of acquiring a thorough knowledge of whatever they contemplated pursuing in after life. What he proposed was that, instead of the present Hebdomadal Board there should be a Hebdomadal Council consisting of twenty-four persons, to consist of the Vice-Chancellor and two Proctors—the Vice Chancellor of the preceding year, and the remainder to be elected by the teaching staff of the University. There should be six Heads of Houses elected, one to be named by the Chancellor of the University. There should be eight professors, six to be elected—one to be named by the Chancellor, and one a Professor of Divinity; and that the greater portion of the council would be elected by the resident congregation. He proposed also to abolish the oaths by which they bound themselves not to reveal or allow changes in the statutes of the University He al o proposed to give the power of opening private halls to any M.A. obtaining a license for that purpose from the Chancellor. With respect to the expenses of the University, however desirable it might be to check habits of expense upon the part of the pupils, he did not believe that it could be effected by the interference of Parliament. He proposed that a commission of five persons should be appointed, to have the power of approving any statutes which might be voluntarily made by the several colleges of the Universities; and, in the event of none such being made, the Commissioners should have the power, under certain restrictions, of enacting rules. After some further observations, the noble Lord concluded by making leave to introduce his bill.

Some discussion then took place, the tone of which was generally in approval of the measure.—The motion was agreed to.

On the motion for going into Committee of Ways and Means,

Mr. M. GIBSON moved an address to her Majesty, praying her Majesty to give special instructions to the officers commanding her Majesty's cruisers, in the event of war, to abstain from interfering with neutral vessels on account of any goods or property not contraband of war that may be considered therein; and praying her Majesty to direct her Ministers to consider the policy of entering into treaty stipulations with the United States of America, and any other foreign country willing to entertain the same, on the principle that free ships shall make free goods, and the neutral flag give neutrality to the cargo.

Lord J. RUSSELL said that the Government were waiting only to consult the Government of France upon the subject; and they hoped to make such an arrangement as would put the question regarding neutrals upon a clear and intelligible footing.

The House having gone into Committee of Ways and Means,

On the Income-tax resolution being proposed, Mr. HUME moved an amendment, the effect of which was to make the tax applicable to incomes as low as £60 a-year.

After a few observations from the Chancellor of the Exchequer against the amendment, and from Mr. DISRAELI against proceeding further at that late hour of the night, Mr. Hume withdrew his amendment.—Adjourned.

OBITUARY OF EMINENT PERSONS.

MR. JUSTICE TALFOURD.

THE sudden death, on Monday last, of this eminent man—the distinguished orator, lawyer, and poet—has created the most painful sensation and the most poignant regret.

Few men of any period, placed in so elevated a position, have succeeded in securing so large a measure of personal regard as this eminent Judge. The most winning amiability was the marked feature of Sir Thomas Talfourd's character; and it may be truly said that the only pang he ever caused to his friends was by his untimely death.

Having, on a former occasion (No. 822), given a Portrait and full Memoir of the learned Judge, we will now subjoin only a brief statement of his career.

Thomas Noon Talfourd was born January 26th, 1795, at Reading, in Berkshire, where his father carried on the business of a brewer. His mother was the daughter of the Rev. Thomas Noon, a Dissenting minister; and, when at an age to be removed from her care, he was placed in the Reading Grammar-school, then under the superintendence of Dr. Valpy, no less celebrated for his classical acquirements than for the severity of his scholastic discipline. With such a master, a pupil like young Talfourd could hardly fail of making a great and early progress; and, accordingly, we soon find him in high favour with the stern Doctor, who, if he had little mercy for dulness or indolence, gave all encouragement to industry and talent. As he advanced in his studies, the young scholar began to show a marked predilection for literature, and in a short time had indited verses enough to fill a small volume, besides sending congratulatory rhymes to a newspaper upon Sir F. Burdett's liberation from the Tower.

When only eighteen years of age, our youthful student went to London for the purpose of studying the law, and placed himself under the eminent pleader, Chitty. He did not, however, fail to qualify the dryness of this new pursuit by occasional excursions into the haunts of the Muses, as well as by contributing largely to various periodicals.

In 1817 Mr. Talfourd began to practise special pleading on his own account, and in 1821 he was called to the bar by the Society of the Middle Temple, when he joined the Oxford Circuit and Berkshire sessions. Here a large round of valuable connections coming in aid of his natural talents, he quickly rose to the lead of the circuit; a post of honour he maintained against all competitors, although amongst them were many names of eminence.

In 1833 he applied for a silk gown, but, his request being denied, or delayed, he took the self of a serjeant. To make amends for this disappointment—if it were a disappointment—he was the same year elected member for his native town of Reading, where he sat continuously till 1841. He then retired from Parliament for a time; but, having been elected for Reading in 1846, he retained his seat till he was knighted, and made a Judge of the Common Pleas in 1848.

Such is a concise summary of the career of Mr. Justice Talfourd. As an orator, he was distinguished for elegance and fluency of diction. As a member of Parliament, his name will long be remembered in connection with two important statutes the one called the Custody of Infants Act, the other the Copyright Act of 1842; as a lawyer, he ornamented by his learning and virtue the Judicial Bench; as a poet, he has sealed his claims to public approval in the chaste and exquisitely poetic play of "Ion," a most perfect imitation of the ancient classic drama.

EDWARD DENISON, B.D., LORD BISHOP OF SALISBURY.

THIS prelate died on the 6th inst., aged 82. His Lordship was younger brother of the present John Evelyn Denison, Esq., of Ossington Hall, Notts, and second son of the late John Denison, Esq., M.P., of Ossington. He was born in 1801; received his education at Oriel College, Oxford; was elected a Fellow of Merton College in 1827; and was consecrated Bishop of Salisbury in 1837. He married first, in 1830, Louisa Mary, second daughter of the late Henry Ker Seymer, Esq., of Hanford, Dorsetshire, which lady died 22nd Sept., 1841; and, secondly, 10th July, 1845, Clementina, daughter of the Venerable Archdeacon Charles Baillie Hamilton.

SIR JAMES WYLIE, BART.

THIS venerable Baronet, for so long a time physician at the Russian Court, has just died at St. Petersburg.

Sir James, who was by birth a Scotchman, entered the Russian service in 1790, as senior surgeon in the Ekatsky Regiment; in 1798 he was appointed Physician to the Imperial Court, and, in that capacity, attended Paul I. in his travels to Moscow and Kazan. In 1799 he became Surgeon-in-Ordinary to the Emperor, and Physician to the Heir-apparent, the Grand Duke Alexander. In 1804 he formed the *status medicus* of the Medical Academy of St. Petersburg and Moscow, of which he was President thirty years. In 1806 he was made General Inspector of the Board of Health of the Army; and, in 1812, Director of the Medical Department of the Ministry of War. In 1814 he attained the rank of Physician-in-Ordinary to the Emperor Alexander, and was, at the period of his decease, Inspector-General of the Board of Health of the Russian army, Director of the Medical Department of the Imperial Court, and Actual Privy Councillor; Knight of the Order of St. Wladimir, of St. Alexander Newsky, of St. Anne, of the Red Eagle of Prussia, of Leopold of Austria, of the Legion of Honour, and of the Crown of Wurtemberg. He received from the Prince Regent (George IV.) the honour of knighthood at Ascot Heath races, in 1814, conferred by the command of the Emperor Alexander, and was created a Baronet, 2nd July, in the same year, at the request of the Emperor Alexander, on his departure from England.

Sir James, having no issue, is reported to have bequeathed the whole of his very large fortune to the Czar Nicholas.

THE PANOPTICON, IN LEICESTER-SQUARE.

THIS new "Institution for Scientific Exhibitions, and for Promoting Discoveries in Arts and Manufactures," was opened for private inspection yesterday, and on Thursday, and to-day is opened to the public. The building occupies a large space on the centre of the east side of Leicester-square, for many years a great focus of metropolitan exhibitions. The Panopticon, however, belongs to a higher class than the majority of the sights previously located in the Square. Of the exterior of the edifice we gave a view in the ILLUSTRATED LONDON NEWS for Jan. 31, 1852. The style of the architecture is reputed Saracenic; and its minarets and horse-shoe arches are of that period of art; but its escutcheons, which are prominent features of the elevation, represent the most important branches of the arts and sciences, in the arms of their professors; in addition to the Royal arms, and the bearings of the Panopticon itself, with the motto, "Mente et manu." The site has, moreover, olden scientific repute; for, upon this spot, John Hunter collected his valuable museum, and in one of the adjoining houses was temporarily located "the National Repository," some four-and-twenty years since—this being the first "Polytechnic" Exhibition in the metropolis.

Having passed through the vestibule, which is pleasingly decorated with encaustic tiles and English alabaster, next is the internal porch, "strictly ornate Saracenic," and then we reach the Rotunda here Engraved. The centre is occupied with a magnificent fountain, and throughout the circle are two galleries, with ornate fronts, stalls, and richly decorated ceilings. The great central dome is radiant with gold and colour, and through the glass crown a circle of small stars, and a series of semicircular windows, the vast apartment is lighted. This room is about 97 feet in diameter, and the same in height, and the total inbreal area of the Hall and its recesses are about 500 000 feet, in addition to the space occupied by the boxes and the organ-gallery. At night it will be lighted by lamps of design in keeping with the character of the decorations. The fountain throws up a centre jet to the height of the dome, and eight minor jets, each 40 feet, converging to the centre; the water being obtained from an Artesian well 346 feet deep. The fountain is worked by a powerful pneumatic apparatus, aided by a steam-engine.

In the lower gallery is a Photographic Room, which may be reached by the staircases, or by an ascending carriage up a shaft. Around the Rotunda are the Laboratory and adjoining apparatus-rooms; and, descending, you reach the circular railway, engine-room, &c. North and south are Lecture-rooms. The ventilation and warming are by "Gurney's Warming Battery," which is described in the "Handbook" sold in the establishment. To the same source we refer the reader for the details of the apparatus to be exhibited here to illustrate diving; turning and planing, drilling and boring, the combustion of steel; aurora-borealis and thunder; pin-making and needle-making, and gas cookery; freezing mercury; the liquefaction and solidification of carbonic acid; ballooning under water; galvanism, magnetism, and the electric light; and a large collection of machinery, models, &c. In the first gallery is a "Royal stand" sumptuously fitted with scarlet and gold.

The east side of the Rotunda is filled from the first gallery with an organ, by Hill and Son, which state that it exceeds in tone and compass every other organ in the metropolis, and the organs of York and Birmingham. It consists of 4 manuals, each from C C to A in alto; and a pedal organ, from C C C to F, 30 notes. It contains 60 stops, 7 bellows, 10 composition pedals, 1 crescendo pedal, and 46,004 pipes. There are seven bellows, of different pressures of wind, *worked by steam*.

The scheme of the Panopticon promises much for the popular spread of science in its application to the arts and manufactures; to which are to be added the attractions of painting, sculpture, and music; and we shall be happy to record its success.

THE SOUTH METROPOLITAN INDUSTRIAL SCHOOLS AT SUTTON, SURREY.

IN a former volume, we gave a View of the large Pauper Schools erected near the Anerley Station on the London and Epsom Railway, and we now present a View of another of even greater extent, which is in progress of erection near Sutton, on the same line of railway.

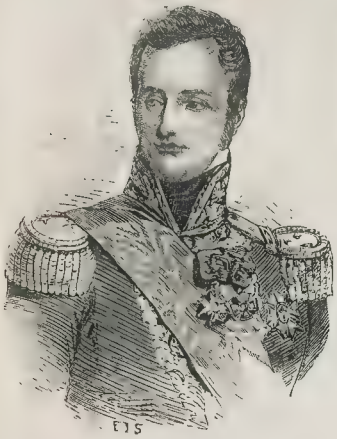
The act of Parliament under which Schools of this kind are constituted was passed some years ago, yet little progress in carrying out its provisions was made until recently—the City of London Union Schools, at Norwood, and the Forest Schools, at Leytonstone, having been the first in operation near the metropolis. They are for the maintenance, education, and industrial training of the pauper children appertaining to any particular parish or union of parishes, in a mode whereby it is decreed the much moral, physical, and economical advantage will be obtained by bringing the children together in an out-of-town locality, and under a special discipline, instead of rearing them within the confined walls of an ordinary workhouse, where the means of suitable education are limited and imperfect, and where also the demoralising influences and associations are very great. The new system embraces the occupation of several acres of land, upon which the elder boys are made to work at spade labour, and at farming and other manual operations, thereby invigorating their constitutions, and at the same time raising a considerable produce for the support of the establishment; and the results already experienced create increased confidence in the ultimate success of the method.

The Schools at Sutton are erected for a district comprising ten parishes, and are designed for the reception of 1000 children in three classes—of girls, boys, and infants; each class being in a distinct arm of the building, and having, also, a separate playground. The apartments of the governor and matron, the committee-room, and other offices connected with the chief supervision, are in the centre. Behind the governing department, and in the middle of the whole range of buildings, is the centralling department—comprising the dining-hall (126 feet by 33 feet), the kitchen and its various offices, and store-rooms, and the bakehouse; also a boiler-house, in which will be produced hot water and steam for cooking, warming, washing, and for working a steam-engine to pump water from a well into tanks placed over the large staircases above the level of every floor in the building. The wash-houses and laundry are near at hand on one side of the kitchen yard, and on the other side are carpenters', tailors', and shoemakers' workshops. The schools, dayrooms, and dormitories, occupy the long arms extending each way from the centre. The infirmary is a detached building in the rear. The homestead for farming, between fifty and sixty acres, has not yet been commenced; and, moreover the extreme ends of the building have been for the present omitted. The extreme length of the building will be 580 feet, and the depth from front to back 370 feet, and its situation is upon a fine bank of elevated ground with a chalky subsoil. The architect is Mr. Edwin Nash, of London, and the design was selected in competition in 1850.

ADMIRAL ROUSSIN.

THIS distinguished officer, who has just been snatched away from that branch of the service upon which he has shed so much lustre, was born at Dijon on the 81st of April, 1781. When only twelve years old, he entered the service as cabin-boy, on board the *Républicaine*. At that early age his education was necessarily imperfect; but he fortunately possessed a desire to learn, and, by steady application, he soon made up for his previous deficiency. At the age of twenty he obtained the degree of aspirant of the first class, in which capacity he took part in several expeditions. In 1803, having been raised to the rank of Ensign, he was attached to the division of Admiral Linois, then ordered to India and China, where France and England were so frequently brought into collision from that time up to 1810. The young Ensign distinguished himself personally in five engagements while there, and was soon after appointed second in command of the corvette *Jena*, of fourteen guns. With that vessel he encountered an English frigate,

La Modeste, of forty-four guns, and was made prisoner on the coast of Bengal after a defence so heroic as to be deemed a triumph. The English are said to have been so struck with the bravery displayed by the officers and crew of the *Jena* that they actually lodged them in the Governor's palace at Calcutta, as a mark of their esteem. An exchange of prisoners took place soon afterwards, and Lieutenant Roussin went to the Mauritius, where he was again appointed second in command on board the *Minerve*. Under Admiral Duperre, he took part in the engagement with a division of the English fleet, at Grand Port, Mauritius, which lasted three days; and at the conclusion of it was named captain of the frigate. On the capitulation of the Mauritius he returned to France; and in 1812, having been appointed to the command of the frigate *Gloire*, he showed his bravery and skill on several occasions.

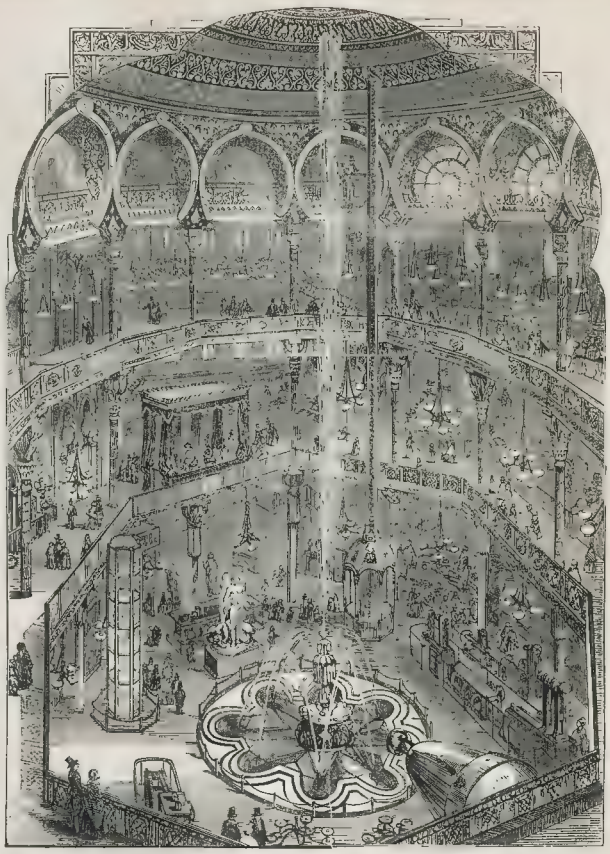


THE LATE ADMIRAL ROUSSIN.

At the establishment of peace, in 1814, Captain Roussin was sent to Plymouth to exchange prisoners with Great Britain. In 1817 he was sent to make a hydrographical survey of the western coast of Africa; and, on his return, was appointed to the command of the French station at Brazil, with instructions to prepare a chart of that coast. At the end of this important undertaking, in 1820, he was created a Baron. In 1822 he was made Rear Admiral, and invested with the command of the South American station, where he rendered some important services to French commerce. In 1824 he was appointed member of the Council of the Admiralty. In 1828 he received the command of the naval forces appointed to enforce the negotiations relating to certain differences between France and Brazil, which were fortunately settled amicably.

The scientific labours of Admiral Roussin, carried on through a long series of years, led to his being elected, in 1830, member of the Academy of Sciences, in the section of Geography and Navigation. About the same time, also, having been charged with the direction of the Ministry of the Marine, he left that post for that of Maritime Prefect at Brest. In the following year, the Portuguese government having refused certain demands which France had made, Admiral Roussin presented himself at the mouth of the Tagus, at the head of a squadron. On the 11th of July, he forced an entrance, an act of vigour which was acknowledged on all hands, to be one of the boldest ever achieved, and the result of which was the prompt and satisfactory arrangement of the French claims. For his conduct on that occasion M. Roussin was promoted to the rank of Vice-Admiral, and during the year afterwards was created a Pear of France, and appointed Ambassador at Constantinople, where he ably represented the interests of France for the next seven years. He returned home in 1839, and in the following year was deemed worthy to fill the post of Minister of Marine; but the breaking-up of the Cabinet sent him into private life for a short time. Under the Guizot Administration he was again called to the head of the Marine, which he did not retain long, however, as he was forced to retire on account of ill health.

Admiral Roussin has left three children, two daughters and a son. The latter, although young, ranks already among the most distinguished officers in the French naval service. His conduct at the siege of Saint Jean d'Ulloa was highly praised at the time.



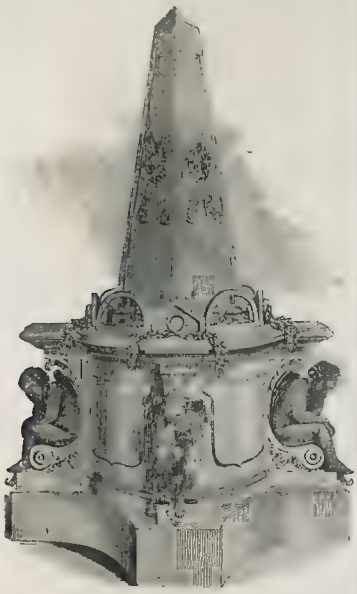
INTERIOR OF THE PANOPTICON, LEICESTER-SQUARE.—(SEE PRECEDING PAGE.)

THE SOUTH METROPOLITAN INDUSTRIAL SCHOOLS, SUTTON, SURREY.—(SEE PRECEDING PAGE.)

MONUMENT TO THE LATE G. B. THORNEYCROFT, ESQ., FIRST MAYOR OF WOLVERHAMPTON.

A noble bronzed cast-iron monument has lately been erected in Wolverhampton General Cemetery, to the memory of Mr. Thorneycroft, a leading member of the great iron trade of that district, and equally well known and respected in the mercantile world.

The memorial, being novel in design, and of good execution, has proved a great attraction in the Wolverhampton cemetery, and is, therefore, worthy of illustration. So great was the respect for Mr. Thorneycroft that his funeral was attended by more that 20,000 persons. His family have erected to his memory a noble monument; and near it is placed the testimonial here engraved, which has been raised by the clerks, managers, and workmen of the deceased. A foundation of Grinshill stone supports an iron base ten feet square, with massive plinth, having the angles replaced by bold segmental recesses; the whole supporting a well-proportioned cylinder, bearing shields with the family coat of arms and the inscription subjoined. Attached to the cylinder, and jutting out toward the angles of the base, are four brackets ornamented with leaves of the acanthus and scrollwork of honeysuckles, &c. A figure of a seated angel, in mournful meditation, relieves each bracket, and adds greatly to the general effect. The entablature contains in alto-relievo funereal urns, tazzas, the hour glass, and Bible, with well-arranged drapery; and at each corner rest pendant wreaths of "immortelles." A pyramid, surmounting the whole, has panels decorated with inverted torches and wreaths of palm-leaves. A railing of novel and pure design surrounds the monument. The iron-work is carefully bronzed, and reflects the highest credit on the Coalbrookdale Company (by whom it was executed); the details are correct and noble in design; the castings sharp, clean, and in perfect execution; and the whole ingeniously put together by internal fastenings to prevent oxidation.

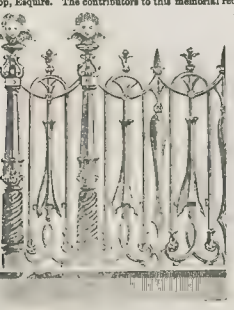


MONUMENT TO THE LATE MR. THORNEYCROFT, IN THE WOLVERHAMPTON GENERAL CEMETERY.

The family of Mr. Thorneycroft must derive high gratification from the praiseworthy feeling which prompted and has carried out so ably and satisfactorily this well-merited memento; and the clerks, managers, and artificers—a thousand in number—may be justly proud that their humble contributions have, in thus gracefully testifying their gratitude and respect, produced a specimen of art-manufacture which will long continue a noble example of the great staple trade of the district.

The following is the inscription:—

Erected by the grateful offerings of nearly a thousand workmen to the memory of their old employer, George Benjamin Thorneycroft, late of Chapel Ash, in this county, and of Hadley Park, in the county of Salop, Esquire. The contributors to this memorial record with mournful pride the high position which the Divine blessing on a life of uniform industry and uprightness permitted the deceased to obtain in public estimation, no less than in their own: a position alike honourable in the individual instance and beneficial to posterity, as a social precedent. His commercial enterprise multiplied the means of employment, and developed the resources of a trade that rose in graceful reciprocity, like his own fortunes, from obscurity to importance. He was chosen by the universal suffrage of the Municipal Council the first Mayor of Wolverhampton; the poor of which borough deplore in him a patron whose living benevolence reflects its posthumous image in the benefaction to future generations of honest indigence of a thousand pounds, as the inaugural oblation that enshrines in the memory of its clients the epoch of his Mayoralty and of the Civic Charter. In the Commission of the Peace for the counties of Stafford and Salop, he administered justice with impartiality, illustrating, on the bench, that patience, judgment, and integrity, which had raised himself there. As the Warden of the Collegiate Church he made its ancient walls enclose a monument to his own years of office: when finding its interior appointments inadequate and crumbling to decay, he left them enlarged, beautified, and in efficient repair. Death bereaved his connections of a kind, considerate, and paternal principal; and society of a generous supporter of its charities, and of an exemplary discharger of its duties. His lamented decease struck a note of general sorrow throughout the great iron trade, for a master of the craft had fallen! The sympathies of thousands drew them to his funeral obsequies, and the Mayor and Corporation, the resident County Magistracy, the High Sheriff of the County, and other public functionaries of the province, accompanied by all his workmen, together with a vast concourse of all classes of the inhabitants, bore him with spontaneous honour to the grave. In humble Christian faith, commending his soul to the covenant mercies of God, in his son Jesus Christ, and looking only to him, he slept in peace, April 28th, Anno Domini 1851, aged 63 years. "A merchantman seeking goodly pearls, who, when he had found one pearl of great price, went."—Matthew, c. xiii., v. 45 46.



PORTION OF THE RAILING OF MR. THORNEYCROFT'S MONUMENT.

On the north front of the monument is the family coat of arms, with motto—"Fortis qui se vincit."

THE ADELAIDE MEMORIAL WINDOW IN WORCESTER CATHEDRAL.

This beautiful Memorial of the excellent Queen Adelaide has lately been placed in Worcester Cathedral; and has been highly commended for the admirable manner in which the entire work has been executed. The artist of the design is Mr. Frederick Preedy, of Worcester, by whom the treatment is thus described:—

It has been my aim in the design to select the most prominent female Saints and Holy Women, also, some of the most conspicuous Queens and Rulers from the Old and New Testaments, as figurative of the pious deeds of the good and gracious Sovereign whom the window is intended to commemorate; and further, to make the whole subject suited to the position which it occupies in the Cathedral (namely, the south end of the western transept), on the supposition that the subject of other windows of the Cathedral *westward* of this transept may be chosen from the Old Testament history; and the subjects for windows of the choir and all windows *eastward* of the transept, from the New Testament. As authority for some such arrangement of type and antitype, we constantly find the remnants of a complete series of subjects, which once adorned the windows of many of our churches—as, for instance, Canterbury and Lincoln Cathedrals, and Malvern Abbey.

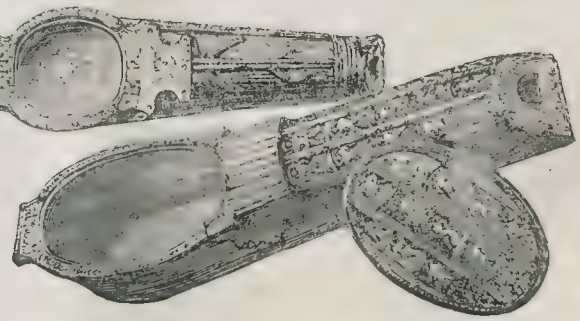
The inscription at the foot of the window, written by Lord Lyttelton, is as follows:—

In majorem Dei Gloriam,
Et perpetuam, si detur, memoriam
Adelaidæ Reginæ,
Olim in hoc agro commorantis
Clementissimæ
Beneficentissimæ
Piissimæ
Hanc Fenestram adornavimus,
A.D. MDCCCLIII.

The centre of the window (which is of three lights, of the Early English period) represents a stem or root of Jesse, descriptive of the genealogy of Christ, and is intended to form a connecting link between the old and new dispensations. It is in illustration of Isaiah, ch. xi, v. 1, 2. Jesse lies recumbent at the foot; from his side issues the stem or vine, branching out into foliage, supporting figures of the twelve lesser and four greater Prophets, and forming a vesica-shaped medallion for the reception of each of the principal figures in the order following, reading upwards:—1st David, bearing sceptre and harp; on either side of him the Prophets Hosea and Joel 2nd. Solomon, bearing a sceptre and book, with Prophets on either side. 3rd. Salathiel, bearing a scroll, inscribed J. genie Filius, Neri Filius. 4th. Zorobabel, bearing a model of a temple in his left hand, and an olive-branch and golden candlestick in his right, he having laid the foundation of the second Temple. The Prophet Zechariah points to the olive branch as representing Zorobabel (See Zech., chap. iv). 5th. Joseph, the husband of Mary, bearing a book and lily. 6th. The Virgin, with infant Saviour, the Saviour being crowned, holding the globe in his left hand; the right in attitude of benediction. 7th. Christ in majesty: in the same compartment are the four greater Prophets, above whom the branches of the vine form seven circles, containing the seven spirits described in the text from Isaiah before alluded to.

The western light has at the foot, St. Wulstan, with angels bearing a scroll inscribed with Psalm cxxvii., v. 1. The figures above (reading upwards) are Deborah, Hannah, Abigail, Esther, Judith; angels support a crown of glory over the head of each. Abraham's bosom, or Paradise

THE ADELAIDE MEMORIAL WINDOW, IN WORCESTER CATHEDRAL



COFFINS FROM THE SITE OF BABYLON, JUST ADDED TO THE BRITISH MUSEUM.—(SEE NEXT PAGE.)

occupies the summit of the western light. The corresponding part of eastern light has an angel conveying the souls of the faithful to Paradise. At the foot of the eastern light is a bust of Queen Adelaide, with angels bearing scroll inscribed with text, Isaiah, c. xlix, first part of verse 23. The figures above are Lydia, Dorcas, Mary Magdalene, Anna, Elizabeth, with angels bearing crowns, as in western light.

Mr. Preedy states that in this Window he has adopted the peculiar method of shading the lines in use in early glass, and which, though very simple, is effective and transparent; of which latter quality modern glass-painting is generally deficient. The lead ag is also an intricate work, the leads being made to form lines of the folds of drapery, as much as possible. The glass and leading have been ably executed by Mr. G. Rogers, of Worcester; and the stone-work by Mr. J. Norman, also of Worcester, from the designs of Mr. Perkins, architect to the Dean and Chapter.

This Window has been erected by public subscription, in testimony of the many virtues of the late Queen Adelaide, who was especially endeared to the inhabitants of the county of Worcester, by her residence at Witley Court. The sum collected amounts to £680 14s 6d., of which has been expended £538 14s. 9d.; leaving a balance of £97 10s. 4d.

THE BRITISH MUSEUM.—BABYLONIAN COFFINS.

These curious relics, discovered beneath the Mound of Warka, S. Babylonia, by Mr. W. K. Loftus, have recently been added to the relics of the antique world in the British Museum.

The construction of these coffins is very peculiar: the lower part is closed, and an oval opening left for the introduction of the corpse, the orifice being covered with a separate lid. They are formed of green glazed earthenware, much resembling the common pottery of the present day. At present, little is known of the Mound of Warka; and its identification with any known place of the ancient world is not yet made out; but from the circumstance of Mr. Loftus having returned to the spot, with ample powers to prosecute further researches effectually, many interesting details may shortly be expected.

The date assigned to these remains is considered to be less ancient than that generally called the Old Assyrian period. Their probable date is of from two to three centuries before Christ.

CHESS.

TO CORRESPONDENTS.

Carl (A), W. of Guernsey.—Neat, but too easy for our collection. Try again.

Tyro.—Many thanks, but we must repeat that "first attempts" are of no service to us. We only want the contributions of performers.

E. T. R. An unusually ingenious position. Is it original? We have an idea of something like it.

A Subscriber, Newmarket.—1 Your solutions are correct. How is it your club does not appear in the monthly List of Chess-clubs on the wrapper of the *Chess Player's Chronicle*? Where can it be found? Who is the secretary?

Fergus.—You may obtain a copy of the new rules of the St. George's Chess-club by application to the secretary.

Celt.—The Treatise on the opening by Prince Sergeus Ourussoff, which was expected to be ready for the press this coming season, is likely to be delayed for some months.

An (11) Member.—The "Cercle des Echecs" in Paris is no longer conjoined with the "Café de la Regence," but holds its meetings in comfortable rooms situate in the Palais Royal.

A., of Hyde, Hereford, and others.—Since the amendment given in our last Number, we do not see how Problem 524 can be solved in less than five moves.

A. J., Norwich.—Having once declared you should claim a Queen, we do not think you could, upon consideration, demand another piece instead. Our very imperfect Chess laws, however, make no provision for such a contingency.

M. T. S. and "Derby."—You had better procure the first volume (New Series) of the *Chess Player's Chronicle* for 1853 and take the numbers as they appear on the 1st of every month. The work contains all the rules, and gives also a list of the British Chess-clubs, with the names of their officers, and the time and place of meeting of each. Published by Kent and Co., Paternoster-row.

Subscriber.—The St. George's Chess-club have altogether left their old quarters in Cavendish-square, and are located at No. 23, St. James-street, President, the Earl of Eglinton; Vice-Presidents, Viscount Cremorne and C. H. M. Talbot, Esq., M.P. Apply (by letter) to "the Secretary of the St. George's Chess-club," and you will obtain the information desired.

L. W., Sunbury.—Place a Black Pawn at Black's K 6 6th.

T., of Bradford.—It shall be examined. Where does the Bradford Chess-club hold its meetings, and who are the officials?

J. S. G.—You can have two or more Queens on the board at once.

A Student would be glad to pay a game, by correspondence, with an amateur of *moderate* skill. Address, Theta, 3, Byer's-buildings, Holborn.

Regina.—Your question is answered above

Reading and Berkshire Chess-Club. The annual meeting and dinner of this well-known Chess Society, are appointed to be held at the Bear Hotel, Reading, on the 30th inst. On the 29th a Chess Soirée, to commence at six o'clock, p.m., will be held at the New Public Hall; on the following day the sub-rooms will be thrown open for play, and in the evening the sports are to be wound up by a dinner, the George Hotel.

Solutions of Problem No 526, by Sylph, E. E., M. T. M., Vicar, L.S.D., Hugo, D.D., Mus. Doc., O. Q., Jack of Worcester, Albert, F. B. of D., E. D. M., Pete, Czar, Thoseus, Frederick, S. S. A., Dewsbury, Dr. L., are correct. All others are wrong.

Solutions of Problem, No. 525, by G. W., J. F., Syren, Nepler, Fracula, Onyx, S.P.Q.R., S. S., Waltham, F. F., Argand, Paris Club, Perseus, are correct. All others are wrong.

Solution of Problem No. 523.

Chesters Cup.—15 to 1 agst Nemesis (of); 30 to 1 agst Brown Brandy (3); 33 to 1 agst Tailcord (2).
Derby.—6 to 1 agst Autocrat 9 to 1 agst Dervish (t); 17 to 1 agst Wild Huntsman (5); 20 to 1 agst Ruby (of); 30 to 1 agst Acrobat; 33 to 1 agst Andover; 40 to 1 agst Rescue; 50 to 1 agst Old Mell, Phantom, and Sardis.
2000 Guineas' Stakes.—10 to 3 agst Belardo; 20 to 3 agst Champagne.

The Championship of the Tyne.—This great scullers' contest, between Messenger, of Teddington, and Candlish, of Gateshead, was determined on Tuesday upon the Tyne, in the presence of a vast concourse of spectators. Messenger was the favourite at seven to four. The race was appointed for an hour before high water, the distance being from a boat moored off the Wanston-houses to Scotswood. Messenger took the lead and maintained it throughout, winning easily by twenty lengths. The time occupied was half an hour.

Note.—The sign + denotes above the average.

The reading of the barometer has varied but little during the week—the highest reading being 30.23 inches during the afternoon of the 15th, and the lowest 29.92 inches during the morning of the 14th. The mean for the week, at the height of 82 feet above the level of the sea, was 30.025 inches.

The mean daily temperature of the 10th was the highest mean daily temperature recorded on that day since the year 1836, when it was 54·1°; those of the 11th and 12th were the highest since 1830, when they were 51·6° and 49·0° respectively; that of the 15th was the highest since 1836, when the mean daily temperature was 51·9°. The mean temperature of the period from the 8th to the 16th was 50·8°, being 9·8° above its average value, and the highest mean temperature for this period, consisting of the same consecutive nine days, at present recorded, the register extending as far back as 1814. The nearest corresponding values are 46·9° in 1841, and 46·4° in 1833.

The mean temperature of the week was 49·9°, being 8·8° above the average of the corresponding week during 38 years.

The range of temperature during the week was 33·2°, being the difference between the highest and lowest readings of the thermometer on the 12th.

The mean daily range of temperature during the week was 20·2°. The least was 7·9°, on the 15th, and the greatest, 30·2°, on the 12th.

Rain fell slightly during the week, but to no great depth

Lunar halo was seen about 9 p.m. on the evening of the 14th.

The weather on the 10th and 11th was very fine, and the sky was cloudless on both days. During the rest of the week it was fine, but the sky was cloudy.

Lewisham, March 17th, 1854. James Glaisher.

Health of London.—The births of 1800 children were registered in the week ending March 11. Of these 946 were boys, and 854 girls. The averages of the same week in the nine preceding years were 761 and 720 respectively. The number of deaths registered was 1045, being greater than in the preceding week by 136, and was 245 above the calculated amount by 152. Changes in the weather seem to have had an injurious effect upon the public health. It will be seen by reference to our Meteorological Table, that the changes in temperature in the week were great. The variation in the mean daily temperature from the 6th to the 9th amounted to no less than 19°2. The excess of deaths has been caused by disease of the lungs, or organs of respiration, and in epidemic diseases. Deaths from bronchitis rose from 106 in the preceding week to 147; those from pneumonia from 112 to 135. The total number caused by diseases of the respiratory organs is 295, exceeding the average by 38; and the number referred to the class of epidemic diseases is 254, exceeding its average by 33. Scarlatina, 20, North Wharf road, 29; the 9th March, a man, formerly a shoemaker, died at the advanced age (as stated) of 102 years. The deceased would have completed his 103rd year next month.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the French Loan—which has been thrown open to the public, consequently the exact amount of it to contractors have been saved—has been received with much favour both here and in Paris, the value of Consols has been tolerably well supported during the week. The purchasers of stock have been by no means large, and we have heard of no extensive speculations for Time. There has been rather an increased demand for money, and the rates of discount have been very firm. First-class Bills may at any time be run, to discount at from 1½ to 1¾ per cent.

It is thought that from £2,000,000 to £3,000,000 of the new French Loan will be taken in this country. Should such be the case, we may look forward to large shipments of bullion to meet the various instalments. The exports of gold have continued to be considerable—about £200,000 having been sent off since we last wrote—and several parcels have been forwarded to other quarters. The imports have amounted to £136,000 in gold from Australia, £50,000 from Mexico, £21,000 from New York, and £14,000 from the Brazils, &c. The stock in the Bank of England is expected to show a decided falling off during the next three or four weeks, unless, indeed, large contributions are received.

Notice has been given by the East India House, that the rate of exchange at which the Company will receive cash for bills on Bengal and Madras, at all future periods, is the same as at present. From this we learn that the remain ng portion of the Five per Cent Loan—£7,000,000 sterling—has been converted. In China, silver was quoted sufficiently high to admit of shipments from this country at a good profit.

The last account of the Bank of France shows an increase in the stock of bullion of £650,000; but a falling off in the discounts of £1,200,000. Since August last, the total drain has exceeded £20,000,000 sterling.

On Monday, the Three per Cent Consols were done at 91¾ ⅜; and for the Account, 91¾. Bank Stock, for the Account, was marked 220 to 221½. Exchequer Bills were at 10s. to 16s. premium. Long Annuities, 4 15-16 5. The business doing on Tuesday was limited. The Three per Cents were 91⅝; Long Annuities, 4 15 16; India Bonds, 4s.; Exchequer Bills, 10s. to 16s. prem. Very little was doing on Wednesday. The Three per Cents ruled at 91½. Exchequer Bills were 10s. to 14s. pm. Much inactivity prevailed on Thursday; and the Three per Cents, for Money, were 91½; and for Account, 91⅝ to 91. Exchequer Bills declined 2s., viz to 8s. and 12s. prem.

All Foreign Bonds have sold heavily; in prices, however, no material change has taken place. Five per Cents have been 77; Chilian Six per Cents, 101½; Danish Three per Cents, 76; Mexican Three per Cents, 24½; Russian Five per Cents, 91 ex div; Ditto Four-and-a-Half per Cents, 82; Spanish Three per Cents, 27½; Brazilian Five per Cents, 93; Buenos Ayres Six per Cents, 65½; Sardinian Five per Cents, 79¾. Upwards of £4,000 000 Portuguese Stock yet remains to be converted.

The whole of the Continental Exchanges are still against this country.

Nearly all Miscellaneous Securities have met a dull market, as follows:—Australasia Joint Stock Bank, 79½; Chartered Bank of Asia, 3⅞ to 4; English, Scottish, and Australian Chartered, 6¾; Oriental, 42. Australian Agricultural have been done at 40; Crystal Palace, 6¾; Peel River Land and Mineral, ½ dis.; Portland Iron Company, 2½; Scottish Australian Investment, 2¾; Van Diemen's Land, 1¾; Berlin Water-works have been 2⅞; Rast London, 131; Do., New, 2⅝ prem.; Grand Junction, 73¾; Do., New, 114; Kent, 80; Southwark and Vauxhall 90, West Middlesex, 110, ex div.; Do., New, 17; London and South-Western, 92; Great Northern, 125; Liverpool, 126; European, 20; Globe, 137; Guardian, 58¾; Imperial Fire, 370; Ditto, Life, 20; London, 30; Palladium, 3 ex div.; Pelican, 45, Phœnix, 185; Royal Exchange, 178; Royal Insurance, 92; Union Fire, 52½; Ditto, Life, 65. Bungerford Bridge, 12; Waterloo, 5½; Vauxhall, 21. South ampton Dock, 30; Australasian Pacific Mail Packet Company, 13 to 13½; Canada Six per Cent Debentures, 110; General Steam Navigation, 3 ex div.; North British Australasian, 1½; Peninsular and Oriental Steam, 57.

Railway Shares have been dull nevertheless, the quotations have been fairly supported. The following were the official closing prices on Thursday:—

Ordinary Shares and Stocks.—Aberdeen, 23; Bristol and Exeter, 91½; Caledonian, 65; Chester and Holyhead, 15½; Eastern Counties, 12⅝; East Lancashire, 82; Edinburgh, Perth, and Dundee, 73; Great Northern, 91½; Ditto, A Stock, 81; Great Southern and Western (Ireland), 93; Great Western, 77¾; Lancashire and Yorkshire, 69⅜ ex div.; Leeds Northern, 13½; London, Tilbury, and Southend, 8½; London and Brighton, 99; London and North-Western, 100⅜; Ditto, Eighths, 12½; London and South-Western, 79; Midland, 61; Ditto, Birmingham and Derby, 28¾; Norfolk, 46; North British, 33; South Eastern, 62½; Vale of Neath, 16⅜; York, Newcastle, and Berwick, 67½.

Lines Leased at Fixed Rentals.—West Valley, 29½.

Preference Shares.—Great Northern, Five per Cent, redeemable at 10 per cent prem., 8½; Great Western and a Half per Cent Stock, 9½; Great Western Four per Cent, irredeemable, 84; London and Brighton Five per Cent Stock, 115⅜; Consolidated Bristol and Birmingham Six per Cents, 126; Norfolk Preference Four per Cent, 88; Ditto, Five-and-a-Half per Cent, 106; Oxford, Worcester, and Wolverhampton, 100½.

Foreign.—Antwerp and Rotterdam, 4⅜; Great Western of Canada Shares, 2⅜; Luxembourg, 2; Mining Shares, that the quotations have been almost nominal. On Thursday Agua Fria were done at 2; Anglo-Californian, 5⅛; Cobre Copper, 43; Colonial Gold, 1; Ponighaul Silver-Lead Mining and Smelting Company, 16; Quartz Rock, 1⅛; Saulago de Cuba, 3⅜.

Friday Evening.

We have had an exceedingly inactive market for Cons ls to day. The Three per Cents have marked 90⅝ ⅞, 91, 90⅞. Exchequer Bills have marked 8s. to 12s prem In Foreign Bonds and Railway Shares scarcely any busin ss has been done.

THE MARKETS.

Corn Exchange (Friday).—The present week's arrival of English wheat up to our market, coastwise and by land carriage, has been very moderate. To-day the show of samples was larger than on this day se'nnight. Owing to the large imports from abroad the demand for all kinds of wheat of home produce ruled heavy, and to effect sales lower prices must have been accepted. Foreign wheat—the show of which was large—moved off heavy, and most parcels were easier to purchase. Floating cargoes were very dull and droppier. Barley met a dull inquiry, at barely Monday's currency. The malt trade was very dull, but no actual change took place in prices. Oats ruled heavy, at late rates. Beans, peas, and flour command not very little attention.

Arrivals.—English wheat, 7720; barley, 3710; malt, 7360; oats, 3060; flour, 910. Irish: oats, 7260. Foreign: wheat, 32,780; barley, 2540; oats, 7270; flour, 6370 sacks; 13,170 barrels.

English.—Essex and Kent, red, 65s to 70s; ditto, white, 68s to 74s; Norfolk and Suffolk, red 67s to 70s; ditto, white, —s to —s; rye, 45s to 50s.; grinding barley, 35s. to 36s.; distilling 40 s, 36s. to 40s.; malting ditto, 40s to 44s.; Lincoln and Norfolk malt, 64s. to 66s.; brown ditto, 58s. to 62s.; Kingston and Ware, 68s. to 72s.; Chevalier, 72s. to 73s.; Yorkshire and Lincolnshire feed oats, 21s. to 26s.; potato ditto, 26s. to 28s.; Youghal and Cork, black, 23s. to 26s.; ditto, white, 27s. to 29s.; tick beans, new, 44s. to 46s.; ditto old, 44s to 48s.; grey peas, 44s. to 46s.; maple, 47s. to 48s.; white, 56s. to 58s.; boilers, 56s to 60s. per quarter. Town-made flour, 68s to 72s.; Suffolk and Norfolk, 55s. to 58s.; Scotch and Yorkshire, 57s to 62s. per 280 lbs. *Foreign:* French flour, —s. to —s. per sack; American, 32s. to 42s. per barrel

Arrivals.—Lower seed—both red and white—is in good request, at full prices. Linseed and cakes are quite as dear as last week.

Linseed, English, sowing, 62s. to 64s.; Baltic, crushing, 60s. to 58s.; Mediterranean and Odessa, 58s. to 59s.; hempseed, 40s. to 42s. per quarter; coriander, 17s. to 18s. per cwt. Brown mustard-seed, 12s. to 14s.; white ditto, 13s. to 15s.; and tares, 7s. to 9s. 6d. per bushel. English rapeseed, 23l to 23l per last of ten quarters. Linseed cakes, English, 11l to 11l 5s.; ditto, foreign, 11l 5s. to 11l 10s. per ton. Rape cakes, 6l 15s. to 7l 5s. per ton. Canary, 50s. to 54s. per quarter. English clover seed, red, 56s. to 64s.; white ditto, 54s. to 64s.; trefoil ditto, 24s. to 34s. per cwt. Brown.

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d., of household ditto, 8d. to 10d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 79s. 6d.; barley, 38s. 7d.; oats, 27s. 2d.; rye, 49s. 5d.; beans, 43s. 2d.; peas, 44s. 2d.

The Week Ending March 11th.—Wheat, 80s 3d.; barley, 39s. 7d.; oats, 27s. 2d.; rye, 48.; 10d.; beans, 43s. 1d.; peas, 44s. 1d.

Potato and Foreign Corn.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—The dee and for all kinds of tea is very inactive, at about stationary prices. Several public sales have been held this week.

Sugar.—The market continues dull. In some instances the quotations have a downward tendency. Fine qualities are unaltered, and quite as dear as last week. Inferior parcels neglected. In the value of English and foreign, very little change has taken place. Bacon is held at full quotations. Hams and lard are unaltered.

Tallow.—The business doing is but moderate. P. Y. C., on the spot, 64s.; and for forward delivery, per cwt. Town tallow, 56s. per cwt.

Coals.—In used coal has advanced to 35s. on the spot, and 37s. for May and June. Rates in the river are unaltered. Other coals are steady. Sprits of turpentine, 44 15s.; in puncheons, 43 10s.; rough, 1is. per cwt

Hay and Straw.—Monday hay, £3 to £5 5s.; clover ditto, £3 15s. to £6 6s., and straw, £1 16s to £2 4s. per load

Wool.—Fine long-fib wools are in steady request, at very full prices. Otherwise, the demand is quite at a stagnate state.

Potatoes.—The supplies have rather on the decrease, the demand is steady, at fully late rates. Regents, 70s. to 90s.; Scotch ditto, 50 to 80s.; Rocks, 40s. to 50s.; Irish whites, 105s. to 120s.; Foreign do 50s. to 115s per ton.

Hops (Friday).—On the whole a fair business is doing in our market, at last week's currency. The imports are—57 bales from Ostend and 27 from Hamburg. Mid and East Kent markets, at 110s. to 210s.; Weald of Kent, 65 0s. to 77 0s.; Sussex, 45s 12s to 65 10s. per cwt.

Coals (Friday).—Holywell, 21s.; Old Adelys, 19s. 6d.; Braddy, 20s.; Hilton, 21s.; Hawthorn, 20s.; Lemton, 19s 9d.; Brough Hall, 21s.; net cash.

Smithfield (Friday).—The supply of beasts in to-day's market was seasonably good. All breeds were very dull in sale, at barely Monday's prices. Amongst the forage stock we had a fair show of sheep, but only a limited number of prime Downs, moved off slowly. In the quotations we have no alteration to notice. Lambs sold at from 6s. to 6s 8d. per 8lbs. Calves and pigs met a very heavy inquiry, on former terms. Prime small porkers, 4s. 4d. to 4s. 6d.; ordinary ditto, 4s. 2d. to 4s. 4d.

Per 8lbs. by the carcase.—Inferior beasts, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime small ditto, 4s. 6d. to 4s. 8d.; large pork, 3s. 8d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; Scots, 4s. 4d.; coarse and inferior sheep, 4s. 4d. to 4s. 6d.; middling ditto, 4s. 8d. to 4s. 10d.; prime ditto, 5s. to 5s. 2d.; prime Southdown, 5s. 4d. to 5s. 6d.; large lambs, 5s. 8d. to 6s.; small ditto, 6s. to 6s. 8d.; large calves, 4s. 2d. to 4s. 6d.; small ditto, 4s. 8d. to 5s.; large hogs, 3s. 8d. to 4s. 0d.; neat small porkers, 4s. 4d. to 4s. 10d.; suckling calves, 28s. to 38s.; and quarter of store pigs, 21s. to 27s. each. Total supply—Beasts, 2,665; sheep, 10,300; calves, 140; pigs, 300. Foreign: Beasts, 324; sheep, 700, calves, 20.

Newgate and Leadenhall (Friday).—Such kind of meat sold heavily, on the following terms

Per 8lbs. by the carcase.—Inferior beasts, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime small ditto, 4s. 6d. to 4s. 8d.; large pork, 3s. 8d. to 4s. 0d.; neat small porkers, 4s. 4d. to 4s. 10d.; middling ditto, 5s. 0d. to 5s. 4d.; prime ditto, 5s. 6d. to 6s. 0d.; veal, 4s. 0d. to 4s. 6d.; small pork, 4s. 8d. to 5s. 0d.

A THENÆUM LIFE ASSURANCE SOCIETY.

Incorporated by Act of Parliament.

Chief Office, 20, Sackville-street, London.

The ATHENÆUM LIFE ASSURANCE SOCIETY was founded with a view to afford to the members all the moral advantages of Life Assurance, and a most convenient form of policy has been invented by which all Payments are made to the Holder, so that a policy can be transferred with the convenience and security of a bill of exchange.

Special attention is also solicited to the following points in this society.

1. The granting annuities according to the probability of life, thus giving to Annuitants, whether diseased or hea thy, the opportunity of obtaining the largest possible return for their investment.

2. The Equitable Assurance of Diseased Lives.

This society h ving completed a valuable and unique set of Tables for the purpose, is now enabled to transact business with the same facility as the ordinary societies, all risks taken at the proper age on a specific table, classifying the stage of disease, and exempli ying the probable duration of life. These principles have now for many years been found to the Assurance of Sums at Death and Granting Annuities, and appeal to the Medical Profession and General Agents for their and and cooperation.

Prospectuses, with further particulars, and Tables for Average Rates, can be had on application.

36, Sackville-street, London. HENRY SUTTON, Manager.

EMPOWERED BY ROYAL LETTERS PATENT.

UNITED KINGDOM LIFE and GENERAL LIFE ASSURANCE and GUARANTEE ASSOCIATION, 16, Cockspur-street, Charing-cross, London.

(Lit)

Every description of business connected with the contingencies of human life transacted.

Every premium paid rendered productive to the assured; policies being granted free from all restrictions as to residence or travel.

Credit given for half the premiums on whole life policies during the first five years, the balance to be chargeable on the policy

The benefits of life assurances extended to impaired lives

Loans granted for foreign residence named on policy, to become payable when hereunto risk is incurred.

No charge but the actual stamp duties.

GUARANTEE

The security of the Association interposed between employer and employed, in combination with life assurance, on terms peculiarly favourable to the latter.

Special terms for railway officials.

T. H. WALKER, Managing Director.

HY. M. FAUDEL PHILLIPS, Secretaries.

MITRE GENERAL LIFE ASSURANCE.—The business of this Association embraces the granting of Life Assurances of every kind, and of immediate, deferred, and in ividual Annuities upon a new principle. The Directors continue to receive applications from respectable par ies (accompanied with references) for the Agencies of the principal towns in the kingdom. There are no progrietors. The sum assured during the last year was £926,343. The annual income secured is £29,630

All persons privileged as above to make assurances upon life in this Society are invited to apply for the Prospectus, at the Office, 41, Parliament-street. JOHN N DGSON, M.A., JOHN BURDER Jts

THE PROVIDENT CLERKS' MUTUAL ASSURANCE ASSOCIATION (Enrolled under the Friendly Societies Act) and BENEVOLENT FUND.

TRUSTEES.

Thomas Baring, Esq., M.P. W. O Prescott, Esq.

Thomas Hankey, Jun., Esq., M.P. | Baron L. N. De Rothschild, M.P.

Trustee of the Benevolent Fund—Thomas Hankey, Jun., Esq., M.P.

The Association embraces life Assurance on the mutual principle in all its forms, and offers to all classes of society the peculiar privileges of securing absolutely to the Widow, Widower, or Children, the amount assured, free from Probate or Legacy-duty, or any other charge.

Prospectuses may be had at the Office of the Association. By order of the Board,

48, Moorgate-street, 28th February, 1854. PHILIP HENRY BYRNE, Secretary.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION, 37, King-street, Covent-Garden, London.

TRUSTEES.

George Dodd, Esq.,

Colonel W H Meyrick.

Joseph William Thropp, Esq.

This Office, established 1836, by Members of the Westminster Fire-office (founded 1717), has been highly successful in its operation. An annual bonus is declared, exceeding the actual payment of the premium by the 7th incurred, and a careful investment of the funds, have enabled the Directors to offer peculiar advantages to policies, which have equalled one half of the premiums received. The profits are divided every five years—the next division of which will be in 1857, and assurances effected before the 31st December next, will participate in the profits for three years. Any information respecting life assurance, with prospectuses and forms of proposal, may be obtained on application to the Office.

Agents required in the principal country towns.

W. M. BROWNLIS, Actuary.

MALTA: VALETTA, FROM THE QUARANTINE HARBOUR

THE BRITISH EXPEDITION.—THE VOYAGE TO MALTA.

THE ease, celerity, and comparative comfort with which the greater part of the brigade of Guards and the 28th Regiment have been conveyed to Malta, in some measure justify the enormous laudation which we have bestowed on ourselves as a great maritime state, with vast steam locomotive power. The 28th Regiment, in the *Niagara*, made a remarkably fine passage, and suffered but little discomfort; not any, indeed, beyond that which invariably attends on some 800 "men at sea," who are imprisoned for the time being with the Johnsonian alternative of being drowned; but the *Orinoco*, who made a run of 16 days from Cork, with the aid of canvas alone, had no reason to complain very much, even though they were not quite so rapidly conveyed as if they had been impelled by steam. Had the Guards, who left Southampton Water on Thursday morning, Feb. 23, been stowed on board sailing vessels instead of steamers, they would have met a constant current of baffling winds, which were too light frequently for effective tacking, and were obstinate enough to defeat plain sailing; with these same winds they would have taken fourteen days to have got to Gibraltar alone, and their further voyage to Malta would have required about as many days more. The *Leander*, a 50-gun frigate, has been thirty days going from Gibraltar to Malta ere this, under similar circumstances. The only disadvantage attendant on steamers is the heat to which the men on the main-deck, about the engine, are necessarily exposed, and the reduction of accommodation *pro rata*, in consequence of the space required for the machinery; but this is more than—or, at all events, as much as—counterbalanced by the certainty of getting through the water in a shorter time.

The huge swarm of red-coated insects which settled on the decks of the *Ripon*, the *Orinoco*, and *Manilla* on Wednesday, the 22nd of February, and which buzzed and bustled about so actively, nearly all that night, after the day of marching, of excitement of leave-taking and cheering and hunger, was hived, ere morning, in hammock, or blanket for the most part, as the vessels rode quietly amid the heavy rain in the waters of the Solent. They had been accompanied to their moorings off the Leap Buoy by the *Guernsey* steamer, filled with friends, if not "sweethearts and wives," and when darkness set in they were left alone even by those. Soon after daylight anchors were tripped, and with full steam off dashed the little fleet. The *Ripon* was off by seven o'clock a.m. on Thursday, followed closely by the *Manilla*, and soon afterwards by the *Orinoco*.

They ran past the Needles at 8.15, and were soon bowling along with a fresh breeze on the bow (N.W.), in weather which sailors, by some strange perversity of the usual terms relating to the state of the atmosphere, denominated "moderate and fine," right from the land, and making straight for the Bay of Biscay. The breeze was, with all deference to Jack Tar, strong and blusterous; but, with the excitement and novelty of the situation, the mind ruled the stomach, and the men were not sick, even though there was a long swell from westward; and they evinced the usual degree of anxiety as to the time for eating and drinking, which shows that the pastiest and most anti-gastric of all maladies had not seized them. The crews of the ships busied themselves swinging hammocks for the men. Fourteen inches is man-of-war allowance, but eighteen inches were allowed for the Guards. The hammocks were not strictly luxurious: they consisted of the hammock canvas, one blanket, and the military overcoat if they liked to use it. Knapsack stowing was wondrous work for the time; but even it failed after an hour or so, and there was nothing but looking at sea-gulls, smoking pipes, watching each other smoke, and wondering if "they were going to be sick."

On Friday, the long swell from the westward began to tell on the troops. The figure heads plunged refreshingly into the waters, and the heads of the poor privates hung despondingly over gunwale, portsill, stay, and mess-tin, as their bodies bobbed to and fro with the creaking, tumbling tabernacle in which they were encamped. It was satisfactory to see that the paroxysms of the complaints were more characterised by resolute toil, and a sullen determination "to do or die," than by the ecstatic misery of the Frenchman, or the prostrate inanity of the German. It showed that the last drop of Viking blood had not been purged out by the vapours of the fens or the fogs of the borders. Even at night they brightened up, and when the bugle sounded at nine o'clock nearly all were able to crawl into their hammocks for sleep. On Saturday the speed of the vessels was increased from 9½ to 10 knots per hour; and the *Manilla* was left by the large paddle-wheel steamers far away buffeting with the swell and head-winds. On Sunday all the men had recovered to a great extent, and when the ship's company and troops were mustered at 10.30 for prayers, they looked as fresh as could be expected under the circumstances. In fact, as the day advanced, they became as lively as ever, and the sense of joyfulness for release from the clutches of their enemy were so strong that they cheered "a grampus," which blew close alongside, in reply to stentorian demand for "three cheers for the jolly old whale!" Monday was passed with the usual observances of cleaning decks, cooking, eating, steaming; but at four p.m., in lat. 37 deg 48 min., long. 8 deg. 9 min. west, all hands roused up to look at a strange vessel with a dismasted vessel in tow. The *Ripon*, which came close to the stranger, hoisted her ensign, whereupon the stranger who had lost bowsprit and jib-boom, and seemed to have been in collision with the towes, ran up Russian colours. The Guards on board burst into a hearty cheer, but why it would be hard to say, unless that they drew breath at the first sight of the dubious enemy, and continued gazing on her, and the poor log of a Dutch galliot, which she dragged after her, till she was lost in the distance. On Tuesday the *Ripon* passed Tarifa, at 5.50 a.m.; and anchored in the quarantine ground of Gibraltar, to coal, half an hour afterwards. In consequence of the quarantine regulations, there was no communication with the shore, and the *Orinoco* passed, without stopping, through the Straits, but the soldiers in garrison lined the walls, and the men of "the Cruiser" manned yards, and as the *Ripon* steamed off at 8.30 p.m., after taking on board coals and tents and tent poles, they burst into hearty cheers, which were replied to with goodwill by the soldiers. The voyage continued with fine weather, but head winds, and on Thursday a target was run up to the fore-top-gallant stun-sail-boom of the *Ripon* for practice with the Minié rifle. By some extraordinary chance it turned out that this target was painted like a Russian soldier, and in half an hour it was so thoroughly riddled as to be useless. Running along at the rate of ten knots an hour, the *Orinoco* reached Malta on Sunday morning, at ten a.m., and the *Ripon* on Saturday night, soon after twelve o'clock.

As the several steam and sailing transports glided into the harbours of Malta, they were received with deafening cheers by their companions in arms, who thronged the battlements. The first division of Guards landed at two p.m. on the 4th, in miserably wet weather—four companies occupying Fort Manoel, three others the Lazaretto, and one company Fort Tigné, at the entrance of the quarantine harbour of Marsamuscetto, the horses of the field-officers and staff being sent into the Lazaretto cattle-sheds. The 28th landed on the same afternoon—three companies occupying the naval hospital store in Bighi Bay, at the entrance of the grand harbour of La Valetta; two companies, Fort St Salvador, nearly adjoining; the head quarters and two companies, the new works at Fort Verdala, within the Cottonera lines; and one company, Zabbar Gate, the first post beyond these works. The second division of Guards had the advantage of finer weather, and landed at one p.m. on the 5th, in the *Lazaretto*.

The arrival of the troops naturally increases the gaiety of the town, and slightly increases the market; but lodgings are still to be had in plenty, nor are the hotels all full. The Union Club have increased their subscribers, and allowed the new officers to join for a month on paying a pound. The Maltese Club members have invited the officers of the new regiments to the hospitality of their rooms during their stay. Nothing could have been, by any possibility, better arranged than the landing of the troops: not an accident nor a misfortune, and the soldiers look as fresh and in as good order as if just fresh from their barracks. They all speak in the highest terms of the very comfortable manner in which they came out—feeding excellent and plenty, better even than in their barracks in England.

The General has issued a strict order that all the officers shall dress in uniform, so that our streets appear very gay. The soldiers mix freely with the inhabitants, who, in a quiet way, give them a hearty welcome; and, on Sunday, the coffee-houses were all full, and the Maltese freely treating the soldiers. The wine, towards evening, had its effect on their heads, but did not interfere with their tempers; and everything has gone on smoothly and pleasantly, not a single complaint having reached the police. The soldiers are looking clean and respectable, walking about seeing the lions, and receiving every mark of civility and kindness from the inhabitants, in the same spirit that it is offered.

THE BALTIC FLEET

ILLUSTRATED LONDON NEWS SUPPLEMENT

MARCH 13, 1854

[No. 674.] "THE DUKE OF WELLINGTON," FLAG-SHIP OF VICE-ADMIRAL SIR CHARLES NAPIER, WEIGHING ANCHOR.—(SEE NEXT PAGE.)

THE DEPARTURE OF THE BALTIC FLEET.

THE departure of the Baltic Fleet, on Saturday last, grand and inspiriting as it may have been, was not intended for a show. It was the commencement of serious business. Though a beautiful sight, the many thousands of people who witnessed it were no doubt impressed with emotions of a deeper character than those which would have been excited by any merely holiday performance. The assemblage of such an armament is happily a new thing to the present generation; and pride in the resources and energies of the country, that could in a few months equip and prepare for sea, so magnificent a fleet must have been the predominant sentiment in the mind of every spectator. But the pride and the enthusiasm were tempered by natural anxiety. When the Queen of Great Britain, by a sudden evolution of her yacht, the *Fairy*, got in advance of the foremost vessel of the fleet, as if to lead it on the way to glory and to victory; when the sails of the noble vessel felt the impulse of the favourable wind, and it seemed as if the auxiliary and superior power of steam were scarcely necessary to convey them triumphantly to their destination, it was impossible to avoid a feeling of elation. Not only were the ships among the finest and most powerful that were ever constructed, and their gallant commander a man in whom the Government, the naval profession, and the whole public had an equal confidence; but—what distinguished the armament from those mnd yed in the previous wars of this country—the crews were animated by the patriotic spirit of the people. They had not been gathered, either wholly or partially, from the highways and by ways, by the cruel and degrading system of impressment, but had voluntarily enrolled themselves in the service of their country, and were as eager to come to blows with the enemy as if the war against the Czar were a quarrel personal to each of them. These considerations, added to the general conviction that the conflict in which we were about to engage was both just and inevitable, were more than sufficient to inspire the hope that the previous naval glories of the country are yet to be surpassed, and that the names of men still living will ere long become household words amongst us; and that the remembrances of the Nile and of Trafalgar will have competitors on the waters and shores of the Baltic destined to endure as long, and to shine as brilliantly, in the annals of the nation. The anxiety that threw a shade over these feelings was personal rather than national. It was impossible to avoid the melancholy inquiry, How many of these gallant fellows are fated never to return to the country for whose interest and glory they are about to struggle, and at what cost of human life are our victories to be purchased?

As Sir Charles Napier has more than once taken occasion to remind the public, it is not wise to underrate the strength of an enemy. But it is almost equally unwise to overrate it. For a period of forty-two years Europe seems to have fallen into the last-mentioned error with respect to Russia. The signal discomfiture of the Emperor Napoleon in 1812—not by the valour or even by the numbers of the Russians, but by the severity of the climate and the vastness and barrenness of the country which he had so recklessly undertaken to conquer,—gave the Russians a factitious reputation for invincibility, which they have ever since contrived to turn to profitable account. The glory which more refined and vigorous nations acquire by activity and prowess, Russia has managed to extract from her inaccessibility and her inertia. The coming war will speedily test her real strength. That she is strong we do not doubt; but that her fleet in the Baltic can match that of Sir Charles Napier, even without the assistance of our gallant French allies, we utterly disbelieve. We suspect that the Czar himself entertains a similar opinion, and that he has even less hopes of the safety of his Black Sea armament. A naval service, in which it is a rule that no attack shall be made upon an enemy unless the attacking force of all number three vessels for every two of their opponents, can scarcely have much confidence in itself. Yet such is the principle of Russian tactics; a principle which if attempted to be enforced as a rule for the guidance of the gallant fleets of England would, we are certain, excite the contempt both of officers and men, and be the forerunner of humiliation and of defeat. Our brave sailors would scorn to act in such a cowardly squadron. Neither England nor France, nor any other great country that we ever read of, in ancient or modern times, ever avowed or entertained such a rule of conduct. Ship to ship, or man to man, is what we and our allies considered a fair fight. When we look over the glorious and precarious struggles, both with civilised and uncivilised nations, we are reminded of the glorious fact, that many of the most splendid of our victories, and those which have been productive of results the most lasting, and the most beneficial, have been achieved with numbers greatly inferior to those of the enemy opposed to us. It is a popular belief among the gallant seamen of the British navy, that each Englishman is as good as three of any foe that can come against him; and the same daring notion has pervaded the British army, in every struggle in which it was ever involved. Such ideas inspire valour, even when they are ill-founded; but the Russian idea bespeaks a nation of slaves.

Independently, however, of all such considerations, the fortunes of the Black Sea and the Baltic fleets will be regarded with peculiar interest. At the close of the last European war, the power of steam was scarcely known. In the same year in which Napoleon invaded Russia, the first steam-boat ever launched upon the waters made its way slowly and painfully down the Clyde, amid the doubts of the wise and the jeers of the foolish. When Wellington and the Allies restored the peace of the world in 1815, a steam vessel was a rare sight even upon the river Thames. So recently as fifteen or twenty years ago, many admirals and captains of the British fleet looked with suspicion and mistrust upon steam propulsion, and scouted the idea that a day would ever come when the "wooden walls" of Old England, in which Blake Camperdown, Howe, Jervis, Nelson, and other heroes had achieved so many victories, would ever be superseded by ships of a different build and construction, propelled by a power that would render them independent of the winds. But all these prejudices are now as antiquated as if they had not been heard of for two or three centuries, although there are men still alive, and still young, who shared in them. But a steamfleet has never yet been engaged in battle. These new leviathans of the deep—no longer compelled by adverse winds, as the ships of Nelson and his predecessors too often were, to cruise hopelessly about for many months before they could fall in with their enemy—will make their way directly to their point. With far greater rapidity than the Emperor of Russia could march another army into the Danubian provinces, the fleets of Great Britain and France can take up their stations at the entrance of the Baltic, and force the Russians into conflict, or into the shelter of their forts. Celerity is thus the greatest of the new elements with which steam has introduced into modern warfare. Even should the screws and machinery of these floating monsters be damaged by collision with the foe, they can trust to their capabilities as sailing vessels for the means of advance, and remain, though partially disabled, as effective for all the real purposes of war as the old three-deckers that established our naval supremacy. Although the science of maritime warfare has thus been revolutionised to a great extent by modern progress in the mechanical arts, it is a feeling of curiosity rather than anxiety that is excited to learn how our new bulwarks will acquit themselves in the hour of need. If science have done much for our opponents, it has done more for us. It is to English genius and energy that the world owes the mighty power of steam. All its great developments have either originated or been brought to their present state of efficiency in this country. With well-founded confidence, therefore, in the justice of our cause, as well as in the strength and completeness of our armaments, every British heart will wish success to the Baltic fleet, and join in the spirit-stirring cry of

VICTORY! VICTORIA!

THE ARSENAL OF PORTSMOUTH.

FROM Portsmouth—one of the greatest naval arsenals in the world—sailed Nelson, in 1805, to gather the never-fading laurels of Trafalgar; and from the same port sailed the gallant Exmouth, to chastise and subdue the Algerines. Spithead, at the conclusion of the last war, in 1814, was honoured with the presence of the Prince Regent and his Imperial and Royal visitors to a sham naval fight; and in August last the same spot witnessed a review and similar fight, under the gracious presence of Queen Victoria, Prince Albert, and a portion of the Royal Family. Once in each generation it is permitted, it would appear, for a British people to witness the imposing and interesting spectacle of its fleets going forth to war. Our fathers tell us of a time when the eastern cliffs of England were black with the congregated thousands who assembled there to bid God speed to squadron after squadron as it sailed from the Downs to chastise the enemies of their native land; and when from the heights of Kent an army of volunteers sig ed to be led forth to the great conflict. There are limeless veterans, multilated relics of that heroic age, who, at Greenwich, in the halls of one of England's noblest palaces, although hoary with age and enfeebled in voice, still chant with enthusiasm of a time when

With the spring fleet they went out,
The British Channel to cruise about,

and we listen with enchained and credulous attention, while in rough and perhaps unmusical numbers, they sing of the noble deeds of valour of all that belonged to that jovial crew of "the saucy *Arethusa*."

And it may occur that Saturday, the 11th of March, 1854, will become a memorable day; for on that day the FIRST DIVISION OF THE BALTIC FLEET left the anchorage at Spithead for its destination, in the presence of her Majesty and the Royal family, amid the cheers of myriads of spectators, and accompanied by the best wishes of the whole country: the sending forth such a fleet in such a cause—truth, integrity, honour—confers the noblest attribute on any country.

Of the great naval force which has been, for some time, mustering at Portsmouth, only three vessels were left on Saturday. The *Neptune*, the *Prince Royal* and the *Rosseven* remained to form the nucleus of the second division, which, under the flag of Rear-Admiral Corry, has been ordered to follow Sir Charles Napier to the Baltic.

ROYAL VISIT TO THE FLEET, ON FRIDAY.

In our late edition of last week we briefly recorded the Visit of her Majesty to the Fleet, which we this week illustrate in the large Engraving in the centre of the present Sheet. At noon, the Queen, attended by the Court, arrived at Portsmouth from London; and, proceeding on board the *Fairy* yacht, passed through the Ball to fleet at Spithead, on her way to Osborne. A few minutes before the guns of the *Victory* announced the arrival of the Royal train, the signal to dress the ships was made from the *St Jean d'Acre*, in which Sir Charles Napier has his flag flying, and the order was immediately obeyed; and every ship was seen with her yards manned. Then, after a short pause, the *Fairy*, with the Royal standard floating from her mainmast, came going out of the harbour, and instantly, the crowds assembled on shore, raised their loyal cheers for the Queen. Sending her course past the Platform Battery, the guns of which poured forth their we come, the yacht steered at once for the head of the fleet, where the flag ship lay. The salute then began, and was volleyed forth in grand style. Hardly had the flash of the first gun blazed from the side of the *St. Jean d'Acre*, when all the other ships were following her example, and for about a minute there was a tremendous roar of artillery. When the dense cloud of smoke had passed away, the *Fairy*—which looked in contrast with the vast ships, very like a Thames wager-boat—was steaming swiftly through the fleet, on her way to Osborne. The cheering was taken up by ship after ship, as they were passed in succession, with deafening shouts and precision. The *Royal George* and the *Duke*—the only three-deckers in the fleet—delivered their "Hurrahs" with thrilling effect. The *Black Eagle* followed the *Fairy* in her course, with a distinguished company on board. This truly animated scene is depicted in the large cut in our Engraving.

Up to a late hour on Friday night myriads of persons continued to pour into Portsmouth. So far as regards that demonstration it was very like the review time in August last. Every hotel, every lodging-house, and even stable lofts, were eagerly seized upon. Illuminations took place on a scale never before witnessed at the port; and streets were crowded up to twelve o'clock by thousands of sight-seers.

SATURDAY MORNING.—THE "NEPTUNE," FROM SPITHEAD.

The preparations for the great event of the sailing of the fleet, commenced at an early hour on Saturday, and all Portsmouth was abroad and stirring in order to be spectators of the scene. Shortly after eight o'clock, the *Neptune*, of 120 guns, one of the finest models of naval architecture in the world, which for more than twenty years has been in harbour, was towed out to Spithead by a small steamer. It was a strange sight to see that majestic hull towering aloft with its three decks and its lofty masts, and taken as a helpless prisoner by a petty steam tug, which could have been stowed away without inconvenience in any part on the deck of the noble vessel. The superiority of science over bulk could hardly have been better illustrated than in this case. Here was one of the finest line of-battle ships in the world lying sluggishly at the mercy of the reluctant breeze, when, lo! a little black magician appeared, and taking the huge leviathan by the fin, coolly places her in her place in the proper order of departure. It is quite clear that sailing line-of-battle ships will soon be matters of history in this country. Vast crowds of people were assembled on the ramparts to see the ship pass out; and the ship's band playing many well remembered tunes, gave to the proceeding, in connexion with the assembled fleet at Spithead, a more than usual degree of interest.

The flag of Admiral Napier was shifted from the *St Jean d'Acre* to the *Duke of Wellington* shortly before the *Neptune* arrived at Spithead

SIR C. NAPIER AT THE GUILDHALL.

The gallant Admiral having attended at the Guildhall to receive an address from the Town Council (the proceedings of which will be found in another column), proceeded to the Victualling-office, to go on board the *Sprightly*, which had been placed at Sir Charles's disposal by the Portsmouth Commissioners. Admiral Thomas Cochrane, for the purpose of conveying him, some members of his family, and two or three friends on board his flag ship. The pier, which was crowded with people anxious to witness the embarkation of the gallant Admiral, was gaily decorated with the flags of England, France, Turkey, Austria, and the United States, and with a large banner, bearing in huge letters the words "God save the Queen," and give Success to Admiral Napier and our gallant Tars." It is impossible to exaggerate the enthusiasm with which Sir Charles was greeted, and it was with difficulty that he could make his way through the crowd, or clear himself of those who thronged around him to shake hands previous to his departure. Sir Charles was accompanied on board by his daughters, Mrs. Hay, Mrs. Lacy, and Mrs. Jones, and on board the *Sprightly* he was received by Admiral Berkeley and Sir Baldwin Walker. As soon as the *Sprightly* got alongside the flag-ship, the crew gave the Admiral a cheer, so long, so loud, and so hearty, as to furnish a proof of how they welcome his appointment.—(*See the Illustration of Sir Charles Napier's Departure, at page* 244.)

ARRIVAL OF THE QUEEN AT SPITHEAD.

A few minutes before one o'clock, the *Fairy*—having on board her Majesty, his Royal Highness Prince Albert, the Prince of Wales, Prince Alfred, the Princess Royal and Princess Alice, with the ladies and gentlemen in waiting, and accompanied by Sir James Graham, First Lord of the Admiralty, and Vice-Admiral Sir Thomas Cochrane—followed by the *Elfin*, *Fire Queen*, and *Black Eagle*, was seen approaching the fleet; and, on the signal from the admiral, a general Royal salute was fired in admirable style. Her Majesty, it was expected, would have come on board the *Duke of Wellington*; and the ladders, with a portion of the main and lower decks, were covered with scarlet cloth for her reception. She did not, however, inspect any of the ships. As the Royal yacht neared the anchorage, all hands were piped on deck to man the rigging; and certainly few sights could be more interesting than that which immediately presented itself. Standing on the quarter-deck of the huge vessel, no signs of animation or life could be seen on the vessel, save where the Admiral walked musingly, telescope in hand; or where Commodore Seymour and the officers of the ship and of the watch moved about the deck.

A moment after, and from every part of the ship came forth a mighty mass of human beings, and above a thousand men crowded the decks; away they ran up the rigging, and hung clustering together upon every rope and spar, like swarming bees. Five hundred men whom the rigging would not hold crowded the pinnaces and boats of the ship, or formed a line of blue jackets on the forepart; the marines drew up as guard of honour on the quarter and main decks, the ship's band struck up the National Anthem; and, unregulated and unconstrained by the "pipe," the crew sent forth such a deafening cheer as would almost have sufficed to drown the noise of one of their ship's broadsides. From every floating line and human swarm that formed part of this goodly fleet went forth the same thrilling and ungoverned burst of enthusiastic loyalty. It was a remarkable cheer—one which may be heard once, but never forgotten in a lifetime.

(*The Illustration at page* 244 *represents "The Fairy" passing Southsea Castle.*)

In spite of all the enthusiasm, however, no one who witnessed the naval review last year could help contrasting the scene which now presented itself with the impress produced by the former spectacle. The naval review of last summer was a great national holiday, with the people in their holiday clothes and the ships in their holiday colours. The Sovereign came out in her yacht to participate in the spectacle, and to admire those wonders of naval architecture which modern science had just then added to the formidable array of "castles on the sea," in which the people of these islands rest their great hope of national security. But Saturday's proceedings had no holiday air about them. Boats passed from ship to shore incessantly, signal-men were in constant requisition, weeping female faces might frequently be met, as fathers, sons, or brothers, sped away to join their ships; and even the people, who came in thousands from all parts of the country to see the fleet off, wore an earnest and thoughtful expression of countenance, and seemed fully alive to the importance of the coming struggle in which Admiral Napier and his brave sailors are expected to play so conspicuous a part. The popular demonstrations in favour of that distinguished officer were, on the day of his departure, of the most enthusiastic and unequivocal character.

THE ADMIRALS AND CAPTAINS ON BOARD THE ROYAL YACHT.

As the *Fairy* came up, signals were made for the Admirals and Captains of the fleet to repair on board. The Royal yacht, having run to leeward of the fleet, hove to, and Admiral Napier, the Admirals Commanding-in-chief, and the Admirals of Division, Corrie, Chads, and Plumridge, with the Captains of the Fleet and Commodore Seymour, proceeded on board, and were presented to her Majesty by Sir James Graham and the other Lords of the Admiralty. After a short stay on board, the officers returned to their ships, and at half past one Admiral Napier gave the general signal to the screw fleet to get under way with sail.—(*In the Illustration upon the front page of the Number published with this Supplement, shows the Reception on board "The Fairy."*)

THE FLEET "UNDER WAY."

The *Royal George* was the first to be ready. Her sails were set and her anchor at the bow in about ten minutes, when she were round like a cutter, and sailed away steadily with a pleasant south-west breeze, amid the cheers of thousands of spectators.

The spectacle now visible from the quarter-deck of the *Wellington* became one of intense interest. The admiral stood, glass in hand, giving orders to the ships to "weigh" in succession; and immediately the signals were run up with magical celerity, and answered by the ships addressed in a moment. The shrill sound of the boatswain's whistle came faintly over the air, and the sailors were seen to crowd aloft and spread themselves along the yards. Soon the great sails were sunken out, swelling majestically in the breeze; and the ships indicated by unerring movements at their anchorage the precise of a newly-applied momentum. The captains could be heard at work to the sound of the fife, and soon the great anchors were seen dangling from the bows, and the ships creeping slowly away.—(*See the Illustration upon the front page.*)

The *St. Jean d'Acre* and *Tribune* were soon under way, under single-reefed topsails; and the *Impérieuse*, *Bienheim*, *Amphion*, *Princess Royal*, *Edinburgh*, *Ajax*, *Arrogant*, and *Hogue* followed in quick succession. The *Royal George* was now making away for St Helen rapidly, and as she was filled with the billows of her sails she might be hard to imagine a more perfect type than she presented of beauty, symmetry, and power. The paddle ships, *Leopard*, *Valorous*, and *Dragon* came next, rushing on under steam, and adorning, in their plunging movements, a striking contrast to the steadily pace of the screws.

The first division of the fleet being now fairly started, the signal was given for the "Great Admiral" herself to "weigh" and make sail; each of these operations were performed with the celerity and precision which might be expected from the science and aptitude of the crew, and the skill and experience of the commander. Every rope was hauled "home" in a moment, by the silent but simultaneous effort of a hundred men. The rigging was soon literally black with sailors; and, while the eye detected everywhere the greatest energy and activity, to the ear there was no sound perceptible but the boatswain's whistle and an occasional command from an officer, short sharp, and decisive.

The *Fairy* now shot past, receiving a cheer as she passed; and the visitors bade farewell to the *Duke of Wellington*, and returned to their first quarters in the *Sprightly*. The ladies of Admiral Napier's family were put on board this vessel, and were accompanied by Admiral Berkeley and Sir Baldwin Walker. Both of these great naval authorities seemed never to tire of gazing at the flag-ship, but ordered the captain of the *Sprightly* to keep close company, in order that they might watch and enjoy her appearance under canvas. It would require the skilled eye of a naval man fully to appreciate the quantities she now developed; but the magnificence of the spectacle came home to every one—and, once seen, could never be forgotten.

HER MAJESTY "LEADING" THE FLEET TO SEA.

By this time the *Fairy* headed the fleet, her Majesty literally leading them out to sea, standing on deck all the time, and watching every movement with an interest that never tired.

The headmost ships had proceeded as far as St. Helens when they were signalled to shorten sail, to allow the *Duke* and the *Leopard* to come up. At this period her Majesty, as she returned to Osborne, was cheered by each ship which she passed, and as she crossed the bows of the *Duke*, the Admiral dipped his ensign. The *Fairy* hove to for some time to see the *Duke* fairly under sail: the crews manned the rigging and gave a most hearty and tremendous cheer. One of the crew climbed up to the truck of the maintopmast, and, seated upon it, waved his hat and cheered in the most enthusiastic manner. The tar, with two of his comrades, perched on the tops of the fore and mizen masts, and several others who were holding on to the top—struggling for the lofty perch, attracted the notice of her Majesty, who returned the cheer of the brave fellows by waving her handkerchief, and Prince Albert also acknowledged it by waving his hat. Her Majesty, having seen the fleet,

fairly off, returned to Osborne, where she arrived at 4.30 p.m. *(The Engraving at page 236 shows the Departure of the Fleet.)*

FORMING DIVISIONS

Having reached open water the order of sailing was formed in two divisions Admiral Napier's and Admiral Chads' ships heading the divisions, consisting of the following ships:—

STARBOARD.			PORT.		
The Duke of Wellington (Admiral Napier)	..	131	Edinburgh (Admiral Chads.)	..	58
St Jean d'Acre	..	101	Hogue	..	60
Royal George	..	12	Blenheim	..	60
Princess Royal	..	91	Ajax	..	58
Impregnable	..	61	Arrogant	..	30
Arrogant	..	47	Amphion	..	34

The *Leopard*, *Valorous*, and *Dragon*, paddles, were on the weather beam and as repeating ships; and in this order the naval "Cinematus" brought his flock of "early lambs" to the green anchorage of the Downs, where they arrived at five o'clock on Sunday morning.

SMART HANDLING OF THE FLEET.

The manner in which the ships were handled by their crews was the subject of general approbation among the officers on board the *Duke*. The *Royal George* was particularly conspicuous for the short time in which she got under way after having received her signal. The *Tribune* took one of the smartest ships in the navy, and reported to be a match for any three first-rates of her size, got away in splendid style. The *Impérieuse* and the *St Jean d'Acre* also fully sustained their previous reputation, and upon no occasion was there ever a squadron which got under way in such excellent order. The double power which the screw has given to many vessels was admirably displayed in the manner in which the ships, filled with their heavy engines, fuel, and armaments, stood out under canvas alone.

COMPARISONS ON FORMER FLEETS AND THE PRESENT.

The chief expression which probably can be given to the thoughts of all who saw the fleet depart from Spithead will probably be found in the bald but telling statistics of the mighty fleet, which Sir Charles Napier has been chosen to command, and of the division with which he had put to sea. Its aggregates can only at present be set forth in general terms, the details being left for the next few weeks to work out. Of the division which set out for the Baltic, on Saturday, we can speak more definitely. It comprises eight screw line-of-battle ships, four screw, and four paddle-wheel ships of inferior rank, making a total of seventeen war-steamers; of which two—the *Duke of Wellington* and the *Royal George*—have decks; while three carry double flags—Admiral Sir Charles Napier's in the *Duke*, Admiral Chads' in the *Edinburgh*, and Admiral Plumridge's in the *Leopard*.

There is not a single ship in his Division dependent upon sails alone for propulsion; while there are twelve, including all the line-of-battle ships and the four largest frigates, which, being screws, are equally available a steamer or sailing vessels, or both combined. In to know through the fleet those who are conversant with naval matters will readily distinguish for themselves the old from the new—the fast from the slow and the general characteristics and antecedents of each. For the general public, however, who have not such a special knowledge it may be interesting to state that the *Duke of Wellington*, *St Jean d'Acre*, the *Princess Royal* and *Impérieuse*, and the *Tribune*, are those most recently turned out from our dockyards; that the *Blenheim*, *Hogue*, *Ajax* and *Edinburgh* have recently been empowered as block-ships, and that the *Amphion* and the *Arrogant* were among the first, if not the first, men-of-war fitted with screws. The *Royal George* was built at Chatham so long ago as 1827; the *Blenheim*, the *Ajax*, and the *Edinburgh* have all borne the brunt of war service already, the last especially, having been at St Jean d'Acre; so that Sir Charles Napier takes with him to the Baltic both the most strong memories of former triumphs to help him in gaining new ones. The four paddle wheel frigates will, no doubt, serve a useful purpose in the fleet, though their present position is less favourable for fighting than the screws.

Of these latter, the division consists of the earliest and the latest examples in the service, the difference of speed between the *Amphion*, which was launched so that form of propulsion in 1846 and the *Tribune*, which was built at Sheerness in 1853, serving to show the progress which has been made in the last seven years. The most splendid and perfect specimen of naval architecture in this division, and in every way worthy to be the flag-ship of the British fleet, is unquestionably the *Duke of Wellington*. She furnished a steamer out to the Peninsular and Oriental Company's service for the *Madrid*, which, shrunk in all the splendour of fresh paint, and puffing out volumes of angry steam, formed no inconsiderable feature of the marine spectacle in Spithead. The great number of her heavy guns, and the amount of reserved strength difficult to come into action, so terrible when awakened. The commercial leviathan, divided as it was between the conditions of her own which she made no secret of showing, while her fiery red roaring funnels seemed to growl out the whole wrath of the country at Russian aggression.

"PLEASURE" AND "BUSINESS" IN FLEETS.

There were some points about the proceedings on Saturday which could not fail so forcibly to attract the notice of protators. As we have already remarked there was a marked difference in the manner in which the movements, such as landed the review of the fleet last August—the dressing of ships or manœuvres, but a business-like aspect marked every movement, there was work to be done, and it was done without any unnecessary parade. The intense enthusiasm of the crews was a subject to be remarked; and this was seen, not only in the reception which they gave her Majesty and the Admiral but also in the manner in which they saved the time for professional operations. As some of the excursionists passed alongside the *Duke of Wellington* and cheered the gallant Admiral and his noble flag-ship, some of the blue jackets extended themselves beyond the port-holes, and threw their arms round the huge guns—as though they were carrying some noble steed, or fondling some faithful mastiff; and, as they slapped their hands upon the muzzles of the guns or kissed their fist mouths, they expressed most significantly their confidence in the objects of their strange affection. One feeling alone appeared to weigh on the spirits of poor Jack, and that was, that the fleet of to-day would not be able to "bring the Russians down on their knees," to let the good people of England see them, but that they should be only distressing themselves to push them at their anchorage.

Compliments among the numerous vessels sailing to witness the spectacle was by no means confined to the Royal Mail Steam Packet Company's, the *Atrato*. The elegance of her build excited universal admiration. Notwithstanding the immense number of craft of all kinds which the Royal Yacht put to sea—which would have far more than sufficed to have brought the boats right out, and the rocks as numerous as when they were—the smoke of the large ships or crowded round the Royal yacht were not aware of the occurrence of any fatal accident, although a somewhat serious one was very narrowly avoided.

A DANGEROUS ACCIDENT AVOIDED.

A large number of pilot-boats were clustered around the *Duke of Wellington*, filled with women who had taken leave of the crew, when the *Sprightly*, conveying the Admiral and his friends on board, ensnared in a most alarming manner a boat having some forty or fifty women on board. The confusion on board the boat was fearful, and all the efforts of Sir Baldwin Walker, who sprang into the apparently sinking boat, were unavailing to restore anything like order among the shrieking passengers. Captain Gordon, with admirable presence of mind, ordered the lower port-holes to be opened, and the ship's boats to be lowered, and a large body of sailors came to their assistance, and ultimately every person in the boat was hifted or dragged safely through the port-holes, happily much more frightened than hurt. The boat itself was seriously injured, and her sides bulged in.

THE PORTSMOUTH CORPORATION AND ADMIRAL NAPIER.

The Mayor, Aldermen, and Town-council of Portsmouth, having determined to present the admiral with an address, half-past ten o'clock on Saturday was fixed upon by Sir Charles for receiving it; and at that hour he proceeded to the Guildhall cheered and followed by crowds. There the Mayor addressed him as follows:—

Sir Charles—It becomes my duty to announce to you that the Town-council of this ancient borough have resolved to present an address to you on your embarking from these shores to lead her Majesty's fleet. I feel it is sincere, most sincerely, trust, to add fresh triumphs to the list of those glorious victories which have shed imperishable lustre on the British navy. We further trust that, if it please God, you may be the instrument for producing in the mind of the Sovereign of Russia such impressions as will induce him to yield to the peaceful suggestions of Europe, and to desist from those schemes of aggression which have disturbed the peace of Europe. But whether you return as the triumphant conqueror or as the messenger of a peaceful settlement of the Eastern question, we shall ever feel that your career stamps you as one of the greatest men of the age, we have great pleasure, Sir Charles, in tendering to you our deepest respect on this occasion when you are about to lead forward to action the younger members of that service of which you are so distinguished an ornament (Loud cheers).

The Town-clerk then read and presented to Sir Charles Napier the following address:—

TO VICE-ADMIRAL SIR CHARLES NAPIER, K.C.B.

Sir Charles—We, the Mayor, Aldermen, and Burgesses of the ancient borough of Portsmouth, having learnt that you were about to embark from our port to take command of the powerful fleet destined for the Baltic Sea (to which have been added reserves have been imposed by the favour of her Most Gracious Majesty), are anxious, ere you leave the British shores for the probable scene of actual conflict with that Power which has been duly characterised as "the common enemy of Europe," in defence of the just and honourable cause which this nation, in conjunction with its allies, has espoused, to express our earnest hopes that you will be enabled, if the necessity arrive, to lead the mighty armaments of which you have the command to some great and glorious victory, and thus compel the Autocrat, who has so wantonly disturbed the peace of the world, to appreciate the courage and resources of England and France united, which he has hitherto dared to set so completely at defiance.

Great, indeed, is the responsibility which rests on you, and great are the expectations and anxieties with which the British people will be filled while you are engaged in the difficult and perilous duties to which your Queen and country call you. In those duties may the God of battles aid and prosper you; and may the combined force under your control, fighting in cordial union in a righteous cause, succeed in materially assisting to bring the warfare to a speedy and decisive issue.

You, and the equally brave and gallant men who will rally round you, will have the earnest aspirations not only of the inhabitants of this borough, but of the whole people of the United Kingdom. We wish you "God speed!" and pray that the war which has been thus needlessly forced upon Europe may eventually result in a still more lasting peace, check the barbarous policy of aggression, and promote the civilisation of the world.

Given under the common seal of the borough, this 16th day of March, 1854. G. C. SYGANT, Mayor.

Sir Charles Napier, who was vociferously cheered, said, in reply:—

Mr. Mayor and Gentlemen,—When I tell you that I have had only twenty four hours to get ready to go afloat, you will not be surprised if I decline to make a long speech; however, I beg to thank you for this very kind and handsome address. I believe it is not usual when a man is so abroad to have addresses of this kind presented to him, but all I can say is this—that I will do the best I can to prevent the Russian flag from being tarnished. I know a great deal is expected from the fleet; but, gentlemen, you must not expect too much (Cheers) We are going to meet no common enemy; we are going to meet an enemy well prepared. I am sure every officer and man in the fleet will do his duty gloriously; but, as the same time, I warn you again that you must not expect too much (Cheers). The fleet is a new one; the system of warfare is new; great consideration is required to steer and how it is best to manage a fleet urged by steam. The system of warfare is entirely different now to what it was formerly; but we will do our best (Cheers), and I am sure I shall remember to the last day of my life the kindness of the people of Portsmouth (Loud cheers)

While the Admiral, having given this reply, returned to the George Hotel, the Corporation in their robes went in formal procession to the Victoria-pier, in order to be present at his embarkation. Sir Charles, as is enthusiastically cheered on his way, arrived there about eleven o'clock, and (as before said) after much difficulty got on board the *Sprightly*, and was conveyed to his flag ship at Spithead.

PROBABLE PLAN OF OPERATIONS.

There is much speculation, of course, in naval circles as to the probable plan of operations. The more ardent of the gossips speak boldly of the bombardment of Cronstadt, and point to the large quantity of Moor's bombs shipped as a proof that extensive mischief is contemplated at the construction and materials of this terrible projectile is a Government secret; and so important is it deemed, that each ship's supply is numbered and registered in a book; and, whenever one is used, the why, the when, and the place for which it is fully noted down, and the details forwarded to the Admiralty. This, it is said, looks like bombardment: but the more cautious shake their heads, and say that to attack Cronstadt with its 800 guns would be sheer madness. Others again speak of blockade; and a third hint at the capture and occupation of the Island of Aland, as commanding the Gulf of Finland, and at once settling the doubtful neutrality of Sweden. In support of this hypothesis, it is alleged that Sappers and Miners go on, and that the ships take on a supply of long pikes and other siege apparatus. A few months will put to rest all these speculations, and perhaps add another to Professor Creasy's list of the decisive battles of the world.

ARRIVAL AND ANCHORING IN THE DOWNS.

It having been stated that the fleet would pass Dover early on Sunday morning, all were on the *qui vive* eagerly expecting its appearance. I was not, however, until about one o'clock that any positive intelligence could be obtained; it was then earned that the fleet was four or five miles to the south-west of Ha ting's, when it passed at eleven a.m. At the time the excitement among the inhabitants became very great. Large numbers crowded all the best positions for seeing the imposing pageant, the cliffs, piers, and beach being densely thronged with eager spectators.

One of the steam-boats brought over no less than 400 of the French from Boulogne; and for miles the vociferous cheers of our gallant neighbours were heard. The *Queen of the French* had the French people on board, and, in honour to our allies, she hoisted the French flag at the main, having the Turkish flag at the fore. As this vessel passed the British men-of-war the Royal ships dipped their ensigns in acknowledgment of the enthusiastic plaudits which cheered them on their way.

The South-Eastern Company despatched a vessel from Dover to meet the fleet at 12 40 p.m., which first sighted it at one p.m., disposed in two long lines, as nearly in mid-channel as possible; the colossal *Duke* forming the outer line, closely followed by the *St Jean d'Acre*. The weather was as favourable as could be wished; not a cloud was to be seen, and the sea was almost unruffled. The fleet passed Dover at three p.m., and proceeded to the Downs; where they anchored at half-past four, and were saluted by the *Castle*, *Duke of Burgundy*, 51, screw, from Sheerness, and the *Dauntless*, 33, screw, from Portsmouth.

[As the Review at Spithead in August last has been referred to in the several accounts of the departure of the Baltic fleet, it may be interesting to refer and the reader that a copiously-illustrated report of the above Review appeared in the ILLUSTRATED LONDON NEWS (No. 640) for August 20, 1853. In addition to the details of the day's proceedings, and the Engravings of the leading manœuvres, this Number of our Journal contains an interesting *resumé* (principally from official sources) of the several vessels which were employed at the Spithead Review in August; and which include nearly all those now under the command of Sir Charles Napier. (See pages 150 and 151).]

THE SAILING OF THE BALTIC FLEET.

(From our own Reporter.)

UNDER the most favourable auspices, with favouring gales and brilliant sunshine, cheered by the best wishes and acclamations of hundreds of thousands of their countrymen, and inspired by the presence and under the guidance of their Sovereign, the stout ships and gallant crews composing the first division of the Baltic Fleet, departed on Saturday from Spithead, on their momentous mission. Never have we witnessed stronger or more unmistakable evidences of national enthusiasm and sympathy than were exhibited by all ranks and classes who swarmed into Portsmouth towards the close of last week; and never, in the annals of England's naval triumphs, has a more powerful and efficient fleet been prepared with so much despatch. We may add, that never have the resources of science and the aids of machinery been more strikingly demonstrated than in the almost magical celerity with which twelve sail of the line were armed, manned, and fully appointed, within the brief space of a few days, to vindicate the national honour and protect the interests of Great Britain and her allies. It is unnecessary to say that Portsmouth and its tributary towns, Portsea and Gosport, evinced all the animation and excitement which the presence of the fleet, the hurrying on of the naval preparations, and the vast influx of visitors from all parts of the country was calculated to produce. The interest and bustle reached its climax on Saturday morning, when Sir Charles Napier, the Admiral-in-Chief, who has received in advance all the honours and ovations of a great naval victory, was invited to the Guildhall by the Mayor and Corporation, and, in the name of the inhabitants, presented with an address well calculated to cheer and encourage him in his perilous task. Her Majesty, with her usual kindly consideration, postponed her visit to the fleet to afford time for the presentation of the address; and at eleven o'clock the gallant Admiral, amid the most enthusiastic demonstrations of popular favour, proceeded through the crowded streets of Portsmouth to the Victoria pier, where, accompanied by his family and friends, he embarked in the *Sprightly* for his flag-ship the *Duke of Wellington*. The piers, the whole beach of Southsea, the long line of fortifications, and the heights commanding a view of Spithead, were by this time thronged with countless thousands eagerly watching all the movements to and fro seaward; and the steamers and railway-trains from the metropolis and the great towns continually poured in additional numbers; while steamer after steamer, loaded to the water's edge, and presenting nothing but a sea of heads, with yachts, pleasure-boats, long-shore boats—and, in short, every thing that could swim, down to the little cockle-shell with a hankerchief for a tryseil—stood out to Spithead, and were soon lost under the gigantic shadows of the floating fortresses there assembled. Nothing could be more propitious than the weather for this grand naval spectacle; a brisk south-west breeze just sufficient movement and animation to the numerous craft to divest it of its holiday look; but there was not one enough to affect the most sensitive, or excite the qualms of even the cockney seaman who, in rough pilot-coats, low-crowned shiny hats, and telescopes at high at themselves, were doing "the nautical" with epigastic impunity. Around each of the men-of-war were clustered swarms of shore-boats and luggers, filled with the wives and sweethearts and relatives of the seamen, and bearing last packages and messages, and freighted with final adieux to the gallant tars: all of these hung on or hovered about till the vessel got under way. Meantime, the excursion steamers and pleasure-boats went through the fleet, affording the visitors ample opportunity to view the formidable armament, the gigantic proportions, the massive construction, and the numerous and gallant crews who crowded the decks. The ships lay in grim repose, their sides bristling with artillery, their decks thronged with armed men, and their whole bearing evincing all the stern reality of war, as contrasted with the holiday pageant which took place the previous summer in those waters. Noon had long past, and those who knew her Majesty's punctuality, and who were unaware of the alteration in the arrangements, began to entertain serious misgivings that the Queen would not come, and that the fleet would not get under way. The practised eyes of the look-out men at length detected a light cloud of smoke in the direction of Osborne, a signal was run up to the mast-head of the Admiral's ship and a Royal salute of twenty-one guns broke forth from each ship of the fleet: the loud acclamations of the people, and all other sounds, being lost in the roar and thunder of the artillery, while the fleet and its swarm of a tendant craft were enveloped in a thick cloud of smoke. As the wind drove the smoke to leeward, the little *Fairy*, with its Royal freight, and carrying the Admiralty flag at the fore, the Royal Standard of England at the main, and the Union-Jack at the mizen, was seen cutting her way rapidly through the water; followed by the *Elfin*, the *Five-Queens*, and the *Black Eagle*, on board which were the Duchess of Sutherland, Lady Graham, and a distinguished party. The Royal squadron steamed through the fleet, the several vessels manning the rigging and cheering enthusiastically as her Majesty approached, and the steamers and pleasure-boats, with their crowded freights, falling up the line in swift their decks by but not less hearty acclamations; the bands of the several ships playing the National Anthem. The Admiral's flag ship had her side ladders and deck covered with scarlet cloth, and a guard of honour of the Royal Marines, drawn up in the waist, in anticipation of a visit from her Majesty; but the little yacht held on her course through the crowded floating mass, and hove to, to the leeward of the fleet, at the same time making a signal for "Admirals and Captains to repair on board." The barges and gigs of the several vessels were instantly lowered and manned, and the whole directed their course towards the *Fairy*; the Admiral's barge leading the way, with Sir Charles and his Captain in the stern sheets. By this time the crowd of steamers, yachts, and pleasure-boats had approached as near as propriety permitted, to the Royal yacht, the larger vessels taking up their station on the outside of the circle. Among them, the giant bulk of the *Atrato*, West India Royal Mail steamer, was conspicuous, and the *Medway*, Peninsular and Oriental steamer. The vessels of the Commodore and Ryde Company, and numerous others from Southampton, Brighton, Newhaven, and other places, might also be observed. Her Majesty, with the Prince, the Royal children, her attendants, Sir James Graham, the First Lord of the Admiralty, and Vice-Admiral Sir Thomas Cochrane, were on deck to receive the naval officers as they arrived. Sir Charles Napier, with Commodore Seymour, Captain of the fleet, were the first on board. They were presented to her Majesty by Sir James Graham, and the Queen conversed for some few minutes, with much apparent animation, on with the gallant veteran, who repeatedly bowed to her Majesty, and, if we may judge from the smile of gratification on the gallant Admiral's face as he retired, there were words of trust, and confidence and encouragement addressed to him, which could not fail to rouse every feeling of loyalty and determination in his breast. It has been said that her Majesty was somewhat affected while addressing the officers of the fleet, but whatever her personal feelings might be as to the solemn and important nature of the duty on which these stately ships and their gallant crews were about to depart, they were carefully repressed; and, from personal observation, we can state that the Queen's countenance was radiant with hope and satisfaction, and that her word and her smile were full of confidence and encouragement. The presentations were quickly terminated. As the barges from the nearer ships moved off, those from the more remote vessels came alongside; and by this means all confusion and crowding were avoided. On their progress to and from the *Fairy*, the Admiral and his brother officers were loudly and repeatedly cheered by the company on board the excursion vessels. The Queen was all animation, and apparently as much pleased with the enthusiasm of the people as with the complete nautical efficiency of the formable floating fortresses by which she was surrounded. Her Majesty wore a dark silk dress, a sable muff and victorine, with a blue veil and parasol—the latter, probably in compliment to the Admiral's flag. It is needless to say that the Queen's reception was most gratifying; and that, wherever the little *Fairy* appeared, the cheering and shouting were kept up without intermission. The yacht, in her light and brilliant paint, her tasteful carving and gilding, formed a striking contrast to the rude and massive forms of the men-of-war, and re-enabled a light and beautiful butterfly, as it sported over the waves, followed by its attendant steamers.

At two o'clock a gun was fired from the *Duke of Wellington*, for the fleet to get under way; and now all was excitement. The shrill whistle of the boatswain was heard from the *Tribune*, 31 guns, the leading ship of the leeward line; and in an instant the rigging and yards were crowded with men; another moment the top-sails and top-gallant sails fell simultaneously, and the ship was covered with a cloud of canvas. The sails were soon sheeted home; and the head-sails being set, she swung round slowly and gracefully under the influence of the breeze, and proceeded towards the Channel. The *St. Jean d'Acre*, 101 guns, which had been in the meantime getting up her anchor, performed the same manœuvre, and in a few minutes was also under way, following in the wake of the *Tribune*, at a few hundred yards' distance. The *Impérieuse*, 51 guns, was the third ship; and the *Fairy*, which until now had been lying to, made a rapid movement round the fleet to windward, followed by her attendant steamers, and took up her station a little in advance of the leading ship, as if marshalling the way for them to fame and glory. The movement was skilfully accomplished, and the effect was extremely fine. The enthusiasm of the people and of the crews of the men-of-war broke out afresh in repeated bursts of cheering; and never did her Majesty appear to greater advantage than when, in right of her proud position as mistress of the seas, she led the way for her gallant and well-appointed fleet. The *Amphion*, 34 guns, was the fourth ship under way; and then came the *Barbadoes*, 60 guns one of the guard-ships, painted with one streak like a frigate, but concealing in her lower deck a powerful armament of heavy guns which would most dangerously astonish a Russian three decker: the *Hogue*, *Ajax*, and *Edinburgh*, have also the same peculiarity, and are all of much greater real than apparent power. In common with all the larger men-of-war, the *Princess Royal*, the *St. Jean d'Acre*, the *Duke of Wellington*, the *Impérieuse*, and others, carry a ten-inch gun as dishops, for throwing hollow shot, or shells; and another new and formidable engine of modern warfare, Moorsom's shells, have been supplied to all the ships, the destructive effects of which, in bombardment or in close action, are well known to our naval authorities. At three o'clock, the *Royal George* came round, and a few minutes afterwards the *Duke of Wellington*

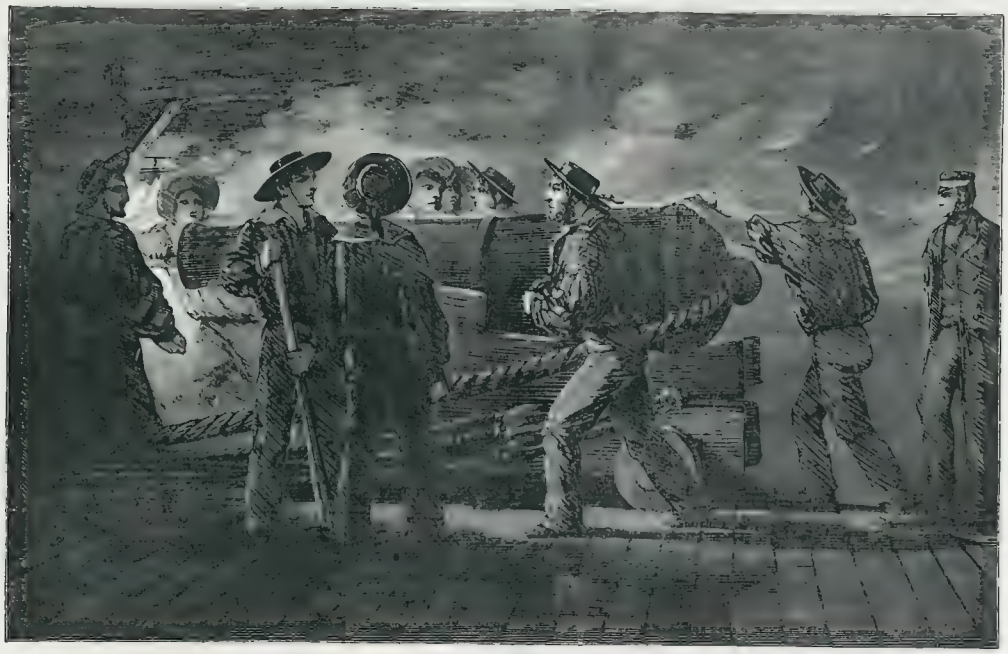
HER MAJESTY, IN "THE FAIRY," PASSING SOUTHSEA CASTLE.

ton, the Admiral's ship, followed, bringing up the rear of the men-of-war. The whole of the twelve ships are screw steamers, but they all went out under canvas, the wind being favourable—the object being to economise their fuel. The *Leopard*, *Valorous*, and *Dragon*, paddle-wheel steamers, followed; and in this order they proceeded in single line, towards the Nab light, followed by a whole swarm of boats and steamers. Within about a mile of St Helens, the *Fairy*, which had till then taken the lead, was stopped, and the fleet went ahead under easy sail. Each vessel, as she passed the Royal yacht, again manned her rigging, and lowered her top gallant sails, the crews giving three hearty farewell cheers, and the Queen and other distinguished personages on board the *Fairy*, waving handkerchiefs and hats in token of farewell. By the time the *Duke of Wellington* had approached the Royal yacht, the headmost ships had made a good offing, and were scarcely discernible in the horizon. The crew of the flag-ship, instead of stopping at the top, sprang up the rigging to the topmasts, one gallant fellow seating himself on the truck of the maintopmast, and in this perilous position cheering and waving his hat. As soon as the flag-ship had passed, the *Fairy* again got under way and returned to Osborne, which the Royal party reached at half-past four o'clock. Much comment and observation has been made upon the mode in which the several ships were handled in getting under way, and in the manning the rigging and yards: but we had an opportunity of observing very closely the manœuvres of every ship in the fleet, and do not hesitate to say that all of them acquitted themselves most creditably. We are borne out in this remark by the opinion of many naval veterans, who expressed their high admiration of the rapidity and precision with which the newly-collected crews of the fleet executed the various movements, and who assured most favourably from the manner in which these preliminary duties were executed. As soon as the fleet had made a good offing, signal was made to close and form in double line, the three paddle-steamers closing the line; and before dusk the ships had got well up the Channel, standing to the north-east, under easy sail.

With the exception of a shore-boat stove in by the *Sprightly*, while going alongside the flag-ship with the Admiral on board, not the slightest accident took place, amidst the many hundred vessels of all sizes which crossed and jostled each other during the day—loaded so as to be a most unmanageable, and heeling over now and then in a manner that would terrify any persons who were not under the influence of some extraordinary excitement. In the shore-boat stove in alongside the flag ship were a large number of women who were quickly dragged through the lower-deck ports into the ship, and who appeared to regard their immersion as a providential dispensation, as it afforded them another opportunity of taking leave of their friends and relatives among the crew.

Independently of the deeper and more absorbing interest of this grand and imposing naval spectacle, it was one of great brilliancy and beauty the fresh gale, the buoyant ripple of the water

SIR CHARLES NAPIER LEAVING PORTSMOUTH.



GUNNERY PRACTICE — LOADING — ON BOARD "THE ST. JEAN D'ACRE."

the occasional gleams of sunshine, followed by masses of heavy clouds, the vast number of vessels moving about under canvas or steam, the weighing anchor and departure of the noble fleet, and the presence of Royalty, formed a *tableau* which no verbal description can do justice to. Few of the present generation have beheld anything approaching to it in naval grandeur, and no one could have witnessed it without being deeply impressed with the evidences before him of the great maritime strength, the enormous material resources, and the indomitable energy of the country. Before dusk the great bulk of the visitors had been safely landed and conveyed to their destinations. There were a few complaints here and there of parties having purchased excursion tickets, who were left behind by the steamers, for the very sufficient reason that they could carry no more, and of others who had come down by the trains, and could not get back to town at the precise moment specified. Our only surprise is that, with the vast amount of extra traffic the service was so efficiently conducted, and upon the whole, we believe there were as few real grounds of complaint on this as on any former occasion of a public spectacle of such magnitude and importance.

FITTING FOR SERVICE.

Early last week it was pretty generally known that the first instalment of the Fleet at Portsmouth would leave within a few days, and, probably on a very short notice. On board the ships therefore, every one, from the Captain down to the youngest boy, was fully occupied "*fitting for Service*," and for active service, too, was the order of the day. Fitting for service is a most comprehensive phrase. The ship being given all that makes a ship complete remains to be done. The Captain finds full occupation in procuring all appliances and provisions from the Dockyard authorities and from those of the Victualling Department, and his subordinate officers are equally busy in supplying things so procured to their proper uses. "Keeping up supplies of Provisions and Water," was one of the many essential operations which a visitor had frequent opportunities of observing during the period of preparation. "Drawing Gunnery Stores," shot, shell, and such interesting items, also gave pretty constant occupation to ships' crews. These operations are so systematically done, that neither delay nor confusion can occur. The general results are truly wonderful, till one comes to analyse the means by which they are arrived at. When we see the untiring zeal, and the practised ability and skill, of those who command, and observe the thorough good will with which orders are carried into execution by those under command, all wonder ceases. There is not a class of men in existence who are more ready to see the proper uses of any material under their control, or more prompt to put it into use than sailors. Money is perhaps an exception to this rule. The noble ships which sailed from Spithead on Saturday was one of many manifest proofs of naval energy and skill. Even had no great purpose been embodied in those massive hulls which rode so tranquilly at their anchorage on Saturday morning, one look at them would have been ample compensation for a visit to Portsmouth. The Admiral's ship was, in itself, a picture not to be forgotten easily by those whose good fortune it was to see it. To manipulate those 131 terrible engines of war, this magnificent vessel carries within its giant flanks the population of a good sized town, eleven hundred men, each man in his proper place, having his own peculiar duty to do, and doing it. After some weeks of constant activity, in the manner already indicated, and also in pretty frequent "gunnery practice," "firing at a

HER MAJESTY'S SURVEYING STEAM-SHIP "HECLA."

target," &c., the fleet was honoured with a visit from her Majesty on Friday. At one o'clock on Saturday the Queen again visited the fleet, and gave the signal for their departure, escorting them for some miles on their voyage. On this occasion the ceremony of "saluting" was performed with more than ordinary good will. The boom of the cannon rolled eastward with the breeze, and was heard along the south coast as far as Worthing, a distance of some forty miles from Portsmouth. The Royal salute over, signal was made at a quarter before two o'clock to "put to sea."

The two groups at pages 252 and 253, Man-of War's Men and Royal Marines, have been drawn from life by George Thomas; and are fine specimens of the men forming these branches of the service.

Ajax	58	600	450	Capt. Warden.

STEAM-FRIGATES, &c.

Ships.	Guns.	Men.	H.-pr.	Commanders
Impérieuse (screw)	51	810	360	Captain Watson, C.B.
Euryalus (screw)	51	600	400	Captain G. Ramsay.
Arrogant (screw)	47	460	360	Captain Yelverton.
Amphion (screw)	34	320	300	Captain Key.
Dauntless (screw)	33	320	300	Captain Ryder.
Leopard (paddle)	18	300	560	Captain Gifford.
Dragon (paddle)	6	200	560	Captain Wilcox.
Valorous (paddle)	16	320	400	Captain Buckle.

Thus, the first division of the Baltic Fleet, will consist wholly of steamers—amounting to 17 ships, 1017 guns, 8370 men, 7370-horse power. Besides which there are four steamers—the *Desperate*, *Vulture*, *Basilisk*, and *Hecla*, employed in services connected with the North Sea, which may join the fleet

The following now ready and fitting, in various ports, will form the Second Division of the Baltic Fleet:—

SHIPS OF THE LINE.

SAILING.	Guns.	Men.	H.pr.	Captains	Ports
Neptune	120	970	—	Flag of Rear Admiral Corry, Capt. Hutton	Spithead.
St. George	120	970	—	Capt Fyres, C.B. ..	Plymouth.
Warspite	120	970	—	Capt. Lord F. Kerr ..	Sheerness.
St. Vincent	101	800	—	Capt. Scott	Portsmouth.
Prince Regent.. ..	90	820	—	Capt. Smith, C.B.	Spithead.
Monarch	84	750	—	Capt. Erskine	Sheerness
Boscawen	70	740	—	Capt. Granville	Spithead.
SCREWS.					
Cæsar	91	850	400	Capt. Robb	Spithead.
James Watt	91	850	600	Capt. Elliott	Devonport.
Nile	91	850	400	Com Martin, C.B. ..	Devonport.
Majestic	80	750	400	Capt. Hope, C.B.	Chatham.

FRIGATES, SLOOPS, &c.

SCREWS.	Guns	Men.	H.-pr	Commanders.	Ports.
Miranda	18	175	250	Capt. Lyons	Sheerness.
Archer	14	160	200	Capt. Heathcote	Woolwich.
Conflict	8	130	400	Capt. Foote	Devonport.
PADDLES.					
Odin	16	220	560	Capt. Yelverton	Portsmouth.
Bulldog	6	160	500	Capt. W. K. Hall.. ..	Spithead.
Gorgon	6	160	320	Com. A. Cuming	Portsmouth.
Driver	6	160	280	Com. Hon. L. Cochrane	Sheerness.
Rosamond	6	160	280	Com. Wodehouse	Sheerness.
Prometheus	6	145	200	Com. Rice	Woolwich.
Alban	3	60	100	Com. Otter	Woolwich.
Lightning	3	60	100	Capt. Sullivan..	Woolwich.
SAILING.					
Frolic	16	130	—	Com. Norleth	Southend.

Making in the whole, as before stated, a glorious and powerful fleet of 44 vessels, 2200 guns, 16,000-horse power, and 23,000 sailors and marines!

THE CUBAN SLAVES.—Lord Clarendon having had the case of the liberated Cuban slaves now at Southampton, on their way to Liberia, brought under his notice, has ordered the Admiralty authorities in that town to see that every care is taken of them at the Government expense, and has promised them a free passage to Africa.

SURVEY OF THE BALTIC BY HER MAJESTY'S SHIP "HECLA."

THE steam-sloop *Hecla*, commissioned for the special service of conveying a large number of surveying officers to the Baltic, to make soundings for the approach of Sir Charles Napier's fleet, returned to Spithead on Monday morning. The *Hecla* had on board several masters of the navy, and some younger brethren of the Trinity House, under the command of Mr. Peter Wellington, Master, R.N. She mounts six guns: two 10 inch shell guns of 84 cwt.; and four 32-p unders, 65 cwt. We annex the details of the Survey, which took her over 3000 miles of sea: she met with no ice in the Baltic.

The *Hecla* left Hull on her outward voyage on the 19th ult., and anchored in the harbour of Flekkefiord on the 22nd, and left on the 24th for Christiansand (weather very threatening, and snow storms very prevalent), where she anchored the same evening, and Mr. Wellington communicated with the British Consul; from Christiansand she proceeded to Christiania, and carried a line of soundings across the harbour, thence to Fredericksvarn, a small port near Laurvig, where she anchored on the 24th. The Commandant of that port furnished a Government pilot and a set of Norwegian charts for the whole of Christiania Fiord. She left on the 25th for Laurvig Bay, and steamed about there, then proceeded up Christiania Fiord, past Horten, to Drobach, where she anchored in the evening. The anchorage of this place was found very bad. The *Hecla*'s party went across to Christiania in sledges, and were well received. She left on the 28th, and proceeded down the Fiord of Christiana. On the 1st instant she sighted the lights of Wingo Sound at midnight, hove to, proceeded at daylight in through Warholm, Flemuh, and Hawke-road, and in and out of the north, middle, and south channels. She left Wingo Sound on the 2nd, made for the Skaw, on the coast of Jutland, and proceeded along Aitbeck Bay and Frederickshavn. She sounded all the way; in the evening anchored in Nyborg-roads; and, on the 3rd, passed between Kalsko and Spogo, noting the leading marks in and out; also the marks on the Vemeasse shoal. Then she went by the Langland Deep S.S.W. through the Great Belt, and anchored at Kiel the same night. Here she received orders to return to the Downs, in consequence of some Russian frigates being in a dangerous vicinity. It would have been a grand chance for a powerful Russian frigate to have grabbed all the masters belonging to the Baltic fleet. The masters as well as the pilots were told off, and stationed at the guns, in case of falling in with a Russian of superior force

The *Hecla* left Kiel about eight o'clock in the evening of the 3rd, and arrived off Copenhagen on the 5th, having made Dars Point on the previous morning, and examined the locality of the Plantagenet shoal, where a line-of battle ship sank some long time since. She found the shoal accurately marked on the chart; and commenced her return on the 7th, so as to be in the Channel on the 12th (as ordered). The Danish Government, she found, had recently issued an order that no vessel should anchor within a certain distance of the Trekroner Battery. The *Hecla* found that the Great Belt is easily navigable. Christiansand appeared to be the best port for a fleet to anchor in on the coast of Norway; Wingo Sound, on the coast of Sweden; Nyborg, in the Great Belt; and Kiel Bay, on the eastern coast of Holstein, a little to the south of Schleswig—the most advantageous of any for a large fleet. It is a capacious and most beautiful bay, and possesses the paramount advantages of communication by railway with Hamburg, besides any amount of victualing supplies, which are both good and cheap. Coals also are plentiful and may be had at a reasonable contract price.

The *Hecla* arrived in the Downs at one o'clock on Sunday morning, and left for Spithead at 10 a.m. She fell in with Sir Charles Napier's fleet, off Dover, at half-past 1 p.m, in two divisions, under steam, and all plain sail. The Admiral made signal to shorten sail, and for the *Hecla* to commence supplying the weather division with the masters and second masters belonging to them, and two pilots (forty of whom she had on board) to each. She commenced with the last ship of the lee division, and did not finish transhipping all the officers until 7 p.m. Sir Charles expressed to Master Commander Wellington his high satisfaction at the opportune punctuality of falling in with him, and the manner in which he had performed the duty intrusted to him. After disembarking Commander Scott, R.N., and Captains Fenwick, Bailey, and Sidney Webb, of the Trinity-house, the *Hecla* proceeded for Spithead, where she arrived between seven and eight on Monday morning. She went into harbour in the afternoon, and commenced coaling, to return to the fleet with despatches, and some necessaries for the Commander-in-Chief.

THE BALTIC SEA.

THERE is no marine excursion in Europe more capable of beguiling the leisure, or of gratifying the curiosity, of the practical traveller than a sail, at the right time of year, up that labyrinth of isle-entangled and coast-sheltered waters, which so many gallant Englishmen are now about to visit in a very different manner. But it is necessary that they should go thus to render it possible that others should continue to repair to the same scenes, either for personal pleasure, or for the profit derivable in an immense and beneficial commerce—checked and paralysed at present by the ungovernable ambition of one tyrant, who appears to be as deaf to the voice of common prudence, as to that of political honesty and public law. That magnificent fleet—which, under the command of Vice-Admiral Sir Charles Napier, will, we trust, soon vindicate the outraged rights of nations, relieve Europe for all future time from the menaces of the modern Huns and Vandals, restore the intercepted currents of traffic and of business to their thousand channels, and establish the true interests of the world on a basis of civilisation so firm and solid as not to be soon or easily shaken again—will pass by many a beautiful and memorable spot, and will first awaken its thunders amid scenes which never echoed to the like before; and never, indeed, in some instances heard the artillery of a great naval armament, fired in anger, since the world began. For, of course, the theatre of action lies much further east than in our last Baltic expedition. Artillery, indeed, and worked in anger and in earnest, has resounded over the Gulf of Finland; but it was that of land troops, when, in the depth of winter, armies have marched and fought on the safest pavement of ice, carpeted with snow, which overspread the waves of that inland sea. Our expedition is of a different nature, and must wait for a different season, and for the thaw of the Baltic

The first thing to be remarked in its geography is, how it bears as to mere distance relation to the main practicable entrance of new ships, additional equipped. There never yet was an armament so completely furnished with the formidable agencies of steam, and steam in its most efficient form of warlike application—steam with the screw propeller, the motive machinery of the ship being considerably below the water mark, and out of the range of the enemy's fire. On the other hand, there is, perhaps, no sea in Europe where there might be more pressing occasion for steam to facilitate the war like operations of a fleet. In the Black Sea, where there are sudden and violent storms, steam might often save a vessel; and, indeed, this new power must be an advantage everywhere. But, in the Baltic, which is almost wholly formed by the concentric discharge of great rivers, and where very little wind-power, or opportunity from ocean currents, can ever be anticipated, the moment for an operation might without the resources of steam, pass away before the ships could be concentrated at the required spot.

The next peculiarity of the Baltic is the length of its gulfs in which it terminates, is exceedingly important. The fleet does not leave the whole of that sheet of waters simultaneously; the western part are already so much sooner than the eastern; and, from west to east, the process of liberation once begun stretches further and further, by well known gradations. Now the Russian fleet is not concentrated in any one place; and if it were possible (which is for Sir Charles Napier's judgment, and not for that of laymen) safely to enter the nearer waters, the moment they are free, and to follow the thaw as it advances, it is evident that the Russian ships, found successively in various ports, or intercepted in their egress, or overtaken in their flight, must fall in detail, easy and blood less prizes, almost without a blow. The attempt would have its hazards; and those most accustomed to that navigation, and to the localities, might fare the best. Many a good vessel has perished just after the thaw, amid rocks which no chart can indicate—the rolling masses of half-sunken ice, which for many days infest the whole of that expanse, from shore to shore

Having beheld the magnificent pine crowned cliffs of Norway, and threaded the isles of the Skattegat, our expedition will approach, between beautiful scenes and famous coasts the two formidable gates of the Baltic—in the direct line, the Sound; and, by a little circuit to the right, the Great Belt. Nothing can be compared to the difficulty of these entrances (if they were in the hands of an enemy) except the Dardanelles. Russia, on the other hand, is under arrest in her own dominions, with sentries at the only egresses, and must never go, except by permission and on sufferance, in to the high seas

All the scene around the expedition is the ancient nursery ground of existing Europe. the Scandinavian fastness, or system of fastnesses; the home of the Scald, the sanctuary of the Saga, the starting point of the restless Norman, the cradle of all those modern empires which have developed their municipal greatness out of the feudal but heroic societies, issuing of old from here. Having passed renowned Elsinore, and fairly entered the Baltic, the fleet may be imagined to "refuse" Sweden, and to be pushed, well in hand, between Borgholme (legendary land) and Rugen, along the lower or southern shore. Beyond Dantzig and the mouths of the Vistula our brave seamen will expect immediate business, and sail with watches still more alert. At Kemel they will leave all that is even nominally neutral behind them, and try what the gripe of the bear is really worth. There runs the frontier of Russia. Not far, on the Niemen, stands Tilsit, memorable in the history of the last Emperor of Russia, brother to Nicholas. The Niemen (or Russ, or Niemen) pours its waters into the Baltic, on this side of the town of Memel; and from that to Riga there is no great port to shelter Russian vessels. If our fleet passes on, it is likely that these Russian vessels will not venture into open sea, but will wait till Sir Charles comes back and invites them to follow him; but meantime he will have done something worth notice at the great naval depôts, in Archangel, terminating the Gulf of Bothnia, preliminarily at Cronstadt and St. Peter-burg. If Sir Charles can pass Cronstadt (and we have long since heard an opinion attributed to him on this head), the war will not last a month beyond the forcing of that vaunted barrier. On his return he should take a glance at Narva, for the sake of the memory of his name-sake, poor Charles XII., and he should look in at Revel, on many accounts. Revel is interesting. Revel has been, at various times, a Hanseatic town, a Danish seaport, a fief of the Livonian Teutonic Knights and a Swedish dependency. It was obtained from Charles XII. by Peter the Great. It was under Denmark till 1347; under the Teutonic Order till 1561; under Sweden till 1700; and has been under Russia ever since. To whom will it belong in the summer of 1854? Is it possible the Scandinavian nations should not feel which side in this quarrel their interests and their honour should espouse?

HER MAJESTY LEAVING PORTSMOUT

VISIT THE BALTIC FLEET.—(SEE PAGE 242.)

The Poetry by Charles Mackay

The Music by John Gray.

Briskly.

May be sung in D flat.

Don't you know the wrong you're do-ing? Migh-ty Czar! migh-ty Czar! Don't you see there's mis-chief brewing? Migh-ty Czar! France and En-gland, one in coun-cil, Are im-pa tient for the day, And are steam-ing to the Bal tic, Ripe and rea-dy for the fray. We have hearts that ne-ver fail us, So look out for wounds and scars; For there's Char-ley Na-pier com-ing, With his gal-lant Jack Tars! For there's Char-ley Na-pier com-ing, With his gallant Jack Tars!

THE BALTIC FLEET.

I.

Don't you know the wrong you're doing?
Mighty Czar! mighty Czar!
Don't you see there's mischief brewing?
Mighty Czar!
France and England, one in council,
Are impatient for the day,
And are steaming to the Baltic,
Ripe and ready for the fray.
We have hearts that never fail us,
So look out for wounds and scars;
For there's Charley Napier coming,
With his gallant Jack Tars!
For there's Charley Napier coming,
With his gallant Jack Tars!

II.

Oh, you think you're very clever,
Mighty Czar! mighty Czar!
But we'll do our best endeavour,
Mighty Czar!
To convince you of your folly.
We are strong when duty calls,
And since reason will not teach you,
Here's success to cannon-balls!
You shall rue the day you roused us
From the sleep of bygone wars,
So, look out for Charley Napier,
With his gallant Jack Tars!
So, look out for Charley Napier,
With his gallant Jack Tars!

III.

'Tis a foolish course you've chosen,
Mighty Czar! mighty Czar!
Russia's strong, no doubt—when frozen—
Mighty Czar!
'Twas not you that beat Napoleon,
But your ugly ice and sleet;
And we'll profit by the warning,
And we'll try you with our fleet.
Ere you feel the summer breezes,
You may thank your happy stars
If you do not yield to Napier,
And his gallant Jack Tars!
If you do not yield to Napier,
And his gallant Jack Tars!

BLUE-BOOKS ON THE EASTERN QUESTION.

(Continued from page 191.)

In our rapid, but, we trust, clear and available, condensation of these voluminous papers, we have now reached the point where our Cabinet, about the end of March, last year, not content with counter-manding Colonel Rose's summons for the Malta fleet, sent him, as an exp anation of their decision, a brief and frigid despatch, which virtually and implicitly amounted to a reprimand. Ministers were soon rewarded for the patience of their honourable, but too confiding, and too costly, credulity, by receiving the most emphatic and profuse thanks from the Army, in a despatch of Count Nesselrode's, which we reproduced in last article. Our Government were pleased with the message, and were confirmed in their error. Fresh intimations were given to the public that the Eastern dispute was approaching a pacific and satisfactory termination. Nevertheless, in spite of the most sanguine hopes which an obstinate belief in the resolute and probity of the Emperor Nicholas's personal character continued to excite in the minds of Lord Aberdeen, Lord Clarendon, and some other eminent English politicians, there was something so grave, something so dark, or, at the least, so indistinct, in the colour which the embroilment had assumed, that Lord Stratford de Redcliffe was ordered to return at once to his post. Even that able diplomatist—to judge from one remarkable expression used by him in a former and early despatch—had originally, like the rest, given the Russian Emperor credit for principles incompatible with the projects which were now slowly coming to light. Colonel Rose appears at no time to have been deceived; and, if his Government, for a moment, subjected him to more obloquy and treated him as a prejudiced alarmist, he was soon vindicated by the most convincing of all advocacy—that of events. The mistake is, at this time, to suppose that, by ordering up the fleet in March, 1853, to the Greek waters, to join the French squadron, a war must immediately have been entailed; or even the chances of a peaceful adjustment rendered, in any sense, or in any degree, more solid. Undoubtedly, Russia thanked Lord Aberdeen and Lord Clarendon, with fervent alacrity, for the passive attitude they then maintained; acrimoniously censuring France, in the same despatch, for the contrary policy. But, after the passage of the Pruth, we should have had a right, without justly incurring war, to have gone not merely to the Greek waters, but (lurky conceiving) to the Black Sea. About that right there was, and there could be, no dispute. That which alone was then apparently in question was, how far we were disposed to stand upon rights, and how far to waive them and to neglect them—even when momentous interests and the safety of Europe depended upon their maintenance. Russia, which felt its way all through the earlier stages of this transaction, was then watching our movements with close and intent study. Her first error about our indifference was, of course, countenanced unawares; her other illusion, that we were disinclined to act with France, was also encouraged and strengthened; for, on the one hand, France was seen to take a step; and, on the other hand, for merely proposing a similar step, we were seen to give one of our ablest and most zealous English envoys an official slap in the face.

The next stage of the transaction may be said to date from the moment when our Ambassador to the Ottoman Court had arrived once more at his post. This was on the morning of the 5th of April; and on that very day our active Envoy addressed himself to his work. At first, the business seemed to soften. Prince Menschikoff, holding back in impenetrable mystery the ulterior demands which he had come to urge, used great insistance respecting the question of the Holy Places. The wisdom and moderation of the French Emperor rendered it evident that no serious difficulties would arise about that point; and, on the whole, Lord Stratford was in hopes that this heightened disturbance would be appeased, and that the peace of Europe would be maintained. Still the Russian armaments were prosecuted with extraordinary activity; and, when explanations on this head were asked at St. Petersburg by Sir H. Seymour, Count Nesselrode returned answers which, from the outset, were felt to be at least evasive, and soon were proved to be prevarications and falsehoods. Another circumstance was, that the tone adopted by Russia was evidently different, in the different scenes of this widespread transaction. The language of Count Nesselrode was not consistent, for example, with that of Prince Menschikoff; so that, despite of some transitory and occasional appearances of the likelihood of an amicable settlement, there were very sinister and very ominous signs remaining, which kept every Government in Europe and the whole commercial world in a state of disquietude and suspense.

On the 5th of May, the mask of this question was finally removed; in so far that, from that day forth, Prince Menschikoff could no longer make the Russian claims for certain privileges at the Holy Sepulchre, &c., the ostensible motive of the menaces or of the preparations of his "orthodox master." The question of the shrines was settled conclusively and definitively on the day in question; and it would be hard to exaggerate the praises due to the French Government and its Minister, M. de la Cour, for the temperate and conciliatory manner in which they carried the previous negotiations to a close; or those praises which, with equal justice, belong to our own Ambassador for the ability of the counsels with which he facilitated and expedited the arrangement.

This matter being done, and "done with," it would now be seen at what Russia was really aiming in the minatory and half-armed mission of Admiral Prince Menschikoff. The representatives of France and England could henceforth act in concert; and they did.

We approach a serious point in the progress of events. We have remarked that, now, Prince Menschikoff would be obliged to speak out. He lost no time. Fourteen days, and no more, after the settlement of the Shrine dispute, the Russian Envoy departed from Constantinople, shaking the dust from the soles of his shoes. This departure of the Russian Plenipotentiary occurred on the 22nd of May. All the significant firmness of the French Ambassador—all the eloquent and officious (or extra-official) efforts of Lord Stratford de Redcliffe, to prevent the fatal step, were in vain. Prince Menschikoff demanded such powers of internal intervention and protection for the Emperor of Russia, in regard to the Greek subjects of the Porte in European Turkey, that, had they been conceded, they would have made the Sultan, who, in that part of his dominions has but 4,000,000 of Mussulman vassals and 10,000,000 of Greek subjects—a mere Lieutenant of the Czar, and, indeed, his tenant-at-will in occupation of the Byzantine peninsula. The Emperor of Russia would at once have become absolute master of Turkey in Europe, with this additional insolence (beyond the violation of treaties, and the insecurity, and indeed ruin, entailed upon the whole of Europe), that the first exercise of his new authority must have taken effect, not by means of a peaceful phrase but by means of a bloody and desolating revolution. The "Christian" majority might rid themselves of the heathen minority by a "religious" carnage, justifying an orthodox Te Deum in the chapel of the Winter Palace at St. Petersburg; and then an installation of the Russian Emperor at St. Sophia, and a great intonement of the Greek Creed (with "Filioque" omitted), thundering over the waves of the Bosphorus. In logic, in policy, in basis, the whole proposition of which Prince Menschikoff's ultimatum consisted had the look of a joke; but it was urged and pressed with tragic earnestness, and with every artifice of bullying and of menace. It was rejected with serious courtesy, and with unalterable firmness; and, at last, to repeat our quotation from the French Emperor, "the Powers of the West awoke from their sleep." Too long, indeed, had that somnolent confidence, or generous "credulity," continued. Even in the waking, there was a lingering reluctance to believe in the worst. But it was only believing in the facts. No alternative remained.

It is remarkable that the despatch in which Lord Stratford announces Prince Menschikoff's departure contains also intelligence that, both at Galatz and at Trebizond, there were already "*appearances of a military advance.*" Reconcile this. If it be possible, with the pacific professions of Russia; bearing in mind that the result of this Menschikoff mission could not yet be known at St. Petersburg; reconcile it, if that be practicable, with honourable or straightforward intentions of any sort. Suppose, for instance, that the Menschikoff proposals had been accepted by Turkey (as they very nearly were; for the Divan was, at one moment scared out of all presence of mind and completely panic-stricken), the advance of troops must have equally taken place; it was manifestly so directed and so commanded, that it was not dependent on the result of the negotiations—that result being uncertain, when the military measures were actually in operation. What, then, was the design of the treacherous and unprincipled aggressor? To coerce the reluctance of Turkey, if she refused, and to destroy her if she complied; for, be it remarked that, by compliance, the Porte would have parted with all virtual authority, and all practical means of control over the immense majority of its European subjects, the Greek Separatists, banded in conspiracy, ready for an armed rising, and abetted by the advancing Russian forces: and the very same act which would have thus unbridled the Greek malcontents, would simultaneously have enraged the Mussulman population, estranged it from the throne, and deprived the Sultan of those enthusiastic defenders, of those very champions, whom his firmness has since rallied to his defence. Well, indeed, might Count Nesselrode thank the English Cabinet for refusing to send our fleet to that identical scene of action, towards which, at the same moment, the Russian troops were stealthily converging, both in Europe and in Asia, under predetermined orders, and with all the expedition that the fell energy of rapacious despotism could impart to their movements.

The French Government now took the start of ours. Disclaiming again, by an official and supererogatory precaution, all intention or wish to obtain a protectorate over the Latin Christians of the East, and thus doubly and trebly justified in resisting the Greek Protectorate claimed by the Czar, the Emperor Napoleon determined to send the French fleet to Besika Bay; a resolution notified to our Cabinet by Lord Cowley, on the 5th of June. Three days later, on the 8th, Baron Brunnow communicated to Lord Clarendon the decision of the Emperor Nicholas to seize the Principalities, and to keep them as "a deposit," until all his claims upon Turkey should be allowed.

The Turks encountered the emergency with a spirit as well as with material resources, which astonished all men. On the 15th of June, our Cabinet learned from a despatch of Lord Stratford that Omer Pasha had gone to Schumla in command of a very considerable force. How that force has since been augmented, been fourfold multiplied by the volunteers from Asia, by the contingents from Egypt, and by the general effort of the exertions of the Ottoman Government, we need not record. And now a singular page is turned; where we find military and diplomatic operations simultaneously adopted, war on the Danube, and negotiations for peace, all over Europe. To show the colour which these negotiations were ultimately certain to assume, it is necessary to do no more than intimate how Austria spoke, even at that early moment. There was no country in so critical or so difficult a situation as Austria in affairs directly provoking the activity or involving the interests of Russia. Hesitation could be understood and excused. But there was no hesitation; there were no chess and re-serve, and a grave, and even solemn attitude; but, from first to last, there has been no change of language, except to say with greater and greater emphasis, as the discussions proceeded, what had been more mildly and gently hinted at the beginning. In the early part of June, last year, Count Buol expressed himself on the conduct of Russia as to elicit the strongest acknowledgments of satisfaction from the English Government; and on the 15th of that month Lord Clarendon wrote to Lord Westmoreland to the purport indicated. Had not the Czar been demented, he would not, even at the outset, have mistaken the sincere solicitude of Austria to escape from impending war for an intent on to take part with Russia if war did become inevitable.

Knowing, now, how fruitless were all the labours at conciliation, and merely extracting from the mass of unavailing proceedings this important general fact for perpetual remembrance, that all the powers then engaged in discussion with Russia, were cordially and honestly anxious to preserve peace, and that but one cause frustrated their endeavours—the intractable, insurmountable, and delirious arrogance and pride of the Emperor Nicholas—marking and setting aside that great fact for future record, we may pass briefly over the unprofitable though protracted course of negotiations. An incident occurred on the 3rd of July, which approved that the Czar, who would debate in order to mislead, was bent, even then, upon removing the question from the Court of pacific discussion and public law, and on placing it under the influence and arbitration of the fiercest passions, and of popular fanaticism. *On that day, by command, the manifesto of Nicholas was read in all the Russian churches.*

Curiously enough, on the same 3rd of July the fatal step of crossing the Pruth was taken—all, we see, betokening early preparations and foregone conclusions. Four days later Lord Stratford de Redcliffe learned the fact; and on the 20th of July Lord Clarendon received his despatch announcing it (No. 196, Vol. I., p. 389). The dates are here of immense importance, and will be so in perpetuity; for Russia pretends that she crossed the Pruth because we entered the Dardanelles. It is remarkable that not only was the passage of the Pruth not negotiated by any violent measures but *no definite agreement* yet subsisted, or was even now framed, between France and England. Russia therefore, flattered herself she might proceed—and that no one would stop her predetermined course of temporising in words, and striking hard in deeds.

The celebrated Vienna Note was disapproved and rejected by the Porte towards the end of August. That note is the most amusing diplomatic blunder on record. It was understood *by those who framed it* in one sense, and by both of the two parties for whom it was framed in another; and, in this last, which was its real meaning, it was applauded by Russia as conceding Prince Menschikoff's demands (*which it was designed to ignore*), and condemned by Turkey for the same reason. The authors of the Note finally recognised this, and, adopting the Turkish modifications in it, sent it to St Petersburg, where it was now positively refused by the Czar. This refusal was communicated by Baron Brunnow to Lord Clarendon on Sept. 16.

At length, on Sept. 23, after reiterated and urgent instances on the part of the French Government, Lord Clarendon, in the name of our Cabinet, authorised Lord Stratford to summon part of the English fleet to Constantinople; and, on Oct. 1, both the French and English Ambassadors were empowered to call up the whole squadrons. On the same day (under remarkable coincidence, for the former fact was not yet known) the Porte relying on England and France, declared war; and on the 25th the combined fleets entered the Dardanelles. This was at instigated Russia to cross the Pruth on the 3d of the previous July!

Even after this, Russia succeeded once more in imposing upon the Powers of the west, by professing her willingness to negotiate.

Now, be it remembered that though France and England (the Porte consenting, or rather asking, and a state of war subsisting) had the clearest right, guaranteed by treaty, to enter the Dardanelles, and attack and capture any armed Russian vessel which they might, after notice, encounter; and though Russia had no such right when she took the initiative, which set her opponents free to act as we have described, but, on the contrary, committed a flagrant act of piracy in forcibly seizing the Principalities, and in treating as conquered their 4,000,000 of Turkish subjects; yet, we say, the instructions given to the combined fleets forbade them to interfere, *even yet*, with the transport of Russian troops between Russian ports (No. 152, Vol. II.). The whole history of international negotiations affords no parallel to this moderation. It was only after the atrocious carnage of Sinope (communicated to our Cabinet on the 12th of December, by a despatch from Lord Cowley) that orders were sent to confine the Russian ships of war to their own ports. These orders were not sent from London till the 27th of December. We will close this summary with the following excellent despatch from Lord Clarendon to our Minister at St Petersburg, and with the short letter in which, eight days later, he announced the conclusion of all attempts at negotiation:—

No. 4.

THE EARL OF CLARENDON TO SIR G. H. SEYMOUR.

Foreign-office, January 21, 1854.

Sir,—I herewith inclose the copy of a note addressed to me by Baron Brunnow, whose name will have appeared to you in the course of the negotiations which have taken place during the last few months, the purport of which is sufficiently recorded in the despatches which I have addressed to you, and which are therefore unnecessary to be repeated in this instruction.

I have only to add that I have received the most positive assurances from Baron Brunnow, by orders of his Government, that the Russian fleet in the Black Sea, which, at the commencement of the present year, consisted of 15 sail of the line, 11 frigates, and 7 steamers, has received no reinforcement whatever, and that the number of ships of war now in that sea is precisely the same as it was at the commencement of the year.

I have also the copy of a despatch from Count Nesselrode, which Baron Brunnow, by orders of his Government, placed in my hands, the purport of which is to express regret that I should have felt it necessary to call upon Russia to withdraw her troops from the Principalities, and to assure me that it is prompted on her Majesty's Government

FINLAND:

ITS IMPORTANCE IN CONNEXION WITH THE PROBABLE OPERATIONS OF THE BRITISH FLEET IN THE BALTIC.

It is now above forty years since this populous and industrious country was by the perfidious policy of the late Emperor Alexander, in the midst of profound peace, and without the slightest provocation, wrested from Sweden, upon pretexts as frivolous and untenable as those now advanced in extenuation of the occupation of the two Principalities belonging to the Ottoman Empire.

In an evil hour, by an overwhelming Russian army, in the heart of a severe winter, and unable, at that time, to receive any succour from the mother country, the brave Finlanders, nevertheless, valiantly defended their territory inch by inch, till at length, overcome by masses of the enemy's troops, they were obliged to yield.

Since that period, the country has been ruled by an iron rod. Cajoled at first, oppression and tyranny have since everywhere distinguished the Russian domination. Taxes, conscriptions for army and navy, restrictions on commerce, military occupation of most of the towns, Russian functionaries and spies in every part—these are among the sufferings which have befallen the once happy but now unfortunate inhabitants.

Remembering the mild sway of their former rulers, the Finlanders have never ceased to wish for return to the dominion of the Swedish crown. They have repeatedly sent deputations to Sweden, especially during the reign of Charles John, the late King, to know if their country could hope once more to join the Swedish brethren? His Majesty, closely watched by Russia, could only console them with the following laconic answer:—"*Messieurs, espérer fait la vie de l'homme*." The same spirit still animates the brave people; continuing to endure accumulated injustice from their oppressors, they only wait for a fit opportunity to shake off the Russian yoke.

The Grand Duchy of Finland, as it was formerly called, with a population of above 1,000,000 of intelligent, industrious, warlike, and active people, is a most desirable country. It is, in truth, the most valuable gem in the Russian crown. Producing abundance of corn for its own consumption, as well as for exportation, with a profusion of cattle of every description, it possesses immense forests, yielding the finest timber for naval purposes, of which not a small quantity is annually exported to Great Britain, where it highly appreciated. From its lakes and rivers, with which the country is interspersed, abundance of fish, particularly salmon of a superior quality, are taken, and exported to foreign parts, either smoked or pickled. The finest game is found in every part. To these productions may be added immense quantities of tar and pitch, which are shipped to every part of Europe, and are a source of great wealth to the Finlanders.

In most of their towns, which are partly washed by the waters of the Baltic, partly by those of the Gulf of Bothnia, there are excellent dock-yards and wharves for building ships; the science of naval architecture is carried to a great perfection, that few countries, Great Britain and the United States alone excepted, can boast of sending such fine ships to sea as the Finlanders. Receiving models from abroad, their naval architects try as much as possible, if not to improve, at least to equal them. They also build ships of any size, but are obliged to consult the intricate navigation of the Gulf, which, at places, does not admit of any great draught. Many are sent to London to be coppered after which they are to be met with in every part of the globe. Of subject, they have the finest specimen. Hence Russia draws her best supply for manning her fleets in the Baltic as well as in the Black Sea. Sober, hardworking, steady, and active, they perform their duty with cheerfulness; though it sometimes happens that, arriving in an English port, they are seduced by crimps to run away; but these are rare occurrences.

The principal towns in Finland are Abo, the present capital, and Helsingfors, the intended one, close to which is the strong and, by many, believed impregnable fortress Sweaborg, built by a native Finn Tavhom, the celebrated architect and engineer, Count Ehrenswärd, soon after the disastrous wars of Charles XII. It is of immense strength, and requires, according to report, a garrison of nearly 20 000 men to defend it properly. Considered formerly as the key to Sweden, it is regarded, during the present eventful contests, all attempts at possession. It was only in the course of the unfortunate war of 1808 and 1809, that the command, and, at one time, the country, whose name is justly lauded in the great sea romance, allowed himself to be seduced by the *promise of* Russian gold, *which he never received* (something like the reward Hungarian chieftain, Görgey), surrendered this stronghold to the Russians. The event created at the time the greatest dismay in Sweden as well as Finland, it enabled Russia to dictate her own hard terms, and peace was signed at Fredrikshamn.

Sweaborg has since been the hands of the Muscovites, who have added to its original strength. Should this fortress happen to be among the first points of attack by the British fleet, it will be a task of considerable risk and danger, as the same naval hero who display'd, not many years ago so much gallantry and valour at the reduction of St. Jean d'Acre, till then considered impregnable, should also upon the present occasion have to add to the British laurels by conquering Sweaborg. By the possession of this fortress the road to St. Petersburg is quite open. Two towns are only to be met with, namely Frederickshamn and Wyborg.

In addition to the two capitals, Abo and Helsingfors, mentioned above, Finland possesses the following towns, all more or less in a thriving condition, with dockyards, &c.:—Ulleaborg, Gamla Carleby, Nya Carleby, Jacobstad, Wasa, Björneborg, Christinestad, Borgo, and Lovisa, carrying on a considerable commerce to various parts of the world with their own ship

Let us now glance at the influence which this country may be destined to exercise in the pending contest between Great Britain and Russia. The Finlanders, as we have already observed, are warmly attached to Sweden, and will only wait for a favourable opportunity to shake off their present fetters. The presence of a British fleet on the coast, with a promise of support in the event of a general rising, would have an electric effect on these brave people, and be a death-blow to Russia.

Sweden, whose policy probably is, or will be, to side with the great Western Powers, since Russia has declared her determination not to respect her profferred neutrality, will not lose sight of her former kingdom of Finland. She will, in her own interest, send a well-equipped army to Finland, in support of any insurrectionary movement, and, by acting in concert with the British fleet and her own naval forces, soon scour the country of the last Russian and restore the brave Finlanders to their pristine happiness. It is, after all, if the express law may be allowed, but recovering stolen property. An appeal to arms would produce a good effect.

To Russia, as we have said before, the loss of Finland will be irretrievable. Sustained by, and on the celerity of the British fleet, it is to be hoped that neither snow-storms, nor any equinoctial gales, rather unusual in the north in the course of March, may impede its progress. If it can enter the Baltic, and arrive at the port of Kiel, an excellent harbour for shelter, before the Russians can get their heavy ships in open water, a good account will no doubt be given of them.

It is pretty evident that the object of Russia is to detach, by an early hostile demonstration, the Courts of Sweden, Norway, and Denmark, from their adopted system of neutrality, and to get them to carry out the contemplated operations; but Sweden and Norway, as far as it is known, and probably Denmark also, have resolutely refused to deviate from their fixed plan; and, uniting the action to the word, are making the most strenuous efforts to be ready for action both by sea and by land. A strong army is reported to have been despatched to the Island of Gotland, greatly coveted by Russia; and every precaution taken to guard Stockholm against a *coup de-main* from the Island of Aland, and to man-of-war stationed within a short distance from the capital. The Swedish Admiral is determined to enter into the intentions of the British Admiral to take immediate possession of this fortress, which, in the hands of the Muscovites, is a continual source of alarm and terror to the inhabitants of Stockholm.

EXPLOSION OF AMMUNITION.—The Health of the Treasury, having received information that firearms and other munitions of war [illegible] were frequently desired [illegible] would not likely to be made, have been in recently carried to her ports to which permission would not have been granted. In order to meet such attempts the Commissioners of Customs, that in all cases where permission is given by their officers for the export of gunpowder, fire-arms, ammunition, or other articles prohibited by the recent proclamation to any foreign country, a bond shall be taken that the same articles shall be duly landed at the port for which they are professed to be shipped and which bond shall be discharged only by a certificate from the British consul at such port that the said articles have been landed there. Similar precautions have been taken with regard to the removal of such articles coastwise, and their Lordships have directed the Commissioners of Customs to take steps to give effect to this arrangement as quickly as possible.

THE WAR IN THE EAST.

(From a Correspondent.)

CONSTANTINOPLE, 25th Feb., 1854.

The most startling event that has recently occurred in connection with the Eastern Question is the demonstration that has been made by large bodies of the people in the kingdom of Greece in favour of the pretensions of the Emperor of Russia. How far the same spirit may extend among those of their own race who are the subjects of the Sultan, has not been accurately ascertained. There can be no doubt but that they lean more to the side of his declared enemy than to him; but unless, in combination with some striking reverse on the side of Turkey, it is not supposed that their partisanship will assume any dangerous shape.

Russia is accused—and not without reason—of having fomented these hostile feelings that have been shown by the King of Greece's subjects. Othe himself is also said not to discourage them. What is his motive does not seem quite so clear. Religious liberty and equality, of course, are the cry not up by the leaders of the people; but that plea, in reality, has very little to do with the business, for toleration is here granted to men of all persuasions. The bitter remembrance of former wrongs and oppressions inflicted by the hands of the Turks and the fond belief that their power is tottering to its fall, are some of the real causes of this declaration of hostility towards their former masters.

Ambitious aspirations after national greatness are other elements that may be at work in their minds. It has, of late, been often proposed by political enthusiasts, and speculators, who, of course, have never gone through the practical part of legislation, that the Turkish rule should be swept away, and a Greek one constructed in its place. There is in that idea much that is pleasing to the Greek mind. But that the Allied Powers of Europe will overthrow a long-settled and acknowledged Government, to which they have already pledged their faith and protection, that they will cut out a new country, form the Greeks into a distinct nation, and give them an independent Government, is a mere chimera. The present difficulties of the Allies are quite formidable enough. Such a task would enhance them to an indefinite degree.

The Greeks have had their day. It is long gone by. Their empire, like that of others equally great, has passed away; and they must be contented, like many other fallen nations, to mix with the common races of mankind.

The fleets have made no hostile move yet, nor is there any sign of any rencontre with the Russian ships occuring. Their presence in the Black Sea, must, however, effectually prevent the repetition of any such catastrophe as took place at Sinope, and a power of vast service to the troops in Asia, in securing for them regular supplies of stores and provisions.

It is now generally understood that no operation against Sebastopol shall take place.

Passing down to events of less note, we may mention that the steamers that arrive here are doing a brisk trade in bringing up volunteers for the Sultan's army. The French steamer arrived the other day from Marseilles and the Italian ports. Every available part of the vessel was crowded with passengers, one half of whom were men who came with the intention of tendering their services to that new-raised chief, Omer Pasha. A very miscellaneous collection these adventurers formed, and they seemed to eye one another not only with feelings of intense curiosity, but of considerable jealousy. Every one appeared quite confident of being about to enter upon a successful career. Not a few were in pecuniary straits enough, we understand to believe that, by one jump, they would clear all obstacles on the road to fortune, and attain to a position in the military profession which, in ordinary circumstances, demands nearly a life-time of patience, steadiness, and courage to reach. Some were French, who, with the restless spirit of their nation, were anxious to figure in the stirring strife; others, again, at the same time, it could not be brought to a successful issue without their co-operation. Others, Hungarians, who had come from exile in America, to improve the double chance that might occur of having pay and promotion in the Turkish army, and of taking part in another insurrection of the Magyars. Others were Italians, who have been deeply implicated in the revolutionary events that took place, not, in 1848, in almost every state in Italy—willing to be employed in almost any work, until their native country shall be ripe for another struggle. Not the least part of the number was our own countrymen. They were almost to a man officers in the army, and their appearance was referable to their profession. To complete the list, there was a proportionate supply of doctors and apothecaries, speaking various languages.

A few words of caution we think not out of place to persons at home or elsewhere, who may contemplate coming out here for the same object. To test their expectations of promotion in the Turkish army on their fancied or real superiority in military matters over the same class in that service, is a most erroneous way of calculating on success. The method of finding out what their chance is, would be to ascertain what is the feeling of the Government in reference to such offers, without regard to their own individual merits. The Government has no idea of removing its own field officers and of replacing them with lower grades of British officers, however well up to their business these may be. Should our captains and lieutenants have influence enough to be brought under the notice of the military chiefs here, they must be content to occupy a position under a Turkish commander, who may not only be ignorant of his profession as understood in our army, but be unacquainted with the usages and refinements of good society. At such a connection, I am satisfied nine tenths of the officers of our army would revolt, and from which they would retire in disgust. Any more liberal scheme of promotion can hardly be expected to prevail even under the dangers that threaten the country against the long-established conservatism of the Turkish system. Adherence to the old practice is the great peculiarity that pervades all the institutions here; and although reform has to a great degree swept away many of their military prejudices, yet the handing over the command of large bodies of their forces to foreigners, is a change which the selfish interests that are at work in the army are too strong to permit. The foreigners, with few exceptions, who have acquired rank in their army, have not done so suddenly, and by passing over the heads of others, but by going through most of the grades of the service. They have become naturalised, and are in their feelings essentially Turks. Turkey is their adopted country. Its language and customs they comprehend as well as the native who has been familiar with them from his infancy.

I have only to add that a man cannot be many days here without having his eyes opened to see that many of the ideas entertained by the British public in favour of this people, are mere delusions—the creations of romance and of a perverted imagination.

VIATOR.

NAVAL COMFORTS.—The health and requirements of the troops destined for Russia have been especially cared for. Many necessaries not to be had in barracks have been ordered; and the humblest in the regiments is destined to have as many comforts which would have surprised the commanders of by-gone campaigns. Even the *governess* of a soldier's children will not be left behind, for the Duchess of Kent has given a free passage to that officer, to provide each man with an extra blanket (under Gibbon's patent) to last the trip. In this respect Russell is better off than the sailor, who, we believe, with a hard exception or so, is still obliged to use a soap for his ablutions which is totally useless in salt water.

THE NEW REFORM BILL.—A public meeting, called and presided over by the Lord Mayor, in the Council-house of the Town hall, for the purpose of considering the provisions of Lord John Russell's New Reform Bill, was numerously attended last Saturday evening. Mr. Alderman Wire moved a resolution to the effect that it contains objectionable clauses which, he considered, would destroy the principles and that the new Reform Bill fairly entitled to the undivided support of all sincere Reformers, was carried.

FIRST IMPRESSIONS OF SINOPE.

It was moonlight when the last of the leviathan ships of the combined squadron of England and France reached her anchorage in the now-peaceful Bay of Sinope, whose waters had, but a few days before, run red with the blood of the Turk, and closed over the remains of so many brave and devoted men. We looked upon the lofty and picturesque outline of the circular Bosphorus-like steep slopes, which had so recently echoed back the Russian thunder, were strongly defined by a bright background of cloudless sky; in the little town beneath, twinkling lights shone out from the casements of such of the houses as were included by the walls. Night threw her mantle over the unroofed mosque, the shattered minarets, the shot-torn hills and the wreck of many a gallant ship. It was difficult to realise in the quiet beautiful scene that now met our view, the sad tragedy which had so recently enlisted the sympathies of Europe, and confined to bring to this unfrequented port one of the noblest fleets that had ever put to sea, manned by the world's best warriors, the brave champions of the oppressed.

Early a few hours morning dawned upon Sinope. A very Turkish-looking place it was, as seen from the anchorage, with its red-tiled overhanging roofs, and its wooden houses standing in the midst of cypresses and other dark evergreens; its picturesque Orientalism was not a little marred by the shattered walls, which concealed that portion of the town which the fire had devastated.

We landed, not forgetful that Sinope was the birth-place of Diogenes, and once the capital of Mithridates. Passing through the small dockyard (where, strange to say, a fine fifty-gun steam-frigate, in the course of construction, had escaped the hand of the destroyer), we entered the uninclosed church, chiefly occupied by the Greeks. Here, on either side, traces of recent war met our view. Clean round holes, of different sizes, through which the shots from the Russian ships had passed, were still unrepaired in the front and sides of the wooden habitations; while, in some of stronger build, the iron missile still remained embedded. One of these intruders was pointed out to us, which had passed through the door of a house and, after ripping and expending two large casks of wine, had buried itself in a neighbouring wall.

As we ascended the hill, and approached the outskirts of the town, the symptoms of such visitations were more frequent. Wherever we appeared, inhabitants and children fled from us with exclamations of alarm. Closing their doors, they cautiously reconnoitred us from behind their jalousies; but a few kind words and looks of sympathy soon reassured them. Little children, some of whom were singularly beautiful, came out and invited us into their houses, that they might show us the "large iron balls" which had fallen amongst them, and they were apparently delighted to explain to us the mischief done. Their childish glee and simplicity accorded well with their animated countenances and graceful movements. In our progress we observed a poor woman, who was watching us from her latticed window, whilst we were examining her shot-pierced house. She pointed us to the direction whence had come the ball which had entered her quiet dwelling, then, making a sign to us that it had passed through the heart of one of her family, she burst into tears, and rushed away. Many of these unoffending people were thus destroyed; and it is said that no less than a hundred and fifty, amongst whom were many sick, were thus killed, or perished in the flames.

The Christian Consul's house had not escaped; and we found the hill above the demolished, but temporarily re-constructed, fort, polished up and perforated with shot and shell, in every direction. Beneath, lay the bones of one of the Turkish artillerists, who had chosen to die and the ground was literally covered with burnt fragments of her timbers and portions of her wreck.

Returning through the Turkish quarter of Sinope, inclosed within the walls, we found how complete had been the work of destruction. It was there that the Russian shells had fallen and set fire to the town, and the greater part of it was a black and irreparable ruin. The eyes rested only upon heaps of stones, and half-consumed walls: mosques, baths, and fountains had shared the common fate. One tall minaret still stood, erect among the ruins, although scorched by the flames, and battered by cannon. It was sad to see, in this scene of devastation, melancholy-looking groups of wretched sufferers sitting amongst the remains of what had been their houses, for lost or burned property; and sadder still to see, crouching beneath the accustomed but unroofed wall, more than one family of homeless men.

There sat one of the sufferers—a surviving woman, whose face of sadness, her pink yashlik, or head-dress, only half concealed—surrounded by her miserable children. Looking and domestic troubles were around them—it was still their home—but it was desolate. With great wistfulness she poured forth her lamentations, interspersed with numerous ejaculations upon the "Moskov" and the "Russ," for by both these names are the Russians designated by the Turks. We tried to comfort her by saying that the Moskov could come no more; but she only looked upon her children with a wild fury, raised her hand to heaven, and muttered "Inshallah, Inshallah!" (Would to God it were so!)

We passed by but one fountain, which the fire had not destroyed. Through the western gate we proceeded down on the massive gigantic walls of the old fortress and the breaking billows of the Black Sea, as they dashed up their spray to the very battlements. Here the numerous cannon had been most violent. Here the site of newly-made graves, extending far along the sandy shore, and the wrecks of many ships lying around, pointed out too truly the fatal tragedy. The sand had been loosely thrown over these graves, on which the called remains of the victims had been interred so hurriedly, that here and there, as we passed them, a limb of the dead might be seen to protrude. The sea had just thrown up the bodies of two Turks, and they were left lying upon the beach, which was strewed with every variety of fragment belonging to a ship's equipment. The place was almost impassable, from the mass of miscellaneous articles which had been cast to the destroyed vessels. Furniture and the grass and fields were covered with burned fragments of the town—pots and pans, copper bolts and chains, and spars, and shreds of clothing of the poor fellows whose bodies had been scattered to the winds.

More than two hundred yards from the beach, midway up a lofty hill, and at least a quarter of a mile from the remains of the ship from which it must have been thrown, we found an anchor weighing nearly fifteen hundred weight.

A cottage on this hill overlooked the scene. It had been struck by the balls of Russian thunder, which lay imbedded in its garden. A shabby-looking old Mussulman sat on one side, smoking his chibouque. His calm, magnificent countenance exhibited no signs of emotion; your true Turk never shows any—he continues to smoke in the midst of the battle, or our remarks on the deserted scene. What was it to him? It was his kismet (his fate) and he smoked on.

The massacre of Sinope (for by a milder term such an unequal contest can scarcely be called) must ever be a dark spot upon the Russian name, a stain upon the Muscovite flag. Many hundreds of the brave sons of Turkey and of Egypt sleep upon Sinope's shores, or bathe in the wild waves which lave them. They sank unconquered with the flag they would not strike. All honour to their memory!

AN OFFICER ON BOARD H.M.S. "BELLEROPHON."

THE WAR ON THE DANUBE.

(To the Editor of the ILLUSTRATED LONDON NEWS*).*

From the commencement of the publication of your very useful Journal, I have been in the habit of taking copies of it weekly for the benefit of friends at a distance, as a means of conveying a larger amount of information than they would like to wade through in letter-press. The Drawings have almost invariably been executed with very great taste, but beyond that, with a correctness which affords evidence of no little acquaintance with the details of the subject under its treatment.

That I have always noticed and admired; but the late numbs rs of your Journal, referring to the War on the Danube, have conveyed such abundance of useful and truthful information on the subject, that I do not hesitate to volunteer my evidence as to the extreme correctness of all the Illustrations, of which the originals are known to me, feeling that it must be very satisfactory to you to receive such [illegible] from a person who has lately travelled through a great part of the country in question. Moreover, as your Engravings are most peculiarly useful in rendering immediately intelligible the mass of information which, otherwise, the country through other sources would be required to study before it could be [illegible] to your readers to know that such valuable can be paid on to receive any of such Illustrations.

I am, &c.,

A SUASCRIBER.

London, March 10, 1854.

P.S.—I send you my card.

THE SOUND DUTIES.—The United States Government is said to have formally protested against the toll taken at the Sound; as the Danish Government has put the paper away in the same department of the public archives which already contains a myriad of similar protests to this. It is probable that the Danish Government will negotiate with Jonathan on this subject.

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXIV.] SATURDAY, MARCH 18, 1854. [GRATIS.

THE BRITISH INSTITUTION.

WE have this week the pleasure of publishing four Engravings from pictures, in various classes of art, in the present year's Exhibition at the British Institution.

"SANCHO PANZA AND HIS WIFE."—BY J. GILBERT.

The place of honour is given to Gilbert's spirited picture. "Sancho Panza informing his Wife of his coming Dignity, and of his Intention to make his Daughter a Countess." Our engraving of it will fully confirm and justify our praise, in a previous notice, of the admirable manner in which the figures are studied and the story told. How exactly the expression of the countenances are in harmony with the vigorous dialogue:—

"I tell you, wife, that did I not expect ere long to see myself the governor of an island, I should drop down dead upon the spot."

"Go, you, husband," replied Teresa, "to your governing and islanding, and puff yourself up as you please; as for my girl and I, by the bones of my mother, we will neither of us stir a step from our own town."—*Don Quixote*, part ii., ch. 5.

The costumes are strictly national and historical. The dog, and various articles of furniture and company, are well in keeping, and faithfully represented; and the colouring, of which we particularly spoke in our last notice, is admirable for judicious selection and harmonious arrangement.

(*Continued on page* 260.)

"SANCHO PANZA AND HIS WIFE."—PAINTED BY JOHN GILBERT.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

WITHDRAWAL OF TROOPS FROM THE WEST INDIA ISLANDS.

(From our Military Correspondent.)

The motive influencing Government to withdraw her Majesty's troops from several of the West India islands propounds an enigma not readily solved. Barbadoes, Trinidad, and St. Lucia, are the favoured stations where the Queen's soldiers are to be garrisoned. Detachments furnished for the protection of St. Kitt's and Dominica were called into head-quarters on the 5th January last. Those from Tobago and St. Vincent have likewise been embarked. As a temporary measure, Antigua and Grenada retain their complement, on account of the difficulty of providing quarters for them at present in any of the three islands previously mentioned; but eventually they will be removed. The barracks at Barbadoes are now filled, while three companies are encamped on the Savannah. The commissariat and store-keepers are under orders to proceed to head-quarters from the posts vacated, on completing their accounts; and a gloomy anticipation of the future is reserved for the proprietors who remain on their estates.

Barbadoes was conquered in 1625; Trinidad, in 1797; and St. Lucia, in 1803. St. Kitt's was ceded in 1623; Dominica, in 1783; Tobago colonised in 1763; Grenada, in 1783; and St. Vincent in the same year. At the smaller islands of Nevis, Montserrat, and Tortola, it has not been customary to locate troops; but the recent outbreak in the latter colony might have led to further disastrous results, had it not been for the friendly assistance afforded by the Dutch, from St. Thomas's.

When these several islands were conquered or ceded to the British Crown, and colonisation encouraged, the promise of military protection formed a leading feature, influencing men to emigrate from England, and engage in the speculation. Had such concession been withheld, it may be questioned whether English capital would, at that period, have been risked. The Caribb Islands were then populated by a race now nearly extinct, having been succeeded by the African blacks imported as slaves. Since emancipation, the value of West India property has greatly deteriorated, and the enforcement of the present measure cannot tend towards a reaction. The supporters of the abolition of slavery merit the highest commendation; but has not the anticipated good exceeded the result? The negro is proverbially averse to any description labour; and, provided he can exist without the fatigue of work, it would be difficult to make him comprehend and advantages derivable from exertion. In a country abounding with fruit, vegetables, and fish, and with a climate obviating the necessity of procuring warm clothing, he prefers a precarious livelihood—no matter how obtained—rather than honestly to earn a subsistence. The majority of a population being so disposed, there is no satisfactory guarantee for quiet and peaceable conduct. The presence of the military has hitherto imposed an immediate check on occasions of violence and disturbance. Negroes have not courage to face the Queen's troops; but, if animated with the spirit of revolt, evil passions might prompt them to the commission of any crime, if uncontrolled by a disciplined force. In the smaller islands the number of police does not amount to more than from fifteen to twenty men; and these would be found of small utility in the event of sudden and serious outrage. To what source, then, can the planter look for assistance in the time of trouble, the soldiers of the line having been removed from the possibility of affording aid? The proprietors of estates are now left at the mercy of the blacks, to act as caprice or bad feelings dictate. By the last arrived West India mail, information was brought that St. Vincent was already threatened with an outbreak. The Lieutenant-Governor had applied to Barbadoes for a company, offering to pay £2500 per annum out of the island treasury, if permitted to retain soldiers for the protection of the inhabitants.

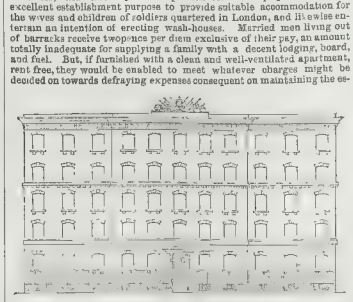
If retrenchment is the desired object on the part of the home Government, it will not be attained by simply stationing the present establishment among three islands. The saving must be achieved by reducing the general staff in the command. It is currently reported at Barbadoes that every department will be more or less curtailed. The appointment of General Commanding the Troops, will, it is said, devolve on a Major-General instead of being held as at present. That arrangement would substitute an Assistant Military Secretary for the higher grade. One Aide-de-Camp would be struck off, and five Fort Adjutants return to their corps. A Deputy Inspector-General of Hospitals is spoken of in place of the Inspector. Three first-class Staff Surgeons will in that case be borne on the strength in lieu of six, and so on through the other grades. It is likewise expected retrenchments will be effected in the offices of the Deputy Adjutant-General and Deputy Quarter-Master General, as well as in the Commissariat and Ordnance Storekeepers' departments. The officers of these several branches who have resided head-quarters from the vacated stations, being supernumeraries, are to return to England by an early opportunity.

The result of these changes will unquestionably diminish expense, but the end will be achieved by a formidable loss to the colonists in being deprived of security, not alone for their property, but at the same time placing in jeopardy even the lives of themselves and their families. It may be judged "expedient" to carry out the project, but it is assuredly a cruel measure. The feeling of safety so long enjoyed by sojourners in the West Indies will rapidly give place to painful consideration regarding their now helpless condition. Should turmoils arise, the ungarrisoned islands cannot receive succour until after the mischief is accomplished, when interference must necessarily prove fruitless. These, and other points of pressing importance to the planter, should be well and carefully considered before Government leaves him to his fate, surrounded as he is by an indolent and uneducated race. Persistance in the new plan will increase the too prevailing embarrassments constantly complained of, and few men will voluntarily reside on an estate in perpetual disquietude through apprehension of impending calamity. By withholding military support, the better class of persons in the neglected islands will be necessitated to abandon their possessions, and it will prove no easy matter to find new purchasers for plantations under such discouraging circumstances.

VICTORIA LODGING-HOUSE, WESTMINSTER.

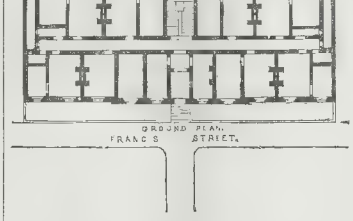
Those whose energy and interest are exerted towards attaining a philanthropic object, become speedily conversant with the difficulties inseparably attendant on applications for pecuniary support. Reasons for non-compliance are readily advanced, and oftimes the objections raised appear unanswerable. In no country throughout Europe can be found so many benevolent institutions, supported by voluntary contributors, as in England. There is scarcely a class in the community that does not boast of some refuge being available in cases of extreme need. Houses of reception are open for the homeless wanderer, and even crime finds shelter and inducement for reformation. The donations bestowed, and legacies annually bequeathed, for charitable purposes in the United Kingdom are immense; but the position of the wife and children of the British soldier has hitherto been passed without salutary amendment. So great an oversight may possibly be attributed to the natural conclusion that Government would assuredly provide against demoralising influences, which in a civilised age we may well blush when acknowledging that until now have been utterly disregarded. The degradation to which women living in barracks are conspicuously necessitated, has already been demonstrated in this Journal. Even if originally impressed with sound moral notions and religious feelings, it is impossible a female can escape undefiled from the contamination she constantly breathes. Recruited as the English army is, the habits and language of the private soldier cannot in a few instances be quoted as irreproachable. What, then, is to be expected from a woman who passes her days and nights in a room occupied by ten or perhaps thirty men?

Hundreds of individuals withhold donations from incertitude as to their appropriation, rather than from disinclination to bestow the bounty. In the case of the Victoria Lodging house no such objection can be started. The names of the trustees offer sufficient guarantee on that point. Honour is due to the officers of her Majesty's household troops and others, who have set an example which doubtless, will liberally be responded to. The projectors of this excellent establishment purpose to provide suitable accommodation for the wives and children of soldiers quartered in London, and likewise entertain an intention of erecting wash-houses. Married men living out of barracks receive twopence per diem exclusive of their pay, an amount totally inadequate for supplying a family with a decent lodging, board, and fuel. But, if furnished with a clean and well-ventilated apartment, rent free, they would be enabled to meet whatever charges might be decided on towards defraying expenses consequent on maintaining the establishment. Thus, freed from the pollution to which narrowed means force them to subject their families, the wives will be afforded opportunity for industry, and the children brought up respectably and in comfort.



THE VICTORIA LODGING-HOUSE.

The Victoria Lodging house now building is designed for the accommodation of fifty-four tenants. That proportion is comparatively small when the number of married soldiers is taken into consideration; but the building could rapidly be enlarged were the influent to commensurate their bounty by the incalculable good they might confer on those whose devotion and loyalty have ever shone conspicuous when called upon to uphold the honour of their Sovereign and their country. Unlike most other institutions, the Victoria Lodging-house will be enabled to defray its own expenses after completion. His Royal Highness Prince Albert has been pleased to notify his approval of the undertaking by heading the list of subscribers; and, when a generous and humane project is substantially based, it would be difficult to point out an instance where the support of her Majesty's Consort is withheld.



GROUND PLAN OF THE VICTORIA LODGING-HOUSE.

It would be easy to particularise the prime movers in this benevolent and truly righteous enterprise; but those who conscientiously labour to do good are the very last to wish their names bruited abroad in terms of approbation; and the bitter humiliations endured by the soldier's wife has long furnished a prolific theme for animadversion. But it was reserved for the officers of the Guards practically to lay a foundation for that reform which it is hoped the Secretary at War will vigorously follow up throughout the army. So noble and disinterested an example cannot fail in ensuring support; and it never can be contemplated that human endeavours to rescue women and young children from scenes and conversation alike repugnant, will be retarded in effect, from paucity of funds. That which is now commenced, should long since have been completed by Government; but, as pecuniary outlay forms the rock whereon benefits launched in legislative councils generally wreck, let it be shown that the liberality of individuals can cheerfully tender aid in behalf of the soldier's family, and thus rescue hundreds from degradation and vice.

A CRUISE IN THE BLACK SEA.

(From a Correspondent.)

We have just returned from another cruise in the Euxine. On the afternoon of Friday (28th January) we got orders to prepare for sea, and to take the *Firebrand* under our orders. We both anchored for the night at the mouth of the Bosporus, and early next morning proceeded into the Black Sea. We then waited for two Frenchmen, *Gomer* and *Sane*, who came out soon after. We at first thought that our destination was Varna, but the French made signal to steer for Kaffa, on the Crimea, not very far from Sebastopol. Before entering the Euxine we loaded with shot, and made warlike preparations, such as getting shell into the steerage, &c. We made Kaffa on the 31st; but before going in we sighted a large vessel under topsails running along the land inshore. Being foremost steamer, we immediately signalled an enemy, beat to quarters for action, and stood in for the vessel with our guns run out and pointed at her. However, she was no Russian after all, for, on seeing us bear down, she hoisted Austrian colours, and we then made her out to be a large merchant ship. We bore up for Kaffa, the weather really frightfully cold; thermometer standing ten degrees below zero. The only building we made out were two spires of churches, the rest of the town appear d completely buried in snow, and all the country round one mass of white. There were three small Russian steamers lying here, and a good many merchant vessels, but we only looked in, I believe, to see if the Russian fleet were there. We then shaped our course for Varna, which we reached on the evening of the 3rd of February. It is beautifully situated, and pretty to look at outside; but, like all Turkish towns, muddy and dirty within. All things seemed good and very cheap there. We left next evening, and arrived in the Bosphorus the morning after, anchoring at Buyukdere for the forenoon, as it was snowing heavily, and too thick at that time to go down amongst the fleet. In the afternoon we anchored at Beicos, and to-day (5th February) commenced coaling.

Colonel Sykes, F.R.S., of the Hon. East India Company's service, has been elected to the office of Lord Rector of the University of Mareschal College, Aberdeen, by three of the four nations; and by a numerical majority of votes of 140 to 105. The installation is to take place on a late day in March.

Rendle's "Price Current and Garden Directory."—This is a scientific catalogue of the seeds of garden plants, by Mr. Rendle, of Plymouth, the eminent nurseryman: the pamphlet will be very suggestive to all who are fond of a garden, as it contains not only a classified list of every necessary or ornamental garden seed, but also the fullest description of the plants and mode of cultivating them. We rarely find so much information in so small a compass.

THE CORPORATION OF LONDON.—A DAWN OF HOPE.

We have devoted to the consideration and discussion of matters connected with the Corporation of London much more than our space would usually warrant. Some of our readers may have thought the shortcomings of that ancient body have been made more prominent than it deserved. That, however corrupt may have been its conduct, however extravagant its expenditure, and however iniquitous its administration; still it is comparatively an unimportant, and, in some respects, an insignificant part of the great metropolis. Those who entertain such views forget how deeply and widely its influence ramifies. There is not a sewer, creek, wharf, or ordinary landing place, from Staines to Yantlet Creek, unmfluenced by its government. There is not a portion of the great valley of London where its lack of wisdom is not felt, nor could there be found, we verily believe, five hundred persons in a population of 2,500 000 who would not unhesitatingly declare that the Corporation, instead of being a benefit to the people, has been the greatest obstacle to public improvement. When we remember that the population of London is larger than either of four kingdoms on the continent of Europe, nearly as large as Scotland, and contain a larger number of human beings than existed in England during the reign of Henry VIII.;—when, furthermore, we know that our columns reach every class of the population, embracing every sphere of life, and are probably perused by half a million of people, whose residences may be found within the radius of twenty miles, measured from St. Paul's Cathedral, the whole of whom are directly interested in the investigation now proceeding—all being subject to the unwise duty on coal—we have felt ourselves justified in giving all the information within our reach. By thus endeavouring to educate the general mind, we have enabled public-spirited men to suggest such improvements as may lead to a thorough system of municipal government for the whole metropolis. The time of action is at hand; and, if the ancient Corporation be not completely revised, the fault will be, not with the public press, which is unanimous upon the subject; nor with the Commissioners, who already, by their searching questions, strongly indicate the decision at which they will arrive; but, with the pusillanimity of the people whose interests are directly involved. If the citizens of London desire a complete and perfect economical system of government; if surrounding districts earnestly wish to curb the presumption of the City, and strictly to define the area of its influence, now is the time for action. Let every parish, district, and township within twenty miles of St. Paul's Cathedral, petition Parliament to effect an entire change: point out the anomaly of the nineteen-twentieths of the population being taxed for the advantage of the twentieth part, without having either a voice in its proceedings, or any advantage from its administration. Government requires no spur, it needs no argument; it only asks the support of the aggrieved as one incentive to warrant the completeness of the reformation they desire to introduce. Let this be given, not tardily, but fully and promptly, and with an energy as if it were meant; and no jesuitry, however clever—no reasoning, however specious—will save the Corporation of London from the doom that awaits it.

In our series of articles we have hastily glanced at the condition of the streets, the river, the bridges, the markets, and almost every matter of interest to the public. We have reviewed the evidence given against the Corporation, and referred to the elaborate answer drawn up by the officers of the Corporation, under the superintendence of the Consolidated Committee. It has been our duty to go into the discussion as a matter of public interest, to weigh deliberately every argument, so as to determine whether the charges were refuted or remained in force. Now, we are bound to record that, after reading all that has been said on both sides, the Corporation stands entirely and most completely condemned. Contradictions have been numerous, denials of the truth of previous evidence frequent; but none of the gravest accusations have been disproved. Charges of malversation have not been made; therefore, the honesty of the Corporation has never been impugned. Charges of incompetence have certainly been given; but, as they are only matters of opinion, and cannot be held to be criminal, must go for what they are worth, and the public will adopt or reject the evidence according to the faith they have in the witness.

The great charge undeniably is that of general wasteful extravagance, and that has not in any way been denied except by a few of the officers—and, inasmuch as they are interested parties, their opinions must be taken with caution. An intelligent and newly-created deputy has declared that, in his opinion, and in the opinion of the public, the inquiry has entirely failed in showing any defect in the management of the Corporation. His evidence is rather the expression of a cherished desire to have things remain as they are, than the opinion of a perfectly clear and unbiassed witness. Another witness, instead of adhering to the large questions involved, went off on collateral issues; but was speedily drawn back to the proper point, and desired to direct his evidence to the charges made. His remarks on Smithfield were held to be beside the question: that matter being settled, it was considered undesirable to re-open it. He then attempted to rebut certain opinions in regard to the bridges of the metropolis; and was again reminded that matters of fact in regard to the Corporation, and not matters of opinion, having reference to bridges, were then before the Commission. Foiled and half-baffled by his own bewildering devices, he declared that no article had ever been sent to the public papers at the instigation of the Committee, or through the instrumentality of its agents; and, therefore, he gave the evidence of Mr. Bennoch on that head the flattest contradiction. The gentleman seems to have forgotten that Mr. Norris and Mr. Acland had certified the fact. Nay, more. Mr. Scott himself had not only bought a paper in which to insert such articles, but declared on oath that £100 had been spent on *literary* men and lawyers. For what purposes were the literary men engaged? Some witnesses avow that articles were written and paid for by the Corporation. If the money went to bribe persons having influence on a newspaper, and the proprietors were only to be rewarded by the purchase of the prescribed number of copies, the case is in no way mended; only instead of being a direct bribe to the newspaper proprietors, it was a roundabout way of arriving at the same result. Instead of corrupting the principal reservoir, they only polluted one of the tributaries. The end was the same. Judging from the ostentatious mention of the names of certain respectable papers, we can only conclude that either those papers shared in the infamy, or were mentioned to bolster up and give an air of credibility to an otherwise ridiculous, if not infamous, statement, unsupported by any evidence, and in direct contradiction of the best-informed members of the Corporation. We place very little faith in the opinion of the witness, for we understand that he was the great opponent of the removal of Smithfield—the chief cause of its being placed in a locality nearly as crowded as the one from which it has to be removed; and now takes credit for supporting plans which will involve an expenditure of £350,000. An impartial reader might gather from the evidence under consideration that Mr. Taylor was the most thorough reformer connected with the Corporation, and he takes credit for some new design for meat markets, and a railway to connect the northern railways with the Post-office. This gentleman is clearly a reformer by compulsion; for, on referring to a file of newspapers, we discover his name prefixed to speeches opposing the introduction of railways to Farringdon-street, the construction of bridges, the removal of Smithfield, and in favour of compelling all dealers within the City to take up their freedom. By some singular process of legerdemain, or an extraordinary assurance, he seems foremost in opposing every proposition for improvement, and, also, ever foremost in claiming

credit for the establishment of what he opposed. Verily, there is little occasion to search far for abundant proofs that consistency of character and harmony of conduct are not Corporation virtues.

The evidence is getting excessively diluted. The leading men of the Corporation, and all the principal officers of the ancient municipality, have been heard; and, so far as we can judge, they have increased the tide of popular disfavour, rather than stayed it, by their evidence. Petty jealousies, personal attacks, misrepresentations, misquoted evidence, and opinions vague and unsatisfactory, have been the staple of their tedious examination. Not one of them has dared to defend either its system of accounts, or the items of which they are composed; while the best-informed witnesses make them the lever by which the Corporation is to be moved into its proper position, and £70,000 or £80,000 saved in its annual expense.

More important matters to the universal public will now engage our attention and occupy our space. The discussions in Parliament, the issues of war, and the good of the world are more momentous than the affairs of any given locality, however interesting they may happen to be. Although we close with this article all formal expositions of the conduct of the Corporation, we shall, nevertheless, watch the proceedings of the Commission, and look forward with deep interest to the report of the three able men who are so judiciously conducting the inquiry.

Here we might have stayed our strictures; but, advocates as we have ever been for the establishment of a thorough system of National Education, we hail with satisfaction every indication of a move in the right direction, and are cheered by a dawn of hope. There are specialties in education, as in everything else. Up to a certain point, education must be "massive unity, as the trunk of a tree is massive and one," beyond a certain point, it may and must stretch its branches in the direction the human being is intended to follow: legal knowledge for the law, theology for the Church, and anatomy and physiology for the medical practitioner. So we might go through every branch of study and industrial occupation. It is with more than ordinary satisfaction that we find independent witnesses opening up the affairs of Gresham College—not in a spirit of antagonism to the Corporation, but with the expressed object of rendering that institution a living spirit among the people, and not permitting it to continue a dead carcase, encumbering the earth. To this idea, the Corporation witnesses, as well as the Gresham professors, cordially assent. So, if, after all, nothing better should spring from the Commission now sitting than the restoration by vigour of the College founded by Sir Thomas Gresham, much good will have been done. The exposition referred to has already had this good result. Several institutions have begun to consider how they can adapt their rules to the rising wants of the age; and we have heard it stated—with how much truth we know not—that the Gresham Trust Committee, the London Institution Managers, the Mercantile and Maritime College Committee, and the Travers Testimonial Committee have conceived the propriety, and are considering the possibility, of consolidating their interests—their aim being the same—so as to establish a Mercantile, Maritime, Commercial, and Nautical College, managed by merchants, bankers, traders, and navigators; and thus elevate, by a thorough system of training, the various classes indicated by the names enumerated. This is a work worthy our time, and worthy the metropolis, and we earnestly hope that no jealousy or spleen will prevent a cordial co-operation of the several parties. The accomplishment of such a work will be honourable to all, and we shall be most happy to lend our aid to bring about so desirable a result.

TESTIMONIALS IN GOLD AND SILVER.

THESE superb pieces of Plate have been designed and manufactured at the establishment of Mr. Hunt, 26, of Bruton-street, and present fine specimens of working in metal; and are worthy of illustration, as examples of that department of design.

THE GOLD CUP AND COVER

Is made of Australian gold, sent over for the purpose by the Hebrew community residing at Melbourne, as a mark of their respect to the Chief Rabbi. The design consists of a circular foot, with chased border, whence springs a banana-tree, which expands into and supports the cup. This is divided into four compartments, on two of which are chased medallions of the "Lion and the Lamb," and the Chalice and open Bible. The other two are occupied by the accompanying inscription, in Hebrew and English. Festoons of flowers gracefully depend from the lower part of the body; while the cover is embossed with wreaths of laurel:—

TESTIMONIALS IN GOLD AND SILVER.

This Cup, made from gold the produce of the mines of Victoria, is presented to the Rev. J. Nathan Marcus Adler, Chief Rabbi of the British Jews, as a token of the high esteem and love he is held by his brethren in this colony; and to mark their sense of his distinguished exertions in the Hebrew Congregation and Education in Melbourne, Victoria, July 12, 1853. A.M. 5613.

THE WILLIAMS' TESTIMONIAL

Is a magnificent silver Candelabrum, of the Louis Quatorze style, formed by a pillar, surrounded by the Three Graces, bearing wreaths of flowers. These are surmounted by branches of a graceful form, to hold eight lights, and in the centre of pierced scroll-work, containing a glass for flowers. The base is triangular, having on one compartment the arms of J. Williams, Esq.; on another, the arms of Macclesfield; and, on the third, the following inscription:—

To record their gratitude for faithful and assiduous services in Parliament, and to testify their esteem and admiration of private worth and virtue, this offering is respectfully presented, by the Reformers of Macclesfield, to JOHN WILLIAMS, Esq.; who for five years—1847 to 1852 inclusive—left their populous borough in the House of Commons, and during that period was the zealous and consistent advocate of Progress, Retrenchment, and Freedom, Civil and Religious: in the firm but humble hope that a life so valuable may long be preserved, for the benefit of his fellow-countrymen, as well as for the adornment of a private station, the inhabitants of Macclesfield desire thus to express their sincere regard for the character of an amiable man and an estimable citizen.

THE CAPEL TESTIMONIAL,

Is a Silver Centre-piece, consisting of a column encircled by two gracefully formed figures, representing Peace, and surmounted by three branches, supporting glass dishes for fruit, and a centre basin for flowers. The base is elaborately worked and finely proportioned, and bears this inscription:—

From the Spanish Bondholders, to JAMES CAPEL, Esq. 1852.

LIFE IN AUSTRALIA.

(BY A WORKING MAN)

(To the Editor of the ILLUSTRATED LONDON NEWS.)

QUEENSCLIFF, SHORTLAND'S BLUFF, 28th September, 1853.

Many thanks for your kindness in publishing my letter of December 26, 1852, and more so for the kind expression of your opinion of the humble writer of the same. Should you deem this worthy of a space in the pages of your paper I hope that what I am about to say may be of use to many who are thinking of seeking a home here in this far distant land, and, perhaps, may amuse a few others who may know me, and shall read these lines.

When I last wrote to you I was in the Surrey field party of Mr. A. J. Skene, our camp at Mr. Griffith's station, now a member of the Legislative Council. He was formerly a nominee of the Crown; but, not liking such an unpleasant and subservient situation, he resigned his post, came forward at the late election as an Independent member for one of the pastoral districts (I forget which), and, though he does not profess to be a popular Liberal member, as I what I have seen of his conduct in the Council Chamber, through the columns of the Melbourne Argus, he is one of the most liberal-minded men in the colony. He left us with a gentleman's stock-whip, the thong of which was plaited by the hands of the Aborigines, as a token of kindness. We had out here two sections of about ten chains each, marked on trees by a missioner, for a surveyor of the name of Hall, I never saw; and I had a good opportunity of judging of its production as the farmers were in the midst of harvest when we arrived there. The wheat is superior to any I ever saw in a garden at home. I had the pleasure of eating some of the potatoes grown there—fine large ones, and as mealy as any Irishman could desire. The soil is black and rich in the extreme, in depth about four feet. It is a large valley—I should say six miles in length by three in breadth. Through the middle runs the river Werribee, a small running stream in summer, but in winter, when the rains descend, and the flood gathers from the many hills and mountains through which the Werribee runs, it becomes much swollen, and a portion of the march is and water for a few days, whilst the fall is so great that the water is soon carried off. Mr. Bacchus was the first settler here, and the place takes its name from him; but I see by a late Argus that the farmers have held a meeting to consider the propriety of changing the name to Spring Vale, which I am sure will be far more appropriate than its present cold repulsive one. At this place there are two large public houses on the line of road from Melbourne to the gold-fields: the first one—belonging to a Mr. Crook, a fine specimen of the Yorkshireman—is a building, or a number of buildings, equal to any gin palace in your metropolis, and much reminds one of the good old road-side inn with which the old country abounds, but which are scarce here; the other one is a large wooden building, only one story in height. Good beds are kept at both these houses, which are extremely clean. This element of comfort I am happy to say, is the prevailing feature of the two establishments; and I may say with truth that the fortunate owners of them will be able to refresh a few years hence from Melbourne—Tuesday and Friday; 'twas there I posted my last to you; a bakehouse, a smith's shop, two shoemakers and menders, a flour-mill (worked by steam), a small Catholic chapel, and I believe the Scotch Presbyterians meet on a Sunday morning in one of the farmer's houses for divine worship. A large stately mansion adorns the scene with its presence, which might do credit to any English esquire or millowner. This was formerly the residence of Mr. Bacchus, but is now the property of the Government, for the double purpose of police-office, lock-up, and residence of a magistrate. I should say the inhabitants in and around the neighbourhood number near 200, chiefly from bonny Scotland and Erin's Green Isle, with here and there a fine sample of the Saxon branch of the great family of mankind. I had near forgot to say that the water of the Werribee is beautiful and clear, and sweet to drink. Almost all the settlers have got wells of good water, at least those who like to be at the trouble and expense of sinking for water can get it here, which I assure you is a great desideratum in this country. The visit to this place was for the purpose of laying out a township, on the left bank of the river in quarter and half-acre allotments. While I was here I went twice to Geelong and once to Melbourne; in the former case to send two five-pound drafts home; and in the latter, to get my boxes out of the steerage-room where they had been from the time of my leaving the ship. In coming back the first time to the camp I lost myself for two days, or what is commonly called here got bushed—wandering about in the burning sun, without water, a heavy load upon my back, no road, footpath, or bridle-path, or mile-stone to direct me to my destination; for wandering to Carlsruhe without knowing whither I went, so that I put me with a friend, who had a habitation to give me a drink of water and rest me a bit. After a little suffering from sore throat, and pain from extreme weak nerves, I got at last to the camp, and found that I had travelled in such a roundabout way, as, starting from Backfriarsbridge, up Holborn, Regent's-circus, Charing-cross, to the ILLUSTRATED LONDON NEWS office. While we were camped here we caught plenty of eels and black fish, the Werribee abounding in both, and the bush in wild ducks and pheasants.

We started on the 16th March, surveying a road from the New Township to Geelong, a distance of thirty five miles, and reached the latter place on the 20th. We arrived here on the 8th of April, and pitched our tents in a small enclosure, so that we could have a good view of the bay. On Monday, 11th, commenced to survey the sea coast for about five miles, and a glorious base line it did afford us, on account of the numerous black swans upon it. Afterwards began to lay out the new township here. About a fortnight after I had been here, a man who had contracted to build a number of houses for the police, called me work at 15s per day, as a mason's labourer, and to quarry stone, with a wooden sled to be in, made in the form of a tent. I at first demurred to this offer, and had another party engaged. I gave Mr. Skene notice to leave at the end of the month, 30th of April. On Monday, 2nd of May, drew a cheque from Mr Skene for the amount of wages due in his hands; walked to Geelong; went to the bank, got it cashed. Went to Melbourne, as I had seen letters advertised for my name, as lying at the post-office there. When I made application, there was none for me: I expect they had been given in a mistake to another party, and he had not the honesty to return them; so I had lost of time, trouble, and expense for nothing. I must not forget to mention that I wrote three different times to the Postmaster-General, at Melbourne, to know if there were letters lying at the post-office for me, and if there were, to forward them; but I regret to add, that I never got an answer. The third time I enclosed postage stamps for an answer, thinking that they would not answer letters unless a stamp was sent for an answer. Need I say, sir, how different this would have been at home, had I written to the Postmaster-General in London? It gives me much pleasure to say that I have had occasion recently to write to the Postmaster of Geelong twice, and my communications have been promptly answered.

I left Melbourne on the 9th of May, for Williamstown; saw the pilot-master there, told him I was engaged at Shortland's Bluff, upon the houses for the pilots; he sent me down with the first pilot in the ship *Athlone*, of Liverpool. We were three days in getting down, through contrary winds. Three times we had the anchor up and down. I must not forget to mention the kindness of the captain, who invited me into the cabin, and at whose table I ate and drank all the time I was on board. Landed on the 13th May, about noon, and began work the same morning. There were six men altogether employed; and as there was a little unpleasantness regarding the cooking, I undertook, in consideration of 5s. per week extra to cook, in addition to my own work, the greater part of which was done early in the morning and late at night. I remained here till the 4th of August, when I engaged with Captain D. M. L. Campbell, Custom-house officer, as cook for him and his boat's crew, 12s. per diem, Sunday included, and found in board, with a good tent to sleep in. My present situation is something like £2 per week better than the last, taking into account loss of time from various causes yet not one of my own, and £1 per week for board; so that you see I am rotating by learning to cook. By the *Victoria* steamer I sent £25 home; and by the same post that brings you this I shall send £20 more, to bring out a relative of mine, to whom I am deeply indebted, and whom I am bound by gratitude to assist, making a total of £50 I have sent home; and I did not fairly begin to work till the 30th of last November (1852). My first situation was at a farm six miles from Melbourne, £40 per annum, and to leave when I could mend myself; stopped a fortnight, and got cheated out of this by the farmer; but I did not care. I engaged with Mr Skene on the 10th of November—£25 a year, and found, stopped with him six months. Then engaged with a stone-mason—14s. a day, charge of board £1 per week: stayed eleven weeks and three days. Changed again to my present employment—four guineas per week clear money. So that you will see how I have progressed, step by step, in spite of the adage that "a rolling stone gathers no moss."

I cannot undertake to encourage emigration upon a large scale of the great bulk of the population to this country, except those employed in the building trade. There will be plenty of work for those in that branch of industry for a number of years, with good remuneration for their labour; but for the great mass of the men now flowing into this country I can see no hope. The *Times* is right: they are not the class of men for a new country, they are a drug in the market; the gold fields are their only resource, and God knows that is a sad alternative for them. While there is much to encourage, there is much to discourage, the new comers. To me the greatest cause of regret is, that every body seems to make money for the sole purpose of flying from the country as from a place infected with the plague or pestilence. There is no inducement held out to the mass of the people to remain. The squatters have got firm hold of the land, that I much fear, unless the home Government interfere some way or other, the people will rise *en masse*, and declare the lands free to the people who wish to cultivate them, and made lovely and beautiful the face of our good mother-earth—that emigration will begin to flow from here. We have a squatting Government to the back-bone: nearly all the members of the Council are squatters; and three-fourths of the Council are elected by squatters. This squatting class interest hangs like a millstone round our necks—like an incubus it oppresses us, and weighs us down to the earth; and will require a Cobden, Bright, and Co., with a League at their back, to remove it. But few care; it will last some time. This is no home for them; their thoughts and hearts are elsewhere. There is nothing to attach us to the soil, to the country, or its institutions; and the Government seems determined there never shall be; and I can see no hope, no bright star in the heavens, to cheer one on. The work to be done is of a peculiar nature; and men are so engrossed with money-making, upon the one hand, and of guarding their territory and large interest, upon the other, that the public welfare is never thought of. We have only discovered a colonist by a tacit consent on the part of the Government regarding the franchise. The next question will be the unlocking the lands to the people, the township areas are not the powerful rocks with the Home Office. The people are apt to ask the question "What has the British Government to do with the lands of this country?" That question will be heard many times yet, and will be answered in the end, and also the propriety of extending the suffrage to the digging population, neither of which the Government will attend to or the public care about until the pent up feelings of the masses break out into open defiance, and a strong demand is made which cannot be resisted, unless at the price of public peace and safety. It is a sad state of things when a Government teaches its people that they can obtain no redress of their grievances, except when they are prepared to set it nought at law and order, and help themselves; yet such is the policy of Mr. Latrobe's government; and he will be honoured by her Majesty with the title of Baronet for the, and her Ministers will find him another place of emolument and large patronage. For what? Studying his public welfare? No; but for preserving the interests of a class, and that a small one, from the encroachments of the common weal.

My great hope and ambition was, that in this far region I might become the owner of a bit of land to settle down upon, and live in peace, and contentment, and, what is still better, independent of the whim and caprice of an employer, but, sad to say, I am further off than ever. I am at home is cheaper than it is here; and, if things do not alter very much during the next few years, I hope to return to my dear old country once more, with a well-filled purse, a grateful heart, and a mind full to overflowing with the experience I have no taste or desire; and yet, believe me, dear sir, I do not despair, because I shall win wealth here—that will be one part of my mission, and the word is before me. There are other lands as fair and bright as this.

28th Nov., 1853.

My dear Sir,—I was on my letter to say a few words more, ere I post this for the *Great Britain*, which she sails on the 3rd of December. The last named ship carries many last words to you; may I hope, sir, that when she returns to this part of the world, that she will bring me a token of your kind remembrance in the shape of a letter? I am sure I need not tell you how joyfully it will be received.

Since I last wrote we have had another wreck, and two vessels were run ashore to prevent them sinking, on Monday, the 14th March, five p.m. Several sail in sight. About half past five a French ship, the *Marie*, in entering the Heads, struck upon a sunken rock, known as the Corsair's Rock. It had only been surveyed about a month before this, and the bearers published, but strangers entering without a pilot would know nothing of it. The *Marie* made seven feet of water directly, and ran ashore about two miles from here, was lightened, the cargo landed, and taken up to Hobson Bay. Half an hour after the ship *Ontario*, from London, with a general cargo, on entering, struck the same rock. She filled directly, for in twenty minutes after she struck, she was on shore. Mr. B. Reilly, his wife, and six small children, and one single man passenger, fortunately. Had she been an emigrant-ship, the loss of life would have been terrible, or had it been a rough day, or had the ship been flowing at the time. It is questionable whether one of them would have been saved; it was just about the turn of the tide as it happened; there were about twenty vessels at anchor off Sorrento at the time, and nearly all sent their boats, in addition to the two pilot-boats, the boat of the Health-officers, and our boat. At one time I counted ten boats near her. The crew lowered their own boats, and were about the only ones that were not. One of the pilot-boats took them in tow, as they had a good sail, and brought them ashore here. So quick was the thing done, that the captain came down with a pair of hand-irons, he having without any covering for her head except a handkerchief.

Some time on the Monday night the ship went to pieces, and for two days the beach was strewed with parts of the wreck and cargo, which was a very valuable one.

The *Clusium* mail-steamer arrived here on the 19th inst., and is now daily expected back from Sydney, and will leave here in twenty-four hours after. I will now conclude this long narrative, hoping that it will not be unwelcome, and should this meet with a favourable reception, you shall hear from me again. In conclusion, dear sir, believe me to remain yours sincerely,

WILLIAM NIXON.

(*Continued from page 257.*)

"MARKING THE COVEY." BY H. HALL.

Harry Hall's picture of "Marking the Covey" will be admired and appreciated by the votaries of field-sports, as well as the admirers of art. It is a capital sporting group, in a true sporting country; the old gamekeeper seated on his donkey, and pointing to the distant covey as they are about to settle, is true to the life; the rough shooting pony and boys in attendance indicate that the party are waiting or the setting out of the 'squire, heir master; to whom appearances omise a good day's sport.

"MIA CARISSIMA." BY C. BROCKY.

This is a pretty study of an Italian peasant woman, with her child dangling in her arms, whom she addresses impulsively in words equivalent to "mother's darling," and other pet phrases which have become traditional in nursery life. The head of the child is cleverly studied, the attitude also happily conceived, and the treatment generally vigorous and effective.

"THE EASTERN STORY-TELLER." BY COKE SMYTH.

"The Eastern Story-teller" (471), by Coke Smyth, we have already spoken of with approbation. In now engraving it we have another opportunity of pointing out the varied merits which it exhibits. The face and figure of the "story-teller," his uplifted hand, his excited eye, the lighted tobacco spit out of the bowl of his chibouk, indicate that he has wrought himself up to a perfect frenzy by the details of the narrative which he is about bringing to a close. His auditors are all deeply engrossed with the subject, although they are differently moved by it. The young are wrapped in admiration of the more dazzling achievements recorded; the old are excited to indignation at some acts of cruelty or wrong; the females are all heart for the tender distresses of the lovers (what story is there without lovers?); whilst the Nubian slave near the door betrays, by a vacant grin, that he has but a very confused notion of some of the more salient features of the narrative, and that he is as much amused at the story-teller as the story. Indeed, the variety in the expressions of the heads is remarkable, and shows a great deal of study and discrimination. It may be questioned whether the group as a whole, particularly as relates to the females, is Oriental in character; and in the solitary instance, in which the *yashmac* or veil is introduced, it is certainly not accurately represented being too thick in material, and not properly put on. The drawing throughout is very careful; but, it must be added, that the colouring is not quite so successful, wanting in brilliancy and transparency.

We take this opportunity, and a few words will suffice for the purpose, of noticing the works of Sculpture which contribute to the attractions of the present Exhibition. They are only fifteen in number mostly of small dimensions; and none of extraordinary merit. The best is a marble group of two children, by Patric Park, entitled "Sisterly Affection and Protection." There is great naturalness about the figures, and a childish innocent expression in the features, which is pleasing; but there is a stiffness and dryness of style which mars the effect. "The Usurper," by J. G. Lough, is a droll conceit, cleverly carried out—a young Cupid has shot an eagle with his little bow and arrow, and lies sleeping in his nest. J. H. Foley has a good marble of a "Youth's Head." "A Sleeping Child and Dog," by A. Wiches; "Innocence Fetted," by J. Kirk; "Cupid," described as "a sketch," by R. A. Wilson; "Nature's Mirror," by E. G. Physick, are models, with a view to execution in marble, or other material, should they suit the public "taste," or, in other words a demand occur for them.

LANDSCAPE—"EVENING." BY CLAUDE.

THERE are those (few, we are glad to say) who dispute Claude's long-asserted position as a landscape-painter; deny his genius of conception, his mastery of hand, his perfect truthfulness and love of nature. Reynolds was of a different opinion, for he asserted that the world might sooner see a second Raffaelle than a second Claude Lorraine. Those who pretend to make little of him, and to call him theatrical, made-up pretender, have not studied him in all his endless variety; have not sympathised in the sublime feeling of repose, and the sylvan rustic simplicity which marks by far the larger number of his works. Of this character is the little picture of which we give an Engraving, and of which an etching exists by the hand of the master, dated, as we recollect, 1660; and, therefore, when he was about sixty years of age. In more than one respect, it is a remarkable specimen of his talent. It is known that, as a rule, he gloried in producing the firmament of heaven and the gorgeous sun, the crystal waters and the elements generally, in a state of perfect repose; no storms would he admit to disturb their calm. In the case of the production before us he has slightly deviated from this rule; the air has freshened at sunset, and the leaves of the trees are driven backward and upward by its force, the clouds are drifted past in the upper sky, and even the water is slightly agitated. This material unquiet is contrasted with the moral repose which breathes through the whole of the poetry of the picture. The herd are leisurely fording the well known stream on the way to their homestead: here, one loitering to slake his thirst in mid passage; there, another snatching a mouthful from a spot of favourite herbage. The occupa-

tion of the herdsman, playing the pipe, completes the idea of the release from the toils and cares of labour, which, in rustic life, comes with the close of day. If we deeply feel the sentiment which breathes through this charming composition, quite equal is our admiration of its artistic merit in every individual particular. The character and massing of the fine old trees, particularly those in the centre, is not to be surpassed in the whole range of landscape art: here and there we see leafless branches, which tell that they are coeval with the dilapidated mansion in the distance, and which, whilst they are pictorially most effectively introduced, add a tinge of melancholy—the melancholy of fond old memories—to the more joyous impulses of such a scene. Nothing can exceed the masterly manner in which the rays of the sun—low down, just upon

"EVENING."—BY CLAUDE.

the point of [illegible] below the horizon—in the extreme right of the picture, dart in a narrow stream athwart the foreground, dancing and glancing off the backs of some of the cattle; thus giving air and distance in the very part of the picture where their absence would be most felt.

As we have already intimated, Claude practised the art of etching as well as that of painting. He was not so successful executively in the former art as his great contemporary, Rembrandt; but still, to the educated eye, his etchings reveal the fine creations of his genius, his magical mastery of light and colour, in a manner which gives them a high position in the art. A complete list of his etchings would, and in fact actually does, [illegible] they are about fifty in number. In the first [illegible] the plates are of little value; but, in the latter, [illegible] they are much esteemed by collectors, and [illegible] rare copies of this kind having been sold publicly for fifty pounds each. A copy [illegible] is the most costly, the [illegible] is worth twenty guineas. The British Museum is now very rich in the finest proofs of Claude's etchings, but the two most valuable collections of them in England are those of Dr. H. Wellesley, of Oxford, and Mr. Cadman, of Hall

LITERATURE.

JOURNAL OF A RESIDENCE IN THE DANUBIAN PRINCIPALITIES, in the Autumn and Winter of 1853. By PATRICK O'BRIEN. Bentley.

An intelligent observer, who writes with fidelity about what he has personally studied and who just comes from the scene ready to put his transcript, which at the moment engrosses the attention of the whole world, emerging, indeed, even deeper in hand out of the very thick of those events, and the very centre of that deplorable and fast-increasing fermentation—could scarcely produce any but an interesting and valuable work. Mr. O'Brien evidently belongs to that very small number of persons who really "see what they see, and hear what they hear." He is, in a word, a practised observer; which cannot be said, with truth, of one individual in thirty thousand. But even among the few who remark with habitual attention what passes around them, all are not, necessarily, able to do justice, in narrative and comment, to the results of their research. Their power to communicate what they have [illegible] is not always proportioned either to the [illegible] and amount of their materials, or to the rapid ability with which they may have been obtained. Those who can do both are perhaps [illegible] a more agile, pliant, and [illegible] a more vigorous constitution and [illegible] readily. Mr. O'Brien, unlike [illegible] reasons for outline and [illegible] nothing, except to record what he has seen, and to come before the personal notice, upon a theme which is now over the attention of everybody, he is of course [illegible] abundant picture.

In the beginning of Autumn, 1853, Mr O'Brien started from Constantinople on a visit to Widdin and Wallachia—Principalities [illegible] made famous with honour, against the whole power of the Ottoman empire, when here was not a mere warfare of a mere potent empire on earth [illegible] much life wards become a great frontier, or barrier state, of any [illegible] constitution and [illegible] prone. Widdin, Wallachia possesses one of the richest of soils, one of the finest of climates, and of one of the most calamitous of geographical situations. If [illegible] nothing but peaceful industry and honest commerce prevail among nations—if nothing we pursued in life but what sustains it and adorns it—the very position of this region would be an additional bount. [illegible] the bounties of nature. Its immense productions would [illegible] all further in the market-place, accessible, and transferable [illegible] which would be secured to the [illegible] But all these things, *requiem ex machinâ*, are but the provocations of rapine, and the prizes of successful freebooting; and the opulence with which art and [illegible] have now covered the land, and its long heritage of martial fame, revealing the very genius of it with a sort of nimbus in the consideration and recollections of the East of Europe, combine but to make it at once cause of battle and a battle-field. The Russians want the [illegible] granary of Europe, and thy begin by desolating [illegible] which would [illegible] the blight if their [illegible] lay to their [illegible] of [illegible] Turks [illegible] and [illegible] to [illegible] Wallachia [illegible] and shut into quarantine, they convert to as vast bark-yard, and one emporium which they had the stirring, and splendid, and free emporium which they had [illegible] Mr. O'Brien [illegible] with freedom and under [illegible] a good system, this noble region should be able to support, in abundance and civilization, twenty millions of souls. Russian management hardly knows how, at this moment, to provide for a hundred thousand troops quartered there, amidst a population whom they have reduced to famine and despair!

Treating it altogether, this is an agreeable, lucid, and useful little production, a practical itinerary, and a gossiping treatise.

THE KNOUT AND THE RUSSIANS, or the Muscovite Empire, the Czar, and his People. By GUSMAN DE LAGNY. Translated from the French by JOHN BRIDGMAN. Bogue.

M. de Lagny's book we have not seen in the original; we cannot, therefore, say much respecting the manner in which it is here translated by Mr. Bridgman. Presuming that the version is faithful, then it is in other respects excellent, being couched in English which flows naturally, easily, and delightfully.

In one point of view this work, which is a "volume of travels," is something more. It affords the usual amount of information, regarding the [illegible] of society and of physical nature which seemed to be the [illegible] re-engaged, and special topic of literary wanderers. This information, too, is conveyed with all the dexterous lightness of a French [illegible] summers, customs, aspects, incidents, and adventures, become re[illegible] upon the theme: [illegible] description and picturesque narrative. And, to complete, as it were, the character of the production, and to colour more violently the indications by which it is customary to classify such works, it comes before us in its present shape profusely illustrated. We are not going to say anything about the artistic merits of these decorations; but, at least, they qualify the graver pretensions, and still further tend to *aerate* the sprightly and effervescent portions of the book.

So it is a book which claims to be ranked with [illegible] the thoughtful [illegible] with the wholly [illegible] quite as much [illegible] works of more ambitious aim. We prefer, from applying that [illegible] views are always incontestable, and far from professing to [illegible] them with our own, but he thinks, and makes the reader think, on various occasions, as he [illegible] through the rapid changes of [illegible] and subjects. Nor does he ever leave himself unprovided [illegible] corroborative fact. These of [illegible] precede his remarks, which then fall with judicial brevity and weight, carrying much of his force at [illegible] appliances.

For example, page 189, after a luminous description, (extending [illegible] several chapters) of the moral and social condition of [illegible] remarkable community, M. de Lagny [illegible] "Russia is [illegible] not [illegible] strange, because a little [illegible] commonplace." After all, Russia is [illegible] more [illegible] in which every [illegible] is [illegible] that for the free [illegible] of [illegible] human [illegible] is [illegible] M. de Lagny [illegible] his work into seven [illegible] the first four are [illegible] army, the nobility, the clergy, and the navy; the [illegible] chapters he has devoted to the "magistracy, justice, and the [illegible] another to an assessment of the [illegible] and the [illegible] the remaining [illegible] entirely [illegible] and [illegible] sketches of local description, and personal record, furnished by [illegible] and by the character and history of the Emperor Nicholas. [illegible] introduction to a close. We recommend it to our readers.

THE HEROINES OF HISTORY. By MRS. OCTAVIUS FREIRE OWEN. Routledge and Co.

[illegible] unit [illegible] memorable examples of [illegible] [illegible] them. A second [illegible] produced in Oxford [illegible] to of "Memoirs of several Celebrated Ladies;" and there [illegible] many minor works of the same class, recommended by the [illegible] their interest, and the sweet uses of the traits of long suffering, [illegible] and endurance which their pages record. The volume before us [illegible] range of character, in presenting us with some five [illegible] biographies. Of these, Heroism, classed in periods, as in the Jewish, Classic, and Modern. We scarcely need remark that the memoirs bristle with actions; and although Jael and Judith open the volume finely, they are followed by strange, eventful histories of human action, of less positive character, if not more ennobling excellence. The "Classic Era" [illegible] from Semiramis to Zenobia; and the "Modern Era" from Eleanor of Castile to Marie Antoinette. The narratives of the antique world are not formed out of the dry bones of history; but their leading traits are, by the ingenuity of the author, clothed with living interest. The "Modern Era," which occupies two-thirds of the volume, will, however, prove attractive to the largest number of readers. It includes Eleanor of Castile, Jane de Montfort, Philippa of Hainault, Joan d'Arc, Margaret of Anjou, Isabella of Spain, Catherine de Medici, Lady Jane Grey, Mary Queen of Scots, Madame de Maintenon, and Marie Antoinette. The book is gracefully written throughout. It [illegible] dashed with historic dates and facts, but the [illegible] plentiful are every [illegible] the narrative. The author, [illegible] narrative, [illegible] by Bartolozzi and Woollett, are valuable, if [illegible] possess. Apply to [illegible]

CATECHISM; or, Short Questions and Answers on the Church Catechism. By [illegible]

A CONSTANT SUBSCRIBER, Dorset.—The Crystal Palace at Sydenham is [illegible]

WILL, Bloomsbury.—"Davidson's Short-hand," or "Short Short-hand."

BLUE PETER suggests, that in order to meet the difficulty of finding seamen to man steamers, their batteries should be served by expert [illegible] soldiers; and as manœuvring under canvas is now out of the question, a very few seamen would suffice to navigate the steamers, in the Constantinople [illegible] already observed:—"The superiority of England on the ocean consisted last war in her possessing better seamen than [illegible] and however [illegible] the Crystal Palace at Sydenham is [illegible] [illegible] [illegible]

THE ILLUSTRATED LONDON NEWS

No. 675.—VOL. XXIV.] SATURDAY, MARCH 25, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE "SECRET AND CONFIDENTIAL" CORRESPONDENCE.

THE extraordinary overtures made to the British Government by the Emperor Nicholas, in the spring of 1853, have been communicated to the world. In the intercourse of Sovereigns, it is probable that negotiations as important as these have often taken place, though it is rare, if not unprecedented, that the details have found their way to the public ear, until the lapse of time has deprived them of all value, except as historical documents. When the Czar endeavoured, by these means, to render the British Government the accomplice of his ambition, he probably imagined that the particulars would not see the light until he himself and all his doings, for good or evil, had receded into the dim twilight of history or tradition, and he had become almost as much of a myth as his predecessor Peter the Great, or Ivan the Terrible. But it is he himself that has betrayed his own secrets. Desirous of embarrassing the British Government, and of sowing mistrust between England and France, he taunted Lord John Russell with having long been privy to his projects. Released from secrecy by the act of the Emperor, the British Government have published the whole of the documents. Never was publication more opportune. Their effect will be prodigious throughout Europe. They unmask the hypocrite; they expose the robber; they show in his true colours the disturber of Europe, and the enemy of the civilisation and the peace of the world.

The Emperor Nicholas is the fitting successor of the able but bad woman who accomplished the partition of Poland. He sits upon her throne and carries out her policy. His zeal for religion is but a cloak to cover his lust of dominion and his avarice of territory. It was not in 1844, when he sounded the Duke of Wellington and Sir Robert Peel, that he first grew covetous of Turkish provinces: the idea was instilled into him from his earliest childhood, grew with his growth, and, like other men's vices, "hardened with his bones." The great States of Europe will regard these disclosures with different feelings. In this country indignation against the Emperor is mingled with satisfaction at the high tone assumed by the Ministry and their Ambassador. The correspondence could not have been more conciliatory, respectful, and cautiously worded towards the great States of Europe if every despatch had been intended for the fullest glare of immediate publicity. It is not possible to despise so formidable a foe as the Czar; yet something like contemptuous wonder must be felt at the utter ignorance of the British character and temper which he displayed when he imagined that such nefarious projects could be favourably received, or that the bribe of Egypt and Candia, or any other bribe whatsoever, could have made this nation the participator in his crimes. But we can scarcely wonder at the lax morality of a man who sings "Te Deums" in honour of the treacherous massacre of Sinope, and who continually proclaims to his people "that God is with him" in his attempts to appropriate the dominions of his neighbour. To serve his own ends, he continually acts upon the supposition that Turkey is in a moribund state. It is possible that he believed the fact to be as he represented it. In opening his mind to Sir Hamilton Seymour, he more than once spoke of the Ottoman Empire under his favourite images of a "sick man" and a "dying man;" yet it never seems to have occurred to the Imperial mind, that to plunder a sick man was quite as heinous an offence as to steal from a hale one; and that murder committed upon a bedridden and decrepit octogenarian was as monstrous a crime as the murder of a man in the full strength and maturity of his powers. But guilty ambition must of necessity impair all the moral perceptions. One monster vice effaces the boundary lines of truth and error, deadens the moral faculties, and obfuscates the intellectual ones. But *Ce Monsieur* (to employ towards himself the phrase by which he designated the Sultan) will no longer impose upon the people of this country. We should think that by this time, even the members of the Peace Deputation must be ashamed that they should have gone near him.

Opportune as the publication of these despatches has been as regards England, it will be still more opportune as regards France. The Emperor Napoleon and our generous Allies will learn of how small account the Czar considers them in the settlement of the affairs of Europe; that he not only designed to mis-appropriate Constantinople, but that he hoped to make England his ally against France in the inevitable opposition which the attempt would excite. If anything were needed to raise to fever-heat the blood of the gallant French army and navy, it would be found in the manner in which the Czar chose to ignore the right of that great nation to be consulted in such a matter as the dissolution of the Turkish empire. The fact will lend energy to the arms of France, and will tend not only to strengthen for the present, but to perpetuate, in the future, the alliance so happily established betwixt them.

> Suis-nous, O vieille Europe où l'honneur nous appelle,
> Deux peuples forts et guerriers
> Se tendent l'un à l'autre une main fraternelle
> Pour vindiquer l'humanité.

The Austrian Government, so seriously interested in the restoration of peace, will, it is to be hoped, find additional reasons, in this correspondence, for making common cause with Great Britain and France against the public enemy. The Czar condescends to mention Austria in the business; but he speaks of her as of a Power completely under his influence, whose opposition is not to be thought of, and which, if it were, would signify nothing if England would but accept Egypt and Candia, and help him to murder the "sick man," and parcel out his heritage.

It was an unlucky day for Austria when, sorely pressed by Kossuth, she accepted the fatal aid of the armies of Russia. It would have been better for her to have granted all that the Hungarians desired than to have owed the possession of Hungary to the good offices of the Czar. It is not yet too late for Austria to rid herself of the deadly incumbrance of Russian friendship. France and England desire no territorial aggrandisement to repay them for the war; but it will be for the interest of all the civilised states of Europe, as well as of Austria, that the mouths of the Danube—that great Austrian river—should be rescued from Russian domination. Austria has every conceivable motive to take part against Russia. We do not know of one that could influence the mind of any intelligent Austrian statesman or subject in favour of the Czar. Even if interest and duty did not compel Austria to join the Western Alliance, prudence, if not fear, might induce her not to make enemies of

THE RIGHT HON. THE EARL OF ABERDEEN.—SKETCHED IN THE HOUSE OF LORDS.—(SEE NEXT PAGE.)

States which, at a word, could let loose the Lombards and the Hungarians to distract her councils, and to find such full employment for her armies that she would not have a soldier to spare for aggressive warfare. Austria has hesitated long enough. The instinct, no less than the reason, of all Germany points out the course she must adopt. Germany has no other leader, and will follow with enthusiasm when Austria gives the signal. Any reasons for neutrality which might have been adduced from a belief in the Czar's reiterated declarations that he only insisted upon rights recognised by treaties, and that he sought no territorial aggrandisement at the expense of the Sultan, have been removed by the publication of the Czar's "secret and confidential" overtures. All doubt upon the subject will be as impossible in Austria as it is in France and England.

Prussia, that has taken part in all previous negotiations, as if she were one of the great Powers of Europe, is not once mentioned by the Czar. His contempt for *M. Clicquot* has long been known, but it could scarcely have been anticipated that the feeling extended to the whole Prussian people. But if the King of Prussia be a vacillating and timorous man, the Prussian nation is jealous of its honour and of its place in Europe. It will neither tolerate the insulting silence of the Emperor of Russia, nor the virtual abdication of its place as a first-rate Power, which is implied in the cowardly neutrality announced to the Prussian Chambers by M. de Manteuffel. With the ill-fortune which so often follows the acts and words of evil-doers, whether on a large or on a small scale, the Emperor of Russia has contrived, in his confidential communications to Sir Hamilton Seymour, to give just ground of offence to every Power interested in these transactions. It is, perhaps, the British Government that has been most insulted; but France, Austria, and Prussia have each sufficient ground for indignation against the overbearing despot, who, either with or without their concurrence, would seek to remodel the map of Europe. Even the slow mind of the King of Prussia may yet be prompted into action by the contagion of the disgust which his people must entertain towards a potentate who so coolly ignores their existence in a struggle that will affect them as vitally as any other people in Europe.

One word in conclusion as to the conduct of the British Government in receiving and commenting upon these despatches. They knew the real objects of the Emperor in the spring of 1853; and, although they may not have been guilty of too much courtesy in acting towards the Emperor in all their open transactions as if they believed his public protestations in preference to his private avowals, we think they might have been prepared for the *ultima ratio* at an earlier period than the spring of 1854. On the very day (March 23rd, 1853) when the Foreign Secretary very ably and temperately explained and reproved the schemes of the Emperor, a letter was despatched from the Foreign-office to Colonel Rose, at Constantinople, blaming that clear-sighted functionary, for requesting Admiral Dundas to bring the British fleet to Vourla. Colonel Rose knew nothing of these "secret and confidential" despatches, and yet he recommended a line of conduct, which a knowledge of that correspondence would have rendered still more advisable. A little more energy at that time would have done no discredit to the British Ministry. In fact, it is highly probable that the presence of a British fleet in the Dardanelles in 1853 might have prevented the war altogether.

THE PREMIER IN THE HOUSE OF LORDS.

THE Portrait of the Earl of Aberdeen, engraved upon the preceding page, was sketched in the House of Lords, a few evenings since, while his Lordship was speaking. The likeness is admirable.

Of the Premier a copious memoir appeared in the ILLUSTRATED LONDON NEWS No. 601. The accompanying characteristics of his Lordship are from a volume of graphic vigour, entitled the "History of the Session 1852-3. A Parliamentary Retrospect."—

Lord Aberdeen is honest—patriotic—anxious that his premiership should be distinguished by national satisfaction; and it is not possible that, at sixty-eight, his motives in taking power could be other than the purest and noblest. And his influence will be proportionate to the consciousness that he is above and apart from the ambitions and schemes of the moment—that he is aiming at national good. But, perforce, he will have to think through others, and to decide on a balance of arguments presented to him by his various colleagues. Lord Aberdeen, at this moment, is precisely what might have been expected of a Peer who early entered on the magnificent education which Parliament provides—who was forced into ambition, and offices, and trust, and who, driven to hard work, was compelled to eschew delights and indolence, and so urged and kept in the regular habits which preserve mental and physical health. He never had cleverness—he never had a seat in the House of Commons, which might have provided the oratorical knack which soften, sharpens for cleverness, and is, in truth, a very practical gift. But he was from the first, as his position provided, a soundly judging, accurate, tactful, well-informed, and thinking statesman, too hard, always learning, always observing, as, after forty years of work and watching, I of wisdom—which is remembrance of the results of observation. Of a nature known to the public, he is especially fitted for the task assigned by the Queen, of being the centre of a combination of parties, or, with all the talents in one Cabinet, an entity preferable to genius in the chief. Premier of sixty-eight speaks with a force that Lord Derby, with the fatal facility of vigorous fluency, could never attain; those who heard the speeches of these two men recently, in the House of Lords, would only contrast favourably the heavy, low-voiced, slow, conversational, or rather soliloquy-like style and manner of counsel, grey headed largely-nurtured Lord Aberdeen, with the "many-come-up-at-able" volubility and pettiness which characterise the mind and nature of Lord Derby.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. W. St. L. Aldworth to West Barsham, Norfolk; Rev. J. Baistle to Faucher; Rev. H. Beckwith to St. Mary, Bishophill, York; Rev. P. Brett to Mount Bures Essex; Rev. M. E. S. Champneys, to Epperstone, Notts; Rev. L. Dowdall, to Rathfarnham, Dublin; Rev. J. Dowson to Horsley, near Lewes. Rev. T. Harrison to Newchurch, Kent; Rev. J. Healey to Redmile; Rev. R. Hersman to Brompton Ralph, Somerset; Rev. A. Hill to Charnield, Gloucestershire; Rev. W. Lamprière to South Warnborough, Hampshire; Rev. N. B. Mules to Colley Weston, Northamptonshire; Rev. H. Morgan to St. Andrew's, Monmouthshire; Rev. G. Parker to Tedderdown, Cloyne; Rev. C. L. Pemberton to Curry Mudel, Wilts; Rev. W. I. Preedy to Kittisford, Somerset; Rev. J. C. Rowlatt to St. Paul, Exeter; Rev. G. Whitlock to Milton Bryant, Bedfordshire; Rev. W. L. Newham, Hackford, Norfolk. *Vicarages:* The Rev. C. B. Awdry to Seagry, Wilts; Rev. H. C. Grey to Wartling, Sussex; Rev. J. R. Jones to Burghill, near Hereford.

TESTIMONIALS.—The following testimonials have recently received tokens of affection and esteem:—The Rev. J. Fox, by the members of St. John's Church, previous to his leaving Whitby for the Vicarage of Hector, near Hull; the Rev. J. Heap, Curate of Great Horton, near Bradford, Yorkshire, as a token of respect and affection from the Sunday-school and friends; the Rev. T. Harrison, Incumbent of Trinity Church, Maidstone, by the Church Schoolmasters' Association of that town, the Rev. J. Reddall, Senior Curate of the parish of St. Alkmund's, Derby, by his parishioners, on his resignation; the Rev. G. F. Greene, late Minister of St. John the Evangelist, Knotty Ash, by the congregation of that church; the Rev. J. Rate Oxley, prior to his leaving Huddersfield for Whitechapel, near Hull, by his teachers of the Trinity Church School; the Rev. H. Parnell, by the members of the bible class, on the occasion of his leaving Darlington; the Rev. J. G. Lonsdale, by the members of Bishop Ra field's Hall, Durham; the Rev. G. Mockler, on his being appointed one of the chaplains to the troops under orders to the East, by the congregation of St. George's-in-the-East.

PREPARATIONS FOR WAR.

THE BALTIC FLEET.

WE have been favoured by one of the officers of the steam-sloop *Miranda*, of 14 guns, with the accompanying sketch of that vessel, the pioneer of the Baltic fleet, saluting the Three Crowns battery of Kronborg Castle, Elsineur, on the 14th inst. Her arrival excited considerable interest, and the joyous roar of her cannon pealed forth at the very moment when the Upper House was almost unanimously voting its want of confidence in the Russian despotic Ministry.

As the King of Denmark had, in February last, withdrawn the permission for foreign vessels of war to lie within the Three Crowns battery range, the *Miranda* anchored in the offing, at about an English mile from the battery. A boat put off soon after; and from the officers and crew it was ascertained that she was ten days from England, whence she had been despatched previous to any naval review, and in such haste that many indispensable purchases had still to be made in Copenhagen. The *Miranda* was instructed to wait for further orders in the Sound, on the

H.M.S. "MIRANDA," THE PIONEER OF THE BALTIC FLEET, SALUTING KRONBORG CASTLE, ELSINEUR

16th she left for Kiel. The promotion of Captain Lyons to this vessel has afforded the greatest satisfaction to his numerous Swedish friends in Stockholm. Unfortunately, the gallant Captain is labouring under a severe indisposition.

The fleet under Sir Charles Napier has already been made up to twenty-six sail, twelve of which are ships of the line, and of these nine are fitted with screw propellers. The three sailing vessels of the line are the *Neptune*, 120, the *Monarch*, 84, and the *Dominion*, 70. The total number of guns in the fleet, under Sir Charles Napier, is now 1363; of men, 14,015; of horse-power, 9810. To these will be added, in a few days—irrespective of the French force, part of which is on its way—nine vessels, five of which are screw steamers, and mounting altogether 80 guns, not to speak of ten smaller ships, chiefly moved by steam also.

Sir Charles Napier arrived at Copenhagen on Monday last, in the *Valorous*, 16, and immediately landed. The rest of the fleet was expected there on Tuesday or Wednesday. The *New Prussian Gazette*, under date of Kiel, 15th, says:—

The English Baltic fleet will not enter our port before the 21st or 22nd, as orders have been given to it not to enter the Baltic until after war shall have been declared by England against Russia. Thus, when you shall learn that the English fleet has entered this port you will also know that Russia has rejected the ultimatum of the Western Powers, and that England has declared war. We know nothing yet of the French fleet.

The *Lightning* steam-vessel, 3, left Woolwich on Tuesday morning, at five o'clock, for Sheerness, preparatory to her proceeding to the Baltic, where she is to be employed in laying down buoys where the navigation is difficult; and will be succeeded in that service by the *Albion*, 3, now stationed at that port by Captain Otter. The *Lightning* had twelve buoys put on board at Woolwich; but her duties will be of no ordinary kind, as it is understood that the Emperor of Russia has ordered all the buoys serving as guides to the safe navigation of the approaches to and in the Baltic to be removed previous to the arrival of the British fleet. The *Lightning* and the *Albion* are to be prepared to lay down about 350 buoys, which will be taken out a few in each of the ships of war and war steamers proceeding to the Baltic. These buoys being British property, it will be with great peril that any other power ventures to remove them while Sir Charles Napier is in the Baltic.

THE COMMISSARIAT FOR THE EAST.

Not the least important announcement, in connection with the expedition which we are despatching to the East, is that contained in a Treasury minute issued a few days ago, whereby directions are given to the Commissariat department for supplying the troops with malt liquors, preserved potatoes, chocolate coffee, tea, sugar, rice, and Scotch barley for broth. These articles of diet are in addition to the ordinary rations of bread and meat, and to be supplied in detail at their nearest wholesale cost, without payment of duty, and excluding incidental expenses, thus leaving the public to bear the expense which will be incurred for freight, packing, and other incidental charges. The following tabular statement shows the supplies provided, the cost price, and the rate of proposed charge:—

Articles.	Quantities provided.	Cost Price.	Rate of Proposed Charge to the Troops.
Porter	64,800 gals.	3s. per bar. of 36 gals.	3d. per qt.
Pale ale (for the Officers)	2,700 ,,	46s. per ditto ..	4d. ,,
Preserved Potatoes ..	50,000 lbs.	5d. per lb.	5d. per lb.
Chocolate	10,000 ,,	£1 16s. per cwt. ..	4d. ,,
Coffee..	80,000 ,,	£61 10s. per ton ..	6½d. ,,
Tea	8,000 ,,	1s. per lb.	1s. ,,
Sugar..	100,000 ,,	£1 1s. 6d. per cwt. ..	2d. ,,
Rice	200,000 ,,	£28 10s. per ton ..	3d. ,,
Scotch Barley for Broth	10,000 ,,	24s. 6d. per cwt. ..	1½d. ,,

The regulations under which the different articles are to be delivered in bulk by the Commissariat to each regiment, and then distributed in detail, will probably be left to Lord Raglan to determine, and his Lordship will, no doubt, fix a limit to the quantity allowed to officers and men, in order that the boon thus conferred may not be converted to other purposes than the soldier's benefit. The importance of this precaution is pointed out in the Treasury minute, it being very naturally presumed that in the article of beer especially the predilections of our troops are likely to undergo no change from service in the East. The foregoing arrangement must give great satisfaction not only to those gallant fellows who will be directly benefited thereby, but also to their countrymen at home, who will have all the more confidence in the triumph of our arms when they know that the "pluck" of our soldiers is sustained by a liberal Commissariat. Should the plan succeed with the expeditionary force, as is expected, it will probably be extended to the troops ordinarily serving abroad.

EMBARKATION OF THE ROYAL ARTILLERY.

The embarkation of Captain Levinge's troop of Royal Horse Artillery and the half of the men and horses of Captain Anderson's company, was effected at Woolwich on Saturday last, most successfully. The period of embarkat on was kept a secret until the last moment, the first intimation of the intended movement being made by the arrival of Captain Riddell, Deputy Assistant Quarter-master-General of Artillery, at a quarter past twelve at night, at the dockyard, to communicate to Commodore Superintendent John Shepherd, that the troops would embark in the horse transport ships, shortly after six a.m., and that several waggons, with stores, would arrive at an early hour. The men were awakened shortly after five o'clock, a.m., and told that they had to get up and embark immediately. The intelligence surprised them, but on such occasions, soldiers under the eye of their superiors, only know the term "duty," and by a quarter past six they were all mustered in route order. The troops left the garrison at a quarter before seven o'clock. The band did not play, and the troops marched so quietly that few of the inhabitants of Woolwich were aware of their departure. On entering the dockyard as seven o'clock, the horses were unharnessed on the dockyard parade ground, and the harness packed into cases for each gun detachment. The embarkation of the horses then commenced, and the whole of the guns and ammunition-waggons were put on board, and the six ships taken out of the basin and towed to moorings at the Royal Arsenal by half past three o'clock p.m., without the least inconvenience or accident whatever. One of the horses slipped and fell into the basin between the *Pyrenees* and *Her Majesty*, horse transport ships, but was not injured. The wives of the men were admitted into the dock yard at two p.m. to bid their husbands adieu, and seven women were allowed to embark with each troop or company, but no children.

Captain Milne, the member of the Board of Admiralty who has the arrangement of the onerous service, minutely inspected the ships before their departure. Fifty men, with their horses guns, ammunition, and complete equipment, have been allotted to each of the six transports, and such excellent arrangements have been made by Captain Milne, that when the ships arrive at their destination, each will deliver perfect in every respect its fifty men, horses, and guns ready for the field. The ships were towed down the river by tugs, so as to lose as little time as possible.

THE FRENCH PREPARATIONS.

The first portion of the French expedition, under General Canrobert, sailed on Sunday night from Marseilles, for its destination in the East. It is said that the whole of the expeditionary army of France will be embarked by the 26th, at the ports of Toulon, Marseilles, and Algiers, and that these divisions will go directly to Gallipoli, a small Turkish town on the peninsula which forms the European side of the Straits of the Dardanelles, and sometimes called the Peninsula of Gallipoli. It is a town of about 12,000 inhabitants, and is celebrated in history as being the first place in Europe captured by the Turks. The port is a good one. This town has always been the rendezvous of the Turkish fleets on their way to or from the Mediterranean, and it was there that they were refitted and provisioned. The point is a very important one in a strategic point of view, and appears to be a good selection. At this place the French army will find itself nearer to Adrianople than if it were to make Constantinople its headquarters, and the country around it is much more healthy than the swampy district around the Gulf of Enos, which was, in the first instance, fixed upon as the head quarters of the French army. In the event of the Russians crossing the Danube, the expeditionary army will be able, in four marches, by way of Kutan and Demotika, and by keeping the left bank of the Maritza, to reach Adrianople. By this means the expeditionary army will be at once in a position to bar the road to Constantinople against the Russian army, which it will have succeeded in crossing the Balkans. Besides this, Gallipoli, being a very good maritime station, the fleet's coal in case of necessity, re-munitioning them to any point of the Black Sea where their presence may be necessary.

The inhabitants of Marseilles are already making arrangements for a grand fête to be given to the Duke of Cambridge, on his arrival in that city, where he is to embark for the East. The reception at Paris will also be everything that could be wished.

More than 6000 mechanics, and nearly an equal number of convicts, work day and night in the Arsenal of Toulon, where immense quantities of ammunition and other materials for the prosecution of the war have been collected.

The *Moniteur* announces that the *Austerlitz*, of 100 guns, left Brest on the 20th inst. for the Baltic. The *Hercule Duguesclin*, and *Trident* have left Toulon for the same destination. The *Duperre* was to leave on the 24th to join the Baltic fleet, and the remaining vessels will leave very shortly. Admiral Parseval Deschenes left Paris on Monday for Brest, to take the command of the Baltic squadron.

FUNERAL OF MR. JUSTICE TALFOURD.—The mortal remains of the late Sir Thomas Noon Talfourd were removed from his late residence in Russell square, for interment at the Cemetery, Norwood, on Monday. In the first carriage following the hearse were the three sons of the deceased—Francis Talfourd, William Talfourd, and Thomas Noon Talfourd, and Mr. P. Talfourd, his brother. The second carriage contained Mr. Patteson Rutt, Mr. Northcote Rutt, Mr. John Salter, and Mr. William Salter, his brothers-in-law. In the remaining carriages were the other more intimate friends. The only private carriages that followed Justice Wightman, Mr. Baron Platt, Mr. Charles Kean, and Mr. Buckstone, R.A.

A report is current that M. Mazzini is preparing to show himself among his partisans in Italy.

The French police authorities give the entire number of English in Paris as 3800, exclusive of children.

FOREIGN AND COLONIAL NEWS.

THREATENED COMMENCEMENT OF HOSTILITIES.

The latest news from Constantinople is of a warlike character. On Saturday, the 11th, a circular was communicated by our Consulate here to the merchants and shipowners, to inform them that the Russians had endeavoured to impede the navigation of the St. George's mouth of the Danube, by throwing in rocks, sand-bags, anchors, and rubbish; and that of the Sulina mouth, by stretching a chain across, with a temporary opening in the centre for small vessels. This information came from the English Consul at Galatz. It is not stated whether these precautions were taken to prevent the ingress of the British and French steamers, or the egress of all merchant vessels. A private letter from Belcos, dated the 12th, alludes to the affair in the following terms:—

"The English sent yesterday, at three o'clock, the fine steam-frigate the *Retribution* with orders to force the stockade which the Russians have established at the mouth of the Danube, and which compels all persons to perform quarantine, even the river, which, for commercial purposes only, they had suspended. If the Russians oppose the destruction of that stockade, the *Retribution* has orders to fire upon them. It is probable that the affair will be the commencement of hostilities. The French steam-corvette the *Coton* left with that frigate. We shall know in five or six days the result

THE RUSSIAN NAVY.

Various statements have been published of late as to the strength of the Russian marine, but of a highly inconsistent, and, for the most part, erroneous, character. The *Fremden Blatt* professes to give the following statement as a reliable and trustworthy view of the actual state and effective condition of the Russian navy; and to have derived its information from the best sources. The return is not without some interest, at a moment when the Russian navy is about to meet with something more than its match:—

The entire marine of Russia is collected at two stations, those of the Baltic and of the Black Sea. Of these, that of the Baltic sea is divided into three sections, and that of the Black Sea into two. But this does not include the various gun boats and small craft. Each division of the Baltic consists only of one three-decker, eight two-deckers, six frigates, one corvette, and five smaller vessels. Thus the Baltic fleet would number 27 vessels of the line, including 3 three-decers, 18 frigates, and 5 corvettes brigs, and smaller vessels, besides a considerable number of steamers and gun-boats, besides the very considerable forces of steamers and gun-boats, which the Russian inspiration places at 400 or 500 vessels. The actual force of the Russian crews is given at 50,000 men; of whom 30,500 belong to the Baltic, and 19,500 to the Black Sea fleet. The grand Russian three-decker are the *Empress*, of 130 guns; the *Twelve Apostles*, of 120 guns; the *Three Saints*, of 120; and the *Warsaw*, of 120. Admiral Prince Menchikoff is at the head of the naval staff; the Grand Duke Constantine is High Admiral of the Russian fleets; Von Kobakoff and Von Ricord are also Admirals. Among the Vice-Admirals are persons named Greenness, Kruschelof, Von Berg, Count Heyden, Von Litke, Baron Karnilloff, Nachimoff, Butmann, Melchoff, Bogdenovitch, Von Glister, &c.

THE RUSSIAN FLEET IN THE BLACK SEA MISSING.

From a short account in the French papers of a trip which the *Vauban* made lately in the Black Sea, it appears that the Russian fleet is concealed somewhere. The *Vauban* made her appearance on the 25th ult. before Selastopol, but out of cannon shot; though, at that distance, she could perceive that the vessels in the port, which consisted of ten sail of the line, of which three were three-deckers, and a frigate. Seven of these vessels were moored in a line across the entrance, and outside this line, in the narrowest part of the channel, a chain was drawn, similar to that which protects the entrance to the port of Brest. At the approach of the *Vauban* the chain was lowered, in order to allow of the entrance of a corvette which had been cruising in the offing, and again raised as soon as she had passed. The steamers were lying in the inner port. The fort and all the batteries on the coast were manned all ready for action. The *Vauban* hoisted the French flag, and then made sail. The Russian flag was flying on the forts and on board the ships, but the Russians made no demonstration. The *Sartorius* anchored off Odessa; she saluted the Russian flag with 21 guns, which was returned by a similar number; but no Russian vessel of war could be seen at Odessa. It appears from these reports that the defenses of Sebastopol were completed, so as to make any attack by sea very hazardous, and that eight sail of the line and several frigates, part of the Russian fleet of the Black Sea, have taken refuge on some point not yet known. It is supposed that they must be lying in some of the harbours on the coast of Circassia, situated between Anapa and Soukoum-Kaleh; for all the other parts of the coast have been visited. This point will, however, be soon cleared up, as some frigates were to be sent in that direction to reconnoitre.

THE NEW MAP OF EUROPE.

Much excitement has been created in Paris by the appearance of a pamphlet with the omi...ous title of "La Revision de la Carte d'Europe." The writer proposes that Finland, one of the provinces of which, Vyborg, was conquered and annexed to Russia by Peter the Great, and the remainder wrested wrongfully by the same Power in 1809, should be restored to Sweden. The Polish provinces, by means of which Russia can now penetrate too far into the territory of the Western Powers, must be consolidated; but, as the independence of a separate kingdom of Poland would not long survive, he proposes that Poland should be annexed to Prussia. The constitution of the Moldo-Wallachian provinces, with their semi-independence, their half-acknowledgement of a Suzerainté of the Porte, and the influence of Russia, cannot exhist. He suggests, then, that these Principalities, with Bessarabia, shall be annexed to Austria, and that Turkey shall receive, as compensation, the Crimea. In order to counterbalance the advantage acquired by Austria in the possession of the Principalities, Lombardy to be consolidated with Piedmont, forming one Italian kingdom. Of England and France nothing is said. Such is the outline of the plan recommended by this anonymous writer, and which has excited so much curiosity. The writer does not appear to be an ordinary *publiciste*. He surely condescends to support his view of this sweeping revision by much reasoning or argument. He goes to his work in rapid, spirited style; and, instead of taking pains to show the propriety of doing this or doing that, he says that such a thing ought to be done, and no other. The Government disavows all participation in, or knowledge of, the work in question. The proofs have been seized, and the publication prohibited.

THE PRUSSIAN NEUTRALITY.
